

A New Perspective On The Kennedy Assassination

INTRODUCTION

In November 2004, I created a PowerPoint presentation on the John F. Kennedy assassination medical evidence for the JFK Lancer conference in Dallas. In 2005, I expanded this presentation and once again brought it to Dallas. In November 2005, I put this now book-length presentation online on a Mac page. Throughout 2006, I greatly expanded this presentation by adding sections on the Warren Commission and the eyewitnesses. I continue to add sections to this day. This expanded version begins below. The text should be a lot easier to read than on the Mac page. The images should also be clearer. I hope you find your time here worthwhile.

A New Perspective on the John F. Kennedy Assassination

by Patrick J. Speer

If you notice anything in this photograph that could possibly be a bullet hole then you should conclude the U.S. Government has ignored or buried the photographic evidence of a conspiracy in the assassination of President John F. Kennedy. Welcome to the dark side.

For reasons beyond my grasp, the first image in each chapter sometimes fails to appear. If there's nothing up above, don't despair; you can still see the image [here](#)

A Dedication

It all goes back to Mr. Ellis. The 80-year old caretaker of a walnut grove handed me a shiny new 50 cent piece. He said the man on the coin was a great President. He suggested that as a form of remembrance I should hold onto the coin and never spend it. This sounded a bit strange to me so I looked to my father. I was, after all, only three years old and "never spending" sounded like quite a long commitment. My father nodded his head in approval. This was 1964. Decades later I would learn that Rose Kennedy, the man on the coin's mother, was another to pass out Kennedy-halves, and I would reflect that somewhere in a small safe whose combination I'd forgotten sat the very Kennedy-half Mr. Ellis handed me, still waiting to be spent.

This investigation, then, is dedicated to Mr. Ellis, and all those like him, who fought foreign wars to defend democracy, only to see it snuffed out at home

11-22-63: Background and Foreword

Above: Governor Connally tips his hat to the First Lady at the beginning of the motorcade. While one might say he's simply being a gentleman another might wonder if he knows what is to come.

11-22-63: Background and Foreword

President John F. Kennedy was assassinated on November 22, 1963. Although his death was investigated by a Presidential panel in 1964, and re-investigated by the House Select Committee on Assassinations (HSCA) in the late 1970's, to most, the facts of his murder are still mystery. This presentation represents one individual's attempt to peel a layer or two from the mud surrounding that mystery.

Over the more than forty years since the President was shot to death while riding in an open-topped limousine through Dealey Plaza, Dallas, Texas, there have been a multitude of theories proposed about the assassination, the most prominent one being that a 24 year-old ex-marine named Lee Harvey Oswald, acting alone, performed the shooting. This was, of course, the finding of

the panel of seven prestigious Americans put together by Kennedy's successor, Lyndon Johnson, and headed by the Chief Justice of the Supreme Court, Earl Warren. This panel, commonly known as the Warren Commission, made the bulk of its evidence available to the public in an attempt to show there was nothing being held back. The 26 volumes of exhibits and testimony it released had the opposite effect, however, and many researchers, commonly called conspiracy theorists or conspiracy buffs, have used (some say abused) much of this evidence in order to question the Warren Commission's findings.

But some new evidence was uncovered as well. So much new evidence bubbled to the surface, in fact, that by 1976 it became necessary to re-open the investigation in the United States House of Representatives. The most damaging of this new evidence included: the admission that both the FBI and the CIA had failed to disclose to the Warren Commission that the CIA had been trying to murder Oswald's purported hero, Cuban dictator Fidel Castro, with the help of organized crime; that the FBI had destroyed and concealed the existence of a purportedly threatening note from Oswald to one of its agents; that, in opposition to FBI Director J. Edgar Hoover's sworn testimony that "there had been no information that would have warranted our reporting him (Oswald) as a potential hazard to the security or the safety of the President," Hoover had secretly disciplined seventeen of his agents for failing to report Oswald to the Secret Service as a security risk; and that the pathologists who performed the President's autopsy recorded the location of his head wound incorrectly, were off by four inches, and had verified this incorrect wound location after reviewing the autopsy photos.

In 1979, the House Select Committee on Assassinations (the "HSCA") ended its investigation by confirming the Warren Commission's finding that Lee Harvey Oswald fired the shots that killed the President. It did, however, disagree that he acted alone, and offered instead a scenario where a second shooter fired a shot that missed. It then referred the case to the Justice Department and asked it to identify this second shooter. The Justice Department refused to do this, however, and instead questioned the HSCA's belief that a recording of the assassination reflected more than the three shots Oswald was presumed to have been able to fire in the time frame established for the shooting. This time frame had been established by the careful study of a home movie of the assassination taken by dress manufacturer Abraham Zapruder. In 1982, the Justice Department declared that its experts

disagreed with the HSCA's experts, and that there was no evidence for additional shots, and thus no need to follow-up on the findings of the HSCA.

In 1991 Oliver Stone released his film, JFK, and re-ignited the controversy. Stone insisted there was valid evidence that the government itself performed the assassination, setting Oswald up as a patsy. To support his position, he cited the fact that many of the HSCA's records were sealed for fifty years.

Right before the 1992 election, however, President George Herbert Walker Bush surprised many by signing into law the JFK Records Act. This act created a government body, the Assassination Records Review Board (ARRB), to review and de-classify hundreds of thousands of pages of documents related to the assassination. Many of these pages have still not been read or analyzed by the JFK research community that demanded their release.

Unfortunately, by then many of the conspiracy theorists had grown so cynical from the almost thirty years of government secrecy and deception that they disbelieved any evidence that pointed away from their now fervent belief that Kennedy was shot from in front of the limousine, from an area of the plaza known as the grassy knoll. Accordingly, they concluded that the President's autopsy photos, as presented in books such as Best Evidence and High Treason, were doctored to hide the true nature of his wounds. Ironically, many of the theorists even came to believe that the home movie of Abraham Zapruder, which depicted the President's head flying backwards after the fatal headshot and was subsequently responsible for convincing millions of Americans that the head shot came from the front, was also faked, as it showed the large exit wound on the President's skull near his temple, and not on the back of his head, where a shot fired from the grassy knoll would presumably have made its exit. This conviction that the accepted evidence had been faked became so widespread, in fact, that the prominent conspiracy writer Dr. David Mantik conceded in Murder in Dealey Plaza that "If the evidence in the JFK case is merely accepted at face value, then the conclusions are rather trivial. The rookie Scotland Yard inspector can easily solve this case--it was Oswald alone. The real challenge is to assess the credibility of the evidence."

With the fortieth anniversary of the assassination, in November 2003, ABC News and its anchor man Peter Jennings only added to the cynicism of the research community by broadcasting what was claimed to be an in-depth investigation of the assassination, but was, instead, a barely-scratch-the-surface over-view featuring a computer-generated cartoon depicting the killing of the President. Claiming this computer simulation, which grossly misrepresented the relationship between the President's back wound and his throat wound, as new conclusive evidence, ABC sought to close the case, once and for all. Sadly, this confirmed for many theorists what they'd always suspected--that the

media was in league with the government in an ongoing conspiracy to cover-up the truth about of the assassination. It was shortly before this broadcast that I began my own investigation. It was perplexing to me that such an important part of American history remained so clouded in mystery. And so I read virtually everything I could on the assassination, with a special emphasis on the medical evidence and medical testimony available on such websites as Rex Bradford's History-Matters.com. At first I was surprised to find that I agreed with the Warren Commission more often than not. I soon realized, however, that the medical evidence area of the case left little room for disagreement, whereby agreeing with the conspiracy theorists even 10% of the time still left you a conspiracy theorist. After a year or so of this immersion into all things assassination, and weary of my inability to reach a firm conclusion on just what I thought happened, I decided to run a test of sorts. Since it makes no sense for conspirators trying to cover up a conspiracy to fake evidence which indicates a conspiracy, I decided to disregard the opinions expressed in the many books I'd read, from Weisberg to Groden to Lifton to Mantik, and determine for myself if the autopsy photos now available on the internet represent solid evidence for a solo assassin firing from behind. Taking historian Stephen Ambrose's statement that "a single researcher, working alone, is always preferable to a committee" to heart, I sought to educate myself on forensic pathology, ballistics, and psycho-acoustics to an extent beyond that of most researchers. If it was true that the photos and x-rays were evidence for one shooter firing from behind, I was willing to conclude that the government's defenders were right after all, as I just couldn't accept so much evidence had been faked, and that so many "experts" had been deceived.

But what I found astounded me. I found that the autopsy photos, when studied along with the Zapruder film, suggested not one lone-nut assassin but two shooters firing from behind, and thus, a conspiracy. This left me as one of the few conspiracists on what many would consider the wrong side of "the great divide," which, according to Dr. Mantik, separates those who accept the medical evidence at face value from the "alterationists", who believe evidence was doctored to sell the American people there was one shooter firing from behind. Although I came to believe that the autopsy photos, x-rays, Zapruder film, etc., were all genuine and unaltered, I found myself in adamant disagreement with the conclusions of many of the experts hired by the government to interpret this evidence. Additionally, I developed an understanding of the assassination and its investigation that put me at odds with the majority of conspiracy theorists, as I came to believe that the incorrect conclusions of the government investigations had more to do with incompetence and institutional cowardice than with any conscious desire to conceal the truth. In some ways this was liberating, in that I could question men's judgment

without identifying them as accessories after the fact in the murder of the president. In other ways it was restricting, however. The "worship of expertise" in American society is such that it is nearly impossible to question the "expert" opinions of doctors, rocket scientists and nuclear physicists with any credibility unless you counter them with the opinions of other doctors, rocket scientists and nuclear physicists. Accordingly, I'm hoping to include some "expert" responses to this presentation in the near future. Fingers crossed.

Pat Speer

August, 2005, November, 2006, March 2007

P.S. Throughout 2006, I tried to acquire some "expert" responses. Despite repeated visits to radiology websites and the posting of multiple fliers at UCLA's Medical Center seeking advice, I was not able to find one medical professional willing to offer his or her expertise to help solve this crime. Some would defer to the opinions of

other doctors without looking into the case themselves. An example of this sheep-like mindset can be found in Dr. Scott Christianson's 2006 book *Bodies of Evidence*, a book on forensic science.

Christianson so admires Dr. Michael Baden, whom he describes as "one of the world's leading forensic pathologists" that he presents every single thing Baden has said about the Kennedy assassination, no matter how ill-informed, as fact. Included in the list of Baden's "non-fact facts" repeated by Christianson is that Kennedy's autopsy photographer was an FBI agent and that the "back and to the left" movement of Kennedy's head after the fatal head shot can be explained by the acceleration of the limousine. If nothing else, I hope my efforts will wake others up to the "fact fact" that you can't accept the works of men like Christianson and Baden as the ultimate sources on the assassination, no matter how many letters have been placed after their names.

In retrospect, I was probably naive to think that young doctors would step up to the plate. In 2004, a high-school acquaintance turned emergency room doctor assured me that the assassination was coffee talk among medical professionals, and that the consensus was that Kennedy's medical evidence was in conflict with the official story. Perhaps I should have realized then that the medical establishment's refusal to say something was not from a decisive lack of information, but from its decided lack of courage and concern.

Within the first half of this investigation we shall examine the history of the Warren Commission and the statements of the many witnesses in Dealey Plaza. Within the second half, we shall look at the autopsy photos, x-rays and assassination films to see if they support my conclusions regarding the eyewitness evidence. While I will not attempt to show who was behind the shooting, I shall acknowledge some of my suspicions and point out some of the circumstantial evidence that may lead the reader to his or her own suspicions. No matter how much you think you know about the assassination, I'm betting there will be arguments and evidence presented throughout this investigation that will challenge you and surprise you.

Chapter 1: The Aftermath

A look at the behavior of Lyndon Johnson, the FBI, the news media, and the Warren Commission in the days immediately following the assassination.

The Delivery Men

Above: The delivery of the Warren Report to President Johnson on September 24, 1964. From left to right: commissioner member John J. McCloy, commission General Counsel J. Lee Rankin, commission member Senator Richard Russell, commission member Congressman Gerald Ford, commission Chairman Chief Justice Earl Warren, President Lyndon Johnson, commission member Allen Dulles, commission member Senator John Sherman Cooper, and commission member Congressman Hale Boggs.

The Delivery Men

While J. Lee Rankin, General Counsel to the Warren Commission, and the man tasked with heading its investigation of the assassination of President John F. Kennedy, is reported to have told his staff that the truth was their *"only client,"* much evidence has arisen over the years to indicate that this simply was not so. The available record, in fact, now suggests that the Commission had another client, one whose interests were to be placed above and beyond the Commission's search for truth. This client was called... "national security" or, more specifically, President Lyndon Johnson.

One need look no further than the memoirs of Chief Justice Earl Warren, (for whom the commission was named), for that matter, to see that this is true. There, in the final pages written at the end of his long successful life, Warren admitted that he was strong-armed into chairing the Commission only after Johnson, Kennedy's successor, told him that if people came to believe there was foreign involvement in the assassination it could lead to a war that would kill 40 million. This, one can only assume, gave Warren the clear signal he was NOT to find for a conspiracy involving a foreign power. But when one reads between the lines--and reads other lines--a fuller picture emerges. Warren was also told he was NOT to find for a domestic conspiracy, or at least anything that could point back to Johnson.

There were signs for this from the get-go. The Voice of America, the U.S. Information Agency's worldwide radio network, had initially reported, in the moments after the shooting, that Dallas, Texas, the scene of the crime, is also *"the scene of the extreme right wing movement."* It soon stopped doing so. This suggests that someone in the government was particularly sensitive to the idea that the right wing would be blamed for the shooting, and had ordered the Voice of America to downplay the possibility of a domestic conspiracy.

This "sensitivity," moreover, was in the air and spreading. Acting Attorney General Nicholas Katzenbach, whose discussions in the days after the shooting sparked the creation of the Warren Commission, testified before the House Select Committee on Assassinations on 9-21-78 that his basic concern at that time was *"the amount of speculation both here and abroad as to what was going on, whether there was a conspiracy of the left or a lone assassin or even in its wildest stages, a conspiracy by the then vice president to achieve the presidency, the sort of thing you have speculation about in some countries abroad where that kind of condition is normal."* Yikes. These words make clear that Katzenbach, who was only running the Justice Department in the aftermath of the assassination, considered Johnson's involvement unthinkable, and not really worth investigating.

The rights of every man are diminished when the rights of one man are threatened.

- John F. Kennedy

That Katzenbach's concerns infected the Warren Commission's investigation, moreover, seems obvious. Howard Willens, a Justice Department attorney reporting to Katzenbach, was made an assistant to Warren Commission General Counsel J. Lee Rankin, and was tasked with 1) hiring the commission's junior counsel (the men tasked with performing the bulk of the commission's investigation), 2) assigning these men specific areas of investigation, 3) supplying these men with the FBI, Secret Service, and CIA reports pertinent to their areas of investigation, 4) working as a liaison between these men and the agencies creating these reports, and 5) helping to re-write the commission's own report. On 7-28-78, in Executive Session, he testified before the House Select Committee, and admitted: *"there were some allegations involving President Johnson that were before the Commission and there was understandably among all persons associated with this effort a desire to investigate those allegations and satisfy the public, if possible, that these allegations were without merit."*

But these allegations *weren't* investigated, not really. The Commission's final report amounted to a prosecutor's brief against a lone assassin named Lee Harvey Oswald, and the 26 volumes of supporting data published by the Commission contained next to nothing on Johnson or other possible conspirators.

That this "clearing" of Johnson's name was a major factor in the commission's creation is confirmed, moreover, by a memo written by Warren Commission counsel Melvin A. Eisenberg. While reporting on the Warren Commission's first staff conference of 1-20-64, Eisenberg recalled in a 2-17-64 memo that Chief Justice Warren had discussed *"the circumstances under which he had accepted the chairmanship of the Commission,"* and had claimed he'd resisted pressure from Johnson until *"The President stated that the rumors of the most exaggerated kind were circulating in this country and overseas. Some rumors went as far as attributing the assassination to a faction within the Government wishing to see*

the Presidency assumed by President Johnson. Others, if not quenched, could conceivably lead the country into a war which could cost 40 million lives."

Eisenberg's account of Warren's statements was supported, for that matter, by Warren Commission Junior Counsel--and subsequent Senator--Arlen Specter in his 2000 memoir *Passion for Truth*. In Specter's account, Warren claimed that Johnson had told him *"only he could lend the credibility the country and the world so desperately needed as the people tried to understand why their heroic young president had been slain. Conspiracy theories involving communists, the U.S.S.R., Cuba, the military-industrial complex, and even the new president were already swirling. The Kennedy assassination could lead America into a nuclear war that could kill 40 million people..."*

And this, apparently, wasn't the only time Warren admitted Johnson's worries extended both beyond and closer to home than the possible thermo-nuclear war mentioned in his autobiography. In his biography of Warren, Ed Cray reported that Warren once confided to a friend that *"There was great pressure on us to prove, first, that President Johnson was not involved, and, second, that the Russians were not involved."*

And yet Warren refused to put Johnson's fears he'd be implicated on the record. While he was interviewed a number of times in his final years about the creation of the Warren Commission, Warren never admitted in these interviews what he'd readily told his friends and the commission's staff--that Johnson had railroaded him onto the commission in part to clear himself. In fact, Warren said the opposite. When interviewed by Warren Commission historian Alfred Goldberg on March 28, 1974, to be clear, Warren told Goldberg the opposite of what he'd told Eisenberg and Specter (and presumably Goldberg) in 1964. Instead of claiming Johnson told him *"Some rumors went as far as attributing the assassination to a faction within the Government wishing to see the Presidency assumed by President Johnson,"* Warren now related *"There were of course two theories of conspiracy. One was the theory about the communists. The other was that LBJ's friends did it as a coup d'etat. Johnson didn't talk about that."*

It seems likely, then, that even Warren thought it improper that the Chief Justice of the United States, the head of the Judicial Branch of Government, be hired by the head of the Executive Branch of Government, the President, in part to clear his name.

Now, it's not as if Warren's fellow commissioners had a problem with serving this higher purpose... John McCloy, Wall Street's man on the Commission, told writer Edward Epstein on June 7, 1965 that one of the commission's objectives was *"to show foreign governments we weren't a South American Banana Republic."* Well, seeing as the expression "Banana Republic" is not a reference to countries whose leaders have been killed by foreign enemies, but to countries whose leaders have been killed by domestic enemies, who then assume power, this is most certainly a reference to Johnson.

And it's not as if this was all a big secret. The December 5, 1963, transcripts of the Warren Commission's first meeting reflect that Senator Richard Russell, Johnson's long-time friend and mentor, admitted *"I told the President the other day, fifty years from today people will be saying he had something to do with it so he could be President."*

And it's not as if Washington insiders weren't also in the know. In 1966, columnists Rowland Evans and Robert Novak published *Lyndon B. Johnson: The Exercise of Power*. They discussed the creation of the Warren Commission as follows: *"There was first the question of the assassination itself. Inevitably, irresponsible demagogues of the left and right spread the notion that not one assassin but a conspiracy had killed John Kennedy. That it occurred in Johnson's own state on a political mission urgently requested and promoted by Johnson only embellished rancid conspiratorial theories. If he were to gain the confidence of the people, the ghost of Dallas must be shrugged off."*

Now, should one still doubt that Johnson was at least as concerned with suspicions of himself as of the Soviets, there is confirmation from an even better source: Johnson himself. In a rarely-cited interview with columnist Drew Pearson, cited in a November 14th, 1993 article in The Washington Post, Johnson admitted that, in his conversation with Warren, in which he convinced Warren to head his commission, Johnson brought up the assassination of President Lincoln, and that rumors still lingered about the conspiracy behind his murder 100 years after the fact. According to Pearson, Johnson admitted telling Warren that *"The nation cannot afford to have any doubt this time."* Well, this says it all. The doubt, according to Johnson, the nation could not afford to have, was doubt about Southern and/or military involvement in the assassination. The rumors about Lincoln's death, after all, revolved largely around his being murdered by The Confederate Army as revenge for his successful campaign to re-unite the States, or his being murdered by his Secretary of War, or his being murdered by his Vice-President, a Southerner named JOHNSON.

And Johnson confirmed these concerns in his presidential memoir, *The Vantage Point: Perspectives on the Presidency 1963-1969*, published 1971. Of the national mood on 11-24-63, after the man accused of killing President Kennedy, Lee Harvey Oswald, a purported communist-sympathizer, was shot down while in police custody, by Jack Ruby, a man with connections to organized crime, Johnson wrote: *"The atmosphere was poisonous and had to be cleared. I was aware of some of the implications that grew out of that skepticism and doubt. Russia was not immune to them. Neither was Cuba. Neither was the State of Texas. Neither was the new President of the United States."*

And, should one have doubts so many men--not only those working for the commission, but those working for the Secret Service, FBI, and CIA--would agree to give Johnson a free pass, in the name of national security, etc, one should consider that some of these same men defended the conclusions of the Warren Commission for these very same reasons...and left a "smoking gun" document in the National Archives as proof of their activities.

Here is a link to this document. [The Smoking Gun Document](#) One might wish to take a quick look at it before returning to our discussion...

This document, released in 1993 as a result of the 1992 JFK Records Act, which was passed in the aftermath of Oliver Stone's movie JFK, was written on January 4, 1967, at a time when questions surrounding the assassination were beginning to be taken seriously, and appear in mainstream publications like Life Magazine, the New York Times, and The Saturday Evening Post. It is a CIA document, and it proposes that the CIA chiefs around the world to whom it was directed *"employ propaganda assets to answer and refute the attacks of the critics. Book reviews and feature articles are particularly appropriate for this purpose. The unclassified attachments to this guidance should provide useful background material for passage to assets. Our play should point out, as applicable, that the critics are (i) wedded to theories adopted before the evidence was in, (ii) politically interested, (iii) financially interested, (iv) hasty and inaccurate in their research, or (v) infatuated with their own theories."*

Note that it says *"Destroy when no longer needed"* across the bottom. We were never supposed to know about this. Note also that January 1967 marks the precise time the so-called mainstream media pulled back from its criticisms of the Warren Commission, and started focusing its criticism on the critics. CBS News, most pointedly, had started an investigation of the Warren Commission months before, but had changed its direction around this same time, after former Warren Commissioner John McCloy was invited to participate as a top secret adviser.

But note, primarily, the stated purpose of this propaganda push. It says nothing about the danger Americans might think a foreign power killed Kennedy. It says nothing about preventing World War

III. Instead, it says, in so many words, that all this talk of conspiracy is starting to circle in on President Johnson and the CIA, and that would be bad for business. Here are the relevant paragraphs:

1. Our Concern. From the day of President Kennedy's assassination on, there has been speculation about the responsibility for his murder. Although this was stemmed for a time by the Warren Commission report (which appeared at the end of September 1964), various writers have now had time to scan the Commission's published report and documents for new pretexts for questioning, and there has been a new wave of books and articles criticizing the Commission's findings. In most cases the critics have speculated as to the existence of some kind of conspiracy, and often they have implied that the Commission itself was involved. Presumably as a result of the increasing challenge to the Warren Commission's Report, a public opinion poll recently indicated that 46% of the American public did not think that Oswald acted alone, while more than half of those polled thought that the Commission had left some questions unresolved. Doubtless polls abroad would show similar, or possibly more adverse, results.

*2. This trend of opinion is a matter of concern to the U.S. government, including our organization. The members of the Warren Commission were naturally chosen for their integrity, experience, and prominence. They represented both major parties, and they and their staff were deliberately drawn from all sections of the country. Just because of the standing of the Commissioners, efforts to impugn their rectitude and wisdom tend to cast doubt on the whole leadership of American society. **Moreover, there seems to be an increasing tendency to hint that President Johnson himself, as the one person who might be said to have benefited, was in some way responsible for the assassination. Innuendo of such seriousness affects not only the individual concerned, but also the whole reputation of the American government.** Our organization itself is directly involved: among other facts, we contributed information to the investigation. Conspiracy theories have frequently thrown suspicion on our organization, for example by falsely alleging that Lee Harvey Oswald worked for us. The aim of this dispatch is to provide material for countering and discrediting the claims of the conspiracy theorists, so as to inhibit the circulation of such claims in other countries. Background information is supplied in a classified section and in a number of unclassified attachments.*

Now note that, according to this last paragraph, this trend towards accusing Johnson was, in the eyes of the writer of this dispatch (undoubtedly one of the CIA's top officials), "a matter of concern to the U.S. government," **including** the CIA. This more than suggests that this order to "employ" the CIA's propaganda assets to help clear Johnson's name did not originate within the CIA itself... but from elsewhere in the executive branch.

Quite possibly Johnson himself... In October 2007, the Johnson Presidential Library released a batch of previously withheld recordings of President Johnson's phone calls while President. Most interesting of these was a January 11, 1967 phone call between Johnson and his most trusted adviser, Supreme Court Justice Abe Fortas. This call built upon similar calls with Fortas on October 1 and October 6, 1966; it was made, moreover, just one week after the "smoking gun" document was written. In this call, amazingly, Johnson drops his guard completely, and tells Fortas that he believes Senator Robert Kennedy--his predecessor's brother--and Robert Kennedy's supporters are behind the recent spurt of books and articles on the assassination. He claims, moreover, that: *"They've started all this stuff...they've created all this doubt...And if we'd had anybody less than the attorney general--ah, the chief justice--I would've already been indicted."*

And should one think Johnson exaggerating here, and stating something that he didn't really believe, one should consider that he said similar things even after Robert Kennedy was dead and buried. As reported by Robert Caro, in his 2012 epic *The Passage of Power*, Johnson dropped his mask yet again during the August 19, 1969 recording of an oral history for the Johnson Library. He declared: *"I*

shudder to think what churches I would have burned and what little babies I would have eaten if I hadn't appointed the Warren Commission." He also offered a slightly different and no doubt more honest version of how he got Warren to chair his commission. Leaving off the bit about the Russians launching nukes should they think we blamed them for killing Kennedy, he admitted he'd actually pressured Warren through a call for domestic tranquility. He said he told Warren: *"When this country is threatened with division, and the President of the United States says you are the only man who can save it, you won't say no, will you?"* And that Warren responded, *"No, sir!"*

So there you have it, straight from the horse's--ah, President's--mouth. Johnson felt that his having left-wing icon Earl Warren chair the commission investigating President Kennedy's murder not only stopped Kennedy's brother Robert Kennedy from having him (Johnson) investigated as a suspect, but stopped him (Johnson) from actually being indicted for Kennedy's murder.

Which leads us back to the "smoking gun" document... Note that one of the arguments the CIA plans on using to assure the world Johnson is above reproach is *"Conspiracy on the large scale often suggested would be impossible to conceal in the United States, esp. since informants could expect to receive large royalties, etc. Note that Robert Kennedy, Attorney General at the time and John F. Kennedy's brother, would be the last man to overlook or conceal any conspiracy."*

Well, this is grossly unfair. Robert Kennedy did not participate in the investigation of his brother's murder. He never even read the report of Earl Warren's commission.

This argument is also familiar. On November 4 1966, just when critics of the Warren Commission started gaining traction, President Johnson made a similar argument at a press conference. He offered: *"The late, beloved President's brother was Attorney General during the period the Warren Commission was studying this thing. I certainly would think he would have a very thorough interest in seeing that the truth was made evident."* (Note that this was well after Johnson first started musing that the "beloved President's brother," Robert Kennedy, was behind all these critics...)

This argument was then repeated by those closest to Johnson. A January 1968 letter to the New York Times by John Roche (subsequently quoted in its January 5 edition), offered: *"Any fair analysis of Sen. Robert Kennedy's abilities, his character and of the resources at his disposal as Attorney General would indicate that if there were a conspiracy, he would have pursued its protagonists to the ends of the earth."* Roche was a "Special Consultant" to Johnson, his so-called "intellectual in residence." Roche had written Johnson a memo on 11-23-66 urging Johnson to make countering the critics of the Warren Commission a *"top priority"* of his administration.

And the residue of this sticky business stuck to Johnson for the remainder of his days. In 1971, Johnson published *The Vantage Point*, his presidential memoir. On page 25, he relates: *"One of the most urgent tasks facing me after I assumed office was to assure the country that everything possible was being done to uncover the truth surrounding the assassination of President Kennedy. John Kennedy had been murdered, and a troubled, puzzled, and outraged nation wanted to know the facts. Led by the Attorney General who wanted no stone unturned, the FBI was working on the case 24 hours a day and Director J. Edgar Hoover was in constant communication with me."*

Well, this was bullshit of a presidential magnitude. Johnson knew full well that Robert Kennedy barely followed the FBI's investigation, and most certainly never "led" it. Kennedy even put this on the record, signing a statement to the Warren Commission declaring *"As you know, I am personally not aware of the detailed results of the extensive investigation in this matter which has been conducted by the Federal Bureau of Investigation."* What's worse, Kennedy's statement was an understatement...a gross understatement. The June 4, 1964 memo of Warren Commission counsel Howard Willens, in which Kennedy's signing such a statement was proposed, admits *"The proposed response by the Attorney General has, of course, not been approved by him, or on his behalf by the Deputy Attorney General. It*

*represents a revision of an earlier letter which I did show to them during my conference with them earlier today. At that time the Attorney General informed me that he had not received **any** reports from the Director of the Federal Bureau of Investigation regarding the investigation of the assassination."*

So...gulp...President Johnson was not only so paranoid he thought Robert Kennedy was behind the rumors he'd killed President Kennedy, and so concerned about these rumors he thought that only his appointing Chief Justice Earl Warren to chair the commission investigating President Kennedy's murder had saved him from an indictment for murder, and a reputation as one of the world's most evil men, but so ruthless he was willing to use Robert Kennedy's deep remorse over his brother's murder, and resultant failure to promptly investigate his brother's murder, to suggest what he (Johnson) undoubtedly KNEW was untrue--that Robert Kennedy, President Kennedy's brother, ("Bobby"), had led the FBI's investigation into President Kennedy's murder, and cleared Johnson of all wrong-doing.

Well...would an innocent man behave in such a manner?

Perhaps. But Johnson's creation of a commission in part to clear himself is only part of the story. If one is even remotely prone to suspicion, it is also intriguing that Johnson initially hoped to avoid an independent commission altogether, and instead pressured the FBI and a Texas Court of Inquiry to investigate the crime, and, presumably, clear his name. In a 12-23-68 interview conducted on behalf of the Johnson Library, Leon Jaworski, Special Counsel to the State of Texas during its inquiry, explained the circumstances of its creation: *"Here and in Europe were all kinds of speculations, you know, that this was an effort to get rid of Kennedy and put Johnson in, and a lot of other things. So he immediately called on Waggoner Carr, who was Attorney General of Texas, to go ahead and conduct a Court of Inquiry in Texas."* That Johnson would call on Texans with right-wing political affiliations to investigate a crime many suspected was committed by Texans with right-wing political affiliations was not lost on Jaworski, who clearly saw the need for something with a more national flavor. In his memoir *Confession and Avoidance*, Jaworski, who met with Johnson in Washington a few days after the assassination, describes the circumstances of their meeting as follows: *"a problem had developed. The city was seething with rumors and accusations surrounding John Kennedy's death. Some sources in Europe had jumped on the story that Johnson himself had disposed of Kennedy in order to ascend to the presidency. Any investigation that was localized in Texas would be, to put it gently, under suspicion."*

From Jaworski's words we can see that Johnson was desperate to deflect any speculation about his own involvement in the assassination, and that he created the Warren Commission in large part because it had become clear that an investigation by Texas officials and the FBI would fail to be convincing to those most needing to be convinced. But, in hindsight, this should always have been obvious. While Warren was purportedly asked to chair the Commission because as Chief Justice of the Supreme Court he had unparalleled credibility with the American public, the truth is that Warren was probably the last person Johnson would want to deliver the message that Russians were not involved in the assassination, as those likely to believe communist involvement would not believe anything Warren had to say, and considered him pretty much a communist himself. It seems clear then that Johnson drafted Warren onto the commission chiefly to convince those who trusted Warren--the liberals and intellectuals throughout the world who loved Kennedy and were most suspicious of Johnson--that there was no right-wing conspiracy behind the killing. It should be noted, furthermore, that Warren quite possibly pushed Johnson into this by publicly eulogizing Kennedy within hours of the assassination as having *"suffered martyrdom as a result of the hatred and bitterness that has been injected into the life of our nation by bigots."* Johnson, who counted among his supporters many of these very same bigots, could not have been pleased.

And so the Warren Commission was born. The participation of the famously liberal Warren appeared to offset the otherwise inexplicable participation of Kennedy's biggest opponent on civil rights, Senator

Richard Russell, and a man Kennedy had fired, former CIA director Allen Dulles. The political make-up of the commission--five Republicans and two conservative Democrats--moreover, assured that no one would follow any suspected right-wing or left-wing conspiracies beyond where Johnson would want them to go. Now this is not to say that the Warren Commissioners consciously concealed the truth. It seems clear, however, that such a commission, created under such circumstances, and comprising such men, would be unlikely to disagree with the FBI's conclusion that there had been no conspiracy, and would most certainly never push upon the public that perhaps just perhaps their current president was behind the murder of their former president. In his book *Real Answers*, Gary Cornwell, an assistant counsel to the HSCA (the late '70's congressional committee that reviewed the work of the commission) asserted that in order to find a conspiracy you have to at first suspect a conspiracy, and act a little paranoid. The Warren Commission, not surprisingly, refused to act paranoid, even a little. They were, in fact, barely interested in their work. Its members attended less than half its hearings and participated in the questioning of only a small percentage of its witnesses. They relied almost exclusively on inexperienced junior counsel and the FBI, even though they acknowledged in private they didn't trust the FBI.

And there is reason to believe this was all according to plan. In a 1991 article about Oliver Stone's film *JFK*, former Senator and longtime Washington insider Daniel Patrick Moynihan asserted that the Warren Commission *"was Lyndon Johnson at his worst; manipulative, cynical. Setting a chief justice of no great intellect to do a job that a corrupt FBI was well content should not be done well."*

This was not just an old pol letting off steam. Moynihan's comments are justified by the official record.

This record, furthermore, reflects that Johnson was not alone in his desire to put the past behind him and reassure the public that their president was not a murderer.

From the boardrooms to the newsrooms, he found plenty of support.

A Tragedy of Errors

Above: Attorney General Robert Kennedy, FBI Director J. Edgar Hoover, and President Kennedy. Above, right: an 11-22-63 press conference with Dallas District Attorney Henry Wade. At left: an 11-22-63 press conference with Doctors William Kemp Clark and Malcolm Perry. At right: Nicholas Katzenbach and President Johnson.

A Tragedy of Errors

Although much about the assassination of John F. Kennedy is in dispute, or tinged with mystery, most everyone agrees he was shot in the head on a Dallas street about **12:30 PM CST, 11-22-63**, and that he was pronounced dead at Parkland Hospital shortly before **1:00 PM CST**.

While this marked the end of history for Kennedy, his death marked the beginning of a bizarre new chapter in American history...that continues to this day.

At **2:16 PM CST**, two of the doctors who'd tried to save Kennedy appeared before the media. This press conference was the beginning of a truly bizarre chain of events. During the Warren Commission investigation, the exact words of this press conference were debated. By the mid 1970's however a transcript was discovered at the LBJ Presidential Library in Texas. (While the transcript says the time of the press conference was 3:16 CST, it seems likely this was supposed to read 3:16 EST, and that it really took place at 2:16 CST. This is supported, to be clear, by the TV coverage of the assassination, in which Walter Cronkite discussed the impending swearing-in of President Johnson -- which took place at 3:38 EST--in the same segment he reported on the press conference.)

Dr. Malcolm Perry, who had performed a tracheostomy on the President in an effort to save his life:

"Upon reaching his side, I noted that he was in critical condition from a wound of the neck and of the head...Immediate resuscitative measures were undertaken, and Dr. Kemp Clark, Professor of Neurosurgery, was summoned, along with several other members of the surgical and medical staff. They arrived immediately, but at this point the President's condition did not allow complete resuscitation...The neck wound, as visible on the patient, revealed a bullet hole almost in the mid line...In the lower portion of the neck, in front ...Below the Adam's apple." (When asked if a bullet had passed through Kennedy's head) "That would be conjecture on my part. There are two wounds, as Dr. Clark noted, one of the neck and one of the head. Whether they are directly related or related to two bullets, I cannot say...There was an entrance wound in the neck. As regards the one on the head, I cannot say." (When asked the direction of the bullet creating the neck wound) "It appeared to be coming at him." (When asked the direction of the bullet creating the head wound) "The nature of the wound defies the ability to describe whether it went through it from either side. I cannot tell you that." (When asked again if there was one or two wounds) "I don't know. From the injury, it is conceivable that it could have been caused by one wound, but there could have been two just as well if the second bullet struck the head in addition to striking the neck, and I cannot tell you that due to the nature of the wound. There is no way for me to tell...The wound appeared to be an entrance wound in the front of the throat; yes, that is correct. The exit wound, I don't know. It could have been the head or there could have been a second wound of the head. There was not time to determine this at the particular instant."

Dr. William Kemp Clark, who had examined the President's head wound and pronounced him dead: *"I was called by Dr. Perry because the President... had sustained a brain wound. On my arrival, the resuscitative efforts, the tracheostomy, the administration of chest tubes to relieve any...possibility of air being in the pleural space, the electrocardiogram had been hooked up, blood and fluids were being administered by Dr. Perry and Dr. Baxter. It was apparent that the President had sustained a lethal wound. A missile had gone in or out of the back of his head, causing extensive lacerations and loss of brain tissue. Shortly after I arrived, the patient, the President, lost his heart action by the electrocardiogram, his heart action had stopped. We attempted resuscitative measures of his heart, including closed chest cardiac massage, but to no avail." (When asked to describe the course of the bullet through the head) "We were too busy to be absolutely sure of the track, but the back of his head...Principally on his right side, towards the right side...The head wound could have been either the exit wound from the neck or it could have been a tangential wound, as it was simply a large, gaping loss of tissue."*

The reports on this press conference should have cleared up any confusion. But a few minutes before the press conference, Dan Rather had told his CBS audience that *"we've been told"* that the fatal bullet *"entered at the base of the throat and came out at the base of the neck on the back side."* After the press conference began, less than ten minutes later, however, Walter Cronkite corrected this report for CBS' audience: *"We have word from Dr. Malcolm Perry, the surgeon at Parkland Hospital who attended President Kennedy. He says that when he arrived at the Emergency Room, he noticed the President was in critical condition with a wound of the neck and head. When asked if the wounds could have possibly been made by two bullets, he said he did not know."* Cronkite then described some of the care Kennedy received while at Parkland, including that he'd received a tracheotomy.

But the other networks and news agencies weren't so precise, or accurate. Indeed, in his own rushed report on the press conference, NBC's Robert MacNeil told its viewers: *"A bullet struck him in front as he faced the assailant."* As NBC had previously reported that Kennedy had been struck in the head, its viewers would undoubtedly have taken from this that Kennedy had been struck in the head from the front.

And other news reports supported this belief. An AP dispatch on the press conference quoted on WOR

radio at 2:43 CST claimed that Dr. Perry said *"the entrance wound was on the front of the head."* This dispatch, moreover, was quoted far and wide. The Albuquerque Tribune, on the stands within hours of the press conference, related: *"Dr. Malcolm Perry, attendant surgeon at Parkland Hospital who attended President Kennedy, said when he arrived at the emergency room 'I noticed the President was in critical condition with a wound of the neck and head.' When asked if possibly the wounds could have been made by two bullets, he said he did not know."* The article concluded *"When asked to specify, Perry said the entrance wound was in the front of the head."*

They were not to be outdone, however. The 11-23 San Francisco Chronicle, building upon the inaccurate reports of the AP and UPI, put its own spin on the press conference, reporting *"At Parkland Hospital, Dr. Malcolm Perry said Mr. Kennedy suffered a neck wound--a bullet hole in the lower part of the neck--and a second wound in the forehead."*

Even the great ones got it wrong. An 11-23 New York Times article on the press conference reported: *"Mr. Kennedy was hit by a bullet in the throat, just below the Adam's Apple... This wound had the appearance of a bullet's entry. Mr. Kennedy also had a massive gaping wound in the back and one on the right side of the head. However, the doctors said it was impossible to determine immediately whether the wounds had been caused by one bullet or two."* The doctors, of course, had never mentioned a gaping wound on Kennedy's back.

At 3:30 PM CST, Drs Perry and Kemp once again spoke to the press, this time on the phone to local reporters unable to attend the official press conference. Connie Kritzberg of The Dallas Times-Herald was one of these reporters. Her article on the President's wounds was published on 11-23.

Neck Wounds Bring Death

Wounds in the lower front portion of the neck and the right rear side of the head ended the life of President John F. Kennedy, say doctors at Parkland Hospital.

Whether there were one or two wounds was not decided.

The front neck hole was described as an entrance wound. The wound at the back of the head, while the principal one, was either an exit or tangential entrance wound. A doctor admitted that it was possible there was only one wound.

Kemp Clark, 38, chief of neurosurgery, and Dr. Malcolm Perry, 34, described the President's wounds. Dr. Clark, asked how long the President lived in the hospital, replied, "I would guess 40 minutes but I was too busy to look at my watch."

Dr. Clark said the President's principal wound was on the right rear side of his head.

"As to the exact time of death we elected to make it - we pronounced it at 1300. I was busy with the head wound."

Dr. Perry was busy with the wound in the President's neck.

"It was a midline in the lower portion of his neck in front."

Asked if it was just below the Adam's apple, he said, "Yes. Below the Adam's apple."

"There were two wounds. Whether they were directly related I do not know. It was an entrance wound in the neck."

The doctors were asked whether one bullet could have made both wounds or whether there were two bullets.

Dr. Clark replied. "The head wound could have been either an exit or a tangential entrance wound."

The neurosurgeon described the back of the head wound as:

"A large gaping wound with considerable loss of tissue."

Dr. Perry added, "It is conceivable it was one wound, but there was no way for me to tell. It did however appear to be the entrance wound at the front of the throat."

"There was considerable bleeding. The services of the blood bank were sent for and obtained. Blood was used."

The last rites were performed in "Emergency Operating Room No. 1."

There were at least eight or 10 physicians in attendance at the time the President succumbed. Dr. Clark said there was no possibility of saving the President's life.

The press pool man said that when he saw Mrs. Kennedy she still had on her pink suit and that the hose of her left leg was saturated with blood. In the emergency room, Mrs. Kennedy, Vice President Johnson and Mrs. Johnson grasped hands in deep emotion.

But the nature of Kennedy's wounds was not the only part of the story muddled up by the press.

The details of the shooting were especially muddled. CBS News, the only network news agency to accurately report the Parkland press conference, whose reporting on the shooting was to become the stuff of legend, reported so many falsehoods and half-truths in the first hour after the shooting that one might wonder why the entire news team wasn't fired. Within a half-hour or so of the shooting legendary newsman Walter Cronkite, repeating some of the early reports coming over the news wire, told the nation: *"Some of the Secret Service agents thought the gunfire, however, came from an automatic weapon fired to the right rear of the Chief Executive's car, possibly from a grassy knoll, and that's that knoll to which motorcycle policeman were seen racing and where the huddled figures of a man and a woman were seen on the ground with a crowd surrounding, which suggests of course that perhaps this is where the shots came from. This we do not know as yet, positively."* Moments later, Eddie Barker, reporting from Dallas, compounded this mistake, declaring: *"The report is that the attempted assassins--we now hear it was a man and a woman--were on the ledge of a building near the Houston Street underpass."* Soon afterward, Cronkite told the nation: *"Governor Connally was shot, apparently, twice in the chest."* After this rush to speculation, however, Cronkite grew more cautious, and stressed that they had unconfirmed reports that Kennedy was dead and unconfirmed reports Connally was in surgery. He then reported that a Secret Service agent had been killed in the line of duty while trying to protect Kennedy, noting that *"apparently, this is correct."* (Apparently, it wasn't).

But Cronkite's cavalcade of confusion was far from over. Moments later, after reading a report that Governor Connally had said he was hit from the back, Cronkite tried to correlate this information with the information previously received. He told his audience: *"Governor Connally could very possibly have been shot in the back with the assassin's bullet still coming from the front of the car. He rode in a small jump seat in the center of the back of the specially-built presidential limousine."* (Apparently, Cronkite thought the jump seats faced the side of the limousine.) The cavalcade continued. While looking at a photo of Kennedy in the motorcade, shortly after receiving word that a witness claimed to see a man fire at Kennedy from the Texas School Book Depository, Cronkite asserted: *"The assassin took dead aim. He got the President, apparently, with the first shot in the head, and then Governor Connally with the next two shots."* Cronkite failed to explain that CBS News now believed its earlier reports regarding multiple assassins and automatic weapons were inaccurate. He just changed the story as new information came along--whether or not this new information had been confirmed. As much as an hour after the shooting, Cronkite was still reporting that *"a Secret Service man was also killed in the fusillade of shots that came apparently from a second floor window."* Ironically, he reported this canard just before reporting, affirmatively, that Kennedy had passed. One can only wish he'd got the first part right but was wrong about the second.

Should one wonder where CBS got this story that a Secret Service Agent had been killed, one should consider that around this same time an AP dispatch (found in the Racine Journal-Times) reported that *"A Secret Service agent and a Dallas policeman were shot and killed today some distance from the area where President Kennedy was assassinated"* and that ABC News reported that they'd received

confirmation from the Dallas Sheriff's office both that a Secret Service agent had been killed and that four shots had been fired at the limousine. Even worse, when one considers the subsequent refusal of the American people to believe the findings of the Warren Commission, was the analysis of Don Goddard, V.P. of ABC News. After explaining that American assassins normally use pistols and make no attempt to escape, he pronounced that *"This must have been a very carefully planned terrible tragedy and conspiracy."*

Still, it's hard to single out ABC for adding to the public's suspicion, when CBS News, supposedly the premiere news agency of the day, was making similar mistakes. Around 3:40 EST, at least two hours after the shooting, things were still so confusing that Dan Rather reported *"There have been a number of suspects arrested by Dallas police, Dallas County Sheriff's Officers. One of the suspects was a 25-year old white youth. He was the first one arrested. He was in the vicinity of a multi-storied building, near the scene where President Kennedy and Texas Governor Connally were shot. On the fourth or fifth floor--it has never been completely determined on which floor of that building--four empty cartridges were found."* This was, according to what the public would soon be told, the wrong number of cartridges...on the wrong floor. The arrested man, moreover, was quickly released.

And NBC was no better... NBC anchorman Frank McGee, after showing his viewers a photo of a sniper rifle being removed from the book depository, reported *"The best we can make out now the President's motorcade had really traveled perhaps a few yards beyond this point and that the fatal shots that were fired were fired from behind and struck him in the back of the head."* He then added *"and then incongruously some way another bullet struck him in the front of the neck."* Incongruously, the possibility there was more than one shooter was not to be discussed.

Meanwhile, America's newspapers only added to the confusion. An 11-22-63 UPI article by Merriman Smith, who would win the Pulitzer Prize for his reporting, claimed Governor *"Connally was hit in the head and back,"* at the same time CBS was telling its viewers Connally had multiple chest wounds. Neither report was accurate, of course. An 11-22 article rushed out for the Dallas Times Herald, moreover, reported both that *"Bullets apparently came from a high-powered rifle in a building at Houston and Elm"* and that a witness said: *"the motorcade had just turned onto Houston Street from Main Street when a shot rang out. Pigeons flew up from the street. Then, two more shots rang out and Mr. Kennedy fell to the floor of the car. The shots seemed to come from the extension of Elm Street from just beyond the Texas School Book Depository Building..."* Hmmm... Someone reading this article would quite possibly have concluded the President was shot by more than one assassin while riding on Houston Street.

On the other side of the world, The Christchurch Star reported *"Three bursts of gunfire, apparently from automatic weapons, were heard."*

Closer to home, as Air Force One soared back to Washington, Mrs. Kennedy was offered the choice of having her husband's autopsy performed at Walter Reed Army Hospital or Bethesda Naval Hospital. She chose Bethesda as the place where the questions would be answered. This proved to be a mistake. The hospital at Bethesda proved as inadequate at performing forensic autopsies as America's newspapers proved at reporting accurate information regarding the President's wounds.

And let's not forget the magazines... The Contents section of U.S. News and World Report in 1963 claimed that each issue reached the streets the Monday before its street date, after having gone to press the Friday before that. Its first articles on the assassination were in its 12-2-63 issue. This, then, suggests that these articles were written on the 22nd, just after the shooting and just as the magazine was going to press.

And they show it... U.S. News' initial article on the shooting was seriously short on facts, or at least the facts as most have come to know them. It declared *"The assassin killed President Kennedy with a*

single shot from a powerful .30 caliber rifle. The bullet struck in the neck and emerged from the back of the head." Yes, this is what one of the top magazines in the country was telling its readers as long as 10 days after the shooting. And yet, confused as these early accounts were, they were consistent on one thing--there was only one shooter. Not only did this article declare there was but one "assassin" before the writers of the article could possibly know anything about Lee Harvey Oswald (soon to be the sole suspect, who was never even mentioned in the magazine), but a companion piece on the motorcade announced in its title *"A Thousand Well-Wishers--And One Assassin."*

Amidst this confusion, and with the newly-crowned President quite literally still up in the air, someone got the idea that the public should see a friendly face. At **5:01 PM**, grandfatherly ex-President Dwight Eisenhower took to the airwaves and assured the masses huddled before their boob tubes that *"Americans are loyal, and it's just this occasional psychopathic accident that occurs, and I don't know what we can do about it."* It's unclear if Eisenhower had been following the developments in Dallas, and had already decided that Lee Harvey Oswald, an employee of the building from which shots were fired, and a suspect in the murder of a Dallas police officer, was a *"psychopathic sort of accident."* But he certainly prepared the American people to think as much.

FBI Director J. Edgar Hoover was no less guilty of spreading half-baked info. Hoover's notes from this day reflect that he called Attorney General Robert Kennedy and told him that the suspected assassin Lee Harvey Oswald had run into two police officers a block or two away from the assassination site and had killed one of them in a shoot-out. He also told Kennedy that Oswald had been to Cuba several times. As a solo Dallas policeman had been killed a few miles away from the assassination site, and as Oswald had never been to Cuba, these statements were quite incorrect, and suggest that either Hoover's information or his ability to grasp such information was seriously flawed.

But Hoover was not the only one seriously out of touch with the most basic facts. More than four hours after the Italian Mannlicher-Carcano rifle used in the assassination had been found in the school book depository, and nearly as long after Oswald had been arrested in a movie theater without firing a shot, the great Walter Cronkite was still telling his viewers that the rifle found in the depository had been a German Mauser (a story that would not be corrected until the next day), and that Oswald had killed a policeman in a shootout at a theater.

But the Johnson Administration, apparently, had bigger concerns than the mainstream news media's totally confusing the public. Dallas District Attorney Henry Wade was, apparently, letting it be known that he suspected Oswald was but one actor in a larger conspiracy. (The next morning's Dallas Morning News, in fact, claimed that Wade had intimated that "preliminary reports indicated more than one person was involved in the shooting" and that he'd said "Everyone who participated in this crime--anyone who helped plan it or furnished a weapon, knowing the purposes for which it was intended--is guilty of murder under Texas law" and that they "should all go the the electric chair.")

Wade's comments, moreover, were bland as milk compared to those of his assistant, Bill Alexander, who was hinting to the press that Oswald would be charged with acting as part of a communist conspiracy.

Well, this just wouldn't do. Wade was later to admit that Cliff Carter, one of newly-crowned President Johnson's closest aides, called him repeatedly on this evening, starting around 5 or 6 o'clock, to make sure that Oswald was not charged with acting as part of a conspiracy. While Johnson was reportedly concerned that Wade would press charges accusing the Russians of conspiring against Kennedy, it seems more than clear that his interference in this matter would lead Wade and the Dallas Police to be less than enthusiastic about pursuing *any* conspiracy.

Even so, Wade's promise of cooperation was apparently not enough. An 11-14-93 article in the

Washington Post revealed that, at roughly the same time Johnson was having Carter contact Wade, he was having another close associate, Homer Busby, contact Texas Attorney General Waggoner Carr, and ask Carr to convene a state *"court of inquiry"* that would supersede the authority of the Dallas Police and the Dallas County District Attorney's office.

But these were not the last of Johnson's power grabs. Shortly after landing in Washington, President Johnson had his own talk with FBI Director J. Edgar Hoover. According to a Hoover memo, Johnson told him to ignore the inconvenient problem that he had no jurisdiction, and to simply take charge of the investigation. According to Cartha DeLoach, the FBI's liaison with the media, LBJ told Hoover to have a report on his desk in two days, and to use whatever powers the executive branch had to offer to accomplish this task.

Hoover sprang into action. At **8:40 PM CST**, the FBI distributed the following teletype to all its field offices: *"All offices immediately contact all informants, security, racial and criminal, as well as other sources, for information bearing on assassination of President Kennedy. All offices immediately establish whereabouts of bombing suspects, all known Klan and hate group members, known racial extremists, and any other individuals who on the basis of information available in your files may possibly have been involved."*

Around **10:00 PM CST**, the FBI sent another teletype to its field offices, this one even more instructive: *"The Bureau is conducting an investigation to determine who is responsible for the assassination. You are therefore instructed to follow and resolve all allegations pertaining to the assassination. This matter is of utmost urgency and should be handled accordingly keeping the Bureau and Dallas, the office of origin, apprised fully of all developments."*

By **11:18 PM** Dallas Mayor Earl Cabell had had enough. While he'd mostly sat by as a parade of pundits criticized his city for its climate of intolerance and violence, he decided it was time to go on the defensive, and deflect the blame onto Lee Harvey Oswald. He told a national audience *"I don't believe this event will hurt Dallas as a city. This was the act of a maniac who could have lived anywhere--a man who belonged to no city."* The investigation into Oswald's possible guilt was only hours old, and already public figures were denouncing him as a homeless maniac.

At **11:49 PM CST** it was announced that Lee Harvey Oswald had been officially charged with the murder of the President. That's right. Mayor Cabell had pronounced Oswald a *"maniac"* and guilty of killing Kennedy before Oswald had even been charged with the crime.

All through the night the FBI and DPD worked together in lockstep. The Dallas Police sent much of the physical evidence gathered to the FBI's crime lab. The FBI pursued a few leads of its own. By morning, the FBI had linked Oswald to the Mannlicher-Carcano rifle found on the sixth floor of his work. They had also examined his background as a former resident of the Soviet Union.

Sometime the next morning, the U.S. Ambassador to the Soviet Union, Foy Kohler, met with Soviet leader Nikita Khrushchev. According to a State Department cable on the meeting, Kohler told Khrushchev the new company line--that Oswald must have been a *"madman"*. Reflecting his concern that those prosecuting Oswald would focus on his alleged *"Marxism"*, and that this would hurt U.S. relations with the Soviets, Kohler offered *"While we clearly must be factual and objective in our output, I would hope, if facts permit, we could deal with the assassin as 'madman' with long record of acts reflecting mental unbalance rather than dwell on his political convictions."*

And Kohler wasn't the only one itching to move on. An 8-19-70 interview of CIA Director John McCone, conducted for the LBJ Library, reflects that on the night of the shooting McCone visited Johnson at his home and that Johnson's *"mood was one of deep distress over the tragedy, and grave*

concern over how to properly handle the men in the organization whose competence he recognized...he decided to work with the organization and to win its support, and he did so successfully. Many men who were determined to leave the next morning stayed on and served him loyally and very well--and some to the end of his Administration." While Johnson's Daily Diary, available on the LBJ Library website, demonstrates that McCone was mistaken as to the exact timing of this discussion, and that it actually took place early the next morning, on the 23rd, his recollection is nevertheless illuminating. Johnson was supposedly concerned that a foreign government had been behind Kennedy's death. And yet, he met with two ex-Presidents, three top Kennedy advisers, and twelve members of Congress upon his return to Washington, and failed to meet with the head of the CIA until the next day. This suggests that Johnson's priority on his first night as President was not in finding out what had happened to his predecessor, but in political maneuvering. Even stranger, McCone failed to mention any concern of Johnson's that Kennedy was killed by an international conspiracy. This would have been the expected topic of conversation.

If, with the arrest of Oswald, Johnson was preparing to move on, however, his plan would soon hit a snag. At **9:01 AM CST** on **11-23** he called FBI Director Hoover for an update on the investigation. While the tape of this conversation has mysteriously been erased, the remaining transcript reflects that Hoover told Johnson that *"The evidence that they have at the present time is not very very strong,"* and that Hoover then discussed a recent trip that Oswald had made to Mexico City: *"We have up here the tape and the photograph of the man who was at the Soviet Embassy, using Oswald's name. That picture and the tape do not correspond to this man's voice, nor to his appearance. In other words, it appears that there is a second person who was at the Soviet Embassy down there."* While Hoover seems much more in command of the evidence in this conversation than in the previous day's conversation with Robert Kennedy, by the end of the conversation, he once again displayed his confusion: *"I think that the bullets were fired from the fifth floor and the three shells that were found were found on the fifth floor. But he (the sniper) apparently went up to the sixth floor to have fired the gun and throw the gun away and then went out."* The rifle and shells were, of course, later determined to have both been recovered from the sixth floor.

Shortly after this call, at **10:20 AM CST**, the FBI dispatched another teletype to its field offices, this one telling them to stop pressing for information, and to resume normal activities. *"Lee Harvey Oswald has been developed as the principal suspect in the assassination of President Kennedy. He has been formally charged with the President's murder along with the murder of Dallas Texas patrolman J.D. Tippit by Texas state authorities. In view of developments all offices should resume normal contacts with informants and other sources with respect to bombing suspects, hate group members and known racial extremists. Daily teletype summaries may be discontinued. All investigation bearing directly on the President's assassination should be afforded most expeditious handling and Bureau and Dallas advised."*

Well, wait a second. Hoover had just told Johnson that there may be someone "using Oswald's name" and engaging in suspicious activity, and yet the FBI sends out a teletype telling its field offices to stop pressing their sources for information? Was Hoover afraid of finding out something he didn't want to know? Even if the case against Oswald looked solid, shouldn't the FBI have pressed its sources for more information?

Or was Hoover not interested in such information, for his own selfish reasons? Just moments before this teletype went out, Dallas Police Chief Jesse Curry, reciting something he'd been told the night before, told a national television audience that the FBI had known for some time that Oswald was dangerous, but that they had failed to inform the local police. This raises the possibility that Hoover didn't want the investigation to expand beyond Oswald because it might cast suspicion on his own

agents.

Or perhaps not. In either event, Chief Curry's statement proved too much for the thin-skinned Hoover. Hoover's top aide DeLoach asserts in his book that after hearing Curry's comment Hoover called up his many powerful friends in Texas and asked them to put whatever pressure was necessary on Curry to bring him into line. This approach, apparently, proved successful. Curry would later withdraw his statement. (This proved too little too late for Curry, however. The Dallas PD was refused the assistance of the FBI crime lab for some time afterward and only regained access to those services upon Curry's removal from office.)

Still, Hoover wasn't the only one circling in on the Oswald-did-it-all-by-his-lonesome scenario. Sometime before noon, CBS News anchorman Walter Cronkite presented his viewers with the unexpected question of whether Oswald had been aiming at Kennedy, or Governor Connally. While doing so, he read aloud a letter Oswald wrote to Connally, when Connally was Secretary of the Navy, in which Oswald had asked that his *"dishonorable"* discharge be changed, and had asserted that he would *"employ all means to right this gross injustice."* This was inaccurate, but fair. Although Oswald had, in fact, received an *"undesirable"* discharge, and not a *"dishonorable"* discharge, Oswald himself had misrepresented the discharge in his letter. What was both inaccurate and unfair, however, was Cronkite's misrepresentation of Oswald's complaint. According to Cronkite, Oswald was *"dismissed"* from the Marines after twice being court-martialed, once for possession of a private firearm, and once for abuse to a non-commissioned officer. Cronkite had thereby painted a picture of Oswald as a violent malcontent, and had hidden from his viewers that Oswald had in fact been given an honorable discharge from the Marines, and that his discharge status from the Marine Corps Reserves had been changed to *"undesirable"* only after he had moved to Russia.

If Cronkite ever corrected this mistake, moreover, well, *that* would be news. We do know, however, that he did try to clarify one piece of information he'd provided on the day before. Apparently reporting the speculation of some of the doctors as if it had been the conclusion of all of the doctors, he further confused the country as to the nature of Kennedy's wounds by reporting that the Dallas doctors now *"said that the bullet that entered his neck came out the back of his head."* Yes, you read that right. While on the day of the shooting CBS had been the one network to accurately report that Dr. Perry *"did not know"* if Kennedy's wounds were made by one or two bullets, it reversed itself the next day and reported that the Dallas doctors claimed Kennedy's wounds were caused by one bullet, entering from the front. Cronkite didn't even try to explain how this was possible given that the supposed sniper's nest was behind Kennedy at the time of the shooting. He just spat out the confusing information, and kept moving. You can't make this stuff up.

Nor should you need to. Yes, truth is truly stranger than fiction.

After finishing with Hoover, President Johnson met with Mrs. Jacqueline Kennedy, and then President Eisenhower. He then made a **12:35 PM** CST phone call to Wall Street Attorney Edwin Wiesel. According to the transcript of this conversation in Max Holland's book *The Kennedy Assassination Tapes*, Johnson asked for Wiesel's help in keeping the economy stable, and alluded to his earlier conversation with Hoover by warning Wiesel *"This thing on the...this assassin...may have a lot more complications than you know about...it may lay deeper than you think."* What makes this statement especially intriguing is that the transcript of this conversation provided by the LBJ Library and available online has Johnson saying something completely different. The Library's transcript reads: *"I may--have a lot more complications-- you know about them so--it may lead deeper."*

When one considers that the tape of Johnson's earlier conversation with Hoover was inexplicably erased while in the possession of the LBJ Library, and that all that remains of this conversation is a transcript provided by the Library, and that people who've acted out this transcript swear it plays

nowhere near the length of the 14 minute gap on the tape, one can't help but wonder what else Johnson and Hoover talked about in that first phone call on 11-23.

There is another phone call purportedly made by Johnson that is equally intriguing. Long-time Dallas researcher and icon Mary Ferrell reported that in the 1970's one of her friends had lunch with Dallas Police Captain Will Fritz. According to this unidentified source, Fritz confided that on 11-23-63 he received a phone call from President Johnson telling him that "*You've got your man, the investigation is over.*"

If this story is true it helps to explain Fritz's subsequent actions. Despite the fact that the only witnesses claiming to see a sniper in the sixth floor window had failed to identify Oswald, and that the paraffin test for nitrates on Oswald's cheek, which if present would have suggested he'd fired a rifle, had turned up negative, Fritz, who was chief of the Dallas Police Homicide Bureau, told the press at 2:05 PM CST "*that this case is cinched, that this man killed the President. There's no question in my mind about it...We are convinced beyond any doubt that he did the killing.*" Similarly, the 11-24 New York Times quoted Fritz as saying "*We're convinced beyond any doubt that he killed the President.*" The 11-24 Washington Post, the most widely read paper by the nation's movers and shakers, went a little bit further, however. In their account of Fritz's 11-23 statements, he claimed not only that "*This man killed the President,*" but "*There were no accomplices.*"

Well, how could he know that? Consider the damage to Fritz's reputation should Oswald have confessed the next day, and named names. Well, why would Fritz have risked such a thing? And who, for that matter, were the "we" Fritz claimed were already convinced of Oswald's sole guilt?

Dallas District Attorney Henry Wade was obviously one of the "we" mentioned by Fritz. In a morning news conference, when asked by the press to describe Oswald, Wade showed his hand, stating "*I can't describe him any other than--the murderer of the President, is about all the way I put on it, but I don't know anything about the accused--his psychological background or anything.*"

It's cute how Wade calls Oswald "*the accused*" after first describing him as "*the murderer.*" It's also kinda cute how Wade says he doesn't know anything of Oswald's psychological background, but then (according to the next day's Herald-Examiner) admitted he "*expected Oswald to plead insanity,*" and (according to the next day's New York Times) stated "*I think we have enough evidence to convict him (Oswald) now.*" Neither Fritz nor Wade had read the as-yet-unwritten autopsy report, tested Oswald's rifle to see if it was capable of accurately firing the shots, or conducted an interview with anyone in the Presidential limousine or Secret Service back-up car. What few witness statements they had obtained provided conflicting accounts on most every point but one: most of the statements agreed that two of the three shots were fired very close together. As the FBI would soon determine, Oswald's bolt action rifle could not have been fired accurately more than once every 2.3 seconds.

Which isn't to say the FBI was any less closed-minded. An 11-23-63 memo from Cartha DeLoach to J. Edgar Hoover regarding the FBI's acquisition of the Zapruder film, a home-movie of the shooting taken by a bystander, states that the Dallas Special Agent in-Charge, J. Gordon Shanklin, who'd been provided a copy of the film by the Secret Service, "*did not believe the film would be of any evidentiary value; however, he first had to take a look at the film to determine this factor.*" It's almost as if he were apologizing for doing his job.

Others were doing theirs. At **5:10 PM** CST Detective CN Dhority of the Dallas Police Department prepared a homicide report on Kennedy's murder. It read "*The expired was riding in motorcade with wife and Governor John Connally, and his wife. Witnesses heard gun shot and saw the President slump forward. More shots were heard and the expired fell in his wife's lap. Governor Connally was also shot*"

at this time." While the report, based on the statements of the closest eyewitnesses, is somewhat vague, it is clear on one point. Kennedy reacted to the first shot. Months later, after the possibility was raised that Oswald did not have enough time to pull off the shooting as purported by the FBI and Secret Service, the Warren Commission would propose that perhaps the first shot missed. There was no support for such a miss, mind you. It was just speculation, designed to place minor doubts in the minds of those who might be holding major doubts.

On the evening of November 23rd, however, this was President Johnson's tactic. Now, some of those closest to Kennedy, including his secretary Evelyn Lincoln, immediately suspected Johnson's involvement. He was almost certainly aware of this. It only makes sense, then, that he would try to convince them he was sincerely interested in finding Kennedy's true assassins. He would do this, moreover, whether or not he himself was involved. So it comes as not surprise that, as reported in William Manchester's *The Death of a President*, President Johnson cornered President Kennedy's top speechwriter and adviser, Special Counsel Ted Sorensen, on this evening, and asked him if he'd thought a foreign power was responsible for Kennedy's murder. Yes, you read that right. Here was Johnson, hours after the Dallas Police had taken to telling everyone it was Oswald, and that he'd acted alone, and hours after the FBI had embraced this same conclusion, picking Sorensen's brain about a possible conspiracy. While Sorensen, near as can be gathered, never ascribed an ulterior motive to Johnson for doing so, it is nevertheless intriguing that, in his 2008 memoir *Counselor*, Sorensen specified that, as the years passed, his suspicions of conspiracy only grew.

An 11-23 UPI article on Governor Connally's wounds shared the homicide report's account of the shots. It declared: *"The president was shot first. A bullet smashed through his head. Sheriff's deputies who lined the route said there was a pause of several seconds before two quick shots followed the first."* This report hit the streets more than 24 hours after the shooting. And yet it was still claiming Kennedy was hit in the head by the first shot. The "official" solution, of course, is that he was hit in the head by the third shot.

An additional 24 hours only made things worse, however. An 11-24 UPI update of the article on Connally specified: *"The Governor, facing the President in the White House limousine Friday, swiveled in horror when the first two bullets struck Mr. Kennedy. The quick movement probably saved his life. The next bullet struck Connally and sped downward from the collarbone through the right side of his chest."* If the first shot missed, and the second shot hit both Kennedy and Connally, and the third and final shot was fired 5 seconds after the second shot, as most current single-assassin theorists hold, why didn't anyone report this in the days after the shooting?

Still, virtually every early news article reflects some confusion, and that speculation was the rule and not the exception. An 11-23 Canadian Press article found in the Winnipeg Free Press, for example, reports: *"At approximately 12:30 p.m. CST, the slow-moving Kennedy motorcade had rounded a downtown corner to enter a freeway. Three shots-rang out. Detective Ed Hicks said one bullet from a 7.65-millimetre Italian-made rifle, fitted with telescopic sights, hit the back of Kennedy's head and emerged from his throat. 'It made a hole about two inches wide at the back of his head,' he said. Another struck Texas Governor John Connally, Jr., who was riding in the open presidential limousine. Another struck a nearby road manhole."* Apparently, Hicks had figured out that the supposed sniper's nest was behind Kennedy at the time of the shooting, and had simply reversed the trajectory of the bullet presumed to have entered Kennedy's throat and explode from the back of his head suggested by the Parkland press conference.

Apparently, others shared his thinking; an 11-23 UPI article on the similarity of Kennedy's death with Lincoln's found in the St. Joseph News-Press claimed *"President Kennedy also suffered a fatal head wound, the bullet entering the back of his head, then out of his throat."* This description was especially surprising in that the lead story on Kennedy's death, at the top of the page, claimed something quite

different. This story, courtesy the Associated Press, opened with *"Three shots rang out, blood sprang from the President's face. He fell face downward in the back seat of his car."* Well, heck, what were the readers of this paper supposed to believe? That he'd been shot in the back of the head, only to have blood spring from his face, while the bullet exited his throat?

Another UPI article, this one found in the 11-23 Lodi News-Sentinel, was much more careful, and suggests that yes indeed some newsmen were trying to make the president's wounds fit the assumption Kennedy was shot from behind, as opposed to simply reporting what Dr.s Perry and Clark had said at the afternoon press conference. The article relates: *"The fatal shot apparently came from a window of the Texas School Book Depository...Kennedy fell over sideways on his face toward the seat. Doctors said later that one shot apparently had torn through both the back of his head and his throat."* Note the implication that the head wound was an entrance, when Dr. Clark said it had been either an exit or a wound of both entrance and exit. Note also the implication the throat wound was an exit, when Dr. Perry specified that it appeared to be an entrance.

An article in the Boston Globe, fortunately, not only shared UPI's new interpretation of the bullet's trajectory, it confirmed the thinking behind it. It admitted: *"The rather meager medical details attributed to Dr. Malcolm Perry, the attending surgeon, described the bullet as entering just below the Adam's Apple and leaving by the back of the head. Since that statement Friday afternoon it is believed from determining the site of the firing that the bullet entered the back of the head first and came out just under the Adam's Apple."*

Now, it might seem strange that, within a day of the shooting, members of the media would disregard the statements of Kennedy's emergency room doctors, and re-interpret the trajectory of the fatal bullet...so that all the shots came from behind, where, by gosh, the government's chief suspect was employed. But it's really not so strange, once one takes into account the incredible confusion then reigning down upon the country. No one knew what to think, so some with a soapbox took it upon themselves to calm down the masses.

Confusion was so widespread, in fact, that even photo captions were suspect. The caption to an AP photo by James Altgens found in the 11-22 edition of the Benton Harbor, Michigan New Palladium--of Kennedy reacting to the first shot, with his arms at his neck--claimed it depicted President Kennedy *"grasping his chest just seconds after assassin's bullet struck him in head."* Kennedy would not receive his fatal head wound, of course, until seconds after this photo was taken. And the caption to the photo below it was no better. It read *"Moments before vicious killer fired: President and Mrs. Kennedy flash their famous smiles to crowds along Dallas parade route in this picture taken just minutes before a rifle bullet struck the nation's Chief Executive."* And they're smiling alright. There's just one problem: the photo depicts Governor Connally in the back seat of the limo and Mrs. Kennedy in the middle and was not even taken in Dallas.

This photo appeared in the 11-23 Albuquerque Journal as well--only there someone realized that Connally was not in the back seat of the limo at the time of the shooting, but in a jump seat directly in front of Kennedy. And improvised... After claiming *"Moments Before Shooting"* the writer of this caption asserted that this was a photo of President Kennedy and Governor Connally *"moments before a sniper fatally shot the President and wounded Governor Connally (sic)."* He (or she) then did what should never be done--something far worse than repeating inaccurate information, something far worse than inaccurately reporting information--he (or she) made up a story to explain how this photo--which was obviously not from Dallas--could have been taken just moments before the shooting, and could therefore be deemed worthy of its position on the front page. He wrote: *"Connally moved to the car's jump seat before the shooting."*

The caption to a UPI photo found in the 11-23 Holland Evening Sentinel, of the Texas School Book

Depository, was not so dishonest, but even more misleading. Taking its cue from an inaccurate report by UPI's Pulitzer Prize-winning reporter Merriman Smith, it crowed *"A German-made rifle was found in the stairway on the fifth floor of the building by Dallas police, with three spent bullets, believed to be the two used to wound Texas Gov. John B. Connally and the one which fatally killed the President."* Beyond the stark and stupid fact that the caption claimed a bullet "fatally killed" the President (I mean, how can a bullet kill someone non-fatally?), the caption misled its readers as to the make of the rifle (it was Italian, not German), the location where it was found (it was found near a stairwell, not in a stairwell), the floor on which it was found (sixth, not fifth), and the respective number of bullets believed to have struck Connally and Kennedy.

And these weren't the only mistakes made by the award-winning Smith. The front page story for the Montana Standard, under Smith's name, reported not only that a German Mauser was found on the fifth floor, but that the school book depository overlooked Main St. (not Elm St.), and that Oswald killed a policeman at the Texas Theater before being taken into custody. Officer Tippit was, in fact, killed blocks away from the theater, by a man matching Oswald's description. No shots were fired at the theater.

Another 11-23 UPI article would prove even more confusing in light of subsequent developments. This article attempted to clarify the president's wounds by announcing *"An authoritative White House source said one bullet entered Kennedy's head and another penetrated the 'neck and chest.' The source said White House officials did not know until this morning about the second wound."* This is more than a bit strange. The wound discovered at the autopsy was a small back wound. The existence of this wound would have been brought to the attention of the White House after the autopsy was completed that morning. While Dr. Humes and his autopsy team had reportedly been unaware of the throat wound described the day before until making a phone call this morning, there is no reason to believe he turned around and called the White House to report his belated knowledge of a wound mentioned in all the morning papers. The neck wound in the story would therefore appear to be a reference to the back wound discovered at the autopsy. Since the Warren Commission would also come to misrepresent this back wound as a "neck" wound, and as this first misrepresentation of the back wound as a neck wound came from an "authoritative White House source" it's not unreasonable to suspect this migration of the wound came under direction of the White House. The use of the word "penetrated," however, implies the bullet did not exit, and since the only entrance mentioned at the press conference the day before was the throat wound, the article implies to its readers, regardless of the White House or FBI's intentions in leaking the story, that the bullet entered Kennedy's throat and continued down into his chest, and that the shot came from the front. Who was this "White House source?"

An 11-24 UPI article (found in the Dallas Times Herald) helps clarify the confusing article from the day before. This article, apparently based on the the same 11-23 conversation, states *"President Kennedy was shot twice yesterday by an assassin, White House sources said yesterday. First reports said the president was killed by one bullet. It was learned today that the information given the White House was that two bullets entered Kennedy's body. Staff doctors at Parkland Hospital in Dallas said only that the sniper's bullet pierced the mid-section of the front part of his neck and emerged from the top of the skull. White House sources said they understood that one bullet hit Kennedy in the neck area. He bent forward, turned his head and was struck in the skull by the second bullet."* This confirms that these "White House sources" knew nothing of the back wound, and were revealing only that the President had been hit twice, and not once, a distinction left open by Dr.s Perry and Clark at the 11-22 Parkland press conference.

These articles are nevertheless interesting in that they suggest the shots came from in front of Kennedy (why else mention that Kennedy turned his head before the head shot other than to explain how a wound on the back of his head could have been caused by someone firing from in front of him?) well

after it was apparent to others that, at the precise moment the shots were fired, Oswald's workplace was behind Kennedy.

Scratch that. The juxtaposition of the Parkland claim the throat wound was an entrance wound with the description of the shooting by "White House sources" created the appearance the "White House sources" also believed the shot came from the front. When they quite possibly did not. An 11-23 penned article in the 11-24 Los Angeles Herald-Examiner by Warren Rogers also presents the views of these "sources." It relates: *"A White House source said it appeared the President was slain by two bullets, instead of one as originally reported. This source said one bullet entered Kennedy's head and, as he turned, the other penetrated his neck and chest."* Well, I'll be. This White House source was claiming the first shot hit Kennedy in the back of the head, while the one talking to UPI had said the first shot hit him in the front of the neck. Hmmm... It seems quite possible from this that they were in fact the same source, and that this source had no insight on the shot sequence, but was simply stressing to its media contacts that having an entrance wound in Kennedy's throat and entrance wound on the back of his head DID NOT mean there were two shooters.

The cover-up was already in effect, before the investigation had truly begun. Perhaps this "source" meant well and was only trying to calm people down by leaking that the bullet and bullet fragments recovered in Dallas came from Oswald's rifle, and that it seemed clear he'd fired at least two shots from behind. But this was to avoid that the witnesses had heard three shots--and that the bullet and fragments comprised but two of these bullets. What had become of the third? And from where had it been fired?

These articles are also interesting for what they fail to state--that the statements of the sources cited in the article would only have merit if an autopsy had been conducted and its results reported to the White House. I mean, why isn't the "A" word mentioned even once in these articles?

An **11-24** AP article found in the Washington Post supports that something strange was afoot. This article, by Frank Carey, accurately reported the statements of the doctors at the press conference--that there was a wound in the middle of the throat and another at the back of the head, and that the doctors didn't know whether these wounds were caused by one or two bullets. It then claimed that pathologists consulted for the article believed the bullet creating the throat wound would *"probably"* strike the spinal cord. One anonymous pathologist then asserts that that the president's having taken a breath at the hospital proved the spinal cord had not been severed, but that, nonetheless, the fact Kennedy was having so much trouble breathing suggested *"the cord was probably badly damaged."* The article then asserted that, due to this difficulty, the doctors consulted concurred *"that the fatal bullet or bullets most probably affected vital areas near the brain stem."*

Well, this speculation is really not so strange. In fact, it's exactly what one would expect doctors to say, based upon the evidence provided. No, what's strange is that here, two days after the shooting, so little evidence had been provided. The article notes *"Doctors who attended the slain president at Dallas and those who later--at the Naval Hospital in Bethesda--prepared his body for burial have not given out the specific cause of death. And it has not yet been announced whether an autopsy involving a post-mortem examination of vital organs was performed at the Naval Hospital."*

The story then took another turn. On 11-24 The Dallas Morning News reported:

Photographer Sells Pictures Of Assassination for \$25,000

President Kennedy flinches as the first shot strikes him.

Mrs. Kennedy takes her husband in her arms.

The second shot strikes the President in the side of his head, toward the back.

His head becomes a blur.

Mrs. Kennedy crawls out over the trunk compartment in the rear of the car trying to escape the line of fire.

Her husband slumps to the floor.

A Secret Service agent runs to aid Mrs. Kennedy.

This historic picture of the assassination of President Kennedy is recorded on 8-millimeter color movie film shot by Abraham Zapruder; dress manufacturer of 3909 Marquette. Perched on a concrete pillar in a plaza a few feet away, Zapruder took perfect pictures of a terrible tragedy.

Saturday, Dick Strobel of the Associated Press, Los Angeles; Jack Klinge of United Press International, Dallas, and Dick Strolle, Los Angeles representative of Life Magazine, negotiated with Zapruder for still picture rights to his film. Rights finally were sold to Life for more than \$25,000, Zapruder told one of the other men who were bidding for the film.

This article, with its reference to a shot striking Kennedy on the side of his head (at the site of the large head wound)--reveals that the press was entirely clueless about the autopsy results. This was now two days after the autopsy, and no one in America had been told there was 1) a small bullet hole on the back of Kennedy's head, and 2) a small bullet hole on his upper back. These two wounds were the best evidence Kennedy had been shot from behind. Instead, the public had been told of a throat wound and a head wound, both of which could have been created by someone firing from in front of the President.

But forget about the public. What about the Dallas Police, who were still, as of this morning, charged with investigating the crime? Amazingly, even though they could be wasting valuable man hours looking for a second shooter--someone firing from the front--there is no evidence that anyone from Washington ever called them to tell them of the two previously unnoticed wounds discovered at autopsy. This suggests, if nothing else, that someone at the federal level had already decided to cut them out of the loop.

Even so, on the morning of 11-24, the papers were filled with quotes from Fritz and Wade on Oswald's obvious guilt. And it's not as if the press were unwitting bystanders. Some of the newspapermen have misrepresented the evidence against Oswald in a manner that suggests they were far from impartial. A nationally syndicated article for UPI by John V. Young described Oswald in the following manner: "Oswald, a Marine Corps misfit, expert rifleman, and former head of a 'Fair Play for Cuba' committee who defected to Russia for three years, refused to take a lie detector test after police said paraffin tests for gun powder on both his hands were positive. The U.S. Navy disclosed that after Oswald's undesirable discharge from the Marine Corps he wrote a letter to former Secretary of the Navy John B. Connally that he would 'employ all means' to get even for the wrong he felt was done him by the Corps."

The bias in Young's reporting is blinding. First, he describes Oswald as a "misfit" without any citation, with the obvious implication that "misfits" are not to be trusted. Second he describes Oswald as an "expert" rifleman, when in fact Oswald barely qualified as a "marksman" the last time he was tested. "Expert" is the highest level for a Marine Corps rifleman, while "marksman" is the lowest. Third, he describes Oswald as the head of the Fair Play for Cuba Committee in New Orleans, without mentioning that Oswald was its only member. But it gets worse.

Young next states that Oswald "defected to Russia." Oswald, in fact, never officially renounced his U.S. citizenship. He technically, therefore, having announced an intention to defect to Russia, only visited Russia. Young is also unfair in citing Oswald's refusal to take a lie detector test as evidence of his guilt. Oswald had not yet acquired a lawyer, so his taking a lie detector test at this time would have been stupid, to say the least.

Young's ignorance or bias reaches new heights, however, when he says the paraffin tests were for "gunpowder" and implies that the results of these tests indicated Oswald killed the President. Paraffin tests show positive results for many chemicals, including the components of gunpowder, but are not specific to gunpowder. As a result, the fact that Oswald tested positive on both hands, could simply indicate that he'd handled such a chemical. More likely, however, they reflected that Oswald had handled a pistol, which he had, by his own admission. Young's failure to state that the one test performed which could have indicated Oswald had fired a rifle, the paraffin test of his cheek, had obviously come up negative (or else Curry, Fritz and Wade would have cited it as evidence for his guilt), is further indicative of his bias and/or lack of curiosity.

His next few sentences confirm this bias. He correctly states that Oswald wrote John Connally after he received an "undesirable discharge." He leaves out, however, that Oswald wrote Connally after his "honorable discharge" from the Marines was blemished by an "undesirable discharge" from the Marine Corps reserves after he moved to Russia. Far worse, while Oswald indeed wrote Connally requesting that his "honorable" status be restored upon his return, and said that he would "employ all means to right this gross mistake or injustice to a bona-fied U.S. citizen and ex-service man", Young offers no reason to believe Oswald's view of righting a mistake or injustice meant killing Connally and/or Kennedy. Young's twisting of Oswald's words into a threat to "get even for the wrong he felt was done him by the Corps" is therefore thoroughly without foundation, and his depiction of Oswald as a "Marine Corps misfit" who sought to "get even" with "the Corps" incredibly unfair. One wonders if a spokesman for the Navy presented the evidence to Young in such a manner. If so, this might be taken as an indication that someone in the military chain-of-command had already made the decision to lynch Oswald in the public eye.

Another newspaper story in the 11-24 New York Times gives us more cause for pause. An article on the plans for Kennedy's funeral noted "The body of Mr. Kennedy which had been flown to Washington from Dallas yesterday (sic), was carried into the White House at 4:28 A.M. after being prepared by morticians at the Naval Hospital at Bethesda, MD." What's intriguing about this article is that it stated the exact time the body was brought into the White House but omitted that an autopsy had been conducted on the body at Bethesda. One can only assume the reporters knew an autopsy had been conducted. Certainly they should have suspected as much. So why didn't they say so? The public had a right to know. When President Warren G. Harding died suddenly in 1923 his widow would not allow an autopsy to be performed. Years later a best seller suggested she'd murdered her husband for infidelity. The New York Times should have reported that an autopsy had been performed or, if they really were unaware that one had been performed, demanded to know if one had been performed. The government's initial silence on these matters and the media's apparent lack of interest only fueled suspicion later when it was revealed that the descriptions of the President's wounds in the autopsy report written by military doctors differed greatly from the descriptions of his wounds given by the civilian doctors in Dallas.

Three items in that Sunday's Times demonstrate the need for clarity on these issues. The first article was the 11-23 AP dispatch attempting to correct the accounts of Kennedy's wounds given at the 11-22 Parkland press conference. As we've seen, this dispatch, while stressing that Kennedy was hit by two bullets, reported: *"White House sources said they understood that one bullet hit Mr. Kennedy in the neck. He bent forward, turned his head and was struck in the skull by the second bullet."* A turn of the page, however, brought one face to face with a more substantive article by Dr. Howard Rusk discussing the President's wounds. Rusk wrote *"The high-velocity bullet that entered through the neck and exited through the base of the skull tore away the bone and brain tissue, striking the vital areas of the brain."* As if that wasn't confusing enough, a Polaroid photograph snapped by Mary Moorman *"just as President Kennedy slumped after shot,"* was published alongside Rusk's article. This photo showed the

grassy knoll in front of Kennedy. As the Times had already published a number of photos showing their readers that the school book depository where Oswald worked was behind Kennedy, the undeniable message communicated by the proximity of this story and photo was that Kennedy was shot from in front and that the front page stories proclaiming Oswald's guilt were a lie.

Unanswered Questions

At left: Dallas Times-Herald photographer Robert Jackson's Pulitzer prize-winning photograph of Jack Ruby shooting Lee Harvey Oswald.

Above: Jackson's photo as normally published. Note that the man at left in the full photo has been cropped off. He is no longer part of the story. This was Capt. Will Fritz, head of the DPD's investigation of the killing of President Kennedy.

As Fritz was supposed to be protecting Oswald, his walking far ahead of Oswald just before the shooting, and his failing to even glance at Ruby till seconds after he fired, (as shown in the TV footage at left), seems a tad suspicious.

Was Fritz opening the door for Oswald, or Ruby? Was his worried face removed for photographic reasons, or political?

Unanswered Questions

If those articles had led some to suspect there was something not right about the assassination, moreover, what happened at **11:20 AM CST** that morning would most certainly have convinced them there was something absolutely positively wrong. While being transferred to the custody of the Dallas County Sheriff's Department, Oswald was shot in the guts by Jack Ruby, a local nightclub owner with ties to both the Dallas Police Department and the Chicago Underworld. Ruby, who had no business being in the garage where Oswald was shot, would later claim to have just walked down a ramp to get there. And yet, none of the press or Dallas police observing Oswald's transfer saw him walk down this ramp. And if that wasn't bad enough, it would soon be revealed (in, amongst other places, a New York Times article by Gladwyn Hill) that the original plan had been for the Dallas County Sheriffs to handle

Oswald's transfer, and that this plan had not been changed until late the night before. Oswald was taken to Parkland Hospital. He was treated by many of the same doctors and nurses who'd treated Kennedy two days before. He died at **1:07 PM CST**.

At **4:00 PM EST**, LBJ aide Walter Jenkins created a memo for the record, quoting J. Edgar Hoover on the shooting. It reads, in part: *"Last night we received a call in our Dallas office from a man talking in a calm voice saying he was a member of a committee organized to kill Oswald. We at once notified the Chief of Police and he assured us Oswald would be given sufficient protection...However, this was not done...Ruby says no one was associated with him and denies having made the telephone call to our Dallas office last night...he guessed his grief over the killing of his President made him insane. That was a pretty smart move on his part because it might lay the foundation for a plea of insanity later. I dispatched to Dallas one of my top assistants in hope he might stop the Chief of Police and his staff from doing so damned much talking on television. They really did not have a case against Oswald until we gave them our information... Oswald had been saying he wanted John Abt as his lawyer and Abt, with only that kind of evidence, could have turned the case around, I'm afraid. All the talking down there might have required a change of venue...The thing I am most concerned about, and so is Mr. Katzenbach, is having something issued so we can convince the public that Oswald is the real assassin ...We have no information on Ruby that is firm, although there are some rumors of underworld activity in Chicago."* The Katzenbach mentioned by Hoover is Nicholas Katzenbach. Since Robert Kennedy had stepped aside to take care of his family, Katzenbach had assumed his duties as Attorney General.

And was apparently very concerned about the public's attitude towards Oswald. An 11-24-63 internal memo from Alan Belmont to Clyde Tolson of the FBI reflects that "At **4:15 PM** Mr. DeLoach advised that Katzenbach wanted to put out a statement, *'We are now persuaded that Oswald killed the President, however, the investigation by the Department of Justice and the FBI is continuing.'*" According to Belmont, DeLoach was opposed to the idea. In any event, no such statement was issued.

Let's refresh. At the time of his death, Oswald had never confessed. In fact, he'd declared himself a patsy. No one could identify him as the shooter. The paraffin test of his cheek had come up negative. Several witnesses had stated that either shots were fired from someplace other than the school book depository where he worked or that men had raced out of the back of the depository building after the shots had been fired. The films of the assassination had not been studied. The First Lady, the Connallys, and some of the closest witnesses in the motorcade had not been interviewed. No motive for his purported act had been established. And there was something odd about his trip to Mexico...

Even so, some of those tasked with investigating Kennedy's killing thought it time to call it quits. Captain Fritz was quoted as saying that, with Oswald's death *"the case is cleared."* An AP dispatch from this day found in the Weisberg Archives is even more problematic. It reads: *"DIST. ATTY. HENRY WADE SAID TODAY THAT HE WILL NOT DIVULGE ANY MORE OF THE EVIDENCE OFFICERS HAVE AGAINST LEE HARVEY OSWALD. OSWALD WAS ACCUSED OF KILLING PRESIDENT KENNEDY AND WAS HIMSELF SLAIN TODAY. POLICE REFERRED ALL SUCH INQUIRIES FOR RELEASE OF EVIDENCE TO WADE. ASKED IF HE WOULD MAKE THE COMPLETE EVIDENCE PUBLIC, WADE SAID: 'NO. WE HAD PLENTY OF EVIDENCE TO CONVICT OSWALD. FINGERPRINTS AND EVERYTHING. BUT I'VE TOLD THE POLICE, AND THE POLICE HAVE COOPERATED VERY WELL, THAT THE OSWALD CASE IS MOOT NOW AND WE HAVE TO GET ON WITH THE RUBY CASE.'"*

Wade's refusal to go through the evidence, and pile even more dirt on the not-yet buried Oswald's corpse, however, was not appreciated by everyone. An 11-24 article by Anthony Lewis, found in the next day's New York Times, headlined *"OFFICIALS DISTURBED,"* and reported *"Federal officials, convinced that Lee Harvey Oswald was the assassin of President Kennedy, were considering tonight*

appropriate ways to let the public see the evidence."

Apparently, one of the ways deemed "appropriate" was to have the Dallas FBI go through the evidence against Oswald for the press, and misrepresent a fact or two. An 11-25 New York Times article recounting the evidence against Oswald reported that the paraffin tests showed *"particles of gunpowder from a weapon, probably a rifle, on Oswald's cheek and hands."* This, of course, was untrue. The results were negative for Oswald's cheek. Disturbingly, the Times article said this information came from Gordon Shanklin, Special Agent in Charge of the Dallas FBI.

Meanwhile, at Bethesda Naval Hospital, at **5:00 PM** EST, Dr. James J. Humes turned in the final draft of the President's autopsy report. He'd concluded, after conferring with Dr. Perry the day before and discovering that a small throat wound had been obliterated by a tracheotomy incision, that one bullet entered the President's back and exited his throat, and that a second bullet entered low on the back of the President's skull, broke into pieces, and exited from the top of the right side of his skull.

A short time later, during a **5:55 PM** EST phone call with Whitney Young, Director of the National Urban League, President Johnson hatched a plan. After Johnson complained *"Well, I've got to get this funeral behind me and I've got all these heads of state coming,"* Young suggested that in his upcoming statements Johnson should *"point out that...with the death of President Kennedy...that hate anywhere that goes unchecked doesn't stop just for the week."* This got Johnson thinking on ways he could exploit Kennedy's death. He told Young *"Dedicate a whole page on Hate... hate international... hate domestic...and just say that this hate that produces inequality, this hate that produces poverty... that's why we've got to have a tax bill... the hate that produces injustice... that's why we've got to have civil rights... it's a cancer that just eats at our national existence."* Apparently, the only conspirator Johnson seemed interested in pursuing was hate.

Not everyone shared his disinterest. Oswald's brother Robert, who'd been taken into protective custody by the Secret Service, along with Oswald's wife, mother, and children, would later relate in his book Oswald, *"I began to realize there was some difficulty between the Secret Service and the FBI...Gradually the reports and rumors from various sources seemed to fit together. As early as Friday night, I had heard some speculation about the possibility of a conspiracy behind the assassination of the President...On Saturday and Sunday there were rumors in Dallas that the "conspiracy" might involve some Government agency. By Sunday night, I realized that the agency under greatest suspicion was the FBI."*

Hmmm... Perhaps this suspicion had something to do with Johnson's decision to use the FBI as his private police department. A note from aide Clifton Carter to Johnson on this evening reflects that he'd just spoken to Texas Attorney General Waggoner Carr, and that Carr had expressed a willingness to create a court of inquiry that "could be used to clear up any question about the Oswald case in Dallas. He said the FBI could conduct this hearing through him in any manner they cared to complete the record on Oswald." To this Johnson added: *"Good idea, but purely a state matter. Can't say President asked for it."* Well, this reveals both Johnson's desire to personally oversee the investigation of Kennedy's death, through the FBI, and his even greater desire to hide this desire from the public. Feel free to get suspicious at this point...

And stay suspicious... In a filmed press conference from earlier in the evening (presumably around 9:20 EST) broadcast on NBC at **10:39 PM** EST, Dallas District Attorney Henry Wade gave in to pressure, presumably from the "Federal officials" mentioned in the article by Anthony Lewis, and recited the evidence against Oswald. According to a transcript in a book put out by NBC News, Seventy Hours and Thirty Minutes, he told the press *"His fingerprints were found on the rifle. Paraffin tests showed that he had fired a rifle recently."* Both statements are, of course, untrue. Oswald's fingerprints were not found on the rifle. Both the Dallas PD and the FBI crime lab found the prints around the trigger guard

inadequate to make a match. While it's purported that Oswald's palm print was lifted from the rifle barrel on the 22nd, the FBI would not even know of this print for days and it would not be matched to Oswald's palm print until the 29th. Even worse, the paraffin tests for Oswald's cheek were negative and suggested, if anything, that he had NOT fired a rifle.

Now, to be fair, it seems probable Wade was "innocent" in this matter. The 11/24/63 Wade press conference available on myfoxdfw.com has Wade saying *"His fingerprints were found on the gun--I've said that--"(then clarifying for the journalists) "on the rifle."* (Someone then asks about the paraffin tests) and Wade replies *"Yes, I haven't gotten into that. The paraffin tests showed that he'd recently fired a gun. It was on both hands. Both hands."* (And then clarifying, when asked if this meant a rifle) *"A gun."* Wade then corrects himself from moments earlier: *"It's a palm print rather than a finger print."* (Then clarifies) *"Yes on the gun also."* He is then asked on what part of a gun the palm print was found, and replies *"Under the--on part of the metal, under the gun."*

Hmmm. While Wade does say that fingerprints were found on the rifle, as quoted, NBC failed to note that he later corrected himself. Far worse, he NEVER said the tests indicated Oswald had fired a rifle. Never. Since this is most certainly the Wade press conference quoted by NBC, then, it seems likely this last quote was simply made up by NBC for its book, which just so happened to come out in 1966, just as books by writers Edward Epstein, Mark Lane, and Harold Weisberg were beginning to receive attention, and give people real reasons to doubt Oswald's guilt. Hmmm.

In any event, although Wade succumbed to pressure demanding he run down the evidence against Oswald one last time before the media, he stood by his guns on another point--by re-iterating his belief the case against Oswald was closed. An Associated Press transcript of the press conference, found in the Weisberg Archives, concludes:

REPORTER: "HAS YOUR OFFICE CLOSED THE INVESTIGATION INTO THE DEATH OF PRESIDENT KENNEDY?"

WADE: "NO SIR. THE INVESTIGATION WILL CONTINUE ON THAT, WITH THE BASIS, OF COURSE, THAT WE HAVE NO CONCRETE EVIDENCE THAT ANYONE ASSISTED HIM IN THIS. THE INVESTIGATION, I'M SURE, WILL GO ON WITH REFERENCE TO ANY POSSIBLE ACCOMPLICE OR PERSON THAT ASSISTED HIM IN IT."

REPORTER: "DO YOU HAVE ANY SUSPICIONS NOW THAT THERE WERE?"

WADE: "I HAVE NO CONCRETE EVIDENCE OR SUSPICIONS AT PRESENT."

REPORTER: "THANK YOU."

REPORTER: "WOULD YOU BE WILLING TO SAY, IN VIEW OF ALL THIS EVIDENCE, THAT IT IS NOW BEYOND A REASONABLE DOUBT AT ALL THAT OSWALD WAS THE KILLER OF PRESIDENT KENNEDY?" **WADE:** "I WOULD SAY THAT WITHOUT ANY DOUBT HE IS THE KILLER--THE LAW SAYS BEYOND A REASONABLE DOUBT, TO A MORAL CERTAINTY, WHICH I HAVE--THERE IS NO QUESTION THAT HE WAS THE KILLER OF PRESIDENT KENNEDY."

REPORTER: "THAT CASE IS CLOSED IN YOUR MIND?"

WADE: "AS FAR AS OSWALD'S CONCERNED."

While it's also suspicious that Wade cited a palm print found on the rifle as evidence, even though the lone palm print found on the rifle had not yet been thoroughly compared to Oswald's palm print, this may also have an "innocent" explanation. As Lt. Day, the Dallas crime lab employee purported to have lifted the palm print from the rifle on the 22nd, would later admit that "at a quick glance" he'd believed the palm print matched Oswald's, and that he'd told this to Police Chief Jesse Curry and Capt. Will Fritz, it seems reasonable to assume that one of these men passed this information on to Wade. If so, it seems reasonable to believe Wade said the palm print matched Oswald's without realizing that Day had

taken but a cursory look at this print, and that the FBI crime lab did not even know of its existence.

If so, however, this reflects badly on Wade's competence. Here he was, hours after the Dallas Police had received a report from the FBI's crime lab in which it was declared no identifiable prints were found on the rifle, giving a press conference on the evidence against Oswald, and repeating second-hand stuff he'd heard about a palm print being found on the rifle. There's just no getting around it. He either failed to read the FBI's report on the evidence before going before the cameras to talk about the evidence, or had accidentally misrepresented the case against Oswald by telling the nation something he should have believed untrue.

On **11-25**, the next morning, President Johnson met with Texas Attorney General Waggoner Carr, who'd flown in for Kennedy's funeral. In his book, *Texas Politics in my Rearview Mirror*, Carr describes this meeting as follows (points of interest in italics): "Before going to the cathedral for the funeral, I talked with a White House staff member and explained that Texas laws authorized a Court of Inquiry--which I could convene as the Attorney General--to establish the facts surrounding the assassination through a public hearing. After talking with the President, and getting *his approval*, the staff member *instructed* me to call a press conference, and say only that I would hold a Court of Inquiry on the assassination as soon as I returned to Texas. He *emphasized* that I should limit my remarks to those simple facts and *not reveal, under any circumstances, that I had discussed this with the White House or had White House approval*. I agreed and called to make arrangements for what I thought would be a very short speech to a small group of Texas reporters." Carr's words confirm what should already be clear--that Johnson was anxious to avoid any suspicion he was supervising the investigation of Kennedy's murder. They also reveal a related, but less obvious point--that most everyone was looking to him to take charge of the investigation, even though his doing so represented a clear conflict of interest.

After Carr left the White House, at **10:30 AM EST** President Johnson spoke to J. Edgar Hoover about the mounting pressure to create a Presidential Commission. He assured Hoover: "*Now we can't be checking up on every shooting scrape in the country*, but they've gone to the Post now to get them an editorial, and the Post is calling up and saying they're going to run an editorial if we don't do things. Now we're going to do two things and I wanted you to know about it. One: we believe that the way to handle this as we said yesterday--your suggestion--that you put every facility at your command, making a full report to the Attorney General and then they make it available to the country in whatever form may seem desirable. Second: It's a state matter, too, and this State Attorney General is young and able and prudent and very cooperative with you--he's going to run a court of inquiry which is provided for by a state law and he's going to have associated with him the most outstanding jurists in the country..." Johnson then proposed to Hoover that "any influence you got with the Post, have them point to them that you don't want too many things...and sometimes a Commission that's not trained hurts more than it helps," to which Hoover responded "I don't have much influence with the Post because frankly I don't read it. I view it like The Daily Worker." (The newspaper of the American Communist Party.)

Immediately after talking to Hoover, Johnson talked to influential newspaper columnist Joe Alsop. Johnson tried to build support for his plan. When Alsop questioned Johnson if somebody outside of Texas was gonna look into the shooting, Johnson slapped him down, telling Alsop "this is under Texas law and they take all the involvements and we don't send in a bunch of carpet-baggers. That's the worst thing you could do right now." (Of course, Johnson was not nearly as concerned about Texas law when it required that he allow Texas authorities an inspection of the President's corpse and limousine.) When Alsop began to explain that nobody was lobbying him to create a Presidential Commission, Johnson snapped "They're not lobbying you, they're lobbying me...last night. I spent the day on it...I had to leave Mrs. Kennedy's side at the White House and call and ask the Secret Service and FBI to proceed

immediately...I spent most of my day on this thing, yesterday. I had the Attorney General from Texas fly in here. I spent an hour and a half with him yesterday evening. I talked to the Justice Dept. lawyers and to the FBI and the FBI is of the opinion that the wisest, quickest, ablest, most effective way to go about it is for them to thoroughly study it and bring in a written report to the Attorney General at the earliest possible date which they've been working on since 12:30 yesterday." When Alsop proceeded to point out that there were many others demanding some sort of oversight of the investigation, Johnson insisted "My lawyers, though, Joe, tell me that the White House must not ...*the President...must not inject himself into local killings.*" Alsop responded "I'm not talking about an investigative body, I am talking about a body which will take all the evidence the FBI has amassed when they have completed their inquiry and produce a public report on the death of the President." When asked why the FBI couldn't do this itself, Alsop explained "on the left they won't believe the FBI...and the FBI doesn't write very well." Johnson then asked if he meant that Katzenbach should oversee it, and Alsop responded "I just wouldn't put it on Bobby and Nick Katzenbach...I'd have it outside...I think it's unfair to put it on Bobby...it is his own brother's death." To which Johnson agreed: "Not going to touch it on Bobby." From this sprang the Warren Commission. Thus, the Warren Commission was born just as Kennedy's body was buried. The eternal flame by Kennedy's grave was lit at **3:13 PM EST**.

After the flame was lit and the funeral was over, however, President Johnson was still so firmly in the dark that he told a crowd of Governors that Texas Governor John Connally, who'd been sitting in front of Kennedy in the limousine and had been wounded in his chest, right wrist, and thigh, had had his left hand blown off by the impact of Oswald's rifle. Even so, the situation was clear enough to Assistant Attorney General Nicholas Katzenbach that he wrote a memo to press secretary Bill Moyers informing him that "*The public must be satisfied that Oswald was the assassin, that he did not have confederates who are still at large, and that the evidence was such that he would have been convicted at trial*" and, stunningly, "*Speculation about Oswald's motivation ought to be cut off.*" The investigation into whether or not the man who murdered Oswald in front of a basement full of cops and cameras, Jack Ruby, was trying to silence Oswald was only beginning, and yet Katzenbach wanted the press to tell the American people Oswald had no confederates! Elsewhere in the memo, Katzenbach mentions the possibility of the President creating a Commission to look into the killings and concludes "*We need something to head off public speculation or Congressional hearings of the wrong sort.*" One can only conclude from this that Johnson at least initially viewed the assassination as a political situation that needed to be controlled, and not as a crime that needed to be solved, and that the Warren Commission was a vehicle to implement this desire. How else could he be certain that the Commission would not conduct hearings of the "wrong sort?"

To be fair, it should be noted that the "speculation of the wrong sort" so feared by Katzenbach had already begun. An 11-25 newspaper column in the St. Louis Democrat by former Major General Thomas Lane, an outspoken right-wing critic of the Kennedy Administration, surmises that, as "the assassination of President Kennedy would jeopardize larger communist interests", "the assassin had orders to shoot Gov. Connally and that he continued to fire until he did so." It then concludes: "In summary, the available information suggests that the communist underground directed the assassination of Gov. Connally; that Lee Harvey Oswald bungled the job and killed President Kennedy by mistake; and that Jack Ruby murdered Oswald to protect himself and the communist underground." (This column is notable not only because it undermines the oft-repeated factoid that the earliest conspiracy theorists were leftists, but because it undermines the oft-repeated argument among leftists that no one on the right would want to kill Kennedy because Kennedy was, at his core, an anti-communist and a hawk. Perhaps Noam Chomsky and others holding this view and believing that, in essence, no one on the right would want to kill Kennedy because he wasn't worth killing, should have ran their "pet theory" anti-theory past the likes of Major General Lane, who so adamantly believed Kennedy was so

far to the left that no *leftist* would want to kill him.)

In any event, that someone, for some reason, was determined to make sure the story dried up is suggested by this morning's New York Times headlines, which both convicted Oswald without a trial by declaring "PRESIDENT'S ASSASSIN SHOT TO DEATH" and cut off speculation about Ruby's motivation by describing him as a "Dallas Citizen" "who admired Kennedy."

An 11-25 memo about the Katzenbach memo is also quite revealing. This memo, from the FBI's Courtney Evans to his boss Alan Belmont, notes that Katzenbach said it was prepared "after his discussions with the Director (Hoover) yesterday." The memo then goes on to say that Katzenbach felt "that this matter can best be handled by making public the results of the FBI's investigation...he was thinking in terms of the end of the week if at all possible." Belmont, in turn, wrote his own memo to William Sullivan, who was leading the investigation into Oswald's Russian contacts. After referring to the investigation as the "Oswald case" as opposed to the investigation of the murder of the President, Belmont wrote "this report should include everything which may raise a question in the mind of the public or the press...this report is to settle the dust, in so far as Oswald and his activities are concerned, both from the standpoint that he is the man who assassinated the president, and relative to Oswald himself and his activities...the Director desires that it be out as quickly as possible."

And it's not as if this rush to judgment was a secret. In 1999, Russian President Boris Yeltsin supplied President Bill Clinton with a number of previously secret KGB files on the assassination. Included among these files was an 11-25-63 report written by Russian Diplomat Anastas Mikoyan on his trip to Washington for Kennedy's funeral. Mikoyan concluded: "Judging from everything, the U.S. government does not want to involve us in this matter, but neither does it want to get into a fight with the extreme rightists; *it clearly prefers to consign the whole business to oblivion as soon as possible.*"

And the government wasn't alone in its rush to judgment. Oswald's brother Robert would later reveal that he had difficulty even burying his brother because "One cemetery after another refused even to discuss the possibility of accepting Lee's body" and that "I was astonished by the reactions of the ministers I talked to. The first one, the second one, the third one and the fourth one flatly refused even to consider my request." One of them told him that he wouldn't perform even a simple service because "Your brother was a sinner." Ultimately, after "The Lutheran minister who had promised to be there at four had not appeared, and the Secret Service received word that he would not be coming out" the Rev. Louis Saunders, who'd come out just to see if he could be of help to the family, performed the service.

Yep, while only the day before federal officials were anxious to find out as much as they could about Oswald and present the evidence for his guilt to the public, by the time of Oswald's burial the thinking had become that he was dead and buried, and so was the case against him. A New York Times article by Fred Powledge (found in the next day's paper) reports:

Dallas Nov. 25 — Dallas authorities were willing today to make public all their physical evidence connecting Lee H. Oswald with the murder of President Kennedy, but the revelation was postponed at the suggestion of Federal officials here and in Washington.

Two local authorities involved in the case, Chief of Police Jesse Curry and the Dallas County District Attorney Henry Wade said they would like to place the evidence before the public. Both men added, however, that they would not do so if authorities in Washington wished otherwise.

Justice Department sources in Washington said that when they discuss a subject of such grave importance as the Oswald case they must be absolutely correct.

They said no pressure had been brought on officials here. They expressed confidence that all the

evidence would eventually be made public.

Hmmm. Perhaps these "Federal officials" were beginning to believe that the evidence against Oswald was not as convincing as they'd thought...only the day before. Or Perhaps they were simply trying to avoid embarrassment. The FBI, after all, had concluded there were no legible prints on Oswald's rifle. And Wade, in the press conference the night before, had claimed there was a palm print on the underside of the rifle. Placing the evidence before the public, then, might expose either that Wade had lied, or that the FBI had somehow missed the most damning evidence against Oswald. And no one wanted that.

Wrong, Wrong, Rather

Meanwhile, in radio and TV land, a whole new reign of error was beginning. CBS newsman Dan Rather, after viewing the home movie of the assassination taken by Abraham Zapruder, rushed back to the studio to describe the film for CBS News' radio and television audience. His description was to have many unfortunate consequences. (This first transcript was published by Richard Trask in *Pictures of the Pain*.)

Dan Rather (Radio Take 1): *"Well, let me tell you then, give you a word picture of the motion picture we have just seen. The President's automobile which was preceded by only one other car containing Secret Service Agents...the President's open black Lincoln automobile made a turn, a left turn off of Houston Street in Dallas onto Elm Street, this was right on the fringe area of the downtown area. This left turn was made right below the window from which the shot was fired...as the car made the turn, completed the turn--went below the window from which this shot was fired...went on past the building--keep in mind the window was on the sixth floor...it got about 35 yards from the base of the building...that is if you had dropped a plumb line from the window to the sidewalk to...the President's car was around 35 yards from that spot...President Kennedy had just put his right hand up to the side of his right eye. It appeared that he was perhaps brushing back his hair or rubbing his eyebrow. Mrs. Kennedy was not looking in his direction. In front of them in the jump seat of the Lincoln...were Governor and Mrs. Connally. The Governor, as was the President, was on the side of the car of the building in which the assassin was located. Mrs. Kennedy and Mrs. Connally were on the opposite side. Two Secret Service men on the front seat...At almost the instant the President put his hand up to his eyebrow...on the right side of his face, with Mrs. Kennedy looking away, the President lurched forward just a bit. Uh, it was obvious he had been hit in the movie but you had to be looking very closely in order to see it. Mrs. Kennedy did not appear to be aware that he was hit but Governor Connally in the seat just in front of the President, seemingly heard the shot...or sensed that something was wrong...Governor Connally, whose coat button was open, turned in such a way to extend his right hand out towards the President and the Governor seemed to have a look on his face that might say "What is it? What happened?" And as he turned he exposed his entire shirt front and chest because his coat was unbuttoned...at that moment a shot very clearly hit that part of the Governor. He was wounded once with a chest shot, this we now know...Uh, the Governor fell back in his seat...Mrs. Connally immediately fell over the Governor. Uh, I say fell, she threw herself over the Governor and **at that instant the second shot the third shot total but the second shot hit President Kennedy and there was no doubt there, his head...went forward with considerable violence.**"*

(Note: Rather's description here is quite controversial. As Kennedy's head actually goes slightly forward, and then back and to the left with considerable violence, many see his saying that Kennedy went forward with considerable violence as a deliberate lie designed to sell the American people that

the fatal shot came from behind. If it is true that Rather was trying to sell the American people the single-assassin scenario, however, it back-fired, as he also claimed the film showed Connally being hit well after Kennedy had first been hit, which is in conflict with the single-bullet theory so central to the single-assassin conclusion.)

Rather then described the aftermath of the shooting: *"Mrs. Kennedy stood up immediately her mouth wide open...The President slumped over against Mrs. Kennedy almost toppling her over as she was standing...Mrs. Kennedy then threw herself out of the back seat of the car onto the trunk of the car almost on all fours...stretched out over the trunk of the car...There was a Secret Service man standing on the back bumper. **It would appear that Mrs. Kennedy was either trying to get herself out of what she knew instinctively was danger or perhaps was trying to grab the Secret Service man and pull him into the back seat of the car for help.** At any rate Mrs. Kennedy was prone, uh face down on the back of the car on the trunk...The Secret Service man leaned over put his hands on her shoulders and shoved her back into the car. He seemed to be in danger of perhaps rolling or falling off the back. A Secret Service man in the front seat of the car uh was already on the telephone perhaps he had been on the phone all along it was not clear and the car sped away."*

Rather then answered a few questions from his fellow newsmen Richard Hotelett and Hughes Rudd. When asked if the limo ever stopped, he replied *"The car never stopped, it never paused."* When asked the length of the film, he replied *"Well, the complete scene that I just described to you covers exactly 20 seconds--that is from the time the car made the turn until the car disappeared onto an underpass."* When asked if the President was hit twice, he then added: *"It was very clear that the President was hit twice. He was hit, Governor Connally was hit and the Gov...uh the President was hit again."* When asked the length of the shooting sequence itself, he then offered: *"No more than five seconds and I...am inclined to think slightly less than that perhaps."*

(Note: when all is said and done, this was perhaps Rather's biggest mistake. By assuming that the fatal head shot was the third shot, and timing the shooting sequence from the first hit to the final hit, without accepting that there could have been a miss--without studying the eyewitness testimony, moreover, to see that there very likely was a miss--Rather thoroughly misled the public.)

Rather was then rushed onto television to describe the film to Walter Cronkite during CBS News' ongoing coverage of the assassination and aftermath. (Transcript as posted by Paul Rigby on the Education Forum, 11-15-12)

Dan Rather (TV Take 1): *"We have just returned from seeing a complete motion picture of the moments preceding, and the moments of, President Kennedy's assassination and the shooting of Texas Governor John Connally. Here is what the motion picture shows. The automobile, the black Lincoln convertible, with the top down - carrying, in the front seat, two secret service agents; in the middle, or jump seat, the Governor and Mrs. Connally; and, in the rear seat, President and Mrs. Kennedy - made a turn off of Houston Street, on to Elm Street. This was a left turn and was made right in front of the building from which the assassin's bullet was fired. After making the turn, and going about 35 yards from the corner of the building - six stories up in which the assassin had a window open - and keep in mind here that President Kennedy and Governor Connally are seated on, both on the same side of the car, on the side facing the building: Mrs. Kennedy and Mrs. Connally are on the side of the car away from the assassin. About 35 yards from the base of the building, President Kennedy, in the film, put his hand up to the right side of his face, the side facing the assassin. He seemingly wanted to brush back his hair, or perhaps rub his eyebrow. Mrs. Kennedy at this moment was looking away, or looking straight ahead. She was not looking at her husband. At that moment, when the President had his right hand up to this side of his face (gestures), he lurched just a bit forward. It was obvious that the shot had hit him. Mrs. Kennedy was not looking at him, nor did she appear to know at that instant that her husband had been hit. Governor Connally, in the seat immediately in front of the President, apparently*

either heard the shot or sensed that something was wrong because, Governor Connally, with his coat open, his button was undone, turned in this manner (turns back to his right with right arm extended), his hand outstretched, back toward the President; and the Governor had a look on his face that would indicate he perhaps was saying "What's wrong?" or "What happened?" or "Can I help?" or something. But as Governor Connally was turned this way, his white shirt front exposed well to the view of the assassin, the Governor was obviously hit by a bullet, and he fell over to the side. Governor Connally's wife, immediately, seemingly instantaneously, placed herself over her husband in a protective position, it appeared; and as Governor Connally fell back, President Kennedy was still leaned over. At that moment another bullet obviously hit the head of the President. **The President's head went forward, violently, in this manner (gestures).** Mrs. Kennedy, at that instant, seemed to be looking right-square at her husband. She stood up. The President slumped over to the side and, I believe, brushed against Mrs. Kennedy's dress. Mrs. Kennedy immediately turned and flung herself on the trunk of the automobile, face-down on the trunk, almost on all-fours. **The First Lady appeared to be either frantically trying to get the secret service man who was riding on the bumper of the car - the single secret service man riding on that bumper - to come into the car or to tell him what had happened; or perhaps, from the picture, it appeared she might have been trying to get out of the car some way.** The car never stopped. The secret service man in the front seat had a telephone in his hand. The car...its acceleration increased rapidly and it disappeared under an underpass. Three shots - the first one hitting President Kennedy, the second one hitting Governor Connally, the third one hitting the President - consume, possibly, five seconds. Not much more than that, if any. That is the scene shown in about twenty seconds of film that the FBI has in its possession. The film was taken by an amateur photographer who was in a very advantageous position, and who had his camera trained on the President's car from the time it made the turn in front of the assassin until it disappeared on its way to the hospital. This is Dan Rather in Dallas."

A short time later, he once again described the film to Cronkite. (Transcript as posted by Paul Rigby on the Education Forum, 11-15-12).

Dan Rather (TV Take 2): "We have just returned from seeing a complete motion picture of the moments immediately preceding, and the moments of, President Kennedy's assassination. The motion picture shows the limousine carrying: in the front seat, two secret service men; in the middle, or jump seat, Governor and Mrs. Connally; and, in the rear seat, President and Mrs. Kennedy; a single secret service man standing on the back bumper; the top of the black Lincoln convertible down. The car made a turn, a left turn, off of Houston Street, on to Elm Street, on the fringe of Dallas' down-town area; that turn made directly below the sixth floor window from which the assassin's bullets came. After the left turn was completed, the automobile, with only one car in front of it - a secret service car immediately in front - the President's car proceeded about 35 yards from the base of the building in which the assassin was. President Kennedy and Governor Connally were seated on the same side of the open car, the side facing the building: Mrs. Kennedy and Mrs. Connally on the side of the car opposite the assassin. President Kennedy is clearly shown to put his right hand up to the side of his face as if to either brush back his hair, or perhaps rub his eyebrow. Mrs. Kennedy at that instant is looking away, and is not looking at the President. At almost that instant, when the President has his hand up to this side of his face (gestures), he lurches forward something in this manner (gestures): The first shot had hit him. Mrs. Kennedy appeared not to notice. Governor Connally, in the seat right in front of the President - by the way, the Governor had his suit coat open, his suit was not buttoned - perhaps either heard the shot or somehow he knew something was wrong because the picture shows just after that first shot hit the President, the Governor turned in something this manner, with his right arm stretched back toward the President, as if to say "What's wrong?" or "What happened?" or say something. It exposed the entire white front shirt of the Governor to the full view of the assassin's window; and as the Governor was in this position, and President Kennedy behind him was slumped slightly over, a shot

clearly hit the front of Governor Connally; and the Governor fell back over towards his wife. Mrs. Connally immediately put herself over her husband in a protective position, and as she did so, in the back seat, this time with Mrs. Kennedy's eyes apparently right on her husband, the second shot – the third shot in all – the second shot hit the President's head. **His head went forward, in a violent motion, pushing it down like this (leans forward, lowering his head as he does so).** Mrs. Kennedy was on her feet immediately. The President fell over in this direction (leans to his left). It appeared his head probably brushed or hit against Mrs. Kennedy's legs. The First Lady almost immediately tried to crawl on – did crawl on - to the trunk of the car, face-down, her whole body almost was on that trunk, in something of an all-fours position. **She appeared to be either trying to desperately get the attention of the secret service man on the back bumper, or perhaps she was stretching out toward him to grab him to try get him in. Perhaps even trying to get herself out of the car.** The car was moving all the time, the car never stopped. The secret service man on the back bumper leaned way over and put his hands on Mrs. Kennedy's shoulders – she appeared to be in some danger of falling or rolling off that trunk lid. He pushed her back into the back seat of the car. In the front seat, a secret service man with a phone in his hand. The car speeded up and sped away. It never stopped, the car never paused. That's what the film of the assassination showed. The film was taken by an amateur photographer who had placed himself in an advantageous position: eight millimeter color film. This is Dan Rather in Dallas."

And that wasn't the last of it. Several hours later (one source claims at 8:26 EST) Rather described the film to Cronkite for a third and final time, and compounded his mistakes. (Transcript as published by Richard Trask in Pictures of the Pain.)

Dan Rather (TV Take 3): "The films we saw were taken by an amateur photographer, who had a particularly good vantage point, just past the building from which the fatal shot was fired. The films show President Kennedy's open, black limousine, making a left turn, off Houston Street on to Elm Street on the fringe of downtown Dallas, a left turn made just below the window in which the assassin was waiting. About 35 yards past the very base of the building, just below the window, President Kennedy could be seen to, to put his right hand, up to the side of his head to, either brush back his hair or cover up his eyebrow. President Kennedy was sitting on the same side of the car, as the building from which the shot came. Mrs. Kennedy was by his side. In the jump seat in front of him, Mrs. Connally, and Governor Connally, Governor Connally on the same side of the car as the president. And in the front seat, two Secret Service men. Just as the president put that right hand up to the side of his head, he, you could see him, lurch forward. The first shot had hit him. Mrs. Kennedy was looking in another direction, apparently didn't see, or sense the first shot, or didn't hear it. But Governor Connally, in the seat in front, appeared to have heard it, or at least sensed that something was wrong. The Governor's coat was open. He, he reached back in this fashion, back as if to, to offer aid or ask the president something. At that moment, a shot clearly hit the governor, in the front, and he fell back in his seat. Mrs. Connally immediately threw herself over him in a protective position. In the next instant, with this time Mrs. Kennedy apparently looking on, a second shot, the third total shot, hit the president's head. He, **his head can be seen to move violently forward.** And, Mrs. Kennedy stood up immediately, the president leaned over her way. It appeared that he might have brushed her legs. Mrs. Kennedy then, literally went to the top of the trunk, of the Lincoln car, p-put practically her whole body on the trunk. **It, it appeared she might have been on all fours, there, reaching out for the Secret Service man,** the lone Secret Service man who was riding on the bumper of the car, the back bumper on Mrs. Kennedy's side. Uh, the Secret Service man leaned forward and put his hands on Mrs. Kennedy's shoulder to, push her back into the car. She was in some danger, it appeared, of rolling off or falling off. And **when we described this before, there was some question about what we meant by Mrs. Kennedy being on the trunk of the car. Only she knows, but it appeared that she was trying desperately to, to get the Secret Service man's attention perhaps to help pull him into the car.** The car never stopped, it never paused. In the front seat, a Secret Service man was, was on the telephone. The

car picked up speed, and disappeared beneath an underpass. This is Dan Rather in Dallas."

(Note: in this, his fourth and final description of the Zapruder film, Rather repeated his inaccurate claim Kennedy's head went forward in response to the fatal head shot, but retreated from his speculation Mrs. Kennedy climbed onto the back of the limo while instinctively running from danger. In his 1977 book, *The Camera Never Blinks*, in which he acknowledged his mistake about the movement of Kennedy's head, but mistakenly claimed that he viewed the film on Saturday the 23rd, Rather did shed some light on something of interest: the reasons for his retreat. He admitted that "an editor" in New York told him to "leave out the part about her trying to flee." And that he did.)

But Rather was not the only one making false assumptions and compromises. An 11-25 AP Dispatch (found in the 11-26 Milwaukee Journal) proves that Rather was not even the only one claiming Kennedy's head jerked forward upon impact long before anyone could possibly have concluded it had indeed jerked slightly forward. It read:

"Dallas, Tex.-AP - A strip of movie film graphically depicting the assassination of President Kennedy was made by a Dallas clothing manufacturer with an 8 millimeter camera.

*Several persons in Dallas who have seen the film which lasts about **15 seconds**, say it clearly shows how the president was hit in the head with shattering force by the second of two bullets fired by the assassin.*

Life magazine reportedly purchased still picture rights to the material for about \$40,000.

This is what the film by Abe Zapruder is reported to show:

*First the presidential limousine is coming toward the camera. **As it comes abreast of the photographer**, Mr. Kennedy is hit by the first bullet, apparently in the neck. **He turns toward his wife Jacqueline, seated at his left, and she quickly begins to put her hands around his head.***

At the same time, Texas Gov. John Connally, riding directly in front of the president, turns around to see what has happened.

*Then Mr. Kennedy is hit on the upper right side of the back of his head with violent force. **His head goes forward and then snaps back**, and he slumps down on the seat.*

***At this time, Gov. Connolly is wounded** and he drops forward on his seat.*

Mrs. Kennedy then jumps up and crawls across the back deck of the limousine, apparently seeking the aid of a secret service man who has been trotting behind the slowly moving vehicle. He jumps onto the car and shoves Mrs. Kennedy back into the seat. Then he orders the driver to speed to the hospital where the president died.

The elapsed time from the moment when Mr. Kennedy is first struck until the car disappears in an underpass is about five seconds."

An 11-26 article by John Herbers, published in the 11-27 New York Times, moreover, repeats this same mistake. Herbers writes:

"The known facts about the bullets, and the position of the assassin, suggested that he started shooting as the President's car was coming toward him, swung his rifle in an arc of almost 180 degrees and fired at least twice more.

A rifle like the one that killed President Kennedy might be able to fire three shots in two seconds, a gun expert indicated after tests. (Note: this line is found in online versions of this article, but is not in a clipping of the article found in the Weisberg Archives. Perhaps it was only added for evening editions of the paper.)

A strip of color movie film taken by a Dallas clothing manufacturer with an 8-mm camera tends to support this sequence of events.

*The film covers about a 15-second period. As the President's car come abreast of the photographer, the President was struck in the front of the neck. **The President turned toward Mrs. Kennedy as she began to put her hands around his head.***

Connally Turns Around

*At the same time, Governor Connally, riding in front of the President, turned round to see what had happened. Then the President was struck on the head. **His head went forward, then snapped back,** as he slumped in his seat. **At that time, Governor Connally was wounded.***

The elapsed time from the moment Mr. Kennedy was first struck until the car disappeared in an underpass was five seconds."

Now this is interesting. Note that the AP article and the New York Times article make the same mistakes and repeat the same non-fact facts (which I have highlighted). Note that they both claim Connally was wounded by the third shot, for example. This suggests that the AP writer and Herbers were either sharing information or being fed some of the same questionable facts from an outside source, most probably the FBI. Well, then, was their main mistake--that Kennedy's head went forward--something told them by the FBI, and, if so, should we then assume Dan Rather was also told to say this? I mean, really, is it just a coincidence that CBS News, the Associated Press, and The New York Times, in short order, all incorrectly reported that the Zapruder film showed Kennedy's head going forward? That's pretty hard to believe.

Which brings us to UPI's article on the film. Here it is, as found in the 11-26 Philadelphia Daily News (4 star edition).

The headline on the front page reads: "*Man Who Came to See JFK Makes Tragic Movie*". Beneath this, there is the following explanation: "*These dramatic pictures are from an 8mm 'home movie' reel, shot by Dallas dressmaker Abraham Zapruder who went to see President Kennedy ride through cheering throngs in Texas city. His camera recorded one of the most tragic moments in American history. Story page 3*". Beneath this, are four frames from a home movie of the assassination.

On page 3, the following story is presented:

Movie Film Shows Murder of President

Dallas (UPI)

An amateur photographer shot an 8-MM movie film that clearly shows, step-by-step, the assassination of President Kennedy.

The film was made by Abraham Zapruder, a Dallas dress manufacturer. He is selling rights to the film privately. It has been seen by the Federal Bureau of Investigation, the Secret Service and representatives of the news media.

It is seven feet long, 35 seconds in colour, a bit jumpy but clear.

It opens as the Kennedy motorcade rounds the corner from Houston Street and turns into Elm Street.

Then it picks up the President's car and follows it down toward the underpass. Suddenly, in the film, Kennedy is seen to jerk. It is the first shot.

*Mrs. Kennedy turns, puts her arms around him. A second later, the second shot. **The President's head becomes a blur on the film, lunged forward and up.** The second bullet has torn into the back of his head.*

He rolls towards Mrs. Kennedy and disappears from sight. Mrs. Kennedy lurches onto the flat trunk deck of the Presidential car as a Secret Service man races to their aid. She is on her hands and knees. She reaches for him. He leaps up on the bumper. She pulls him up on the bumper or he pushes her back as the film ends.

Other films show the car never stopped, but raced to the Parkland Memorial Hospital with Mrs. Kennedy cradling the President.

Well, hell. This article was clearly *not* written by someone using the information provided the other writers. The film here is reported to be 35 seconds long, not 15. There is no mention of Connally at all, let alone a claim he was hit by the third shot. And yet the ONE mistake the three articles have in common is the same mistake the AP and Times article had in common with Dan Rather's earlier description of the film--the strange claim Kennedy's head went forward in response to the head shot... Hmmm...

And there's something even stranger about this article. The next day's San Francisco Chronicle re-printed three of the frames found on the front page of the Philadelphia paper, and similarly specified, in a caption beneath the second frame, *"In this photo from the 8mm movie strip taken by the amateur photographer, Abe Zapruder, motorcycle police are seen rushing to the car after the shots."* Well, this was actually misleading on two counts. For one, neither of the two motorcycle police in the frame are rushing to the car; one of them, in fact, is slamming on his brakes. For two, all the frames presented in the article were taken from the south side of Elm Street, with the grassy knoll in the background. Zapruder's film, of course, was taken from the north side. Yes, incredibly, the film frames featured in both the 11-26 Philadelphia Daily News and 11-27 San Francisco Chronicle articles on the Zapruder film were not actually taken from Zapruder's film, but from the film of another eyewitness, Marie Muchmore. Her film had been purchased by UPI on the 25th, and shown on WNEW-TV on the 26th. The sale and broadcast of her film had even been the subject of a UPI article found in some papers, such as The Valley Independent, on the 26th, and others, such as The Eugene Register-Guardian, on the 27th.

And yet no one in the government seemed to notice. Incredibly, neither Mrs. Muchmore nor UPI thought it their duty to share her film with the Secret Service or FBI. This was especially ironic, or disturbing, take your pick, given that UPI's article specified that Zapruder had made his film available to the authorities. In any event, Mrs. Muchmore's and UPI's deceptiveness regarding her film enabled it to pass under the government's apparently defective radar for a lot longer than one might think possible. It would be, amazingly, nearly three months before those investigating the assassination of President Kennedy even learned of its existence.

Something odd was in the air. Even the noted leftist Walter Lippman over-stepped the bounds of

responsible journalism and assumed not only that Oswald had acted alone, but that he knew *why* Oswald had acted. While Lippman's column entitled Murder Most Foul angered right-wingers across the country by blaming Oswald's left-wing extremism on the climate created by Dallas' right-wing extremists, the column is just as notable for its bold closure of the case. Lippman asserted that Oswald was *"addicted to the fascination of violence in his futile and lonely and brooding existence"* and that *"No human feeling stayed his hand...For him the government in Washington is a hated foreign power and the President in Washington is an invading conqueror."* Lippman concluded, not surprisingly, by telling his readers *"I do have much hope in the healing art of Lyndon Johnson"* and assured them that *"We can turn to him with confidence."*

And Johnson had decided to justify this confidence, or at least create the appearance of doing so. After Dan Rather described the Zapruder film on his nightly newscast, Walter Cronkite told the nation: *"The White House announced a full investigation into the assassination of President Kennedy under orders from President Johnson. All Federal agencies have been advised to cooperate with the FBI."* An 11-26 article found in the San Francisco Chronicle similarly reported: *"The case of the murder of the President did not end after all with the slaying of his suspected assassin, it became clear here yesterday. President Johnson himself said: 'The people of the nation may be sure that all of the facts will be made public.' He directed a 'prompt and thorough' investigation by the Justice Department and its investigative arm, the FBI."* The murder of president Kennedy had led to Johnson's becoming President, and now the murder of Kennedy's presumed assassin had led to his assuming total control of the investigation.

Meanwhile, over in Europe, the international media had done such a good job of selling that Oswald was a lone-assassin that the Nazi war criminal Albert Speer (no relation) wrote about it in his prison diary. He noted the irony that *"here only one confused loner was at work, so it seems; he conceived the plan and the assassination was successful. But the attempts on Hitler's life...planned with the precision of a General Staff operation by circumspect, cool-headed people...never did they succeed...."*

On 11-26, FBI Director J. Edgar Hoover and CIA Director John McCone share a friendly phone call. They discuss the fact it was not Oswald in the CIA's photos purportedly showing Oswald in Mexico. Hoover indicates he's not worried about this, however, because *"We do find from our informant down there that Oswald did call at the Embassy that day and the informant has given us the conversation that he had."* They mostly discuss the FBI's upcoming report. Hoover tells McCone *"We are trying to do it as fast as we can so we can dispel various wild rumors that have been circulating as to whether this man was the right man etc. that fired the gun. But there is no question that he is the right man."* He later offers *"Mr. Katzenbach, who is handling it for the Department...he will of course go over it very carefully because it will be a report that will be released to the public, probably through the White House...It is his intention to check with the agencies, Secret Service, etc., to be sure that whatever is said in the report is conferred in and it is agreed to by the various agencies mentioned."* He then concludes *"So you will have the opportunity to go over it and see exactly what is said and I know he will welcome any suggestion that you care to make."* Well, how about that... The agencies whose actions and failures to act were indirectly being investigated were given approval rights to the FBI's report--with the full knowledge of acting attorney general Nicholas Katzenbach.

And that's not the only sign a whitewash is afoot, run by Katzenbach. On 11-26, another memo from Evans to Belmont quoted acting attorney general Katzenbach as saying *"a tremendous responsibility had been placed on the FBI in this instance by President Johnson because this report, which is to be publicized, is for the purpose of assuring the American public and the world as to what the facts are in Kennedy's assassination and setting to rest the many, many rumors that have been circulating."* It continued: *"Katzenbach noted that it is, of course, more difficult to prove that something did not occur than to prove what actually happened. As a consequence, it is his belief there might have to be some*

so-called editorial interpretation." Evans concluded with the observation that *"a matter of this magnitude cannot be fully investigated in a week's time,"* to which his boss, J. Edgar Hoover, responded *"just how long do you estimate it will take...it seems to me we have the basic facts now."*

Not surprisingly, given Hoover's reputation for pettiness, Evans' involvement in the case was thereafter kept to a minimum. His organized crime division should have been the division tasked with investigating Jack Ruby and his contacts with organized crime. Instead, the FBI treated Ruby's murder of Oswald as a civil rights violation, and gave much of the investigation over to men who expressed little interest in Ruby's long-time connections to Mafia enforcers Dave Yarras and Lenny Patrick, his frequent phone calls to Teamster enforcer Barney Baker, and his frequent visits with Lewis McWillie, a man described as a *"gambler and murderer"* in the FBI's files, whom Ruby would freely admit, in his subsequent testimony before the Warren Commission, he *"sort of idolized."*

Elsewhere, as Hoover was boasting about having the basic facts, a memo was sent from Al Rosen, who was to oversee the FBI examination of the physical evidence, to his superior Alan Belmont. Rosen stated *"The Secret Service has advised our Baltimore Office that the photographs of the autopsy and x-rays of the President's body would be available to us...It is not recommended that we request these photographs and x-rays through the Secret Service Headquarters at this time as it does not appear we shall have need for this material."* When one takes into account that on 11-26 Hoover and his FBI had already assumed jurisdiction over the President's murder from the Dallas Police and were lobbying LBJ not to create the Warren Commission, their refusal to look at the autopsy photos can't help but make one doubt their concern for the truth.

Other investigative bodies were even less concerned. While the morning's papers touted *"Texas Attorney General Waggoner Carr announced in Washington last night that his top aids, prominent jurists and enforcement organizations would conduct a court of inquiry to examine in detail the assassination of the President and the killing of the accused murderer"* this court of inquiry was in fact little more than a charade designed to convince Texans that their state laws were being observed whilst simultaneously rubber-stamping the FBI's investigation. A memo from Carr to Johnson aid Walter Jenkins found in the Texas Court of Inquiry's files and printed in Barr McClellan's *Blood, Money, and Power* implores *"I want to conduct myself strictly in accordance with your organization. Am I to restrict my calls to Mr. Fortas (i.e., Abe Fortas, Johnson's most trusted adviser) even when I need an opinion from the White House itself, such as now? I will be happy to abide by your desires once I understand them. Although we are working diligently to reach decisions on such matters as this, we are publicly only cooperating with the FBI whenever needed in the making of the Presidential Report and after the report is made we will then proceed to announce details of the Court of Inquiry. Walter, I do hope that the FBI Report can be sent to us directly from either the White House or the Department of Justice so that we may continue to demonstrate to the public that the State of Texas and the Federal Government are working as partners..."*

But the FBI and the Attorney General of Texas were not the only ones refusing to do their jobs and actually investigate the assassination of the President. Members of the media, perhaps desperate to communicate an authority on the assassination that they, in fact, were lacking, began making more and more assertions of fact without any factual basis. On 11-26, for example, an article in the New York Times on Governor Connally's improving condition threw in that *"The Texas Governor was wounded by the same sniper who assassinated President Kennedy."* There was, of course, no way for them to know this. The few small bullet fragments recovered from the governor's wrist could not be linked to the rifle found in the depository.

Other articles were even more deceptive. An 11-26 article by Jim G. Lucas of the Scripps-Howard News Service found in the Washington Star detailed *"The Federal Bureau of Investigation has uncovered additional evidence linking Lee Harvey Oswald with the assassination of President Kennedy"*

and the wounding of Texas Gov. John B. Connally...The FBI's additional evidence included: Minute particles of the clothing that Oswald was wearing when arrested 35 minutes after the shooting were found on an Italian-made rifle abandoned on the sixth floor of the Texas school book depository where Oswald was employed. Ballistic tests confirm President Kennedy was killed and Gov. Connally wounded by bullets from that rifle. Oswald's fingerprints--smudged but still identifiable--were on that rifle."

These claims, of course, were not exactly true. While the FBI had determined that the nearly-pristine bullet found on a hospital stretcher and the bullet fragments found in the front section of the limo had been fired from the rifle, these specimens were at this time linked to Kennedy's wounds, not Connally's, and there was nothing to link Connally's wounds to the rifle. The specificity of the fiber evidence was also exaggerated; while the fibers of Oswald's shirt reportedly matched the fibers found on the rifle, the FBI refused to make a positive determination that it was Oswald's clothing on the rifle. And last, but not least, not only had the FBI not identified the smudged fingerprints on the rifle as Oswald's, neither had the DPD. The palm print purportedly removed from the rifle by the DPD and later identified as Oswald's by the FBI, furthermore, was at this point unidentified by the DPD and entirely unknown to the FBI. This suggests 1 of 2 scenarios: either Lucas was getting his info secondhand from someone in Dallas not completely in the know, or he was being used as a dupe to spread deliberate falsehoods.

Meanwhile, on Wall Street, in what was considered to be a vote of confidence for Johnson, the stock market rallied for its biggest day ever.

That night, in his private home, President Johnson had a few close aides and confidants over for dinner. Among the guests were his future choice for Chief Justice of the Supreme Court, Abe Fortas, and his future choice for Vice-President, Hubert Humphrey. Humphrey's memoirs recount an unusual incident. As Johnson walked past a photograph of Vietnam's recently-assassinated President, Ngo Dinh Diem, he reportedly offered *"We had a hand in killing him. Now it's happening here."* Humphrey did not know what Johnson meant by this. White House special assistant Ralph Dungan, however, would be more specific. He told writer Richard Mahoney that within a day or two of Johnson's statements to Humphrey, Johnson told him *"I want to tell you why Kennedy died. Divine retribution... divine retribution. He murdered Diem and then he got it himself."*

It seems likely, moreover, that Johnson was saying this kind of thing to most anyone who would listen. A 7-23-64 in historian Arthur Schlesinger's Journal notes that he'd had dinner with Robert Kennedy, and that, after discussing Johnson's behavior on the day of the assassination, Kennedy had told him *"You know the worst thing Johnson has said? ... Once he told (Press Secretary) Pierre Salinger, 'When I was young in Texas, I used to know a cross-eyed boy. His eyes were crossed, and so was his character. Sometimes I think that, when you remember the assassination of Trujillo and the assassination of Diem, what happened to Kennedy may have been divine retribution.'"*

Other mouths were more controlled than Johnson's, perhaps because they were more controllable. On 11-26, while Johnson was musing about Kennedy getting what was coming to him, Admiral Kenney, the Surgeon General of the Navy, figured out a way to keep whatever it was that, according to Johnson, Kennedy "got" from being told to the public. He had Capt. John Stover, the Commanding Officer of the U.S. Naval Medical School, where Kennedy's autopsy had been performed, draw up "Letters of Silence" for his subordinates, including Dr.s Humes and Boswell, and made them promise not to talk to the media, or anyone, under penalty of Court Martial. The letters read: *"You are reminded that you are under verbal orders of the Surgeon General, United States Navy, to discuss with no one events connected with your official duties on the evening of 22 November-23 November, 1963. This letter constitutes official notification and reiteration of these verbal orders. You are warned that infraction of these orders makes you liable to Court Martial proceedings under appropriate articles of the Uniform Code of Military Justice."* (These orders were not rescinded until 1978.)

Perhaps one or more of the recipients of this letter took umbrage, and called someone at the Associated Press to report on this "order of silence". It does seem a coincidence that the very next day, **11-27**, the Associated Press reported that the White House was declining to say whether President Kennedy had even received an autopsy. It went on to state *"One Washington source said, 'There is some doubt whether the fatal bullet was the second shot or third shot. The first shot is believed to have hit the President, but we're not sure about the second and third.'"*

A more extensive AP article published in the London Free Press added "Several persons here (Dallas) who have seen a strip of color movie taken by a Dallas clothing manufacturer during the assassination say the 15 seconds of film shows how the president was hit in the head by the second of three bullets fired by the assassin." While there may have been professional reasons not to release the autopsy report at this time, particularly since the brain had not yet been examined, it makes no sense that an administration anxious to head off public speculation would fail to acknowledge that an autopsy had even been performed. By way of comparison, the New York Times mentioned that an autopsy had been performed in its first article on Lincoln's death in 1865 (the actual results of this autopsy were discussed in an article by one of the doctors a week later); and discussed President Garfield's upcoming autopsy in its first article after his death in 1881, and the performance of this autopsy the next day. Even more telling, the preliminary results of President McKinley's autopsy were mentioned in articles on the very day of his death in 1901. In none of these prior assassinations was the president's autopsy considered strictly a military matter. In none of these prior assassinations was the president's autopsy--the fact that it occurred and the names of the autopsy surgeons--kept from the public. Perhaps just as telling, in none of these prior assassinations did the media sit around and wait for "official word" that an autopsy had been performed. They checked with their sources and reported what they found.

Apparently, someone in the White House saw how bad this all looked, and decided to end the speculation. The evening papers from 11-27 reported that "the White House disclosed today that a post-mortem examination had been performed on the President's body in Bethesda Naval Hospital." This news came in an AP article written with the help of Dr. James Beyer. Beyer stated that the large head wound reported by the doctors at the Parkland press conference could not have been inflicted by the standard ammunition for Oswald's rifle, and that Dum Dum bullets or hunting ammunition would appear to have been used.

And this wasn't the only article planting seeds of doubt about what would later be portrayed as the official story. An 11-27 New York Times article by John Herbers claimed: *"Three shots are known to have been fired. Two hit the President. One did not emerge. Dr. Kemp Clark, who pronounced Mr. Kennedy dead, said one struck him at about the necktie knot. 'It ranged downward in his chest and did not exit,' the surgeon said. The second he called a 'tangential wound' caused by a bullet that struck the 'right back of his head.' 'This was the fatal wound, we feel, although it is possible that either one could have been fatal,' Dr. Clark said. Since one bullet did not exit, it is presumed that the bullet that struck the President's head was the one recovered from the stretcher that bore the President into the hospital. A third bullet was found in fragments in the car and is presumed by official sources to be the one that coursed through the body of Governor John B. Connally Jr. Connally is recovering. The bullet that did not exit from the President's body may have been recovered in an autopsy, but the Parkland Hospital said no autopsy was performed in Dallas. "* Statements such as these, when magnified by Herbers' recounting, on this very same day, that the Zapruder film shows Kennedy "struck in the front of the neck," undoubtedly made an impression.

Another Times article expressed doubts about the weapon. It headlined "Tests Show Rifle like Assassin's *Might Be Able*," and then explained that a firearms expert from the National Rifle Assassination took 11 seconds to fire three shots with a rifle like Oswald's on his first try, and 8 seconds on his second try, and was only able to get his time down below 6 seconds--the time span

attributed for the shots that killed the President--when firing without live ammunition. While the subheading reads "Accurate Firing *Might* Be Possible" it's clear that it also might not.

Perhaps it isn't a coincidence then, that on this same day, the Chief of Police for Los Angeles called a press conference to discuss the speed at which the rifle could be fired. An article on this press conference in the next day's L.A. Times reflects: *"Lee Harvey Oswald would have required no more than 3 1/2 seconds to murder President John F. Kennedy and wound Texas Governor John Connally, Police Chief William H. Parker said Wednesday. He based his estimate on tests conducted here by police firearms experts with the same kind of cheap Italian-made rifle used in the presidential assassination. The experts simulated what happened in Dallas on Friday, said Parker, by aiming the weapon from an upper story window into a courtyard at police headquarters. An officer found, said the chief, that he could aim the 6.5 mm rifle, accurately, pull the trigger three times and slam the bolt into place twice within the space of 3 1/2 seconds. Three shots were fired by the president's slayer; two at the chief executive and one at the Texas governor. 'But it was only necessary to use the bolt twice,' Parker pointed out. 'It was already set for action before the first shot was fired.'"* From there the article drifts into a sea of smoke, with Parker inaccurately offering that the sniper's vantage point behind the motorcade made any lateral movement of the limousine during the shooting "imperceptible", and then admitting that the rifle in his test was not actually fired (which would mean the shooter did not have to react to any re-coil), and then finally hitting bottom with the nonsensical claim that *"Experienced big game hunters tell us that this kind of bolt action rifle can be fired faster than automatics."*

Even less coincidental, one might guess, is that the FBI also tested Oswald's rifle on this day, and concluded that a minimum of 4.6 seconds was needed to fire three shots at a stationary target. It concluded further that an extra second or so would likely have been necessary for Oswald to have fired three times because, unlike the target in the LAPD's test, and the FBI's test, Oswald's target was moving. This discrepancy--the LAPD says Oswald could have done it in 3.5 seconds when the FBI says it would be more like 5.6 seconds--suggests that Parker's claim and press conference was a deliberate minimization of the problem, put out for public consumption. At whose bidding, one can only guess. But it is known that Hoover hated Parker, and considered him a competitor for America's top cop, and that he also resented the CIA, and that the LAPD had a relationship with the CIA. From this, one might assume Parker's claims were put out on behalf of the CIA. On the other hand, perhaps Parker was simply jealous of all the attention provided the FBI by the assassination, and was anxious to get some for himself.

If so, his efforts failed. Instead of reporting on Parker's press conference, many newspapers the next day carried an article by Washington insider Les Whitten, on the FBI's tests. Clearly, Hoover wanted this story out. The article reads: *"The FBI has run field tests proving conclusively that a rifle such as the one that killed President Kennedy can be fired accurately three times in five seconds. It could not be learned whether these tests were run on the murder weapon itself, now in FBI hands, or on an exact duplicate. The FBI refused comment pending Director J. Edgar Hoover's report to President Johnson on the case, expected Friday. European newspapers have ballooned speculation that no single man could have done the shooting - that the 6.5mm Carcano bolt-action rifle cannot accurately be fired that fast. A Milan paper said, 'There must have been more than one attacker.' A French journal said a nonautomatic weapon could not have been used alone and an Olympics rifle champion in Vienna said it was 'unlikely' one man with one Carcano could have fired the shots that cut down both Kennedy and Texas Gov. Connally. But the FBI tests showed clearly that a rifle equipped with a four-power scope such as that found at the murder scene could readily have hit the President and Connally. The mail order Carcano reportedly was equipped with a 'pre-sighted' Japanese scope, thus assuring good shot control. As to comment in one report that only a 'true expert' could have done the killing, the Justice*

Department has received from the U.S. Marines - in which presumed killer Lee Harvey Oswald served - material showing him well-trained as a rifleman. During Oswald's 1956 boot training at San Diego, the material showed, he scored 212 out of a possible 259 in marksman's tests at 200 yards, 300 yards and 500 yards. The President was killed at some 75 yards in a slowly moving car. Oswald's rifle training took up most of 14 full days. A score of 250 would require every shot in a bullseye, or in the "critical area" of a man's silhouette (part of a rapid fire test). The 212 score meant Oswald consistently hit in or close to the bullseye. In 1958, Oswald took a refresher course, scoring 191 out of a possible 250. He was classed as a sharpshooter - a high marine rating - in the first test, and as a marksman, the lowest of three qualifying rankings in the second test. Oswald shot with an M-1 rifle which did not require him to work the bolt as was necessary with the Carcano. But with the Carcano Oswald bought a "pre-sighted" four-power scope that brings the target "so close only an idiot could miss" as one military spokesman commented. Additionally, Oswald's vantage point above the President allowed him to brace the rifle on the window sill. The Marine Corps tests required him to fire standing, kneeling, sitting and lying on the ground - and without any artificial brace such as the sill. The FBI probe is expected to show Oswald the sole killer "beyond reasonable doubt." It is understood that it will not accuse any subversive group - Oswald admitted he was a "Marxist" - of directing the killing, but will point to the indirect role played by Oswald's acceptance of the violent aspect of communism."

(The claim by the "military spokesman" that the scope brought the target so close "only an idiot could miss" was, of course, highly deceptive. The use of a scope while firing at a moving target creates its own set of problems--to such a degree that ballistics expert Monty Lutz, charged with investigating the shooting for the House Select Committee in the 1970's, would come to conclude that the assassin firing Oswald's rifle did not use the scope.)

This brings us back to President Johnson... On 11-27, President Johnson began doing what all Presidents do in a time of crisis: he wrapped himself in the flag. In a speech before Congress, he made it clear he would continue in Kennedy's steps and use the public sympathy arising from Kennedy's murder to push for the approval of stalled civil rights legislation. He told them, *"it is our duty, yours and mine, as the Government of the United States, to do away with uncertainty and doubt and delays and to show that we are capable of decisive action...This is our challenge: Not to hesitate, not to pause, not to turn about and linger over this evil moment, but to continue on our course so we may fulfill the destiny that history has set for us...John Kennedy's death commands what his life conveyed--that America must move forward."* While it's probably unfair to assume that one of the doubts Johnson considered everyone's duty to do away with was any lingering doubt they had about him, and his possible role in a coup d'etat, if one harbors such doubts, his words are undoubtedly disturbing. Here was a political figure on the verge of scandal and ruin whose career had been saved by Kennedy's death. (On the day of the shooting, not only were the pages of the most popular magazines in the country, including Life Magazine and the Saturday Evening Post, filled with articles about an investigation into the criminal activities of Johnson's close protegee, Bobby Baker, but an insurance salesman, Don Reynolds, had just begun testifying before a congressional subcommittee on Johnson's own corruption...) And here was this political figure telling Congress and the country that we should not linger over Kennedy's death or, by extension, question the circumstances of his death.

Chapter 1b: Establishing the "Facts"

A look at the weeks of confusion following the assassination, and the failed efforts of the government and news agencies to clear things up

Clearing Things Up

All the secrecy about Kennedy's death led to mucho speculation in the press, much of which would feed into the public's subsequent suspicions. On 11-27, as we've seen, a New York Times article entitled *Kennedy Struck by Two Bullets*, apparently recognizing that the Parkland doctors thought the throat wound was an entrance wound, but that Kennedy was past the school book depository when struck in the head, reported *"The known facts about the bullets and the position of the assassin suggested that he started shooting as the President's car was coming toward him, swung his rifle in an arc of 180 degrees and fired at least twice more."* This was days after the Times had helped the FBI and Police sell that there was but one shooter. And yet, apparently, no one at the Times had bothered to ascertain the whereabouts of Kennedy in relation to the sniper's nest at the moment he was first shot. Apparently, they'd spent so much energy trying to get the "official" word from Washington insiders that they'd failed to note the location of those closest to Kennedy at the time of the shots, or study the photos of the shooting itself. Even a modicum of study should have convinced them that Kennedy was far past the sniper's nest when first hit, and that he could not have received an entrance wound in the neck in such position without turning around in his seat. Astounding.

An article in that evening's Fort-Worth Star Telegram was even more problematic. This article, *The Anatomy of Death in the Afternoon*, written by Arthur J. Snider of the Chicago Daily News, was reportedly written *"with the aid of movies taken by an amateur."* This is clearly a reference to the Zapruder film. Its description of the shooting sequence follows:

(As presented online by Sixth Floor Museum Archivist Gary Mack, with pertinent sections highlighted)

*"As the fateful car rounded the turn and moved into the curving parkway, **the President rolled his head to the right, smiling and waving. At that instant. . .the sniper. . .fired his cheap rifle.** . . the President clutched his throat for a bewildered instant, then began to sag. **A second blast from the high-powered rifle ripped into the right rear of his head at about a 4 o'clock position.***

*"It was a violent wound. As a motorcycle officer described it: 'It just seemed as if his head opened up.' **The President swerved to his left and collapsed into the arms of his wife. Mrs. Kennedy climbed onto the trunk to beseech aid from a Secret Service man. The President slumped against her leg, bloodying her skirt and stocking.***

*"Meanwhile, Gov. John Connally had turned to see what happened. **A third shot rang out. It struck the governor** in the back. The bullet was deflected to his right wrist and lodged in his left thigh. A fragment of rib, fractured by the bullet, punctured a lung."*

Now this article, with its implication that the Zapruder film shows Kennedy turned far enough to his right to receive an entrance wound in his neck from the sniper's nest, would be strange enough. But this isn't the only version of this article. The version in this evening's Chicago Daily News, presumably published after the syndicated version of the article had been wired to Fort Worth, raises even more questions.

"As the fateful car rounded the turn and moved into the curving parkway, the President rolled his head to the right, smiling and waving. At that instant, about 12:30 PM, the sniper, peering through a 4 power telescopic sight, fired his cheap rifle.

The 6.5 millimeter bullet--about .30 caliber--pierced the President's neck, just below the Adam's apple. It took a downward course.

"If you're wearing a bow tie, the position is just about where the knot is," said a Dallas neurosurgeon who saw the wound.

The President clutched his throat for a bewildered instant, then began to sag.

*Meanwhile, Gov. John Connally had turned to see what happened. **A second shot rang out. It struck the governor** in the back. The bullet was deflected to his right wrist and lodged in his left thigh. A fragment of rib, fractured by the bullet, punctured a lung.*

The car rolled on slowly. Onlookers, instinctively startled by the shots, were still unable to grasp their meaning.

Then, in quick order, the third blast. It ripped into the right rear of the President's head at a 4 o'clock position.

It was a violent wound. As a motorcycle officer described it: 'It just seemed as if his head opened up.'

The wound was so vast and ghastly that a pathologist in Arlington, VA, suggests the assassin may have used flattened "dum-dum" bullets."

Yes, you got it. The order of the shots has been changed. It seems doubtful that Snider himself made this change. He had after all, studied the Zapruder film while writing the article. Well, if he didn't change it, who did? And why?

Perhaps we have an answer. At 4:30 PM Governor Connally was interviewed live on television from his hospital bed. He both decried the climate of hatred that led to the assassination and expounded upon the complexities and greatness of his long-time friend Lyndon Johnson. He said of Johnson, *"I think in our dealings with foreign nations I know of no man in my lifetime that I would rather be dealing my hand than him."* Connally also described the shooting to the nation: *"we had just turned the corner, we heard a shot; I turned to my left...Almost simultaneously, as I turned, I was hit...I said, 'My God, they are going to kill us all.'" Then there was a third shot and the President was hit again and we thought then very seriously...."*

From this, one can assume that someone at the Chicago Daily News, in order to make its interpretation of the evidence fit the Governor's widely-watched recollections, re-wrote Snider's article at the last second, after the version printed in the Star-Telegram had already been transmitted. Beyond this possibility, it's difficult to see how two articles written by the same man and published on the same evening could contain such widely divergent conclusions.

On **11-28**, the transcript of Connally's interview was printed in the New York Times. The Times summarized his description of the shots as follows *"Shot one struck the President. Shot two coursed through the Texas Governor's body. Shot three struck the President."*

The shot sequence described by Connally, which was previously described by Dan Rather, was then rubber-stamped by Dr. Robert Shaw, the Parkland Hospital thoracic surgeon who'd presumably saved his life. An article in the 11-28 New York Herald-Tribune (found in the St. Petersburg Times) reflects: *"The Dallas doctor who performed emergency surgery on Texas Gov. John Connally said yesterday that authorities have been able to reconstruct the sequence of shots that killed President Kennedy last Friday. Eyewitness accounts by Gov. and Mrs. Connally, and a crucial Polaroid picture taken by a spectator, reveal that the President was killed by the third shot, the bullet that tore away a piece of his skull."* It then asserted that *"Shaw said that medical authorities here felt the first bullet that hit the President, a bullet in the front of his throat which lodged in his right lung, was not a mortal wound but was one which, with proper care, the President could have survived."*

The article then presented the shot sequence, according to the "authorities" and Dr. Shaw: *"The first*

bullet entered President Kennedy's trachea, in the front of his neck, coursing downward into his right lung. The bullet was removed in Bethesda Naval Hospital in Maryland, where an autopsy was performed." (Well, this would be news to those performing the autopsy, who not only insisted no bullet was recovered from Kennedy's lung, but anywhere in his body.)

The article continued: *"Gov. Connally states he turned, saw the President slumping, then he felt a terrific blow to his right shoulder which stunned him. That was the second shot. The governor then was conscious of a dull explosion, the shot that struck the President and went through his skull, killing him. We know that the first shot went through his throat because authorities have a Polaroid picture, taken by a spectator right after the first shot. It shows the President slumping. His head is intact, undisturbed. Additionally, Mrs Connally said the third shot struck the President in the head."* (This bit about the Polaroid, of course, is nonsense. The Polaroid photo to which Dr. Shaw made reference is undoubtedly the Moorman photo. While Dr. Shaw had based his conclusion the first shot didn't hit Kennedy in the head on his acceptance that this photo, which he believed shows the head undisturbed, was taken after one shot had been fired, it would later be shown that this photo was not only taken after at least two shots had been fired, but after Kennedy had been struck in the head. Oops.)

But from there the article only got stranger. It then claimed *"Dr. Shaw admitted he was 'a little baffled' by the first shot. 'The assassin was behind him, yet the bullet entered at the front of his neck. Mr. Kennedy must have turned to his left to talk to Mrs. Kennedy or to wave to someone.'"* (This was more nonsense. The supposed sniper's nest was behind Kennedy and to his right. If Kennedy had turned to his left, he would have been facing directly away from the rifle, not towards it. Oops again.)

And yet, although Dr. Shaw was clearly not informed enough to make an accurate conclusion regarding the shot sequence, and the Connallys not competent to do so due to their being too close to the action, and Dan Rather not competent, period, the shooting sequence they'd proposed--that Kennedy had been hit by the first and third shots--became the "official" shot sequence. It was reported in a number of 11-28 articles that on 11-27 the Secret Service had performed a re-enactment of the shooting in Dallas. The results of this re-enactment, subsequently reported by both the Secret Service and FBI, indicate that they'd already assumed the last shot was the shot striking Kennedy in the head. Based upon the mixed information they'd received prior to 11-27, this is impossible to understand. But, when one considers that, by 11-27, they'd received word from both the Connallys and Connally's doctor that the head shot was the final shot, well, it becomes a bit easier...particularly when one considers that Life Magazine, as Dan Rather and CBS before it, had taken from its viewing of the Zapruder film that the first bullet strike observable in the film must have been the first shot, and the last bullet strike observable in the film the last.

The 11-29 issue of Time Magazine, already on the streets, we should reflect, had reported the shots a bit differently than had the Connallys and Shaw. It reported: *"a shot...The President's body slumped to the left; his right leg shot up over the car door. Blood gushed from the President's head as it came to rest in Jackie's lap...John Connally turned...there were two more shots, and a bullet pierced his back..."*

And the 12-2 issue of Newsweek, Time's primary competitor, nearly concurred, claiming: *"'Crack!' A rifle shot split the air. 'Crack!' 'Crack!' Two more followed. The President of the United States--caught apparently by the first--spun in his seat. 'I thought it was a backfire,' said Patrolman James M. Chaney, who was riding a motorcycle 6 feet from the right rear fender of the President's car. 'The President jerked his head around...then (came) the second shot and his head exploded in blood...' Turning to look, Governor Connally took the third bullet just below the right shoulder blade. It ripped out through his chest, pierced his wrist, and lodged in his thigh. But the turn saved his life."*

But Time's sister publication, Life Magazine, had purchased the Zapruder film depicting the shooting,

and had described the shooting in its own 11-29 issue, already on the streets, in the manner pushed by Dan Rather, the Connallys and Shaw.

Here is how Life first described the shooting in its 11-29 article entitled Split Second Sequence As The Bullets Struck: *"Then came the awful moment. In these pictures, which run consecutively from left to right, it begins as the car comes out from behind the sign. The President's wave turns into a clutching movement toward his throat. Governor Connally, who glances around to see what has happened, is himself struck by a bullet and slumps over. As the President's car approaches a lamppost, Mrs. Kennedy suddenly becomes aware of what has happened and reaches over to help while Governor Connally slumps to the floor. The President collapses on his wife's shoulder and in the last two small pictures the First Lady cradles him in her arms."* Tellingly, the horrific head shot, after which Kennedy's head jerks back and to the left, is not described. Apparently, this shot was just too horrid for Life Magazine--which had broken barriers by showing starving American children during the depression and dead American soldiers during World War II--to describe to its readers.

But if Life was doing its part to preserve the dignity of Kennedy, and conceal the possibility of conspiracy from the public, it failed miserably. In a newspaper summary of the Life article on the Zapruder film, the first frame, frame 233, was captioned *"The President's hand moves convulsively as he is shot."* Fair enough. But the second frame, frame 269, was captioned *"Gov. John B. Connally Jr. of Texas, on jump seat, turns toward back and is also hit."* This led the public, which was not allowed to see the Zapruder film for themselves, to conclude Connally was hit seconds after Kennedy, by what could have been a second shot fired from Oswald's rifle. This was true to Life's account of the shooting. In time, Life's article and the newspaper coverage it received would fuel the widespread rejection of the Warren Commission's single-bullet theory, holding that Kennedy and Connally were in fact hit by the same bullet. In attempting to reinforce that Oswald had acted alone, Life Magazine had instead planted the seeds of doubt...

Which grew in harmony with the seeds of confusion planted by the other news sources... Around the same time as the 11-29 issue of Life was hitting the streets and mailboxes in the states, the 11-30 edition of The Illustrated London News--a magazine that had been published for over 120 years, mind you--was hitting the streets and mailboxes in England. This issue featured the magazine's initial article on the assassination. Amazingly, its opening line asserted *"President Kennedy was shot **twice** in the head as he drove through Dallas on November 22..."* Now, one might wish to think this article had been written before any details of the shooting had emerged. But one would be wrong. This 12 page article included photos of Kennedy's funeral, on the 25th.

The incredible confusion wrought by these and other conflicting reports was to have long-term effects. One of the first biographies on Kennedy to come out after the shooting, John F. Kennedy, by Urs Schwarz, was to extrapolate and embellish: *"a shot. It was 12:30 p.m. C.S.T. and in a split second a thousand things happened. The President's body slumped to the left; his right leg shot up over the car door. A woman close by at the curb saw it. "My God!" she screamed. "He's shot!" Blood gushed from the President's head as it came to rest in Jackie's lap. "Jack!" she cried. "Oh, no! No!" John Connally turned--and by turning, probably saved his own life. There were two more shots, and a bullet pierced his back, plowed down through his chest, fractured his right wrist, and lodged in his left thigh."* (This account, as you've probably noticed, not only had the shots impact in what even at that time was thought to be the wrong order, but had a woman bystander yelling out "My God!" and Jackie Kennedy yelling out "Oh, no! No!"--exclamations later attributed to Governor Connally.)

And that's but one example. Another rush release, JFK: A Complete Biography 1917-1963, by William H. A. Carr, was to report *"As the Presidential limousine slowed to make a left turn on to Commerce Street at the Triple Underpass, a well-known Dallas landmark, the Governor's wife, Nellie Connally, turned and said laughingly to the President 'You can't say that Dallas isn't friendly to you today.' Just*

then there was a crack of a rifle shot. Jack Kennedy, who had opened his mouth to answer Mrs. Connally, said 'Oh!' and lifted his right hand to his throat, where a bullet, traveling an almost vertical course, had smashed through the skin just above his necktie, tearing its way down through his chest. Jackie, puzzled by her husband's guttural sound, but unaware that he had been shot, leaned over to him, her face reflecting her concern. Governor Connally turned around to see what was wrong. At that instant, another shot split the air. The bullet struck Connally in the back, ripped through his chest, emerged to break his wrist, and finally lodged in his thigh. Utterly bewildered by the sounds, the driver had slowed his car again now, after making the turn. Then the third and last shot rang out. This slug hit the back of the President's head. In the words of patrolman James M. Chaney, who was on a motorcycle six feet away, 'his head exploded in blood.'" (This account, as you've probably noticed, was wrong or at odds with the currently accepted story on just about every fact: it had the shooting taking place on the wrong street; it had the shooting occur while Mrs. Connally was still talking to President Kennedy, instead of moments after; it had the first bullet hit Kennedy's neck from the front and head into his chest; and it had this bullet enter above his necktie.)

The extent of the media's confusion, moreover, is probably best reflected by the fact that Facts on File, the most trusted source book for newspaper stories, summarized the shooting in its 1963 edition as follows: *"Three shots were fired as the President's car approached an underpass...the first two bullets hit the President, who was sitting with Mrs. Kennedy in the rear seat, and he fell face down in the seat. The third bullet hit Governor Connally, who was sharing the jump seat with his wife...The bullet tore through Connally's back, smashed three ribs, punctured his lung, broke his wrist, and penetrated his left thigh."* When the Warren Commission report came out some months later, of course, it offered that Connally was hit by one of the first two bullets, and that only one rib had been smashed.

(The confusion over the wounds and shot sequence, even among historians, unfortunately, continues. In 1998, Anna K. Nelson, an historian working for the Assassination Records Review Board, wrote a chapter on her work for a book entitled *"A Culture of Secrecy – The Government Versus the People's Right to Know."* Amazingly, however, she revealed that some of those in the position to know just can't be bothered. When discussing the Warren Commission's conclusions, she wrote *"Three shots had been fired; one hit the president but did not kill him, one went astray, and the third killed Kennedy and wounded Governor Connally of Texas..."* Yikes. The Warren Commission, of course, concluded that the first bullet to strike Kennedy wounded Connally, and not the last. Still, her display of ignorance was destined to be outdone. The year 2006 saw the publication of *LBJ: Architect of American Ambition* by Randall B. Woods, a history professor from the University of Arkansas. This was a 1,000 page effort published by Free Press, a division of Simon and Schuster. Amazingly, Woods reported: *"As the motorcade turned onto Elm Street, a shot rang out. Connally remembered being covered with a fine mist of blood and tissue. The president's head had been partially blown off. The second shot hit Connally in the back, passed through his body, through his hand, and into his thigh. A third shot rang out, but by that time pandemonium had broken loose."* Woods, amazingly, had not only presented the fatal head shot as the first shot, but had completely failed to account for Kennedy's back wound and throat wound.)

But I digress. Back in 1963, on the night of the 28th, President Johnson addressed the nation. Once again, he wrapped himself in the flag and asked the country to *"banish rancor from our words and malice from our hearts--to close down the poison springs of hatred and intolerance and fanaticism."* He closed his brief address with an appeal for his fellow Americans to *"remember your country and remember **me** each day in your prayers."*

The next day, **11-29**, at 1:15 P.M., Johnson called his closest adviser, future Supreme Court Justice Abe Fortas, to discuss the make-up of the Presidential Commission charged with investigating the assassination. Building upon earlier discussions, Fortas suggested that they create a seven man

commission, chaired by the Chief Justice, with two from the Senate, two from congress, one (Allen Dulles) from the intelligence community, and a general from the military. Johnson then decided that having businessman John McCloy on the commission would be better than having a general. Johnson then picked Senators Russell from Georgia and Cooper from Kentucky as his senators. As to his congressmen, Johnson said *"I would think Jerry Ford would be good from the Republicans,"* and Fortas agreed. When Fortas' suggested Hale Boggs from the Democrats, Johnson complained that Boggs was *"talking all the God-damned time."* Even so, when, after some discussion, Fortas offered *"I wonder if we aren't stuck with Hale,"* Johnson agreed. Johnson then dismissed that any of these men should even be consulted beforehand, declaring *"I think we oughta order 'em to do it, and then let 'em bellyache."* Bing. Bang. Boom. Just like that, Johnson had picked the men charged with investigating, among other things, his own involvement in the assassination. By including the Chief Justice, he had dampened the possibility anyone from the Judicial branch would complain. By including members of both the Senate and the House, he had dampened the possibility anyone from the Legislative branch would complain.

Johnson then called Hoover to tell him that he'd made a decision, and that he was creating a Presidential Commission to review the FBI's report on the assassination. An unhappy Hoover warned him *"It'd be a three-ring circus."* Johnson then asked Hoover about the status of the investigation. Four days after closing ranks to convince the American people not only that Oswald did it, but that he acted alone, Johnson finally got around to asking Hoover if Ruby knew Oswald. Amazingly, Hoover told him they were still investigating! Johnson then asked how many shots were fired and if any of them were fired at him personally. For his part, Hoover told Johnson the FBI would wrap up the case by the following Monday. He then shared such incredible details (incredible because they are so out-of-line with the eventual conclusions of the Warren Commission) as: Oswald fired three shots in three seconds (the commission decided it took almost 6), Oswald raced down from the fifth floor (the sniper's nest was on the sixth floor), there were three bullets fired and all were in possession of the FBI (they only recovered one and a half bullets, plus some fragments which may or may not have come from a third bullet), the first shot hit Kennedy, the second Connally, and the third Kennedy (this was the accepted theory before the development of the single-bullet theory months later), the intact bullet found on a hospital stretcher in Dallas rolled out of the President's head after being loosened by heart massage (the temporary theory on the night of the autopsy was that the bullet fell from Kennedy's back after heart massage; no one ever indicated it fell from the head), and that Connally wouldn't have been wounded if he hadn't turned after the first shot and got in the way of the bullet. This last statement indicates that Hoover was under the impression that the school book depository was somewhere in front of the President when the shots were fired. Strangely, Johnson, who was but two cars behind Kennedy in the motorcade and would have to have known there were no buildings in front of Kennedy, failed to correct him. In any case, it's clear by the tape of their conversation that the two men had no grasp of what happened the week before. And yet they had decided to tell everyone that whatever it was that happened Oswald was somehow solely responsible.

Even more surprising than their overall lack of knowledge, however, is Johnson and Hoover's use of the word "they" when describing the assassin during this phone call. Johnson asked *"Was they aimin' at the President?"* to which Hoover responded *"They were aiming directly at the President."* Then, after Hoover explained that the rifle tests indicated that one man could have gotten off all the shots, Johnson let his views on this be known. He responded *"How'd it happen they hit Connally..."* While the "they" in this particular statement might be a reference to the bullets, the tape-recordings of Johnson's conversations available at his Presidential library, the memoirs of his closest associates, and a number of interviews conducted during his lifetime all confirm that Johnson never believed the conclusions of the Warren Commission, and suspected a foreign involvement in the assassination. That Governor Connally privately shared Johnson's conviction there was a "they" has been confirmed, furthermore, by former Attorney General Ramsey Clark, who in a 1998 interview with Jim Douglass quoted Connally

as swearing *"They were trying to hit me. Don't tell me they weren't trying to hit me."*

Less than three hours after talking to Hoover, President Johnson called Supreme Court Chief Justice Earl Warren into his office and ordered him to chair the commission that would investigate the assassination. Beyond manipulating Warren with his assertions that a war could result from the "wrong sort" of investigation, Johnson told Warren that the other men on the commission, including Senator Richard Russell, had all agreed to serve if Warren chaired the commission. This was a lie.

Johnson then called Speaker of the House John McCormack. He told him, in his crude yet effective manner, that with his presidential commission set to investigate the assassination, he couldn't have a congressional committee conducting its own investigation, and using the investigation for political purposes, blaming it on Khrushchev and whipping up a red scare. He then instructed McCormack to *"take care of the House of Representatives for me,"* which momentarily confused McCormack, and led to his asking *"How am I going to take care of them?"* Johnson then ordered, as if speaking to a servant (as opposed to the leader of the legislative branch of government), *"Just keep them from investigating!"*

Later that evening, Johnson called Senator Richard Russell and ordered him to serve on his presidential commission--a commission on which his membership had already been announced. Russell, who'd spoken to Johnson earlier that day and told him he would not serve on his commission, reinforced this point and stressed that he refused to serve on any commission chaired by Chief Justice Earl Warren. Johnson then bullied Russell by telling him *"You're damn sure gonna be at my command... You're gonna be at my command long as I'm here."* He then cut Russell off by simultaneously playing to Russell's vanity, and bragging about his own new-found power.

LBJ: *Now you just get ready to do this and you're my man on there, and period.*

RR: *Well if you hadn't announced it, I would absolutely be--*

LBJ: *No, you wouldn't. No, you wouldn't.*

RR: *Yes, I would. Yes I would.*

LBJ: *I told Warren, Warren told me he wouldn't do it under any circumstances--didn't think the Supreme Court Justice ought to go on it. He wouldn't have any thing to do with it. He said a man that criticized this fellow that went on the Nuremberg trial, Jackson, he told me what he thought about Goldberg. He thought he was terrible [unintelligible] and I said let me read you one report. And I just picked up one report and read it to him. And I said okay, now, forty million Americans are involved here.*

RR: *I may be wholly wrong, but I think Mr. Warren would serve on anything you'd give him any publicity on.*

LBJ: *Well you want me to tell you the truth? You know what happened? Bobby and them went up to see him today and he turned them down cold and said "no." Two hours later I called him and ordered him down here and he didn't want to come. I insisted he come, he came down here and told me no twice and I just pulled out what Hoover told me about a little incident in Mexico City and I say now, 'I don't want Mr. Khrushchev to be told tomorrow and be testifying before a camera that he killed this fellow and that Castro killed him and all I want you to do is look at the facts and bring in other facts you want in here, and determined who killed the President and I think you'd put on your uniform of World War I, fat as you are, and do anything you could to save one American life. And I'm surprised that you the Chief Justice of the United States would turn me down.' And he started crying and said, well I won't turn you down. I'll just do whatever you say, but he turned the Attorney General down.*

RR: *Well, you ought not to be so persuasive.*

LBJ: *Well, I think I ought to.*

RR: *I think you did wrong in getting Warren and I know damned well you did wrong getting me but I hope to do the best we can.*

LBJ: *I think that's what you'll do. That's the kind of Americans both of you are. Goodnight.*

And so Johnson had his commission of distinguished Americans...

Earlier that day, Johnson called House majority leader Carl Albert and told him of his plans. When Albert voiced Speaker McCormack's concern that it would be unwise to have anyone from the Supreme Court on the commission, as the Justice would then have to pass should any aspect of the case wind up in his court, Johnson shot him down, declaring *"He's not gonna pass on Oswald; he's dead as hell."* That the Warren Commission was hand-picked by Johnson, and was expected to find no international conspiracy, and that President Johnson personally dismissed the possibility they'd uncover a domestic conspiracy, is made clear by his conversations on this date, only a week after the assassination.

While one might think the passage of this week would lead to more accurate articles in the press, moreover, this sadly wasn't true. An article on How the President Was Shot in the 12-9-63 issue of U.S. News and World Report, which is reported to have went to press on 11-29, offers that *"Oswald's gun, a 6.5 mm Carcano Italian carbine, had its telescopic sight aligned for the distance from which the sniper fired at the presidential car--about 250 feet. This meant the gun had presumably been 'zeroed in'--test fired several times from the from the distance the sniper intended to fire from, with crosshairs on the gunsight adjusted accordingly. This, in turn, indicated that the sniper had made careful calculations of the distance between his vantage point in a storage-building window and the parade route."*

Well, this was the worst kind of nonsense. In their study of Oswald's rifle the FBI had found no evidence the telescopic sight on Oswald's rifle had ever been zeroed-in, let alone zeroed-in for the distance in question. This article, then, was undeniably unfair to Oswald. But it quickly changed course. The article continued: *"The sniper, too, almost certainly had carried out target practice to check his calculations. He had been out of the Marine Corps for four years. Without practice he might have been rusty."* Well, oops. The FBI would ultimately find no credible evidence Oswald had practiced with his rifle in the weeks before the shooting.

The 11-29 Chicago Daily News runs a similar article regarding the evidence against Oswald. This article sizzles in its bias. The assassination is now *"the crime of the century--so monstrous as to paralyze humanity."* Oswald is no longer the "prime suspect" for this crime, moreover, or even a "presumed assassin." No, he has now become, officially--because it's in the papers--*"a hate-filled sniper"* and *"lunatic."* This change in tone is really not that surprising. What is surprising, however, is that the evidence against Oswald as recounted by Dallas DA Wade is getting less accurate, not more. Among other things, the article claimed that Wade had *"outlined"* the following items of evidence:

- *"A Federal crime laboratory in Washington found Oswald's fingerprints on the rifle used to murder the President."* (While this is presumably a reference to a palm print lift IDed as Oswald's on the 29th, it seems strange that the writers of the article would be inaccurate on two key points: 1, that it was fingerprints, as opposed to a single palm print; 2, that it was found by a Federal Crime Laboratory, as opposed to the Dallas Police Department. This suggests that perhaps just perhaps Wade was avoiding the embarrassing fact that the FBI had found no trace of this print on the rifle on the morning of the 23rd, and the even more embarrassing

explanation that it had been completely lifted from the rifle by Dallas Police Lt. J.C. Day on the evening of the 22nd, and that he'd failed to take pictures of it before performing the lift, and failed to tell the FBI about it afterward.)

- *"His fingerprints also were found on two cases of books on which the assassin is believed to have propped the rifle. Wade did not indicate which laboratory made the identification."* (This was also inaccurate. Oswald's prints were purported to have been found on only one box believed to have propped up the rifle. They were found on another box, but it was the box on which he was believed to have been sitting.)
- *"A palm print matching Oswald's was found on one of the boxes. Paraffin tests of Oswald's hands showed he recently had fired a gun. These findings were made by the Dallas city-county crime laboratory."* (This was also misleading. The paraffin tests for Oswald's hands were positive, which was consistent with his having fired a gun, but not proof he had fired a gun. As Wade was "outlining" the evidence Oswald shot Kennedy, moreover, it seems a wee bit suspicious that he failed to mention that the test for Oswald's cheek, which would have been consistent with his having fired a rifle, was negative.)
- *"A neighbor who drove Oswald to work on the day of the assassination said the young man carried a long, wrapped package. Oswald said these contained window shades, according to this account. The police believe it was the death rifle."* (This avoided that this "neighbor," Buell Wesley Frazier, described a package much too small to hold the rifle.)
- *"An elevator operator said Oswald carried the package to the deserted fifth floor storeroom from which the shots were fired."* (This, as far as can be determined, was made up from whole cloth. No one saw Oswald with the package in the building. And besides, the shots were fired from the sixth floor.)
- *"Oswald's handwriting, according to the FBI, is on an order for the rifle received by a Chicago firearms firm."* (This was accurate, but avoids the strange circumstance that the rifle found in the depository was a different model than the one Oswald ordered.)
- *"Police have obtained a photo of Oswald holding a rifle that appears to be the same weapon."* (This was accurate, but incomplete. They'd actually obtained three such photos, and had made multiple copies of these photos, to be passed out as souvenirs.)
- *"His blonde wife, Marina, told police she had seen Oswald's rifle at their suburban Irving home the day before the slaying. Police could not find it when they searched the home afterward."* (This was also misleading. Marina told police she'd seen the green blanket which at one time held the rifle, and not the rifle itself. As she discovered when the police came out to see her, however, this blanket was just a shell. As a result, neither she nor anyone else could say when the rifle had last been in the blanket. It could have been taken from the unlocked garage days or even weeks before the assassination.)
- *"Police say that cloth fibers attached to the rifle butt match clothing worn by Oswald on the fatal day."* (This is intriguing for two reasons. The cloth fibers were purported to have been overlooked by the Dallas police, and only discovered by the FBI crime lab in Washington. Were they now trying to make it appear they'd found the fibers? The second reason is far more compelling: the "police" claim Oswald wore the matching clothing on the fatal day, but it does not say he was wearing this clothing at the time of the shooting. This was for good reason; Oswald claimed he'd changed his shirt after leaving work, and, by the time of this article, not one witness had identified the shirt he was wearing when arrested, whose fibers matched those found on the rifle, as the shirt he'd worn to work, and was wearing at the time of the shooting.)
- *"There are witnesses, still unidentified, to corroborate other parts of the story. Some say they saw Oswald leave the warehouse after the shooting. A woman says she remembers him boarding the bus. Three say they saw him shoot officer Tippit."* (This last statement was

inaccurate. While a number of witnesses identified Oswald as the man they saw fleeing the scene of the shooting, only one witness, Helen Markham, said she saw the actual shooting, and identified Oswald as the man pulling the trigger.)

On **11-30**, yet another strange article was published. This article, by Richard Dudman for the St. Louis Post-Dispatch, did what earlier articles should have done, and presented a laundry list of unanswered questions. It presented some quotes from Parkland doctor Robert McClelland, confirming that the Parkland doctors thought Kennedy's throat wound was an entrance wound. It then related *"He said the doctors afterward tried to explain how the shot in the neck could have been fired from the book warehouse. 'We postulated that if it was a wound of entry, as we thought it was, the President might have been turned in such a way that it could hit him there,' he said. 'He would have had to have been looking almost completely to the rear.'"* Dudman then reported what other articles evaded: *"The motion pictures, however, showed the President looking forward."*

Dudman then noted *"Uncertainty surrounds the number of shots that were fired. Most witnesses have said they heard three, within a space of about five seconds. Investigators have accounted for them as the one that entered the President's throat, a second that struck Gov. Connally, riding in the front seat, and a third that struck the back of the President's head and caused extensive brain damage. The first bullet is said by the doctors in Dallas to have entered the throat, coursed downward and remained in the President's body. The second was extracted from Gov. Connally's thigh. It had lodged there after entering the right side of his back, passing through his body and through his wrist. A third, which may be the one that struck the back of Mr. Kennedy's head, was recovered from the stretcher on which he was carried into the hospital. A fourth was found in fragments in the car. Still another bullet was found by Dallas police officers after the shooting. It was in the grass opposite the point where the President was hit. They did not know whether it had anything to do with the shooting of the President and Governor."*

Well, heck, that's five bullets. And yet Dudman ultimately concluded *"If there were two snipers, and Mr. Kennedy's car was caught in the crossfire, the rapid-fire shooting would be more easily explained. Tests have shown, however, that a single sniper, using the bolt-action Italian rifle with telescopic sight found in the warehouse, could have fired three shots easily in five seconds. One shell would have been in the chamber, so that the bolt would have had to be moved only twice. The weapon could have been rested on a box, so that it would not have been necessary to aim again for the subsequent shots."* He was thereby telling his readers, hey, guess what, there's reason to suspect Oswald wasn't the only shooter...and no one is telling you about it. A pretty ballsy article, all in all. Especially when one considers that within the article Dudman revealed the source of his suspicions--his own observations... He wrote: *"Another unexplained circumstance is a small hole in the windshield of the presidential limousine. This correspondent and one other man saw the hole, which resembled a bullet hole, as the automobile stood at the hospital emergency entrance while the President was being treated inside the building. The Secret Service kept possession of the automobile and flew it back to Washington. A spokesman for the agency rejected a request to inspect the vehicle here. He declined to discuss any hole there might be in the windshield."*

Well, that makes it clear as day. Dudman suspected a shot came from the front!

The strangest thing about Dudman's story, however, was that it went unreported in the national news. Apparently, the Washington Press Corps thought one of their colleagues' claiming he saw a bullet hole in the President's limousine--and as much as admitting that this had led him to suspect that more than one sniper had fired on Kennedy--unworthy of the public's attention.

Also on 11-30, CIA Director John McCone called Johnson to inform him that Gilberto Alvarado, a Nicaraguan intelligence agent who'd claimed he'd witnessed Oswald get paid off in the Cuban consulate in Mexico, had admitted he'd lied. Upon hearing this news, Johnson is reported to have laughed. Seeing as Hoover and Katzenbach had already agreed to tell the people Oswald had acted alone and had had no confederates, and seeing as Johnson had already pressured Warren into chairing a Commission whose findings would help avert a war with the Soviets, one might assume Johnson was relieved as well as amused.

If he was relieved, however, it was destined not to last. An 11-30 UPI article, found in the Hartford Courant, trumpeted *"Accused assassin Lee Harvey Oswald wrote at least part of a book intimating he went to Russia as a secret agent for the United States."* This article, built around an interview with stenographer Pauline Bates, who'd worked briefly with Oswald on his never-finished book, proceeded to run through a laundry list of Oswald's complaints about the Russian way of life. Unstated but implicit in these complaints was that Oswald preferred the American way of life. This, of course, supported the possibility Oswald was what he'd hinted at: a U.S. intelligence operative.

Even so, the right-wing rumor mill continued to push that Oswald had been part of a left-wing conspiracy. Conservative commentator and former FBI agent Dan Smoot, in his weekly report dated **12-2**, argued that Jack Ruby--whom he pointedly and repeatedly called "*Rubenstein*"--was a confederate of Oswald's, and that he had killed Oswald to ensure his silence. While listing the evidence against Oswald, Smoot repeated the lies told by Dallas DA Henry Wade and FBI Agent Gordon Shanklin. He told his readers that *"Oswald's fingerprints were found on the murder weapon"* and that *"A paraffin test revealed gunpowder flecks on Oswald's cheek, which is presumptive evidence that he had recently fired a rifle. The powder flecks were identical in kind with powder flecks in the empty cartridges and gun found in the book warehouse."* In his description of the shooting, Smoot confused things even more, relating *"The first shot apparently hit President Kennedy in the neck. He clutched himself and partially rose, as the second shot hit him in the head, inflicting the mortal wound. As Governor Connally turned to see what had happened, the third shot from the assassin's gun struck him in the back..."*

And Smoot wasn't the only one stirring up trouble. Drew Pearson, the most notorious muckraker of his day, dished some dirt of his own in his 12-2 column. Pearson, in opposition to President Johnson's wish that the country just move on, reported that members of Kennedy's Secret Service detail had been drinking the night before the shooting, and raised questions about their readiness. These questions have never been adequately addressed. In time, the Warren Commission would reveal that, of the 6 agents in Kennedy's follow-up car tasked with responding to a threat through self-sacrifice or retaliation (that is, not counting the driver, and the radio man) 4 had been out drinking the night before. Clint Hill, on the left running board, was out drinking scotch, returned to his room around 3 in the morning, and reported for duty at 8:05. John Ready, on the right running board, was out drinking beer, returned to his room around 3:30 in the morning, and reported for duty at 7:20. Paul Landis, on the right running board behind Ready, was out drinking scotch, left a club around 5:00 in the morning, and reported for duty at 8:05. (As he failed to say at what time he returned to his room, it seems possible he never actually returned.) And finally, Glen Bennett, one of the two men in the back seat manning the AR-15, an automatic weapon, was out drinking beer, returned to his room around 3:15 in the morning, and reported for duty at 7:20. (Although off-duty drinking was prohibited while traveling with the President, none of these men were reprimanded for their actions.)

And it wasn't as if Pearson had singled out the Secret Service.. No, in the second half of his column, in what he would have to have known was a risky move, he criticized the FBI and Dallas Police. He

criticized the Dallas Police for the obvious: allowing Jack Ruby into the basement where he killed Oswald. But his criticism of the FBI was not so obvious. He reported that although the FBI was well aware that Oswald, who'd recently been televised passing out leaflets in support of Cuba, had subsequently moved to Dallas, it had failed to notify the Dallas Police and Secret Service of this fact. In a move sure to get some attention, he then blamed this failure on *"jealousy"* and *"squabbles over jurisdiction."*

The FBI's response was both well-reasoned and alarming. In his memo reporting on the column, Assistant Director Cartha DeLoach advised that in order to refute Pearson, the charges made by Pearson would have to be rehashed, and that this was *"believed undesirable."* This view was supported by Director Hoover, who added, in his own hand *"Unfortunately, we are not in a position to completely contradict Pearson."*

But if the FBI's response was measured, what lay beneath the surface was monstrous. DeLoach bragged: *"Many of our news media friends have called me and the men in this office today concerning Pearson's unjust and unfounded remarks. These men offered to literally 'tear Pearson apart' if we will just give them the go-ahead. They have volunteered to start an effective campaign against Pearson for his attack on the FBI."* He then noted that such a campaign was *"justified."* Well, this makes it more than clear that DeLoach had at his beck and call a number of media assets ready to smear anyone he or the director wanted to smear, and that Pearson would have been the victim of such abuse had DeLoach and Hoover not been concerned that further discussion of the FBI's failures would backfire.

This raises the related questions, then, of how many writers had received such treatment in the past, and how many revelatory articles and columns might have been written were it not for fear of such treatment.

And it's not as if the FBI worked only as a censor, trying to keep certain facts from the public. Nope, the FBI under Hoover was multi-talented, and could plant certain stories as well...

The Leaking of the Report

On 12-2, the Associated Press started spreading the news... A nationally-syndicated article stated *"the Federal Bureau of Investigation hopes to send to President Johnson this week its report on the assassination... It will be a narrative account in minute detail of the events surrounding the two deaths. If it follows the patterns of others F.B.I. investigative reports, it will stick to positive statements of what happened, dismissing baseless rumors by not mentioning them...It is expected to state that Lee H. Oswald, acting alone, killed Mr. Kennedy, and that Jack Ruby, acting alone, shot Oswald."* The **12-3-63** edition of the Washington Evening Star confirmed *"An exhaustive FBI report now nearly ready for the White House will indicate that...Oswald was the lone and unaided assassin of President Kennedy, Government sources said today."* The reporter was Jerry O'Leary. FBI assistant director and leaker-in-chief Cartha DeLoach was the godfather of one of O'Leary's children.

A 12-4 New York Times article with a 12-3 dateline then jumped on the bandwagon, reporting *"it was learned officially, the report of the Federal Bureau of Investigation 'probably' will say that Lee Harvey Oswald acted alone in firing the three shots that killed Mr. Kennedy and seriously wounded Gov. John B. Connally Jr. of Texas..."* One notes that these reports call President Kennedy "Mr. Kennedy," an apparent sign of disrespect. If this is any indication of the source, the likely leakers would have to be Hoover and his close cohort, Cartha DeLoach.

Warren Commissioner John McCloy apparently suspected as much. A National Security Administration document (currently available on its website) reports that on 12-4-63 *"In conversation with us, McCloy, a member of the Presidential Commission, stated that he has serious doubts of the credibility of the*

*investigation to date. He does not eliminate the possibility that the attempt on Kennedy was made by two persons. However, in view of Johnson's order that the commission investigate also the circumstances of Oswald's slaying, some of the commission's operations and its report could come after Ruby's trial and perhaps even after the verdict and appeals. In the meantime the trial was postponed until 3 January (sic) and **the FBI released to the press** information that their investigation confirms Oswald's guilt, and that he had no accomplices."*

Another 12-4 article in the Times with a 12-3 dateline is also intriguing. It appears to have been designed to overrule the 11-27 article casting doubt on the ability of one man to fire all the shots. It states *"From motion pictures of the President's assassination taken here on Nov. 22, authorities have concluded that the three shots were fired over a period of five to five and one-half seconds. But that period is calculated from the moment when the first shot is fired...The man starts the interval himself with the first shot. Therefore, if the interval is five seconds, as some people say it was, he has to fire two shots in five seconds, not three shots. It is possible, and it can easily be done. It's no trick at all...The first and third shots, said authorities, struck the President. Either could have killed him. The second bullet missed the President but struck and wounded Gov. John B. Connally, Jr. of Texas, who was riding with Mr. Kennedy."* The frequent reference to "authorities" and the by now familiar "Mr. Kennedy" are indications this article was yet another gift from the FBI.

On 12-4, Theodore Voorhees, Chancellor-elect of the Philadelphia Bar Association, howled into the wilderness. According to a 12-5 New York Times article, Voorhees told a luncheon that Oswald had been *"lynched."* He went on to state *"it is against the legal profession, not television or the press, that the heavy indictment must lie"* and that no member of the legal profession *"protested the publication of the evidence, the 24-hour interrogations, the violation of the prisoner's rights."* The Warren Commission, which had not yet had a meeting, was, naturally, made up almost entirely of lawyers, as was its staff. One of them, Arlen Specter, was an Assistant District Attorney from Philadelphia. One can only wonder what Specter thought of Voorhees' speech.

And what Voorhees thought of the revelations to come... In any event, he was not alone in noting that something was rotten in Dallas...and Washington. On 12-5, an editorial in the San Francisco Chronicle opined that the FBI's leaking its own report to the press was *"highly irregular and objectionable"* and stated for the record that the editors of the Chronicle registered their *"profound objection to this kind of handling of so grave and somber a matter."*

On the other side of the nation, the Warren Commission held its first executive session. Among the topics discussed was, no surprise, the FBI's leaking its conclusions to the press. As reported by Dick Russell (no relation) in *The Man Who Knew Too Much*, notes on this session by Richard Russell, found in his memorial library, reflect that Senator Russell felt *"Something strange is happening. W and Katzenbach know all about F.B.I. and they are apparently through psychiatrists and others planning to show Oswald only one who even considered. This to me is untenable. I must insist on outside Counsel."*

The "W" in Russell's note was Warren. Yes, as incredible as it may seem to those considering Warren a beacon of integrity, Judge Warren was adamantly against conducting an open and independent investigation of the assassination, and told his fellow commissioners: *"I am of the opinion also that we should not conduct our hearings in public; that it is not necessary for us to bring witnesses before us. If it is necessary for us to get the stories of witnesses we can get it through our investigative agencies first, and then if we want to talk to them we can bring them into our conference room and discuss it with them there...Having that view, I do not believe that it is necessary for us to have the power of*

subpoena. I believe that the power of subpoena and holding public meetings where witnesses would be brought in would retard rather than help our investigation...we could hold our meetings and take any evidence or any statements that we want in camera, and eventually make our report without any great fanfare throughout the country. I think any report we would make would carry with it a great deal more influence done in that way than if we attempted to have any public hearings."

He also reminded those in attendance of the commission's *raison d'être*: to shut down other investigations and allay public fears. He advised: *"The President indicated to me that if this commission was set up that in all probability there would be no legislative committees having hearings. I think that would be very helpful, because one investigation should be enough..."* and later added *"I personally would be very happy if the State of Texas would decide not to hold any such hearings until this commission had an opportunity to survey the situation and make its appraisal, because if there should be some irresponsible witnesses come before that commission and give sensational testimony to the public... we would have the job of allaying the public fears that developed from that kind of testimony."*

This last statement reflects that an underlying turf war had bubbled to the surface. While the Texas Court of Inquiry announced after Kennedy's funeral was more than ready to rubber-stamp the FBI's report, Texas Attorney General Waggoner Carr was less willing to subordinate his state's investigation to that of the subsequently announced Warren Commission, as he was concerned that any investigation headed by Warren would have an anti-Texas bias. As a result, during the first week of December he was called back to Washington.

In his book *Texas Politics in My Rearview Mirror*, Carr describes this trip as follows: *"The President suggested that I visit with Chief Justice Earl Warren as soon as possible to work out a cooperative effort...the White House had arranged for Assistant Attorney General Katzenbach to set up the meeting with the Chief Justice. To my complete surprise, Mr. Katzenbach reported to us that the Chief Justice refused to see us until we agreed that Texas would drop any plans for an investigation and any thought of participating in the Warren Commission investigation!...It developed into a Warren-Carr two-day standoff, with Katzenbach acting as go-between. Late in the afternoon of the second day, we sat in the Attorney General's office awaiting Katzenbach's return from another visit with Warren. When he came back, he told us that Warren remained adamant not to see us until we complied with his terms. Completely frustrated and with little patience remaining, I advised Mr. Katzenbach that we were leaving for Texas on the next plane and when we arrived there I would convene the Court of Inquiry. I added that this would be a public hearing, as opposed to Warren's closed-door investigations, and we would let the world determine which one it liked best. We immediately departed for our hotel to check out, but by the time I reached my room, Mr. Katzenbach called to say the Chief Justice had agreed to meet."*

Carr and Warren then worked out the terms of their cooperation. In Carr's book, he lays out these terms. In exchange for the Court of Inquiry's being allowed to have representatives present at the Commission's closed hearings, direct questions to witnesses, and have access to depositions, Carr agreed *"That when the investigation was completed, if we felt a. It had been fair to Texas, b. It had been thorough, and c. No evidence was withheld from the public, then I would report this to Governor Connally and the people of Texas and publicly agree with the Commission's conclusions."* Note that Carr's concern is that the investigation *"be fair to Texas"* and not *"be fair to Oswald,"* a resident of Texas whose rights he was charged with protecting. Note also that Carr agreed to publicly agree with the Commission's conclusions provided only that their investigation be thorough and that all the evidence be made public; and that they need not come to a correct conclusion in order for him to agree.

From this one can only conclude that Carr had sold out his responsibility to see that justice was served in exchange for the protection of his beloved state of Texas, and that Warren had agreed to be kind to Texas in exchange for his conclusions not being publicly second-guessed. A political solution to a legal question. In other words, politics as usual.

(On October 5, 1964, less than 2 weeks after the Warren Commission published its 888-page report, the Texas Court of Inquiry issued a 20-page report, confirming its findings.)

Life's Cavalcade of Errors

While one might think that a little distance and perspective would help the media, and that its December stories would be more accurate than those written just after the assassination, this was hardly the case. The 12-6 issue of Life Magazine, for example, contained even more biased reporting and misinformation than its previous issue. One editorial proclaimed that *"Oswald was a misfit Marxist with a life-long persecution complex; a resentful loner who found an evil chance to employ his single skill--marksmanship--against the world's most valuable target."* Far worse, Life writer Paul Mandel, in an article entitled "End to Nagging Rumors," listed so many non-facts that one can only assume the whole article was a deliberate attempt to squelch said rumors, even at the expense of the truth.

It started out well enough, noting that the killing of Kennedy and Oswald had led to *"breathless rumors: that Oswald had been a hired killer; that Oswald had used an accomplice; that Oswald had not killed the President at all; that Oswald had been framed and then shot to silence him."* But from there it stopped reporting and started blowing bubbles.

Mandel claimed: *"Three shots were fired. Two struck the President, one Governor Connally. All three bullets have been recovered--one, deformed, from the floor of the limousine; one from the stretcher that carried the President; one that entered the President's body."* Well, this was untrue. Only one and a half bullets were recovered. No bullet was removed from the President. As a result, the third shot heard by most witnesses could have come from almost anywhere, and been fired by almost anyone. Apparently this fact, even though it was true, was not to be considered by the American public.

Mandel then continued: *"The murder weapon, although subsequently manhandled for the benefit of TV, still showed Oswald's palm print."* This was also untrue. The rifle was paraded before the cameras BEFORE a palm print was, reportedly, found and lifted by the Dallas Police. The article also fails to note that the FBI was unable to find ANY trace of this print when they inspected the rifle but a few hours later. Now why wasn't this mentioned? Oh, that's right--the article is entitled "END to nagging rumors", not "telling the truth even if it will lead to more rumors."

Mandel then continued: *"His own carbine was missing from its usual place. A witness had seen him bring a long gun-sized package to work."* Ouch. This is an outright lie. The witness in question, Buell Wesley Frazier, had passed a polygraph test while claiming that the "gun-sized package" supposedly found in the building and reportedly shown to him was approximately twice as large as the package he'd seen Oswald carry to work. In Frazier's opinion, moreover, the size of the package Oswald was carrying was far too small to carry the assassination rifle.

This paragraph then came to a merciful end: *"And threads from Oswald's clothing were found in the warehouse sniper's nest."* Now, really. This bit about the threads is made up of whole cloth. True, the FBI claimed there were threads on the rifle that matched Oswald's shirt, but even this "fact" couldn't

end the nagging rumor that Oswald had been framed, as Oswald had insisted that he'd only put this shirt on after returning to his rented room from work, and NONE of his co-workers could recall his wearing the shirt to work that day.

Mandel then proceeded to discuss the Zapruder film, and its help in establishing that Oswald had enough time to fire three well-aimed shots. He reported: *"from the movie camera's known speed of 18 frames a second--two frames a second faster than it should have run--it is possible to reconstruct the precise timing and placing and feasibility of the shots."* Well, this is very interesting. Because it's reasonably accurate. The FBI's report on Zapruder's camera notes that Zapruder gave his camera to the FBI on 12-6, and that the camera was subsequently determined to have run 18.3 frames per second. Mandel's article is dated 12-6, but was actually written days earlier. Well, then, how the heck did Life Magazine know the results of the tests performed on Zapruder's camera before these tests were even performed? Had Life, which had purchased the Zapruder film, performed its own tests on the camera? If so, did it provide this info to the FBI? And, if so, should we take from this that the FBI had no plans to test the speed of Zapruder's camera, and only did so to avoid embarrassment after Life had conducted its own tests?

Mandel then described what can be observed on the Zapruder film. He reported that the first shot was fired from behind and struck Kennedy when he was 170 feet from the sniper's nest (at approximately frame 191). While the HSCA eventually agreed with this assessment, the Warren Commission concluded that the President was first struck somewhere between frames 210 and 225. In a bizarre twist, however, Mandel claimed Kennedy was first struck in the throat. From behind...

But this was just the beginning of Life's cavalcade of errors. Mandel then reported that the second shot hit Connally 74 frames later (at approximately frame 265 of the Zapruder film). Curiously, having Connally hit at this time supported both the scenario outlined in Life's 11-29 issue, and the FBI and Secret Service scenarios for the shooting. It was also strikingly at odds with the film. This leads many to suspect that Mandel's article, designed to end "rumors", was more specifically written as a favor to someone in the government, perhaps even the President. Mandel almost certainly never believed this stuff. Heck, it's so readily apparent that Connally was hit before frame 265 that even the Warren Commission could see it; they claimed he was hit by 225.

Mandel then got something right---he claimed that the head shot came 48 frames later (at frame 313). He then returned to his curious ways. Here, only days after a New York Times article had cast doubt about the assassination rifle's ability to fire three shots in the time allotted for the shooting, Mandel reported that the director of the NRA had successfully re-created Oswald's shooting feat by hitting three moving targets in three tries at similar distances with a similar rifle as Oswald's in 6.2 seconds. The FBI would later determine these claims to have been greatly exaggerated.

Mandel then hit a new low. To explain the public's confusion over the assassination, he offered: *"The description of the President's two wounds by a Dallas doctor who tried to save him have added to the rumors. The doctor said one bullet passed from back to front on the right side of the President's head. But the other, the doctor reported, entered the President's throat from the front and then lodged in the President's body."* Well, this is strange already. NO Dallas doctor had claimed a bullet had passed from back to front through the President's head. This was just made up.

It then got weirder. Mandel wrote: *"Since by this time the limousine was 50 yards past Oswald and the President's back was turned almost directly to the sniper, it has been hard to understand how the bullet could enter the front of his throat. Hence, the recurring guess there was a second sniper somewhere*

else. But the 8mm film shows the President turning his body far around to the right as he waves to someone in the crowd. His throat is exposed--toward the sniper's nest--just before he clutches it." This, of course, is bullshit. The Zapruder film, which was owned by Life, and which was clearly viewed by Mandel multiple times during the creation of this article, shows no such thing. Not even close.

The back wound, inexplicably still a secret, was never even mentioned.

For what it's worth, someone at Life was quick to realize that Mandel's article was an embarrassment... A week later, when the article was repackaged in a special John F. Kennedy Memorial Edition of Life, its title was changed from the grossly overstated *"End to Nagging Rumors"* to an almost apologetic *"First Answers to the Nagging Rumors."* Presumably, Stupid Speculation that We No Longer Stand Behind, although an accurate title, was never considered.

And this wasn't the only Life article revised for the Memorial Edition... The 11-29 article *"Split Second Sequence As The Bullets Struck"* was also revised and renamed *"Split Second Horror As The Sniper's Bullets Struck."* Note that along with the addition of the "Horror" the new title specified there was only one shooter, something the editors of Life would have to have known was in question due to Kennedy's being shot from behind, and having an entrance wound on his throat. (Oh, that's right, Paul Mandel had already explained that...)

Here, then is how the shooting is described in the Memorial Edition: *"Past the book warehouse the President turned to his right to wave to someone. Just as his car passed the road sign shown in the foreground the first bullet struck him in the neck. He clutched at his throat. Although some onlookers heard the shot, Governor Connally still faced ahead, unaware. With the first bullet still lodged in him, the President slumped forward in his seat and down toward his wife. At the same time the second shot struck Governor Connally. Then the assassin fired a third time. Oswald's bullet, fired at a range of more than 250 feet about two seconds after the shot which hit the governor, struck the President in the rear right part of his head."* (The head shot, after which the President's head fell back and to the left, is still not depicted, nor described.) Note that the bullet is now conclusively Oswald's bullet. Note also that, in Life's interpretation of the Zapruder film, Governor Connally was wounded but two seconds before the head shot. This, according to pretty much *everyone* who would subsequently see the the film, including the members of the Warren Commission, places the Connally shot closer to the time of the head shot than to the time Connally was actually shot.

But as confusing as Life's analysis of the shooting was, it had plenty of partners. Its sister publication, Time Magazine, also described the Zapruder film in its 12-6 issue. It related: *"What actually happened was made horrifyingly clear in color films taken by Abraham Zapruder, a Dallas clothing manufacturer and an amateur moviemann. The strip runs for about 20 seconds--an eternity of history. Kennedy was waving to a friendly crowd. Then came the first shot, and he clutched at his throat with both hands. Connally turned around, raised his right hand toward the President, then fell backward into his wife's lap as the second shot struck him. The third shot all too literally exploded in Kennedy's head."* Note that Time failed to present Mandel's bogus claim Kennedy had turned around in his seat before the first shot. Note also that Time claimed Connally reacted to the first shot, while Life claimed that after the first shot *"Connally still faced ahead, unaware."* And note, finally, that two of the points on which the two sister publications agreed is that the film shows Connally to have been hit by a separate shot from Kennedy, and that Kennedy was hit in the head by the third shot. That Connally was hit by a separate shot was in time rejected by the Warren Commission. That Kennedy was hit in the head by the third shot was also called into question. Hmmm...what was *"horrifyingly clear"* to the largest media corporation in America was in time rejected by the Warren Commission.

And Time/Life wasn't the only large American media corporation inadvertently spreading the seeds of conspiracy.

On 12-5, an article in the New York Times by Joseph Loftus about a Secret Service re-enactment of the shooting in Dallas, relates: *"One question was how the President could have received a bullet in the front of the throat from a rifle in the Texas School Book Depository Building after his car had passed the building and was turning a gentle curve away from it. One explanation from a competent source was that the President had turned to his right to wave and was struck at that moment. The best authority presumably on the exact angle of entry of the bullet is the man who conducted the autopsy. He is Dr. J.J. Humes at the Naval Medical Center, Bethesda, MD. Dr. Humes said he had been forbidden to talk. Most private citizens who had cooperated with newsmen reporting the crime have refused to give further help after being interviewed by agents of the Federal Bureau of Investigation. Dallas city and county police withdrew their help the same way. One high officer said he wished he could answer questions 'because it would save us a lot of work.'"*

By this time, millions of Americans must have been asking themselves "If the FBI has concluded that the long-dead-and-buried Oswald killed Kennedy, and that he acted alone, why all this secrecy?"

And a few must have been asking "Hmmm... this article says a '*competent source*' says Kennedy was turned around when receiving one of his shots, when earlier articles from 11-23 attributed such a belief to a '*White House source*.'" Is a '*White House source*' trying to convince us the shots all came from the same direction? And is Life Magazine's claim this is shown in the film a mere coincidence? Or has Life, too, been speaking to this '*White House source*'?"

Ex-CIA chief and newly-appointed Warren Commissioner Allen Dulles also engaged in more secrecy than would seem necessary, should he have truly believed that Oswald had acted alone. In his personal correspondence, now available on the Princeton University website, there is a **12-6-63** letter from Dulles to CIA counter-intelligence chief James Angleton in which he writes *"Please see enclosed letter from (REDACTED). Over the phone he told me that he had some information, rather vague, about some plot of air force officers to 'impeach' President Kennedy, including an Air force officer who had been attache in Czechoslovakia. I told him that such information should be brought to the attention of the FBI. He promised to do it but whether he will or not, I do not know. I can only judge by telephone conversation in that he talked quite sanely but very vaguely."* Here, Dulles, tasked with investigating Kennedy's death, passes the buck to the FBI and CIA, even though he, as one well-familiar with the craft of coups d'etats, knows full well that any coups d'etats made of "air force officers" would be likely to include members of the CIA. Here, he has contacted Angleton, charged with investigating the assassination on behalf the CIA, about a potential break in the case potentially involving the CIA, but has failed to tell his fellow commissioners about this break. From this, it appears that Dulles' first inclination, even in his retirement, was to protect the CIA. I mean, why, if Dulles truly feels the information brought forth by (REDACTED) should be brought to the attention of the FBI, hasn't he done so himself?

And Dulles wasn't the only one covering up for his "team" whatever that team should be. A 12-6 article by Anthony Lewis for the New York Times reflects that *"congressional Republicans"* have rejected President Johnson's decision to blame "*hate*" for the crime, and have insisted instead that people blame left-wing hate for the crime, and leave right-wing hate alone. A statement put out by these Republicans claims: *"We are told that hate was the assassin that struck down the President. If it was hatred that moved the assassin, that hatred was bred by the teachings of Communism. All the evidence presented*

affirms this." No shrinking violet, Republican Senator Millard Simpson of Wyoming offered his support for this sentiment, and complained, on the floor of the U. S. Senate, that persons seeking *"political advantage from warping the uncontestable truth"* were trying to blame *"rightists and conservatives"* for Kennedy's death. He then asserted *"It was a single kill-crazy Communist who was acting to the dictates of his own unexplainable left-wing dementia."* Keep in mind that the FBI's report on the assassination has not yet been released. And that here is a U.S. Senator, on the floor of the U.S. Senate, pronouncing Oswald a *"kill-crazy Communist."*

Still, this was almost a compliment in comparison to what came next. Over the next few days, an AP recap of the shootings of Kennedy and Oswald was published across the country. This was a news story, by Jules Loh, entitled *"Three Paths Led to Dallas,"* clearly based upon the FBI's supposedly unbiased report. It was not an opinion piece. And yet Loh saw fit to describe the defenseless Oswald as a *"sullen, fitful, frustrated, ne'er do well, whose demonic pursuit of Marxist nostrums led him everywhere and nowhere."*

On 12-9, the FBI summary report on the assassination was turned over to the newly formed Warren Commission. One of the many flaws in this report is that it cited the paraffin tests as evidence Oswald killed Kennedy, when they actually suggested his innocence. Attached to their copies of the report, the commissioners found a letter signed by Assistant Attorney General Katzenbach, recommending they immediately release a short press statement declaring that *"1) The FBI report... establishes beyond a reasonable doubt that Lee Harvey Oswald shot President Kennedy"* and *"2) The FBI has made an exhaustive investigation into whether Oswald may have conspired with or been assisted by any organization, group, or person...To date this aspect of the investigation has been negative."* Unimpressed with the report, the commissioners chose to disregard Katzenbach's letter. In his testimony before the HSCA in 1978 Katzenbach explained his role by saying that the state department had requested some statement be made indicating Oswald's guilt so that our allies would feel more comfortable with the new administration. He also mentioned that the FBI itself wrote the letter and that he merely added his signature.

Katzenbach Recap:

On November 22, shortly after the assassination, he took over as Acting Attorney General, so that Attorney General Kennedy could both grieve for his murdered brother and devote himself to his family.

On November 24, after Oswald was assassinated, he met with FBI Director Hoover. The next day, he issued a memorandum to Bill Moyers, then working as the Johnson Administration's Press Secretary, encouraging Moyers to use the press to convince the public Oswald had acted alone. He later defended this action by insisting he was under pressure from the State Department to silence talk of a vast conspiracy.

He then began to pressure the FBI to finish its investigation as fast as possible, and pressure President Johnson to create a Presidential Commission to confirm the FBI's findings.

By early December, he cooperated with Chief Justice Warren and began pressuring the Attorney General of Texas to forego its own investigation.

And then on December 9, he pressured the Warren Commission to simply sign-off on the FBI's findings!

It's amazing to reflect that, in the aftermath of the assassination, Katzenbach, acting as the nation's top cop, had tried to cut-off a thorough, and one might say REAL, investigation at every opportunity, and that, when questioned about this later, he refused to take responsibility, blaming his actions on the FBI and the State Department. It was not HIS job to cater to the insecurities of FBI Director Hoover. It was Hoover's job to answer to him. It was not HIS job to assuage the concerns of the international community. It was HIS job, however, to make sure the assassination was properly and thoroughly investigated, and that those responsible were exposed and brought to justice. Even if one were to acknowledge the likelihood Oswald acted alone, one can not possibly believe that Katzenbach's actions were appropriate and reflective of a high regard for his responsibilities. Robert Kennedy may not have been a giant, but his shoes were clearly too large to be filled by Katzenbach.

Robert Kennedy's approach would almost certainly have been different. On December 9, the same day that Katzenbach urged the Warren Commission to confirm the FBI's findings that Oswald had acted alone, Robert Kennedy had a private conversation with historian Arthur Schlesinger Jr. and made it clear that he could not agree with so simple a solution. In his Pulitzer Prize-winning epic, *Robert F. Kennedy and His Times*, Schlesinger wrote that Kennedy, who had deliberately removed himself from the investigation, was nevertheless keeping tabs on the developments, and was suspicious that Oswald, whose guilt he had accepted, may have been part of a larger plot, *"organized by Castro or gangsters."* Kennedy also told Schlesinger that CIA Director John McCone believed there was a second assassin.

And Kennedy wasn't just talking to Schlesinger. In 1997, with the release of *One Hell of a Gamble*, a book on the Cuban Missile Crisis co-written by Canadian-American historian Timothy Naftali and Russian historian Aleksandr Fursenko, and built upon previously unexamined documents discovered in the Russian archives, it was revealed that on 12-9-63 American artist and ardent Kennedy supporter William Walton delivered a personal message from Robert Kennedy to Russian Premier Nikita Khrushchev. This message, according to the memo of Russian GRU officer Georgi Bolshakov, a former contact of Robert Kennedy's to whom Walton actually spoke, was not remotely an endorsement of the FBI's report on the assassination, which Robert Kennedy undoubtedly knew was bound to be the "official" solution to the crime. No, not at all. Instead, Kennedy wanted Khrushchev to know that *"Perhaps there was only one assassin, but he did not act alone,"* and that *"there was a large political conspiracy behind Oswald's rifle."* And that's not all; Kennedy also had some thoughts on the nature of this conspiracy. According to Bolshakov, Kennedy also wanted Khrushchev to know that *"despite Oswald's connections to the communist world"* the Kennedys believed *"the President was felled by domestic opponents"* and had been *"the victim of a right-wing conspiracy."*

The Mark of Hoover

And yet, even with doubts in high places, including the minds of President Johnson, Attorney General Kennedy and CIA Director McCone, FBI Director Hoover continued pushing his own version of events--that Oswald had acted alone. A **12-11-63** article in the Los Angeles Times entitled *"FBI Certain Oswald Was Assassin, Report Shows,"* discussed the Warren Commission's reluctance to release the FBI's report, whilst simultaneously revealing some of the key findings of the report. The source for the article is clearly the FBI. The problem with this kind of journalism becomes apparent when one reflects that of the three pieces of evidence presented in support of Oswald's guilt, none of them are provided in context. It is reported that threads of Oswald's clothing were found on the assassination rifle. It is not revealed, however, that Oswald claimed he'd changed shirts when he got home from work and had not been wearing that shirt at work, and that no one who'd seen him at work, including a Dallas Police Officer, could identify that shirt as the one he'd been wearing at work. It is also not revealed that none

of the eyewitnesses claiming to have seen a man in the sniper's nest thought the sniper was wearing a shirt of the color of the shirt whose fibers were reportedly found on the weapon. The article then reports that Oswald's hand print was found on the assassination rifle. It does not reveal, however, that this print was reportedly lifted on the evening of 11-22 by the Dallas Police, and that they then supposedly forgot to tell anyone about it until 11-26, after the FBI inspected the weapon and found no such print. The article then reports that Oswald's fingerprints *"were lifted from the wrapping paper that hid the weapon when the assassin carried it to work."* It does not reveal that the only two individuals to see Oswald with a package on the morning of the assassination refused to I.D. the "wrapping paper" found in the building as the package in Oswald's possession, and claimed the "wrapping paper" was in fact a much much larger package than the one carried by Oswald. In sum, the article allows the FBI to present three pieces of evidence to the public, all of which were extremely damaging to Oswald, and all of which, should a full discussion of their significance been permitted, or pursued, might very well have convinced the public that a frame-up was in progress.

Of course no such discussion was permitted, or pursued. Historian Gerald McKnight, in his book *Breach of Trust*, discusses Hoover's efforts to close the case in detail. He describes a **12-12-63** teletype from FBI headquarters (JFK record 105-406-39) informing all FBI field offices that *"Oswald conclusively established as assassin of President Kennedy"* and to limit future communications *"to information pertaining to him and to allegations that a person or group had a specific connection with him in the assassination."* By limiting the investigation to Oswald, and working outwards from Oswald, of course, the FBI had severely reduced the chances they'd find a conspiracy that only marginally or tangentially involved Oswald. Hoover had his man, and wasn't willing to humor the possibility Oswald was just what he said he was--a "patsy."

Further evidence that Hoover was prematurely closing the case is contained within a 12-12-1963 memo from Hoover to his top assistants. Hoover wrote that he spoke to the Chief Counsel of the Warren Commission, J. Lee Rankin, and explained that even though the Justice Department had wanted the release of a statement saying Oswald had acted alone, that he and the President agreed that the FBI report should reach no conclusions. He stated further that he believed Oswald was the assassin but that he still had concerns that Oswald was working for Castro. (Yes, this was the same man who two weeks earlier was urging an immediate wrap-up of the case.) Hoover's memo asserted as well that the Justice Department had been leaking the contents of the FBI Report, that he had pressed them to get the report immediately to the Commission, and that he did not want any conclusions made in the letter of transmission of the report to the Commission.

What's wrong with this memo is that it's contradicted by most everything else in the record. According to both the Acting Attorney General Katzenbach (in his testimony before the HSCA) and one of the recipients of this memo, Assistant FBI Director William Sullivan, Hoover both wanted to close the case with the issue of the FBI's report and was the one who'd been making the leaks.

Sullivan actually went further than that. A memo on a 4-21-75 interview of Sullivan by the staff of the Senate Select Committee to Study Governmental Operations reports *"Sullivan offered that Hoover didn't like the Warren Commission because Hoover didn't want any organization going over the grounds that the FBI had already investigated in fear that the Warren Commission would discover something else that the FBI might have forgotten or ignored. In this connection, Sullivan said that Hoover had leaked the results of the FBI investigation of the assassination of President Kennedy to the press in December 1963, in order to preempt the Warren Commission's findings. Sullivan said that the leak to the press was done via DeLoach, who gave the story to a cooperative news source at the Chicago Tribune and also the Washington Evening Star. Sullivan said that the allegation was then*

leaked that it was Acting Attorney General Katzenbach who had leaked the FBI's findings. Sullivan said that the Bureau personnel who would have been aware of the leak were Mohr, Tolson, Edward Clayton, and Belmont. Sullivan added that this was not an unusual practice of Hoover's." If Sullivan was telling the truth, as most believe, then Hoover's memo of 12-12 reflects his trying to cover his tracks whilst simultaneously alerting his assistants to his cover story.

In any event, no matter who was responsible, over the next few weeks, much of the FBI's report became public knowledge, via leaks to the press, and the press returned the favor by convicting Oswald in the public eye. Typical articles in this time period include the 12-14-64 Saturday Evening Post's account of Oswald, entitled *"The Assassin"* (not the accused assassin) and the Newsweek article of 12-16-64, not too subtly entitled *"Portrait of a Psychopath."* These articles overlooked that Oswald was not particularly violent and had not officially been declared the President's assassin.

Another 12-12 FBI memo only adds to the intrigue. In this one DeLoach informed Hoover and others he'd had a secret meeting with Warren Commissioner Gerald Ford and that *"Ford indicated he would keep me thoroughly advised as to the activities of the commission."* Ford also told DeLoach that the other commissioners wanted to go along with Katzenbach's recommendation to release the FBI's findings but that he was *"a minority of one"* who would fight the issuance of a release *"until the Commission had had a thorough opportunity to review and discuss the FBI report."*

A 12-13 article in the Dallas Morning News, while not an article based upon the FBI's leaked report, nevertheless revealed its influence. The article started by asking: *"Did a bullet from Lee Harvey Oswald's rifle chip the curb of Main Street overpass? That question remained unanswered yesterday. And it raised other questions: If one of the three shots from Oswald's mail order rifle struck the curb, is it possible that another bullet ranged through President Kennedy's body and then hit Gov. Connally? If the chip did not result from another bullet, how did it get there?"* The article then related the story of Dallas police investigator Buddy Walthers, who asserted that a man came up to him in Dealey Plaza on the 22nd and claimed he'd been hit by something as he watched the motorcade. Walthers then admitted that he'd found what appeared to be a freshly-made chip in the curb by where the man had been standing. The article then advised that Gov. Connally said the first and third shots hit the President, and that he'd been hit by the second shot. It then asked: *"Was Governor Connally mistaken about what happened during the 10 second period in which the sniper shot him and the President? Did the rifleman fire two bullets into the car, with one striking both President Kennedy and Gov. Connally, and then hurriedly fire a third which passed over their auto? Or did the chipped shot have nothing to do with the shooting? Couldn't the motorist have been struck by a speck of gravel thrown up by a car? Couldn't the chip have been caused by other gravel? FBI and Secret Service agents may have the answer. But they haven't revealed what they have learned during their intensive investigation of the murder of President Kennedy."*

One problem with this article, of course, was that it framed the questions raised by the wounding of this witness, James Tague, within the parameters of Oswald having fired all the shots. Under normal circumstances, in a case where the FBI hadn't secretly told the press it had concluded that one man had fired all the shots, the existence of an otherwise unexplained chip on a curb, and a witness nearby who believed he was wounded by a piece of flying concrete, might raise questions about a possible fourth shot unheard by the witnesses. Instead, the writers of this article were only willing to state that the wounding of Tague suggested that one of the shots hitting Kennedy had hit Connally as well. The conclusion of this article is also intriguing. A number of journalists had witnessed the Secret Service's 11-27 and 12-5 re-enactments. Those writing this article would almost certainly have known that no measurements had been made linking the sniper's nest to the curb near the overpass. Perhaps, then, the

writers of this article knew full well that no FBI investigation of Tague had been conducted, but were afraid to say so publicly, for fear of incurring the wrath of the notoriously protective and vindictive Hoover.

In any case, with all this leaking and political posturing, the FBI displayed little appetite for performing an actual investigation. Shockingly, a 12-13 teletype message from Gordon Shanklin of the Dallas FBI office to Hoover revealed that the FBI still hadn't even read the autopsy report. The message reads *"An article appearing in the evening Dallas Texas newspaper prepared by staff writer Bill Burrus dateline Bethesda Maryland reflects a still unannounced autopsy report from the US Naval Hospital reflecting President Kennedy was shot in the back and the bullet, which had a hard metal jacket, exited through his throat. This does not agree with the autopsy findings at the Bethesda Hospital as reported on page two eight four of the report of SA Robert P. Gemberling at Dallas on December 10, last, which reflects an opening was found in the back, that appeared to be a bullet hole, and probing of this hole determined the distance traveled by this missile was short as the end of the opening could be felt by the examining doctor's finger. The Bureau may want to have Baltimore obtain the unannounced autopsy report from Bethesda, Maryland, and disseminate to the Bureau and Dallas."*

The Burrus article referenced by Shanklin ran in the 12-12 Dallas-Times Herald. It seems clear the emergency room doctors of Parkland Hospital were his primary source. The records of Secret Service Agent Elmer Moore reflect that he spoke to these doctors on 12-11. On 12-18, one of the few members of the media to smell conspiracy, Richard Dudman of the St. Louis Post-Dispatch, wrote an article about this friendly visit by the Secret Service to the doctors. It reads: *"Secret Service Gets Revision of Kennedy Wound. After visit by agents, doctors say shot was from rear...(the Secret Service) obtained a reversal of their original view that the bullet in his (Kennedy's) neck entered from the front. The investigators did so by showing the surgeons a document described as an autopsy report from the United States Naval Hospital at Bethesda. The surgeons changed their original view to conform with the report they were shown."* Months later, after speaking to one of the Dallas doctors, Dr. Robert McClelland, Mark Lane would relate *"the agents had a copy of the autopsy report on their laps but refused to allow the physicians to see it" and that "after a three hour session with the physicians the Secret Service Agents were able to leave the room and to state that the physicians in the Parkland Memorial Hospital all announced and agreed that they were in error when they said that the bullet wound in the throat was an entrance wound."*

The Secret Service's efforts to bring the doctors in line and get the story of the Bethesda autopsy report to the public was doomed from the start, however. For weeks afterward, publications were still describing the President's wounds as described in the November 22nd Press Conference. The 12-14 Saturday Evening Post reprinted a Jimmy Breslin article from 11-24 and cited Dr. Perry as believing that the throat wound was *"small and neat"* and connected to a *"mediastinal wound"* (which would by extension make it an entrance wound), and that *"The occipitoparietal, which is a part of the back of the head, had a huge flap."* (Perhaps it was this article that inspired Moore to visit Perry and show him the autopsy report.) The Texas State Journal of Medicine, moreover, ran an article entitled *Three Patients at Parkland* in its January, 1964 issue. This article, based on the initial reports of the doctors at Parkland Hospital, described the wounds as witnessed by those doctors, and not as described in the autopsy report.

The confusion caused by the divergent accounts offered by the Parkland and Bethesda doctors was only exacerbated by the actions of the FBI. In mid-late December, before Dallas Special Agent in Charge Gordon Shanklin alerted Hoover that the FBI's report on the wounds could be in conflict with the official autopsy report, the FBI began leaking its own version of the President's wounds, one based not

on the statements of the emergency room doctors, nor on the official report of the autopsy doctors, but on what Hoover's loyal FBI agents recalled hearing discussed at the autopsy. This effort peaked with the publication of *The Torch is Passed*, a widely-circulated book rushed out by the Associated Press and rehashing much of the FBI's report on Oswald. On the shooting itself, *The Torch is Passed* reported: *"The President never heard the shot or knew what hit him. It was a piece of metal a little thinner than an ordinary pencil. It struck him in the back, penetrating two to three inches. He was struck as he turned to his right to wave. His hands snapped up reflexively to his throat. Wordlessly, he fell to his wife, who was sitting on his left in the back seat. In the jump seat ahead, Gov. John Connally turned and a second bullet caught him in the back, passed through, struck his right wrist, and lodged in his thigh. The third and last shot hit the back of the President's head about ear-level, as he was bowed forward. 'His head exploded in blood,' said James Chaney, a motorcycle patrolman who was six feet away."* There was a huge problem with this passage, of course, one mirroring the problem with the FBI's own description of the shooting--it fails to account for the President's throat wound.

Rather than read the autopsy report, and leak its explanation of the throat wound to the press, however, the FBI thereby commenced pushing its own explanation for the throat wound. Even though the Zapruder film in its possession showed Kennedy reaching for his throat a full five seconds before his skull exploded, the FBI Supplemental Report of January 13, 1964 suggests that a fragment of the bullet striking Kennedy in the head created the throat wound. In a section on Kennedy's clothing, the report contains the following passage: *"Medical examination of the President's body had revealed that the bullet which entered his back had penetrated to a distance of less than a finger length. There is a slit...in the overlap of the shirt the President was wearing...The slit has the characteristics of an exit hole...There is also a nick on the left side of the tie knot, which possibly was caused by the same projectile...The coat and shirt were x-rayed for metal fragments...but none were found...The Chief Pathologist at Bethesda Naval Hospital had advised that the projectile which had entered the President's skull region had disintegrated into at least 40 particles..."*

This unique assertion, not found in the 12-9 FBI report possessed by the Justice Department and Warren Commission, nor in the autopsy report in the possession of the Navy and Secret Service, was, upon repetition in the news media, as good as a confession that Hoover (almost undoubtedly through DeLoach), or someone quoting Hoover or DeLoach, had been the original source for the story. Hoover's leaking of the report to let certain conclusions out to the press was almost casually mentioned in the December 14 column of Washington insider Drew Pearson. It seems likely, however, that Hoover had failed to fully realize just how noticeable his footprints had become.

A 12-18 article by Nate Haseltine in the Washington Post was the first to bear the mark of Hoover. Here it was reported that the autopsy pathologists had found that Kennedy could readily have survived the first bullet to strike him, and that this bullet was *"found deep in his shoulder"*. Even worse, it was reported that a fragment of the second bullet, which *"tore off the right rear portion of his head...was deflected and passed out the front of the throat."* The article went on to note that the first bullet *"hit the President in the back shoulder, 5 to 7 inches below the collar line"* and that this was news to the doctors seeing Kennedy in Dallas, who had been *"in disagreement. Some believed the President had been shot twice, the neck wound being from a glancing hit"* while others believed *"he was shot only once, and that a fragment from the bullet that hit his head coursed downward and emerged through the front of the throat."*

Now watch as Hoover's poison spreads. On 12-18, an article for the Associated Press repeats some, but not all, of the FBI's findings. Citing *"a source fully acquainted with results of a post-mortem examination,"* it reported *"The first shot struck Kennedy in the back, made what was described as a*

small neat hole, and penetrated two or three inches without damaging vital organs. The bullet may even have entered Kennedy's back after first glancing off some part of the presidential limousine, since its penetration was not deep when compared to the damage done by the other shots fired by the assassin...The second bullet to strike Mr. Kennedy --the third bullet fired--left a large hole in the back of the President's head, destroyed considerable brain tissue and severely damaged the forehead." Note that there is no mention of the throat wound here. This suggests that the writer of this article had not yet been briefed by the FBI.

Tellingly, on 12-19, the next day, a follow-up article by the AP reported that Dr. James Beyer, who previously had argued that Kennedy's large head wound was not consistent with a military jacketed-bullet, repeated his assertions and built upon the previous day's conjecture that the first bullet to hit Kennedy hit the limousine first by guessing that the second one did as well. Beyer stated that *"the slight instability imparted to the missile by the ricochet could have resulted in the large wound described."* (Beyer's second- guessing of "official" autopsy results would boomerang back at him many years later when he would conduct an equally contested autopsy--that of Clinton lawyer Vince Foster.) Note that there is still no mention of the throat wound. These articles confirm then that the AP had not yet been informed of Hoover's "unofficial" explanation for the wound.

But you can't keep a good leaker down... A column in the Washington Daily News by Richard Starnes on this day repeated the wound description given the Post the day before. No mention of a ricochet. More than a mention of a fragment exiting the throat. Starnes reported as fact that the first shot *"struck the president high in the shoulder from behind, causing considerable damage to the massive muscles of the neck and shoulder. The second shot fired by the assassin struck Gov. John Connally. The third shot inflicted the wound that killed Mr. Kennedy by smashing away the back of his head. The confusion over the wounds was caused by a fragment of the third bullet that coursed down thru the President's head and exited thru his throat approximately at the collar line."*

The red flag indicating the FBI as the source of these leaks gets even redder, however, as we look at articles from the rest of the month. In the December 23 edition of Newsweek, an article quoted the supposedly secret FBI report extensively and said the bullet entering the right shoulder fell out, which left no explanation for the wound in the throat. The next week's Newsweek, however, cited the 12-18 article in the Washington Post, and reported that the throat wound was created by a fragment of the bullet creating the head wound. Similarly, the December 27 edition of Time stated that the "unofficial" word of the autopsy report had been released for a week and that it says a bullet struck Kennedy 6 inches below the collar line and fell out, and that the throat wound had been created by an exiting bullet fragment. A 12-30 U.S. News article followed suit, and claimed the autopsy *"showed that the wound in his neck was caused by the exit of a splinter from the shot that struck the back of his head."*

But with the coming of a new year, the leaks of the old one persisted. A January 4, 1964 article in the Journal of the American Medical Association, for example, repeated the FBI's assertion about the fragment exiting Kennedy's throat. As late as January 26, 1964, incredibly, even the great New York Times was still reporting that the first bullet fired lodged in Kennedy's shoulder, that the second bullet hit Connally, and that *"The third bullet, according to an autopsy in Bethesda Naval Hospital in Maryland, ripped away a portion of the back of the President's head on the right side. Fragments from the bullets cut a wound in the president's throat and damaged the windshield of the limousine."*

But the New York Times was not the only news organization routinely regurgitating the FBI's unique interpretation of the President's wounds. U.S. News and World Report, in its June 1, 1964 issue speculating on the Warren Commission's conclusions, asserted: *"The official autopsy of the President's*

body the night of November 22 shows Mr. Kennedy was first hit in the right shoulder. A second bullet struck Texas Governor John Connally. A third hit the President's head and killed him. There was no fourth bullet." It then added "A wound in Mr. Kennedy's throat was caused by a fragment of the bullet which entered his head from behind."

It took so long for the actual autopsy results to reach the public, in fact, that an entire motion picture, *The Trial of Lee Harvey Oswald*, was written and completed before the autopsy report's release. Clearly basing their description of the wounds on the leaked FBI report, the film-makers depicted a Navy doctor reading from an autopsy report. He states: *"Our examination reveals that the President was struck by two bullets. The first bullet struck the President in the back, just below the collarbone, and lodged in his body. The second bullet struck the President in the back of the head and fragmented. A splintered piece of the second bullet went through the President's neck and exited from the lower part of the neck."* When asked about the bullets, the doctor in the film testified *"We recovered one, the one bullet that had lodged in the upper shoulder."* Officially, of course, the only intact bullet recovered was found in Dallas and the "missile" recovered at the autopsy was just a fragment recovered from the President's brain.

To repeat, as no explanation for the neck wound was contained in the December 9 FBI report given to the Justice Department and Warren Commission, and as the published explanation for this wound was only offered in the FBI's January report, it seems doubtful that the Justice Department and/or Warren Commission were the sources for all these leaks about the neck wound, which started in December. It seems obvious from the nature of these mistakes then that the source of all this misinformation was in fact the FBI. It follows then that the FBI's refusal to look at the autopsy report in a timely manner, its continuing to champion outdated information in its December 9th and January 13th reports, and its decision to invent its own explanation for the throat wound ultimately backfired and fueled many of the conspiracy-oriented books which exploded on the market in 1966 and 1967. Not to be facetious, but perhaps the ever-suspicious Hoover should have had himself investigated as a possible communist.

Hoover's strange nature is further reflected, moreover, in a 12-14-63 FBI memo directed to his top assistants. Building upon his memo from two days before, in which he falsely blamed the Justice Department for leaking the FBI's report to the media, Hoover now told the FBI's assistant directors that he'd had a talk with Attorney General Robert Kennedy--presumably still his boss--and had told him that columnist Drew Pearson had received *"a good portion"* of his information on the report's contents from none other than Chief Justice Earl Warren.

The Decided Non-response

But if Hoover honestly thought he was fooling anyone as to who was behind the leaks of his report, he was both over-estimating the regard in which others held him, and under-estimating their basic intelligence.

From the transcript of the **12-16-63** Executive Session of the Warren Commission:

Chief Justice Earl Warren: *Well, gentleman, to be very frank about it, I have read that report two or three times and I have not seen anything in there yet that has not been in the press.*

Senator Richard Russell: *I couldn't agree with that more. I have read it through once very carefully, and I went through it again at places I had marked, and practically everything in there has come out in the press at one time or another; a bit here and a bit there.*

A short while later, Congressman Gerald Ford asked if the Commission should heed Acting Attorney General Nicholas Katzenbach's written request they release the FBI's findings to the public. After they decided to hold off, Ford explained why he asked.

Congressman Gerald Ford: *I was called by one of the top AP or UP people here, and he didn't know that you had received the letter (from Katzenbach) and we had copies, but he was one of the top AP or UP people at Dallas at the time. He said "Jerry, I'm surprised that we got, and the other press services got, stories out the very same day." In effect, he was saying what they have asked us to do. The minute he said that it led me to the belief that he was inferring that there had been a deliberate leak from some agency of the Federal Government, and now they wanted us to confirm by Commission action what had been leaked previously. Now, somebody had to give this information to both AP and UP in order for that to happen...*

Chief Justice Earl Warren: *I read those dispatches.*

Congressman Gerald Ford: *: Didn't that come to your mind?*

Chief Justice Earl Warren: *Surely did. I spoke to Katzenbach about it.*

Senator Richard Russell: *I mentioned that the first day we sat here.*

Chief Justice Earl Warren: *Yes, you did. Senator Russell asked Katzenbach where it could have come from and he said there was only one source. (Note: He means Hoover.)*

Senator Richard Russell: *Do you recall the first day I asked him that?*

John McCloy: *There were leaks long before we got the documents.*

Congressman Hale Boggs: *And after that, at the second meeting, there was the Evening Star with that whole thing.*

Senator Richard Russell: *Every day there was something.*

Chief Justice Earl Warren: *Yep, until it was all out and I tell you frankly I just didn't find anything in that report that has not been leaked to the press.*

Earlier in the **12-16** executive session of the Warren Commission, an odd incident took place, which might lead one to conclude it was not only Hoover who was anxious to convict Oswald as the lone assassin. Commissioner and former CIA Director Allen Dulles showed up with copies of Robert J. Donovan's book *The Assassins*, a history of the many assassination attempts upon U.S. Presidents, and handed them out to both counsel and his fellow commissioners. He told them "*It's a fascinating book, but you'll find a pattern running through here that I think we'll find in this present case.*" He was referring, of course, to Donovan's assertion that American assassins are predominantly disgruntled loners... lone-nuts. Was Dulles pushing for this conclusion from the outset? And was it just a coincidence that Dulles' former boss, former President Dwight Eisenhower, had written an article for the 12-14 Saturday Evening Post, also claiming that assassinations in the United States "*do not follow a pattern of political conspiracy and coup d'etat...the facts are that four of thirty-six Presidents have been assassinated, and a President in office and a President-elect have been targets of assassination attempts. These acts all had one thing in common: they were the work of crackpots, of people with delusions arising from imagined wrongs or festering hatreds*"? In closing, Eisenhower assured the public "*We must and shall rally behind our new President, Lyndon B. Johnson...*" Huh? Were Eisenhower and Dulles reading from the same script? And, if so, who was writing this script?

Ironically, Donovan's book, originally written in 1952, was re-issued in January 1964 with a new chapter on the Kennedy assassination that, due to the FBI's leaking their out-dated impression of the

wounds, stated the first shot lodged in Kennedy's back and the second shot struck Connally. It is a sublime twist of fate then that the book Dulles touted as a valid resource would be re-written within weeks of the assassination to include information Dulles would soon conclude was false. If Dulles ever noted the irony, however, that moment is lost to time.

Also ironic is that, after raising the possibility in the 12-16 executive session that Hoover was behind all the leaks, Congressman Ford met the next day with the FBI's most wanted leaker, Cartha DeLoach. Despite his earlier promise to keep the FBI *"thoroughly advised"* on the workings of the commission, however, Ford decided to keep the confidence of his fellow commissioners and instead told DeLoach that, in DeLoach's words, "There was no criticism of the FBI at yesterday's meeting. There was no allegations by anyone, including the Chief Justice, that the FBI had leaked portions of this report." Apparently, DeLoach figured out that Ford was onto him. His 12-17 memo on this conversation reflects that *"I went over very carefully with Congressman Ford that the FBI had not had any 'leaks' whatsoever. I told him we were well aware that the department had done considerable talking; furthermore, it now appeared somewhat obvious that members of the Commission were beginning to leak the report. I referred to this week's issue of 'Newsweek' magazine which contains a rather clear analysis of the report. I told Congressman Ford that 'Newsweek' was owned by the 'Washington Post' and that apparently someone was trying to curry favor. I told him we, of course, did not get along very well with either the 'Washington Post' or 'Newsweek.'"*

Even if he was telling the truth about the leaks to Newsweek, DeLoach knew full well the leaks began in the beginning of the month, before either the Justice Department or the Commission had come into possession of the FBI's report. As DeLoach and Hoover were too clever by half, it also makes sense that they would attempt to cut off speculation they were the source of the leaks by leaking it through sources outside their usual pattern. It seems probable, then, that DeLoach, as Hoover, was trying to blame the Commission for leaks that he himself had orchestrated.

In any event, if the 12-16 executive session showed that some tasked with investigating Kennedy's death were displeased with the performance of the FBI, there was no such indication from Hoover's ultimate boss that he shared their displeasure. A **12-17-63** letter from Hoover to Johnson uncovered at the LBJ Library and published by Mark North indicates that these two couldn't be happier in their new mutually accommodating relationship.

Hoover wrote:

"My dear Mr. President: I cannot tell you how much our time together yesterday means to me. Your very real appreciation of the matters I was privileged to discuss with you and your complete understanding of our problems smooth the way to our mutual desire to serve our country in fullest capacity. I shall treasure your photograph and your autographed message as I do your friendship and trust.

Sincerely yours, Edgar"

The next day, on **12-18**, the FBI's Alex Rosen, who was charged with investigating the physical facts of the assassination, wrote a memo in which he insisted the FBI's delay in seeking the autopsy report was because *"the family of the President had requested the report from the U.S. Naval Hospital at Bethesda be kept as confidential as possible."* This assertion is suspicious at best, as FBI Director Hoover was such a sensitive guy that when he called Robert Kennedy to tell him of his brother's death, he is reported to have blurted *"the President's dead"* and hung up. Hoover's hatred for Robert Kennedy was

so great, in fact, that when Robert Kennedy was himself assassinated the FBI deliberately minimized the news coverage of his funeral by delaying the announcement of the arrest of Martin Luther King assassination suspect James Earl Ray for two whole days, and then announcing it during Kennedy's funeral. This assertion comes courtesy Hoover's boss at the time, former Attorney General Ramsey Clark.

More to the point, this "oh, the Kennedys wouldn't let us" excuse presented by Rosen, which would be repeated by Warren Commissioner John McCloy and Junior Counsel Arlen Specter in the months and years to come, was ultimately rejected by Hoover himself. In June 1966, when Edward Epstein's book *Inquest* brought considerable attention to the FBI's failure to read the autopsy report, and embrace its findings, Rosen at first responded by denying there was a problem. He insisted that the FBI's initial reports were based upon the statements of the doctors during the autopsy, and that the 1-13-64 Supplemental report in which these early statements were repeated, weeks after the FBI had been supplied the autopsy report, was also not in error. Yes, incredibly, although the FBI had ignored in its Supplemental Report the official autopsy report then in its possession, and had offered up its own explanation for the throat wound (that it represented the exit of a fragment from the head shot), Rosen claimed, in a June 2, 1966 memo to Hoover's leaker-in-chief Cartha DeLoach, that the inaccurate statements in the Supplemental Report had been included to *"point out the apparent conflict between the information originally furnished by medical authorities on 11/22/63 and the results of our Laboratory's examination of the President's clothing, which indicated a bullet had exited his body."* Well, of course. One always points out inconsistent information by leading the reader to an inaccurate conclusion, and then failing to quote from additional reports in which this inconsistent information has been clarified...

In any event, an October 7, 1966 memo from Rosen to DeLoach in which the increasingly desperate Rosen now acknowledged there had been some confusion about the president's wounds, but blamed this on the Kennedy family, received a terse response from Hoover, who obviously knew better. On the last page of the memo, Hoover scribbled: *"The confusion... would never have occurred if we had obtained the autopsy report originally. The Kennedys never asked us to withhold it and if they had we should have disregarded it."* (Hoover is absolutely right on this point. Many of the conspiracy theories he so despised would not have reared up if the government as a whole had not been so strangely secretive about the autopsy in the first place.)

On **12-19**, President Johnson met with his top advisers from the Pentagon and CIA in order to re-evaluate the U.S. government's position regarding Cuba. According to historians Thomas Powers and Max Holland, President Johnson told this audience that Kennedy was killed as an act of retribution *"by unnamed persons seeking vengeance for the murder...of...Diem."* (The recently-assassinated President of South Vietnam.) This was ten days after Hoover gave Johnson a report saying Oswald acted alone.

It's not that Hoover's report took awhile to sink in. It never sank in. David Wise, the Washington Bureau Chief of the New York Herald Tribune during this period, would eventually write of a long "background" discussion he had with Johnson in January, 1964. while visiting Johnson's ranch in Texas. Wise reported that Johnson discussed the deaths of Dominican dictator Trujillo and Vietnamese President Diem, declared flatly *"we took care of them,"* and then wondered aloud if Kennedy's death wasn't *"some kind of terrible retribution."* Apparently, neither Wise nor any of the other journalists privy to Johnson's thoughts in this period ever violated Johnson's trust and told the Warren Commission investigating Kennedy's death that the government had been targeting the leaders of foreign nations, and that Johnson suspected this behavior may have somehow boomeranged back and hit us in the President.

And Johnson wasn't alone among those supposedly in the know who still had their doubts about Oswald, and his supposedly "lone nut" status. Nope, although he'd told Johnson weeks before that there was nothing to the story Oswald was in the employ of the Cuban government, a 12-19 FBI memo reflects that CIA Director John McCone had continued to spread the story as if it had some merit.

This met with the FBI's disapproval. Severe disapproval. The memo, from D.J. Brennan to Assistant Director William Sullivan, relates: *"Information developed by Mr. DeLoach has indicated that John McCone, Director, CIA, has attacked the Bureau in a vicious and underhanded manner characterized with sheer dishonesty. If the facts are true, we can safely assume that McCone will continue such tactics to the point of seriously jeopardizing Bureau prestige and reputation."* This paragraph concludes *"If MCCone is involved in such nefarious activity, there is a way of putting a stop to this."*

The memo then lays out the "charges" against McCone, namely, that he told Warren Commissioner and sometimes FBI informant Gerald Ford that a Cuban government official had paid Oswald to kill Kennedy, and that he'd also told this story to columnist Drew Pearson. That's it.

The memo then suggests that McCone be confronted with the fact that his own agency had discredited the Oswald-was-a-paid-agent-of-Cuba story, and then be told *"that we can only characterize his actions as a vicious and unwarranted attack against the Bureau."*

It then concludes: *"If McCone did make the referred statements, we can expect him to make a denial. However, it is believed that we will have made our point and he certainly will know where he stands, will undoubtedly have a profound respect for our capabilities to be informed, and he certainly will bear all of this in mind in the event he gets any ideas of making similar statements in the future."*

This recommendation received Hoover's "O.K."

I'll let that sink in. While many envision the CIA as a big evil institution, and the FBI as a bunch of nerds in suits, this memo reflects the true balance of power. By 1963, Hoover's hold on Washington, and monumental ego, had reached the point where an underling like Brennan had no problem asking if he could confront the Director of the CIA, and tell him the FBI was, for all intents and purposes, SPYING ON HIM. This was to be done, what's worse, as a response to a COMPLETELY IMAGINARY attack on the FBI stemming from McCone's repeating a story which his own agency had discredited.

That this was viewed as an attack of any type, let alone a vicious one, is beyond bizarre. It's possible, after all, that McCone had his own reasons for continuing to suspect there was something to the story. It's possible, after all, that McCone had simply repeated the story as worrisome gossip, as an example of the kind of thing his agency had uncovered. But no, the FBI had issued its report to the President, in which no such plot was outlined. It had then become gospel. Anyone expressing any doubt in its conclusions--including the director of the Central Intelligence Agency--was thereby a heretic, attacking the Bureau much as Galileo had once "attacked" the Catholic Church.

What balderdash! One can only wonder, then, how many of these late night knock on the door, "excuse me, we know what you've been saying" type conversations took place in the months after the assassination. I mean, let's face it, if Hoover and his men were willing to threaten the head of the CIA, who wouldn't they threaten?

On **12-20-63** Hoover aide Cartha DeLoach wrote a second memo regarding the 12-16 executive session of the Warren Commission. Even though Congressman Ford had hid the commission's discussion of Hoover's leaks from DeLoach, this discussion was leaked right back to Hoover anyhow. DeLoach wrote: *"Pursuant to the Director's instructions, I met with Senator Richard B. Russell at 3:45 p.m. Inspector Jim Malley accompanied me. I told the Senator that the Director probably had the greatest respect for him than any other man on the Presidential Commission; consequently, the Director was most anxious that any misimpression which the Senator might have gotten, regarding leaks concerning the captioned matter, be straightened out immediately. I mentioned that the Director had maintained throughout that there should be no press release unless it emanated from either the President or either the Presidential Commission...I told him that there had been others who thought that a press release, based upon the FBI report, should be issued immediately. I reiterated that under no circumstances had we "leaked" any information...The Senator inquired as to the identity of the sources who had been "leaking" information. I told him it appeared quite obvious that considerable of the information came from the Dallas Police...I told him also that the (Justice) Department undoubtedly had "leaked" considerable information...Senator Russell told Mr. Malley and me that he was glad to hear an FBI denial in the matter...He (Russell) stated that Attorney General Katzenbach had directly implied that the "leaks" had come from the FBI. He quoted Katzenbach as telling the members of the Presidential Commission, "J. Edgar Hoover has chewed his men out for leaking information and they won't be doing any more of this." (Note: to this, Hoover added in his own handwriting, "This certainly shows Katzenbach's true colors.") DeLoach's memo, continued: "I told the Senator that Katzenbach was obviously lying in implying such action on the part of FBI representatives. The point was made that sometimes a person tries to cover up his own guilt by blaming others."*

That last line may be one of the most ironic ever written, for it has been the verdict of almost everyone to study the matter that Hoover and DeLoach were in fact the ones behind the leaks. When asked in 1978 by the HSCA who leaked the FBI report, Katzenbach responded: *"I think that the Bureau leaked it. The Bureau constantly leaked things of this kind and constantly denied it and constantly blamed it on other people. There is not a reporter in town who does not know that...I wanted a formal statement."* As discussed previously, in his 1976 interview with the staff of the Select Committee to Study Governmental Operations with Respect to Intelligence Operations (The Church Committee), the former Chief of the FBI's Domestic Intelligence Division, William Sullivan, confirmed that it was indeed Hoover who had ordered the report "leaked."

Finally, on **12-24-64**, more than a month after the President of the United States was murdered on the streets of Dallas, the FBI investigating his murder took a look at the official report on his autopsy. The letter by Alex Rosen accompanying the FBI's own copy of this report noted that *"In view of the interest displayed by Mr. Rankin (the Warren Commission's General Counsel) arrangements were made to obtain a copy of the autopsy report from the Secret Service for the Bureau's use and a request was also made that Secret Service furnish a copy of the report to Mr. Rankin."* Incredibly, Rosen was thus admitting that the conflicts between the FBI's report and the autopsy report did not by themselves cause the FBI to look at the autopsy report. They were only investigating the death of a President, after all.

Even after receiving the autopsy report, of course, the FBI ignored its findings, and as late as January 13th continued to champion that the bullet creating the back wound fell out and that a fragment of the bullet striking the skull had been the probable cause of the throat wound. You can't make this stuff up.

Nor can the FBI's decided lack of interest in actually investigating the case be overstated. A **12-30-63** U.S. News and World Report article presented yet another shooting scenario to the public. This scenario was similar to the FBI's scenario, but with a twist. It detailed *"The first struck President*

Kennedy in the back, just below the collar bone, and lodged in his body. The second shot struck Governor Connally and fragmented. Bullets hitting bone can splinter. A splinter from this bullet apparently hit the windshield of the car. Another splinter could have penetrated the floor pan. The third bullet struck President Kennedy in the back of the head, causing death. This bullet also fragmented somewhat." Well, where did they get this bit about the hole in the floor pan? Did someone tell the writer there was such a hole? One might think the FBI would want to know.

Or not. Sadly, a **1-6-64** memo from the FBI's Alex Rosen on the article declared *"There appears to be little significance to the alleged location of this hole in the President's limousine at this time; however, since this item appears in a magazine with a nationwide distribution it is possible questions may be raised by the President's Commission concerning this. Therefore, it is felt we should be in a position to promptly answer any such inquiry."* Rosen was clearly not one easily stirred.

But President Johnson was one easily shaken... That night, Rufus Youngblood, the Secret Service agent who'd protected Lyndon Johnson on the day of the shooting, received a most unusual phone call. It was from Johnson, who was extremely angry about a memo he'd received, written by a former Kennedy staffer. This memo made reference to an article in Sports Illustrated describing one of Johnson's frequent disagreements with his bodyguards. (The name of this staffer is unknown, as the memo from which Johnson was reading has never been located.) Johnson told Youngblood: ***"I've received a memorandum that disturbs me, Rufus. I'll read you some of it. I'm alarmed at the situation that has developed between the President and the Secret Service. Morale in the Secret Service is at an all-time low. A number of the members of the White House detail are asking for transfers. This is a great body of men. These men feel they are being prevented from doing their job properly. These men do not want favors; they just want to be accepted. We need them badly, especially in campaign years. They must feel the President appreciates their efforts. If they do something wrong, they do not want to be reprimanded in public over a radio system which lots of people listen to. The attachment this week from Sports Illustrated is an example. I'll do anything you think proper."*** Johnson then continued *"I just told Rowley (i.e., Secret Service Director James Rowley) to call all of them in and to take any of 'em's resignations that wanted to. And I'd be glad to have his, if he wants it, or yours or anybody else's. And if they don't want to handle it, well, we'll get the FBI to do it."* Johnson then complained about Secret Service agents following his car too closely when he went for rides on his ranch. He then urged: *"So you get ahold of Rowley and you all call a meeting of your group and (decide) whatever you decide you want to do; and if you want to resign, I'll be glad to accept it forthwith. And if the Secret Service wants to go back to counterfeiting, they can go back to counterfeiting, then I'll get the FBI to just assign me a couple of men to stay by my side without all this God damn big push! I don't know who it is bellyaching. First I heard of it. I'm sorry it didn't come to me. It had to come through some of Kennedy's staffers."* Youngblood then asked who wrote the memo. Johnson responded *"I don't think I ought to do that, but one of Kennedy's top people and somebody has been bellyaching to him. And there's enough truth in it (to see) that somebody talked. And I can't have disloyalty, and I can't talk in front of your people and have them repeat it."* Youngblood then responded: *"You're absolutely right. You cannot have disloyalty and I don't want any transfer, reassignment, or any other damned thing, sir."* Johnson then returned to complaining about agents driving too close to his car. He then repeated his threat: *"So you find out whose morale is low and get rid of the son of a bitch. And if the whole Secret Service is low, I'll tell Dillon (i.e., Secretary of the Treasury Douglas Dillon--Rowley's boss) the first thing in the morning that we'll just change the damned law in about five minutes and turn it over to the FBI because Hoover thinks that I could be handled a lot better anyway. I don't want any of it. I think now's a good time, after Dallas, to make the change, if they want to do it. Now I thought I did pretty well after Dallas and I thought I reflected credit on the Secret Service. I did my damndest to compliment you and everybody else. But if the appreciation I get is going to be articles like this--*

*Kennedy people coming in and telling me that the morale is the lowest in the history--I'm not going to be run by them, you know that." He then repeated: "You get ahold of Rowley and y'all see who the hell has been bellyaching and get it straightened out. Take their resignations, get them out of here, and get Lem Johns back and you and Lem Johns handle me. You handle me safer than the forty can, 'cause they're liabilities instead of assets. And if y'all don't want to do it, just honestly say so and I'll get you a good reassignment and I'll get Hoover to send me over a couple of 21-year-old accountants over here and they'll probably do as good a job." Youngblood then said "We'll stick with you, sir." Johnson then finished **"Okay, but I want something done about it, you understand? Good night, Rufus."***

(Note: the transcript presented above was constructed from two sources: Rufus Youngblood's 1973 book *20 Years in the Secret Service*, and Michael Beschloss' 1997 book on the Johnson Tapes, *Taking Charge*. I then compared this transcript against the actual tape available on the Miller Center's website, in anticipation that major corrections were in order. This proved most surprising. The direct quotes in Youngblood's account of the conversation that were not in Beschloss' transcript were nevertheless a near-perfect match for the words on the tape of the conversation. Clearly, Youngblood--or his ghost writer, Richard Hardwick--had been granted access to the tapes...years before the public had been told of their existence. And that wasn't all. The words in bold were in Youngblood's book but not on Beschloss' transcript or the Miller Center's tape. This suggests either that Youngblood and Hardwick made these lines up or that the tapes on the Miller Center's website have been edited since 1973--when Youngblood was writing his book.)

In any event, after chewing out Youngblood, Johnson called up Youngblood's boss, Secret Service Director James Rowley, and repeated his threat of shutting down the service's Presidential Protection Division if they didn't fall in line.

Not surprisingly, in light of this threat, when on the next day the FBI called Robert Bouck, the head of the Protective Research Section of the Presidential Protection Division, and asked him if a hole was discovered in the floor of the limousine, they were told there was no such hole. This marked the beginning and end of the FBI's investigation. While it could very well be that there really was no bullet hole in the floor of the limousine, Johnson's calling the Director of the Secret Service James Rowley the night before this call--and his threatening the jobs of every member of the Presidential Protection Division if they didn't get wise and help protect him from the criticisms of Kennedy loyalists--undoubtedly muddled the waters.

And it wasn't just the Secret Service that Johnson was out to control. The 2007 book *Breaking News*, a history of the Associated Press, reflects that 6 weeks after the assassination Johnson told members of the White House Press Corps that he wanted a close relationship with them, and that *"I'll tell you everything...There won't be any secrets except where the national security is involved. You'll be able to write everything. Of course, I may go into a strange bedroom every now and then that I won't want you to write about..."* As one can only assume, based on his comments to Warren, that Johnson considered the Warren Commission's investigation a national security matter, Johnson was thereby trying to swap out increased access to the White House on political news in exchange for his having greater control of stories regarding his sex life and national security, including the Warren Commission's investigation. One can only wonder how many newsmen took him up on it.

Perhaps Johnson had gotten wind of a **1-7-64** article in the *Winnipeg Free Press*, built around an interview of J. Lee Rankin, the Commission's General Counsel. This article, by Harold Morrison, reflected that the commission was dissatisfied with the FBI's efforts, and read:

WASHINGTON (CP) — Did Lee Harvey Oswald kill John Fitzgerald Kennedy?

The chief counsel for the Warren commission says the signs point that way but that the commission still has not enough evidence to remove all doubt. So the investigation into the crime likely will continue for months.

For example, while Dallas police once reported a finger-print on the alleged assassination weapon—an Italian-made, bolt-action rifle—J. Lee Rankin, commission general counsel, said Monday there was no fingerprint, only a palm print.

The palm print—identified as that of Oswald who bought the rifle from a mail-order firm was found in the underpart of the weapon.

A palm print was supposed to have been found on the brown wrapping paper in which Oswald was believed to have brought the rifle into the Dallas schoolbook warehouse, where he worked. Again there isn't one.

OTHER POINTS PUZZLE

There are other points which bother and puzzle the former U.S. solicitor-general who directs the legal staff of the seven-man commission headed by U.S. Chief Justice Earl Warren.

Paraffin tests showed there was evidence of gunpowder on Oswald's hands, indicating the accused assassin had fired a hand weapon, but there were no similar gunpowder traces on his face, Rankin said in an interview.

Some authorities maintain the paraffin tests on Oswald's face would have been positive if he had fired a rifle, as police said he did, Rankin added.

Eyewitnesses have testified that Oswald fired a pistol to kill Police Constable J. D. Tippit shortly after Kennedy was assassinated and a police alarm sounded in Dallas last Nov; 22.

On that day Kennedy was hit by two bullets fired into his limousine as his motorcade entered a road turn-in downtown Dallas. A third bullet hit Texas Governor John Connally, who was sitting in the limousine's jump seat. Connally has recovered from his wounds.

Rankin said that because of the conditions of the bullets, they could not be positively identified as coming from the rifle found in the warehouse. However, spent shells were found near the sixth-floor window where the assassin was believed to have been perched.

The three bullets were estimated to have been fired within 6 1/2 seconds, said Rankin. While rifle experts maintain the firing of three shots in such a short period is possible, the evidence indicates that the last two shots came almost "on top of each other."

"Can a man operating a bolt action rifle fire two shots so quickly?" asked Rankin. "That is an example of the kind of thing that bothers us."

"What the commission wants to be able to do," he said, "is to publish a report that would eliminate doubt." Last month the Federal Bureau of Investigation gave the commission its report, concluding Oswald committed the crime unaided.

But the commission apparently was not completely satisfied with the FBI summary. It called for all documents on which the FBI report was based. The commission intends to re-examine every aspect of the case; to account if possible for every development on the day of the assassination.

Accounts Differ

"We cannot even get witnesses to agree on what Oswald wore that day," Rankin said, as another indication of his difficulties.

He could confirm, he added, that Oswald left his Russian born wife a set of instructions the day before a sniper shot-at former Maj.-Gen. Edwin Walker last April in Dallas.

A published report said the written instructions advised Mrs. Oswald that something was developing that might cause her husband to be absent for some time or to be arrested. She was given directions as to the location of the jail and given a key to Lee's post office box.

Rankin said that identifying Oswald with the attempted Walker assassination did not, by itself, add

much judicial evidence to the Kennedy assassination.

"We intend to gather evidence from all key witnesses, including Oswald's wife and Mrs. Jacqueline Kennedy and others."

"Mrs. Kennedy has also indicated she intends to co-operate fully in providing detailed testimony for the sake of historical accuracy."

Strangely, two of the problems pointed out by Rankin in the article--that there was no palm print on the paper bag, and that the bullet fragments couldn't be matched to the rifle--would be contradicted by the commission's report upon its release in September. One might assume then that their inclusion in this article reflected a misunderstanding on Rankin's part, or even on Morrison's part. Far more telling, three of the other problems discussed by Rankin--the lack of gunshot residue on Oswald's cheek, the mass of eyewitnesses claiming the last two shots were fired on top of one another, and the fact that no credible witness saw Oswald wear the shirt he was wearing when arrested while at work on the 22nd--would never be resolved by the Warren Commission, and would be dealt with dishonestly in the commission's report.

Another indication of the commission's bent came just four days later. On **1-11-64**, despite Rankin's speaking to the Canadian press, and assuring them the commission was still undecided on the question of conspiracy, and would thoroughly review the FBI's investigation, Chief Justice Warren presented an outline of the Warren Commission's upcoming report to the other members of the commission; shockingly, it mirrors the FBI's report. Oswald was a lone assassin. There was no conspiracy.

The President had been dead for 7 weeks. The commission had been in existence for 6 weeks. They hadn't spoken to a single witness.

The bias of the commission was evident in other ways as well. Of the 14 lawyers hired as assistant counsel to lead the investigation, there were two (Ball and Belin) assigned the task of establishing Oswald's guilt, two (Jenner and Liebler) assigned the task of investigating Oswald's background and possible motivation, two (Coleman and Lawson) assigned the task of investigating Oswald's possible involvement in a foreign-based conspiracy, two (Hubert and Griffin) assigned the task of investigating Oswald's murder and his possible ties to Jack Ruby, and one (Stern) assigned the task of investigating the history of Presidential protection. Three others (Redlich, Willens, and Eisenberg) were given jobs as assistants to General Counsel J. Lee Rankin, and go-betweens to the Justice Department. This meant that the task of investigating what actually happened in Dealey Plaza was left to but two men. One of these men (Francis Adams) dropped out of the investigation shortly after it began. This left a 33 year-old Assistant District Attorney for the City of Philadelphia (Arlen Specter) as the sole investigator tasked with solving the riddles of Dealey Plaza, determining how many shots were fired, from where they were fired, which shots struck the President and Governor Connally, the damage done by these shots, and whether or not Lee Harvey Oswald could have fired all these shots. Perhaps it was the thinking of the Commission and General Counsel Rankin that this aspect of the case was relatively unimportant, in light of Oswald's obvious guilt. Chief Justice Warren would, in fact, later claim that *"The facts of the assassination itself are simple...If the sole responsibility of the Commission had been to determine who shot and killed President Kennedy, it would have taken very little work."*

That this aspect of the case was, at least initially, not taken as seriously as it deserved is supported, furthermore, by a **1-12** article in the New York Times on the structure of the commission, and the make-up of its staff. After noting that General Counsel Rankin had outlined the Commission's plans in an interview, the article claimed that the Commission's staff was to investigate six areas of inquiry, with Rankin handling one, and five other teams of lawyers handling the others. It then lists the six areas of inquiry: 1) "Oswald's activities on the day of the assassination;" 2) "Ruby's activities and background;" 3) "Oswald's life and back ground, with the exception of;" 4) "Oswald's career in the Marine Corps and

his stay in the Soviet Union;" 5) "Oswald's murder;" and 6) "The procedures used to protect President Kennedy." Well, what's missing? Only the elephant in the room. Rankin failed to mention that ANYONE was going to pursue the basic facts of the shooting--the line of inquiry later pushed onto the relative novice Specter.

If Warren and Rankin sincerely believed this aspect of their investigation was a snap, of course, they were sorely mistaken, as many if not most of the ongoing controversies of the case can be traced back to Specter and the Commission's inadequate and deceptive investigation of the basic facts...

And to their reliance on the FBI... On **1-22-64**, President Johnson's assistant Walter Jenkins contacted the FBI to complain about Don Reynolds, the insurance agent whose testimony before congress regarding Johnson's receipt of a kickback was interrupted by Kennedy's murder. Apparently, Reynolds had told someone he thought Johnson was involved in Kennedy's murder. Apparently, this reached Johnson, who was none too pleased, and who now sought the FBI's help in shutting Reynolds up. A 1-31-64 memo from Alex Rosen to Alan Belmont discusses the follow-up to Jenkins' complaint. It reveals its bias by calling Reynolds *"an unscrupulous insurance agent,"* with *"an uncontrollable tongue,"* and concludes further that he is *"an opinionated rumor-monger who apparently gets satisfaction out of spreading deliberate exaggerated stories."* It reports that Reynolds allegedly said President Johnson would soon be impeached based upon information gathered by the FBI. It reports further that FBI Director Hoover had demanded Reynolds be made to *"put up or shut up."* It then notes that Reynolds was interviewed by agents in the presence of his attorney on 1-24, and that he denied telling anyone Johnson would be impeached. It then notes that Reynolds' previously furnished *"observations and opinions"* regarding Kennedy's death were based on *"inferences which he drew from conversations and hearsay"* It then notes that Reynolds claimed he'd been told that Governor Connally had called Lee Harvey Oswald long distance from Washington while Oswald was staying at the Dallas YMCA. It then reports that Oswald had stayed at the YMCA on 10-3-63 and 10-4-64, and that the YMCA kept no record of incoming calls. It then admits that Jenkins was told the results of the FBI's interview with Reynolds on 1-27. Rosen then acknowledges that, seeing as Reynolds wouldn't disclose who told him Connally had made this call, *"no effort has been made to determine the whereabouts of Governor Connally during the period of October 3-4, 1963."* There was no mention of the impropriety of Johnson's using the FBI to harass those spreading rumors about him. There was no mention of the impropriety of Rosen's revealing the results of his interview with Reynolds to Jenkins on 11-27, 4 days prior to his reporting on this interview to his immediate superior Belmont.

And that's only half the problem with the Reynolds interview. Upon receipt of Rosen's memo to Belmont, FBI Director J. Edgar Hoover fired off a letter to Warren Commission General Counsel Rankin, advising him of Reynolds comments regarding Johnson, and acknowledgement he had nothing to back it up. This was unsurprising. What was surprising, however, was what Hoover added to the copies of this letter sent his subordinates. He added: *"Rankin is not being advised that this information was initially received from the White House in view of the statement (appearing in a previous memo) that Walter Jenkins of the White House has indicated that the President does not desire Pierre Salinger to know this information was provided to anyone outside the White House."* So there it is. The FBI was willing to keep things from the commission based upon the mere say-so of a Johnson assistant that Johnson didn't want his press secretary to find out what he'd been up to. Well, geez Louise. Lord only knows what else they failed to reveal based purely on Jenkins' say-so.

If there were any thoughts in the Warren Commissioners' minds about expanding their investigation beyond that of the bureau's, however, those thoughts soon fell by the wayside. On **1-22-64** an emergency session of the Commission was called to discuss the discomfiting rumor that Oswald was an FBI informant, and the even more discomfiting possibility that FBI Director J. Edgar Hoover was seeking to hide this information from the public. The topic of discussion was so discomfiting, in fact,

that Chief Warren ordered all transcripts and notes of the meeting destroyed. Fortunately, a stenotypists's tape was overlooked, and uncovered by researcher Harold Weisberg through the Freedom of Information Act.

Supreme Court Chief Justice Earl Warren: *I thought first you should know about it. Secondly, there is this factor too, that a consideration, that is somewhat an issue in this case, and I suppose you are all aware of it. That is that the FBI is very explicit that Oswald is the assassin or was the assassin, and they are very explicit that there was no conspiracy, and they are also saying in the same place that they are continuing their investigation. Now in my experience of almost nine years, in the first place it is hard to get them to say when you think you have got a case tight enough to convict somebody, that that is the person that committed the crime. In my experience with the FBI they don't do that. They claim that they don't evaluate, and it is uniform prior experience that they don't do that. Secondly, they have not run out all kinds of leads in Mexico or in Russia and so forth...and they could probably say that it isn't our business...But they are concluding that there can't be a conspiracy, without those being run out. Now that is not from my experience with the FBI...Why are they so eager to make those conclusions, both in their original report and their experimental report, which is a departure? Now that is just circumstantial evidence, and it don't prove anything about this, but it raises questions...*

After a brief discussion the commissioners came back to the implications of Hoover's behavior. Everyone on the commission had spent enough time in Washington to hear of FBI Director Hoover's not-so-secret files, files kept on every prominent figure in America, going back decades. Everyone on the commission knew, or should have known, that Hoover would not hesitate to use these files to protect himself and the Bureau. (It would later be revealed that their fears were justified and that, in anticipation of negative comments about the FBI in the Warren Report, Hoover had files created on every employee of the Warren Commission.)

Supreme Court Chief Justice Earl Warren: *They would like to have us fold up and quit.*

Congressman Hale Boggs: *This closes the case, you see, don't you see?*

Former CIA Director Allen Dulles: *Yes I see that.*

Warren Commission General Counsel J. Lee Rankin: *They found the man. There is nothing more to do. The Commission supports their conclusions, and we can go on home and that is the end of it.*

After Allen Dulles pointed out that the FBI was taking a tremendous risk if it was indeed trying to shut down the case, as suspected, Congressman Boggs suddenly became aware of the risk he himself was taking by talking so openly about Hoover's dark side.

Congressman Hale Boggs: *Yes I would think so. And of course, we are even gaining in the realm of speculation. I don't even like for this to be taken down.*

Former CIA Director Allen Dulles: *Yes, I think this record ought to be destroyed. Do you think we need a record of this?*

After Warren assured them that their statements would not be circulated, the session concluded.

On 1-24-64, in an effort to investigate and/or contain the rumor that Oswald had been an informant, Rankin and Warren met with the Texas Court of Inquiry. The memorandum on this meeting prepared by Rankin was not distributed to the other commissioners, nor to the commission's staff. The secretive nature of this meeting and its subject matter is perhaps best demonstrated by its second to last paragraph, in which Rankin relates: *"The Chief Justice decided to present the results of this meeting to the entire Commission on Monday, January 27, 1964 and decided to propose tentatively that necessary inquiries be made concerning these allegations and that this memorandum be prepared for the record."* This suggests the possibility that, if the meeting had exposed conclusive evidence that Oswald had

worked for the FBI, no memorandum would have been created, and no record of this meeting would have been kept.

The statements in the **1-27-64** executive session are even more revealing.

General Counsel J. Lee Rankin: *I don't see how the country is ever going to be willing to accept it if we don't satisfy them on this particular issue, not only with them but the CIA and every other agency. (The "it" in this statement would seem to be the commission's pre-determined conclusion that Oswald acted alone. They had yet to call a witness.)*

Eventually, they discussed the possibility that Oswald worked for the FBI, but that Hoover didn't know. Congressman Boggs brought up the recent capture of the American spy Francis Gary Powers by the Russians.

Congressman Hale Boggs: *Let's say Powers did not have a signed contract but he was recruited by someone in the CIA. The man who recruited him would know, wouldn't he?*

Former CIA Director Allen Dulles: *Yes, but he wouldn't tell.*

Chief Justice Earl Warren: *Wouldn't tell it under oath?*

Former CIA Director Allen Dulles: *I wouldn't think that he'd tell it under oath, no.*

Chief Justice Earl Warren: *Why?*

Former CIA Director Allen Dulles: *He ought not tell it under oath. Maybe not tell it to his own government but wouldn't tell it any other way.*

John McCloy: *Wouldn't he tell it to his own chief?*

Former CIA Director Allen Dulles: *He might or might not. If he was a bad one then he wouldn't.*

Congressman Hale Boggs: *What you do is you make out a problem--if this be true--make our problem utterly impossible because you say this rumor can't be dissipated under any circumstances.*

Former CIA Director Allen Dulles: *I don't think it can unless you believe Mr. Hoover, and so forth and so on, which probably most of the people will.*

John McCloy: *Allen, suppose somebody when you were head of the CIA came to you, another government agency and said specifically, "If you will tell us," suppose the President of the United States comes to you and says "will you tell me, Mr. Dulles?"*

Former CIA Director Allen Dulles: *I would tell the President of the United States anything, yes. I am under his control. He is my boss. I wouldn't necessarily tell anybody else, unless the President authorized me to do it. We had that come up at times.*

John McCloy: *You wouldn't tell the Secretary of Defense?*

Former CIA Director Allen Dulles: *Well, it depends a little bit on the circumstances. If it is within the jurisdiction of the Secretary of Defense, but otherwise I would go to the President, and I do on some occasions.*

General Counsel J. Lee Rankin: *If that is all that is necessary, I think we could get the President to direct anybody working for the government to answer this question. If we have to we would get that direction.*

Former CIA Director Allen Dulles: *What I was getting at, I think under any circumstances, I think Mr. Hoover would say certainly he didn't have anything to do with this fellow. (Dulles was apparently saying that Hoover, unlike himself, would ignore even the President's requests on such an issue. As*

Hoover misled the commission about the results of the FBI's internal investigation, Dulles' skepticism about Hoover proved accurate.)

They then proceeded to discuss the best way to handle the rumor. This led to Rankin's meeting with Hoover to discuss the matter. On 2-6 FBI Director Hoover sent the commission a sworn affidavit under penalty of perjury stating that Oswald was never a paid source or operative for the FBI. On 2-27 he sent the commission a similar letter stating that, while Jack Ruby had been approached by the FBI about employment as a PCI (Paid Confidential Informant), and had been contacted by the FBI 8 times between March 11, 1959 and October 2 1959, he had, in fact, *"furnished no information whatsoever."* This, then, allowed him to claim that *"Ruby was never paid any money, and he was never at any time an informant of this Bureau."*

Of course, these were the kind of statements Commissioner Dulles acknowledged Hoover and his men would make, regardless of the truth, unless directed by the President to tell the honest to goodness truth. If Dulles and the commissioners had had any doubts about Hoover's predilection to lie, moreover, these doubts should have been washed away on 3-7, when Hoover issued a clearly deceptive statement, published by the AP and UPI wire services nationwide. In attempting to shut down speculation about Ruby's status, Hoover completely side-stepped what he'd already told the commission--that Ruby had been approached by the FBI about becoming an informant, and that he'd met with the FBI 8 times afterward. Instead, he declared: *"To set the record straight and to refute the misinformation which has been maliciously circulated, I want to state unequivocally that Lee Harvey Oswald and Jack L. Ruby were never FBI informants; that they were never employed by this Bureau in any capacity; nor did they ever render any services for or receive any sums of money from the FBI."*

This, then, highlights the commission's predicament. By failing to ask President Johnson to give the Presidential directive described by Mr. Rankin, they'd given Hoover free reign to not only deceive them, but the country. This made it difficult for them to go back and point out Hoover's deceptions. As a result, when Hoover was called before the commission in May, he was not asked a single question about Ruby's status as an informant, and no acknowledgment of Ruby's meetings with the FBI were revealed to the public. This, then, can only be taken as an indication the Commission was more interested in "dissipating" rumors for the public, at minimal cost to themselves politically, and with minimal friction between themselves and Mr. Hoover, than in establishing the truth. This indifference, moreover, would be exposed many more times throughout the course of their investigation.

Perhaps the commissioners were just too much on the "inside" to be objective. A National Security Agency document (currently on its website) reflects that commissioner John McCloy met with the agency on this date and *"discussed work of Warren's Commission."* What was said remains a mystery because, beyond the heading "McCloy discussed work of Warren's Commission" the rest of the document--at least as seen online--is redacted. Such secrecy does anything but dissipate rumors. As a result of this secrecy, one might reasonably suspect McCloy told the NSA the subject matter of the 1-27 executive session, including Dulles' suspicion that Hoover would lie.

Of course, Dulles himself was no angel. If a judge, in a court of law, had been a former CEO of a company rumored to be involved in a crime, he would be expected to recuse himself from the case, even if there was little substance to the rumor. Dulles, as a long-time lawyer, certainly knew this, but, instead of stepping down, he did the opposite. He used his position as commissioner to help defend the CIA against charges of its involvement. On 1-30-64, in a personal correspondence available on Princeton University's website, he wrote General Counsel Rankin to make some suggestions on areas he found of interest. Included with his letter was an article by British Labor leader R.P. Dutt, in which

Dutt asks if the assassination was a "*C.I.A. Job?*". Included with this article was a biography on Dutt, clearly written by the CIA itself, in which it is asserted that Dutt's "*standing with Moscow is excellent.*" Dulles then told Rankin "*I suggest that you might wish the CIA to send you directly all important items of this general nature and also items bearing on the future Communist propaganda treatment of the assassination issue with their estimate, preferably coordinated with the State Department, showing the general trend of such propaganda, if there is one. It has been my experience that the Communist party of the Soviet Union exercises a good deal, but not complete, control over the propaganda activities of the various Communist parties in the free world and often uses these parties or selected ones to launch various trial balloons in the propaganda field.*"

In just a few days, Dulles had went from acknowledging the commission's inability to answer questions about Oswald's background to pushing that those even daring to ask such questions were at the beck and call of the Soviets.

Meanwhile, while the Warren Commission resolved to refuse to resolve the issue of Oswald's true identity, the media continued to push the leaked findings of the FBI's summary report on an unwitting public.

Some publications, like UPI's joint venture with American Heritage Magazine, entitled *Four Days*, simply replayed that Kennedy was hit by the first shot, Connally the second, and Kennedy the third, and accurately called Oswald Kennedy's "alleged assassin." (In a curious move, this book was re-issued in 1983 without correction.)

Other books influenced by the FBI report, however, were not as open-minded. *The Dangerous Assassins* by Jack Pearl, published January 1964, included an account of the Kennedy assassination that was even more biased and less accurate than the account of the shooting in Robert Donovan's rush re-released *The Assassins*. On the inside page, Pearl identified Oswald as Kennedy's assassin--no "accused," no "alleged," not even a "presumed." Now that might be acceptable if it reported the evidence against Oswald with something approaching accuracy. But it did not. Instead, Pearl added so many details into his narrative that were at odds with what was already known or would soon be known, that his assertion of Oswald's guilt carried little real weight. For example, not only did he claim Oswald was an "*expert marksman*" whose shooting ability placed him "*head and shoulders above his fellow Marines,*" that Oswald bought a car and drove to Mexico City while seeking passage to Cuba, and that Oswald test-fired his rifle "*innumerable times at a rifle range on the outskirts of town,*" all of which were later proved to be untrue, Pearl claimed that:

1. Oswald was stopped at the entrance to his work on the morning of the shooting by a "*special patrolman*" who asked him about the long package he was carrying. (This is a fabrication.)
2. Oswald was only allowed access to the building after he claimed this package held venetian blinds, and his claim was confirmed by another employee. (While Oswald was purported to have told his ride to work, Buell Frazier, that the package held window blinds, he was not questioned about this at work.)
3. Oswald locked an elevator on the sixth floor before the shooting to hasten his escape after the shooting. (There's no evidence for this. The elevators were on the fifth floor at the time of the shooting, after being ridden to that location by Bonnie Ray Williams from the sixth floor, and James Jarman and Harold Norman, from the first floor.)
4. Oswald calmly ate fried chicken while waiting for Kennedy's arrival. (The chicken found on the sixth floor was Bonnie Ray Williams' lunch.)
5. Nellie Connally was looking at President Kennedy when the first shot was fired. (This was not

- true. She said she looked at him after hearing the first shot.)
6. The second shot was aimed at Governor Connally. (Pure speculation.)
 7. The third and fatal shot struck Kennedy on the back of his head and *"blew a considerable hole in his forehead when it emerged."* (While shattered beneath the scalp, his forehead was intact.)
 8. After the shooting, Mrs. Kennedy climbed out onto the back of the limousine *to help agent Clint Hill climb aboard.* (She was in a panic, and didn't know what she was doing. Hill thought she was reaching for a piece of the President's head.)
 9. While trying to evade capture, Oswald shot Dallas Police Officer J.D. Tippit *three* times. (The Warren Commission concluded he'd been shot at five times, and hit four times.)
 10. After shooting Officer Tippit, Oswald *bought a ticket* and went into a movie theater. (Oswald purportedly aroused suspicion when he failed to buy a ticket, and sneaked into the theater.)
 11. When confronted in the theater, Oswald pulled his revolver and fired at a police officer, only to find that the shell in his revolver *was a dud.* (The bullet was not a dud. The bullet did not fire because the hammer was blocked by the finger of one of the officers.)
 12. The Mannlicher-Carcano rifle found in the depository *was identified as Oswald's rifle by his wife, Marina.* (She never ID'ed the rifle. She thought it looked similar, but knew nothing of rifles and could not say for sure if it was even the same type of rifle.)
 13. Tests performed on this rifle proved that the *three* slugs removed from President Kennedy and Governor Connally were all fired from this rifle. (One intact bullet was found on a hospital stretcher. One partial bullet was found in the limousine. These two bullets were traced back to the rifle. The third bullet was, at least officially, never located.)
 14. Tests performed on Oswald showed that he'd recently fired a rifle. (Totally false. While this was the story put out by the Dallas Police and the FBI, the tests suggested the opposite.)

None of these statements, as we've seen, were supported by the evidence. Some of them appear to have been pulled out of thin air.

But the most widely circulated magazines were not to be outdone when it came to Oswald-bashing. The 1-25-64 TV Guide on America's coffee tables included a long article recounting the first few days after the assassination, and the role television played in bringing America the news. This largely self-congratulatory article displayed an amazing bias, however, that was far more damaging to the cause of justice than barely read and boldly inaccurate books like Pearl's. While not stating that Oswald was the assassin and a psychopath, a la the New York Times and Newsweek, the article described him in such a way that his guilt was more than clear. It described Oswald's first trip before the press as follows: *"Oswald entered, an animal-like figure looking puffy-eyed and morose, flanked by beefy, stone-jawed police, and wearing the T shirt about which he was later to complain because no one had offered him a clean one."* Its description of a later press conference was even worse: *"Oswald looked a little weasel-like...As the police led him out, a reporter slipped up close to him, and said, 'Oswald, what did you do to your eye?'" "A policeman hit me," whined Oswald for 180,000,000 to hear."*

Other writers and publications went to even greater lengths to drill into the public's brain the non-established fact that Oswald acted alone, and that no further investigation need be conducted. Victor Lasky, whose all-out attack on Kennedy, JFK: the Man and the Myth, was scheduled to hit the bookstores within days of the assassination, wrote one especially noteworthy column. In this column, published **February 11, 1964**, Lasky repeatedly quoted the prominent leftist Dwight MacDonald's statement that *"Oswald is our baby, not theirs."* As if MacDonald was in any position to know... Lasky then proceeded to criticize *"certain know-it-alls who cannot bring themselves to believe that someone of the 'progressive' faith might have brutally murdered Kennedy on the streets of Dallas."* He then noted

that pro-Castro forces were arguing that Oswald had been set up by the right to appear to be a leftist, but insisted *"Of course, this argument presupposes that the FBI and the Secret Service are involved in a monstrous plot to cover up for the real assassins."* Of course, the suggestion that Oswald had been set up did no such thing and Lasky was merely pretending it did to create the illusion that questioning the accuracy and completeness of the FBI and Secret Service investigations (whose conclusions were supposedly still-secret) made one un-American. Lasky next mentioned that the Warren Commission has decided to investigate the activities of the Minutemen, *"a so-called right wing group recently accused of having threatened the lives of 20 congressmen."* He then exclaimed: *"But the FBI Report on Oswald, now in the hands of the Warren Commission, in effect fully exonerates the so-called right wing from any involvement in the President's assassination."* Lasky thereby created the illusion that investigating the Minutemen was both a waste of time and a personal insult to J. Edgar Hoover, and used material leaked by Hoover to do so.

Whether or not Lasky's column was a de facto message from Hoover or simply a warning from a prominent conservative to the Commission that they would arouse much ire if they expended any effort investigating a possible right-wing conspiracy, the Warren Commission appears to have received the message: no extensive investigation of the Minutemen or other right-wing organizations was ever conducted on their behalf. Ironically, while assuring his readers that Oswald acted alone, Lasky also revealed just how little he personally knew about the case. His column was entitled *"Left Wing Claims Harvey Oswald's Ghost as Own..."* Harvey was of course Oswald's middle name, not his first name and not part of his last name.

The next day, **February 12, 1964**, the cinema classic *Seven Days in May* was released to the public. The film, a cautionary tale directed by John Frankenheimer, depicted an attempted military coup within the United States. The film's creation was encouraged by President Kennedy, who'd told a number of his friends that he thought such a coup was a real possibility should the president lose the support of the Pentagon. The initial response to the film reflects that elements of the media and government, even months after the assassination, still believed that their primary responsibility was to assure a worried public that everything was OK. As reported in David Talbot's *Brothers*, the Los Angeles Herald-Examiner publicly questioned whether the film should even have been made, as *"The world is on too short a fuse,"* and the film could damage *"the American image abroad."* Across town, the Examiner's larger rival the L.A. Times shared this concern but instead took the time to assure its readers that nothing like this could happen in America. Meanwhile, congressmen called for the film to be clearly labeled fiction before it could be shown overseas.

The film certainly had an impact. A **2-14** memo from Secret Service Inspector Thomas Kelley to his boss James Rowley discussed proposed legislation making the investigation of a presidential assassination a federal offense, and the sole jurisdiction of the FBI. This, in Kelley's mind, would be a bad thing, and could lead to a *"Seven Days in May situation"* in which a *"venal Director of the Federal Bureau of Investigation could in the future bring about or allow the assassination of the President who he either felt was a poor President or a President unacceptable to him..."* Kelley then proceeded to point out that the FBI has an appropriation for protection of the President, normally the responsibility of the Secret Service, *"in case of an emergency"* and that the Secret Service should similarly retain the capacity to investigate assassinations. (As Kelley had just conducted the Secret Service's investigation of the assassination, it can probably be assumed from this that he was not particularly impressed with the FBI's investigation, and that he had doubts about Director Hoover's determination to get to the bottom of the matter.)

Meanwhile, across the country, Americans picked up the **February 15, 1964** edition of *The Saturday*

Evening Post. Inside was an article by the CIA-friendly columnist Stewart Alsop, not surprisingly defending the CIA against some recent charges that it was out of control and was conducting its own foreign policy. No doubt concerned about the effect these charges might have on the public, particularly when combined with the almost simultaneous release of *Seven Days* in May in the theaters, Alsop tried to cut off any speculation of CIA involvement in the assassination of President Kennedy. He actually went further than that, and made out that anyone questioning their involvement was a communist dupe. He complained about the recent treatment of the CIA in general, and then reported *"a few highly respectable journals have even half-echoed The Communist Worker's charge that Lee Harvey Oswald, murderer of President Kennedy, went to the Soviet Union in 1959 as a CIA hireling."* Alsop then shared even more certain knowledge that he could not possibly know, assuring his readers: *"Lee Harvey Oswald never at any time had any connection whatever with CIA, although suspicions on that score are perhaps natural in view of the mystery surrounding Oswald's travels and his sources of income. The highest officials in the CIA are ready to so testify--and indignantly--before the Warren Commission investigating the murder. 'If anybody in the CIA had hired so obvious a psychotic,' says one of the greatest experts in the intelligence business, 'he should have been fired on the spot.'"*

One might rightly wonder if Alsop's "expert" wasn't Allen Dulles himself, seeking to cut off the questions he knew would not be answered by the Warren Commission. One might also wonder why the *"highest officials in the CIA"* would be so *"indignant"* about being asked such a reasonable question, by men who fully understood that they would lie with impunity.

Two days later, on **February 17, 1964**, probably at the prodding of the same CIA employees who'd probably prodded Alsop (this might have been Allen Dulles--let's be realistic), Senator Thomas Dodd of Connecticut made a long speech defending the CIA. Dodd repeatedly, and cynically, quoted President Kennedy in support of the CIA. He concluded *"I think it can be stated as a certainty that many countries that remain free today would not be free if it had not been for the CIA."* The possibility that the CIA was involved in killing Kennedy was not among the litany of criticisms dismissed by Senator Dodd. Apparently, such talk was not to be acknowledged within the hallowed halls of the U.S. Senate.

Within a few days, in its **February 21, 1964** issue, Life Magazine published yet another article on Oswald, and once again convicted him in the public eye. The cover featured a photo of Oswald holding a rifle, with a pistol on his hip. The caption read *"Lee Oswald with the weapons he used to kill President Kennedy and Officer Tippit."* The cover story was entitled *"The Evolution of an Assassin."* This echoed a 12-20 Life article written with the help of the FBI's report. That article had been entitled *"The Assassin: a Cold, Lone Man Who Resented All Authority."* Real subtle.

The media's investigation of Kennedy's assassination, if you could call it that, was by now pretty much over. They'd relied upon the FBI, and the FBI had misled them, for political purposes.

A **2-24-64** FBI memo from F.J. Baumgartner to Deputy Director William Sullivan supports this point. It reports that Oswald's mother, Marguerite Oswald, and Mark Lane, a lawyer trying to present a public defense of Oswald, spoke at a public meeting in New York, sponsored by The National Guardian, a left-wing newspaper. It reports that *"At this meeting it was implied that Oswald was not responsible for the assassination and the handling of the investigation by the Government was criticized."* It then notes that a *"reliable source"*--clearly an undercover operative attending the meeting--spotted Alger Hiss, a one-time member of the State Department, accused of being a communist spy, and convicted of perjury relating to his involvement in the communist party--in attendance. Baumgartner then proposed that this be leaked to the press in order to discredit Lane and--by extension--those daring to imply that Oswald's guilt remained open to question. He even wrote the article he proposed and suggested it *"be placed*

with a cooperative news media source at the Seat of Government."

Although, as far as can be determined, this article never saw print, it seems clear that many sharing its bias, prevailed.

Oswald had been convicted as the sole assassin by President Lyndon B. Johnson, FBI Director J. Edgar Hoover, the New York Times, Newsweek, T.V. Guide, and Life Magazine. The only witnesses called by the Commission up to this date had been members of his own family.

If there had been conspirators still at large, they were now specks off in the distance.

Chapter 2: An Investigation Through the Eyes of an All-seeing FBI

A look at what apparently wasn't seen

The Investigation That Never Was

Above: the photograph of James Altgens, reportedly taken just after the first shot. Notice the position of motorcycle officer James Chaney, only a few feet to the right of the limousine. Shortly after the shots, he told an interviewer one shot was fired after Kennedy had already been hit in the head. The FBI neglected to interview him before concluding that Kennedy was, in fact, hit in the head by the last shot. Chaney was not alone, however. The FBI came to this conclusion before interviewing any of the closest witnesses in this photo, save Mary Woodward and her three friends, by the lamp post, who agreed that Kennedy's head jerked with the second shot. At right: the head shot as seen in the Muchmore film. Of the seven bystanders three were never identified. The other four ALL said they heard at least one shot fired after the head shot. Top, right: Dealey Plaza today. X marks the spot of the fatal head shot.

For reasons beyond my grasp, the first image in each chapter sometimes fails to appear. If there's nothing up above, don't despair; you can still see the image [here](#)

The Investigation That Never Was

Since the Warren Commission investigation was so closely framed around the FBI's initial investigation, it's important that we look at the FBI's investigation in more detail, to see if the conclusions of Oswald's sole guilt contained in the FBI's report of December 9, 1963 had any basis in reality. Since the foundation of most murder investigations is the statements of eyewitnesses, we shall put ourselves in the shoes of an imaginary team of FBI agents given access to the earliest statements of the eyewitnesses and ordered to solve the case. For the sake of sanity, we will look at the witnesses in

chronological order, with married couples grouped together, and with their pre-12-9 statements all in one batch. While we will eventually discuss the origin of the shots as interpreted by the witnesses, at this point we shall focus primarily on their placement of the head shot in the shooting sequence. (The citations printed before the statements refer to the volume and page where you can find the complete statements of these witnesses in the 26 volumes of the Warren Report. References to CD are references to Commission Documents, documents not released with the Warren Report, but now available on The Mary Ferrell Foundation website.) (**Note:** while quite extensive, this chronology is by no means complete.)

Let's start our examination by watching a little television. **James Altgens**. (11-22-63 WFAA announcement that the President had been shot) "*An Associated Press photographer, James Altgens... reports he saw blood on the President's head. The AP man said he heard two shots but that he thought someone was shooting fireworks until he saw blood on the President.*" (11-22-63 AP dispatch, as reprinted in Cover-Up) "*At first I thought the shots came from the opposite side of the street. I ran over there to see if I could get some pictures...I did not know until later where the shots came from.*" **Heard two shots.** (Despite his being one of the closest witnesses to the assassination, Altgens was not interviewed by the FBI prior to the distribution of its December 9 Summary Report.)

A short while later, a young man and his wife, the closest bystanders by the President at the moment of the fatal head shot, come on TV and describe what they'd witnessed. **William Newman** (11-22-63 interview on WFAA) "*We were...we just come from Love Field after seeing the ...President and First Lady, and we were just in front of the triple underpass on Elm Street and we were at the edge of the curb, getting ready to wave at the President when we heard the first shot and the President...I don't know who was hit first but the President jumped up in his seat, and I thought it scared him, I thought it was a firecracker, cause he looked....you know, fear.*" (11-22-63 second interview on WFAA) "*The president's car was some fifty feet in front of us coming toward us when we heard the first shot and the President—I don't know who was hit first—but the President jumped up in his seat...And then as the car got directly in front of us well a gunshot apparently from behind us hit the President in the side of the temple.*" (11-22-63 third interview on WFAA) "*We heard...uh...a blast...and the President looked like that he right jumped up in his seat.....and then he.....we seen him.....uh.....get shot in the side of the head and he fell back in the seat and Governor Connally was holding his stomach.*" (11-22-63 statement to Dallas Sheriff's Department, 24H219) "*We were standing at the edge of the curb looking at the car as it was coming toward us and all of a sudden there was a noise, apparently gunshot. The President jumped up in his seat, and it looked like what I thought was firecracker had went off and I thought he had realized it. It was just like an explosion and he was standing up. By this time he was directly in front of us and I was looking directly at him when he was hit in the side of the head.*" (11-24-63 FBI report, 22H842) "*when the President's car was approximately 50 feet from him proceeding in a westerly direction on Elm Street, he heard the first shots fired...the shots were fired in rapid succession which he thought at the time was a firecracker. The car was proceeding toward him and it seemed that the President's arms went up and that he raised up in his seat and started to look around. The car proceeded to a point about even with him and he could see Governor John Connally was holding his stomach. About that time another shot was fired which he estimated was ten seconds after the first shot was fired. At that time he heard the bullet strike the president and saw flesh fly from the President's head... Newman first thought the President and Governor were playing some kind of a game.*" **Only heard two bursts of gunfire.**

Frances Gayle Newman: (11-22-63 interview on WFAA) "I thought it was a firecracker and I saw the blood and I.....I had the baby and II just ran and we....I got on top of him and laid on the grass. I....I was....it scared me. It was terrible." (11-22-63 statement to Dallas Sheriff's Department, 24H218) "When President Kennedy's car was about ten feet from us, I heard a noise that sounded like a

firecracker going off. President Kennedy kind of jumped like he was startled and then covered his head with his hands and then raised up. After I heard the first shot, another shot sounded and Governor Connally kind of grabbed his chest and lay back on the seat of the car. When I first saw and heard all this, I thought it was all of a joke...Just about the time President Kennedy was in front of us, I heard another shot ring out and the President put his hands up to his head, I saw blood all over the side of his head.” (11-24-63 FBI report, 22H842) “She estimated that when the limousine bearing the President was about 50 feet from them she heard 2 reports and the President seemed to rise up in his seat. A few seconds later she heard another shot and saw that the President had been hit in the head because she saw blood flowing from his body...She believed there were first two shots in succession, a pause, then another shot was fired which struck the President... After the shots were fired, she and her husband each grabbed a child and lay down on the grass fearing they might be hit by gunfire.” **Final shot head shot.**

There's two more witnesses on the radio. They will later appear on our all-seeing television. These women were standing on Elm Street directly across from the Newmans. **Jean Hill** (11-22-63 WBAP interview) “the shots came directly across the street from us, and just as the President’s car became directly even with us...he and Jackie were looking at a dog that was in the middle of the seat, and about that time two shots rang out just as he looked up—just as the President looked up and these two shots rang out and he grabbed his chest, looked like he was in pain, and fell over in his seat. And Jackie fell over on him and said “My God, he’s been shot!” After that more shots rang out and the car sped away...the shots came from the hill...it was just east of the underpass.” (11-22-63 WBAP interview, quoted in Pictures of the Pain) “Mary started to take the picture and the President came right even with us, two shot, we looked at him and he was looking at a dog in the middle of the seat—two shots rang out...And there was an interval and then three or four more shots...” (11-22-63 and he grabbed his chest and this real odd look came over his face and he pitched forward onto her lap...the motorcade momentarily halted and three or four more shots rang out and they sped away real quickly.” (11-22-63 statement to Dallas Sheriff’s Department, 19H479, 24H212) “The President’s car came around the corner and it was over on our side of the street. Just as Mary Moorman started to take a picture we were looking at the President and Jackie in the back seat... looking at a little dog between them...Just as the President looked up toward us two shots rang out and I saw the President grab his chest and fall forward across Jackie’s lap and she fell across his back and said “My God, he has been shot”. There was an instant pause between the first two shots and the motorcade seemingly halted for a second and three or four more shots rang out and the motorcade sped away.” **Mary Moorman** (11-22-63 WFAA interview, quoted in Pictures of the Pain) “My picture when I took it was at the same instant that the President was hit, and that does show in my picture...it shows the President, uh, he slumped...It all happened so suddenly, I don’t think anyone realized, you know, what had happened.” (About the shots) “There was three or four real close together, and it must have been the first one that shot him, ‘cause that was the time I took the picture, and during that time after I took the picture, and the shots were still being fired, I decided I better get on the ground.” (11-22-63 statement to Dallas Sheriff’s Department, 19H487, 24H217) “As President Kennedy was opposite me, I took a picture of him. As I snapped the picture of President Kennedy, I heard a shot ring out. President Kennedy kind of slumped over. Then I heard another shot ring out and Mrs. Kennedy jumped up and said “My God, he has been shot!” When I heard these shots ring out, I fell to the ground to keep from being hit myself. I heard three or four shots in all.” (11-23-63 FBI, report, 22H838) “She took a second photograph of the President as his automobile passed her, and just as she snapped the picture, she heard what she first thought was a firecracker and very shortly thereafter heard another similar sound which she later determined to have been gunfire. She knows that she heard two shots and possibly a third shot.” (When we look at Moorman’s second photograph in the paper on Sunday, and compare it to her position in the various films at our disposal, we realize that the shot in sync with her photo, and the first shot heard by both

herself and Ms. Hill, was in fact the head shot.) **Shot or shots after the head shot x 2.** WFAA interview, quoted in Pictures of the Pain) “just as the car came right in line with us, the President looked up and just as he looked up two shots rang out

Only now does WFAA begin to talk of the Texas School Book Depository: “*Secret Service man and policeman killed at different parts of the city from the Presidential assassination. The Texas School Book Depository has been evacuated. Man reported arrested in Oak Cliff.*” (CD 962, p. 41) Minutes later WFAA begins broadcasting from in front of the building “*Witnesses say they saw man with rifle in window. Shells found.*”

We switch channels to CBS, and see Walter Cronkite inform the nation “*The assassin took dead aim. He got the President, apparently, with the first shot in the head, and then Governor Connally with the next two shots.*” We wonder where he got this information. How does he know there was but one shooter? How does he know which shot struck first? We switch back to WFAA.

In between the various recaps and updates, there is another news bulletin: “*Secret Service believes that an automatic weapon was fired from the top of the knoll.*” (CD 962, p.37) After a second round of interviews with the Newmans, the President’s death is announced. There is a third round of interviews with the Newmans (CD 962, p.60) before Kennedy’s death is confirmed by Washington.

Other witnesses appear upon our screen. One man claims he filmed the whole thing. **Abraham Zapruder (11-22-63** interview on WFAA) “*as I was shooting, as the President was coming down from Houston Street making his turn, it was about a half-way down there, I heard a shot, and he slumped to the side, like this. Then I heard another shot or two, I couldn't say it was one or two, and I saw his head practically open up, all blood and everything, and I kept on shooting.*” (12-4-63 FBI report, CD7 p.12) “*He stated he had started taking pictures prior to the first shot being fired...Zapruder advised he could not recall but having heard only two shots.*” **Unsure. Possible shot after the head shot.** (Marilyn Sitzman, Zapruder’s secretary, was standing beside him. She was never questioned by the FBI or Warren Commission.) Within a few hours of this interview Abraham Zapruder gives 2 copies of his film to the Secret Service. Within an hour after that the Secret Service gives one of them to the FBI to study. This film is flown back to Washington and copied the next day.

Charles Brehm (11-22-63 WFAA television interview as shown in Rush to Judgment) “*Unfortunately I was probably 15-20 feet away from the President when it happened...He was coming down the Street. I asked Joe to wave to him and Joe waved and I waved to him...as he was waving back, the shot rang out and he slumped in his seat and his wife reached up toward him as he was slumping down and the second shot went off and it just knocked him down in the seat. I’m positive that it hit him.*” (11-22-63 radio interview (KLIF?)) “*the first shot rang out and I was positive when I saw the look on his face and saw him grab his chest and saw the reaction of his wife that he had been shot and just at that time, which was probably a few seconds later the second shot rang out and he just absolutely went down into the seat of the car. There was a third shot that went and by that time I had grabbed my little five year old boy who was with me and ran away from the scene of the thing...the first one hit the president—there was no doubt whatsoever, because his face winced and he grabbed himself and he slumped down. I do believe without any doubt that the second one hit him because he had an immediate reaction with that second shot. I do know there was third shot but as I said by that time I’d grabbed my boy and started to go. I did not witness Governor Connally’s being hit.*” (11-25-63 FBI report, 22H837-838) “*He and his son stood right at the curb on the grass and saw the President’s car take a wide swing as it turned left into Elm Street. When the President’s automobile was very close to him and he could see the President’s face very well, the President was seated, but was leaning forward when he stiffened perceptibly, at the same instant what appeared to be a rifle shot sounded. According to Brehm, the President seemed to stiffen and come to a pause when another shot sounded and the President appeared to be badly hit in the head. Brehm said when the President was hit by the second shot, he*

could notice the President's hair fly up...Brehm said that a third shot followed and that all three shots were relatively close together...Immediately after the third shot rang out, Brehm pushed his son down."
Shot after the head shot.

Some witnesses remembered hearing two loud noises fired close together but failed to discern which one struck Kennedy in the head. **Charles Hester (11-22-63** statement to the Dallas Sheriff's Department, 19H478) "My wife Beatrice and I were sitting on the grass on the slope on Elm Street where the park is located. When the President Kennedy's car got almost to the underpass, I heard two shots ring out...I grabbed my wife because I didn't know where the next shot was coming from and dragged her up next to the concrete embankment and got on the ground with her." (**11-25-63** "Hester and his wife, Beatrice, were standing along the street at the point immediately preceding the underpass on Elm Street where President John F Kennedy was shot. Hester stated he saw the President slump in the seat of the car and that he heard two shots fired from what appeared to be a building located on the corner of Elm and Houston Street. He stated he and his wife were almost in a direct line of fire and that he immediately grabbed his wife and shoved her to the ground. **Double head shot.** (From hereon we will use the term 'Double head shot' to indicate that the witness has described two closely-grouped shots at the end of the shooting sequence.) **Mrs. Charles Hester (11-25-63** FBI report, 24H523) "Mrs. Hester advised she heard two loud noises which sounded like gunshots, and she saw President Kennedy slump in the car he was riding in. Her husband then grabbed her and shoved her to the ground. Shortly thereafter they then went across to the north side of the street on an embankment in an attempt to gain shelter." **Double head shot.** FBI report, 22H841)

There were also several witnesses on the railroad bridge. **S.M. Holland (11-22-63** statement to Dallas County Sheriff's Department, 19H480, 24H212) "the President's car was coming down Elm Street and when they got just about to the Arcade I heard what I thought for the moment was a fire cracker and he slumped over and I looked over toward the arcade and trees and saw a puff of smoke come over from the trees and I heard three more shots after the first one but that was the only puff of smoke I saw... After the first shot the President slumped over and Mrs. Kennedy jumped up and tried to get over in the back seat to him and then the second shot rang out. After the first shot the secret service man raised up in the seat with a machine gun and then dropped back down in the seat. And they immediately sped off." (The Zapruder film demonstrates that Mrs. Kennedy never jumped up until after her husband had received the fateful bullet to his head. And yet Holland claims he heard shots after he saw her "jump up.") **Shot or shots after the head shot.** **Austin Miller (11-22-63** statement to the Dallas County Sheriff's Department, 19H485, 24H217) "I saw a Convertible automobile turn west on Elm off Houston Street. It had proceeded about halfway from Houston Street to the underpass when I heard what sounded like a shot a short second two more sharp reports. A man in the back seat slumped over and a woman in a bright colored dress (Orange or Yellow) grabbed the man and yelled. One shot apparently hit the street past the car. I saw something which I thought was smoke or steam coming from a group of trees north of Elm off the railroad tracks." **Double head shot.**

Royce Skelton (11-22-63 statement to the Dallas County Sheriff's Department, 16H496) "We saw the motorcade come around the corner and I heard something which I thought was fireworks. I saw something hit the pavement at the left rear of the car, then the car got in the right hand lane and I heard two more shots. I heard a woman say "Oh, no" or something and grab a man inside the car. I then heard another shot and saw the bullet hit the pavement. The concrete was knocked to the south away from the car. It hit the pavement in the left or middle lane." (Our examination of the Zapruder film shows us that Mrs. Kennedy didn't yell out until after the head shot.) **Shot or shots after the head shot.**

By now, we're beginning to feel confident that the last two shots rang out in rapid succession and that a shot followed the head shot. Since the rifle found on the sixth floor is a bolt action rifle and incapable

of firing shots so rapidly we should be looking for a second shooter. Of course, if we can find concrete evidence that the 3 shots heard by most witnesses were all fired from the sniper's nest, we might save ourselves some trouble. No such luck.

Howard Brennan (11-22-63 statement to the Dallas Sheriff's Department, 19H470) "I saw a man in this window...He was a white man in his early 30's, slender, nice looking, and would weigh about 165 to 170 pounds. He had on light colored clothing but definitely not a suit. I proceeded to watch the President's car as it turned left at the corner where I was and about 50 yards from the intersection of Elm and Houston and to a point where I would say the President's back was in line with the last window I have previously described. I heard what I thought was a back fire. It ran in my mind that it might be someone throwing firecrackers out the window of the building and I looked up at the building. I then saw this man I have described in the window and he was taking aim with a high powered rifle. I could see all of the barrel of the gun. I do not know if it had a scope on it or not. I was looking at this man in the window at the time of the last explosion." (11-23-63 FBI report, CD5 p. 12-14) "He said the automobile had passed down Elm Street (going in a westerly direction) 30 yards from where he (Brennan) was seated, when he heard a loud report which he first thought to be the "backfire" of an automobile. He said he does not distinctly remember a second shot but he remembers "more than one noise" as if someone was shooting fire crackers, and consequently he believes there must have been a second shot before he looked in the direction of the Texas School Book Depository Building." As Brennan only remembers hearing two shots, and as the vast majority of witnesses so far have stated there were two shots fired closely together at the end of the shooting sequence, his statements suggest that he failed to hear one of the final shots. We need more proof.

Fortunately, sitting close to Brennan was another witness to the firing of the rifle. If he heard and saw three shots fired from the sniper's nest, maybe we can save ourselves a lot of legwork. **Amos Euins** (11-22-63 statement to Dallas Sheriff's Department, 16H963, 19H474) "I saw the President turn the corner in front of me and I waived at him and he waived back. I watched the car on down the street and about the time the car got near the black and white sign I heard a shot. I started looking around and then I looked up in the red brick building. I saw a man in the window with a gun and I saw him shoot twice...I could tell the gun was a rifle and it sounded like an automatic rifle the way he was shooting. This was a white man, he did not have on a hat. I just saw this man for a few seconds." One line from Euins' statement sticks out—"it sounded like an automatic rifle the way he was shooting." This confirms the statements of the bulk of the eyewitnesses and Sheriff's Deputies--that the third shot was fired immediately following the second shot. It also suggests that Euins saw the sniper in the window fire the last two shots without operating the bolt of the rifle in between, which is impossible. Could it be that one of the last two shots heard by Euins came from somewhere else? (

We then read the statements of two witnesses from the school book depository. One of these men was sitting in the window right below the sniper's nest, where three shells had reportedly been found. If he heard three shots fired from the window above him, then perhaps we can assume the man firing from this window acted alone, and simply fired the last shot as rapidly as possible, missing wildly. **Bonnie Ray Williams** (11-22-63 affidavit to Dallas County, 24H229) "Just after we got on the fifth floor we saw the President coming around the corner on Houston from Main Street. I heard 2 shots it sounded like they come from just above us. We ran to the west side of the building." (11-23-63 FBI report, CD5 p. 330-333) "Then he joined two other men known to him as Hank and Junior. They were looking out windows on the south side of the building approximately at the middle of the building and saw the car of President John Kennedy come north on Houston Street and then make a turn going west on Elm Street down into the triple underpass directly in front of the Texas School Book Depository. While they were watching this car pass, Williams heard two shots which sounded like they came from right over his head...He stated he and the other two men ran to the west end of the building where they looked out

and they did not realize the President had been shot.” **Jack Dougherty** (11-22-63 Affidavit to Dallas County Sheriff’s Department, CD81, p. 330) “I had already gone back to work and I gone down on the fifth to get some stock when I heard a shot. It sounded like it was coming from inside the building but I couldn’t tell from where. I went down on the first floor and asked a man named Eddie Piper if he had heard anything and he said yes, that he had heard three shots.” (11-23-63 statement to the FBI, CD5 p.366-367) “I was working on the fifth floor of the building at 411 Elm Street...when I heard a loud explosion which sounded like a rifle shot coming from the next floor above me.”

Yikes! Williams heard but two shots, and Dougherty, who had just gotten off an elevator coming down from the sixth floor, but one. We now have strong reason to suspect one of the last two shots was fired from someplace other than the school book depository.

The next morning, there is an eyewitness account of the assassination in the paper. **Mary Woodward** (11-23-63 newspaper article in the Dallas Morning News) "suddenly there was a horrible, ear-splitting noise coming from behind us and a little to the right. My first reaction, and also my friends', was that as a joke someone had backfired their car. Apparently, the driver and occupants of the President's car had the same impression, because instead of speeding up, the car came almost to a halt. ... I don't believe anyone was hit with the first bullet. The President and Mrs. Kennedy turned and looked around, as if they, too, didn't believe the noise was really coming from a gun.. Then after a moment's pause, there was another shot and I saw the President start slumping in the car. This was followed rapidly by another shot. Mrs. Kennedy stood up in the car, turned halfway around, then fell on top of her husband’s body....The cars behind stopped and *several* men--Secret Service men,--I suppose-- got out and started rushing forward, obstructing our view of the car.... About ten feet from where we were standing, a man and a woman had thrown their small child to the ground and covered his body with theirs. Apparently the bullets had whizzed directly over their heads.” (12-7-63 FBI report, 24H520) “She stated she was watching President and Mrs. Kennedy closely, and all of her group cheered loudly as they went by. Just as President and Mrs. Kennedy went by, they turned and waved at them. Just a second or two later, she heard a loud noise. At this point, it appeared to her that President and Mrs. Kennedy probably were about one hundred feet from her. There seemed to be a pause of a few seconds, and then there were two more loud noises which she suddenly realized were shots, and she saw President Kennedy fall over and Mrs. Kennedy jumped up and started crawling over the back of the car. She stated that her first reaction was that the shots had been fired from above her head and from possibly behind her.” (As Woodward heard two shots fired close together at the end of the shooting sequence, and associated the first of these two with a Kennedy "slumping in the car", it follows that this reaction was his getting hit by the head shot, and that a third shot followed.) **Shot after the head shot.** **Aurelia Alonzo, Margaret Brown, and Ann Donaldson.** (12-7-63 FBI report, CD7 p.19) “Ann Donaldson...Margaret Brown...and Miss Aurelio Alonzo...were interviewed December 6, 1963...All furnished the same information as that previously furnished by Mary Elizabeth Woodward.” (Our inspection of the Zapruder film shows that Kennedy waved to these women just before he was first hit. This means he was hit by the first shot described by Miss Woodward and that the slump she described in connection with the second shot is in fact the slump after the head shot.) **Shot after the head shot**
x3.

We read an interesting article on the school book depository employee now charged with the crime. This 11-23-63 New York Times article reports that “*Lee Harvey Oswald was not highly regarded as a marksman,*” and that he’d scored 212 out of 250 when he’d first joined the Marines but had let his skills deteriorate so badly after three years that he barely qualified as a Marksman, scoring a poor-by-Marine-standards 191 out of 250 on his last test four years ago. We then receive the statement of another eyewitness to the firing of the rifle. If he says he saw three shots fired from the sniper’s nest, then maybe we can still say Oswald acted alone.

No such luck. **James Worrell** (11-23-63 affidavit to Dallas County, 16H959) *"I was standing on the sidewalk against a building on the corner of Elm and Houston Streets watching the motorcade of the President. I heard loud noise like a fire cracker or gun shots. I looked around to see where the noise came from. I looked up and saw the barrel of a rifle sticking out of a window...While I was looking at the gun it was fired again. I looked back at Mr. Kennedy and he was slumping over. I got scared and ran from that location. While I was running I heard the gun fire two more times. I ran from Elm Street to Pacific Street on Houston. When I was about 100 yards from the building I stopped to get my breath and looked back at the building. I saw a w/m, 5'8" to 5'10", dark hair, average weight for height, dark shirt or jacket open down front, no hat, didn't have anything in his hands, come out of the building and run in the opposite direction."*

Now this is kind of alarming. Even though the man described by Worrell wasn't Oswald, who'd calmly walked out the front of the building, there is reason to believe Worrell's story, and reason to suspect that someone other than Oswald had actually fired the shots. While a hand-taped brown paper bag large enough to have concealed Oswald's rifle was reportedly recovered from the sniper's nest, and was found to have Oswald's prints on it, there is nothing in the bag or on the bag to indicate it had ever contained a rifle. Even worse, **Buell Wesley Frazier**, a co-worker of Oswald's who'd given him a ride to work on the 22nd, has said Oswald had a much different kind of bag with him that morning. The 11-22-63 Statement signed by Frazier reads: *"Before I got in the car, I glanced in the back seat, and saw a big sack. It must have been about 2' long, and the top of the sack was sort of folded up, and the rest of the sack had been kind of folded under. I asked Lee what was in the sack, and he said 'curtain rods', and I remembered that he had told me the day before that he was going to bring some curtain rods."* Frazier's statement later returns to this package: *"I got out of the car and started walking toward the building where I work. I noticed that Lee had the package in his right hand under his arm, and the package was straight up and down, and he had his arm down, and you could not see much of the package."* (11-22-63 Statement to Dallas County, 24H209). The FBI writes its own report on Frazier. It reads: *"As he got into the vehicle, he glanced at the rear seat behind Oswald, at which time he saw what appeared to him to be bulky brown paper sack sitting on the back seat which he described as the kind of sacks that one obtains in a 5 and 10 cent store. After glancing at the sack, he inquired of Oswald as to what was in the sack, to which Oswald replied 'curtain rods.'"* Frazier got a second look at the bag when they got out of the car. This description was even less helpful. The report continues *"Oswald got out of the front seat...and opened the rear door behind the passenger seat and obtained the brown package which was sitting on the seat...Oswald walked around the rear of the car...Oswald was carrying this package in a straight up position under his right arm and appeared to be holding the end of whatever was in the package and proceeded then to the Texas School Book Depository. Frazier stated he would estimate the length of the package under Oswald's arm at approximately two feet in length, however, he paid very little attention to the package."* (11-23-63 FBI report on an 11-22-63 interview, CD5, p316-319). The bag found in the sniper's nest was an irregular and obviously hand-made bag comprised of brown shipping paper and brown shipping tape--materials Frazier would associate with his workplace and not a 5 and 10 cent store. It was over 3 feet long, not 2 feet long. Frazier has, seemingly, described a different bag.

Frazier's sister, **Linnie Mae Randle**, is the only other person to see Oswald with this bag, and her description isn't any more helpful. The FBI report on her reads: *"Randle...observed Lee Harvey Oswald walking up her driveway and saw him put a long brown package, approximately 3 feet by 6 inches, in the back seat area of Wesley Frazier's 1954 black Chevrolet...while at the Dallas Police Department on the evening of November 22, 1963, officers of the Dallas Police Department had exhibited to her some brown package paper, however she had not been able to positively identify it as being identical with the above-mentioned brown package, due to the fact she had only observed the brown package from her residence window at a distance."* (11-23-63 FBI report on an 11-22-63 interview, CD5, p320-321).

Another eyewitness statement trickles-in. **Malcolm Summers (11-23-63** statement to Dallas Sheriff's Department, 19H500) "The President's car had just come up in front of me when I heard a shot and saw the President slump down in the car and heard Mrs. Kennedy say, "Oh, no," then a second shot and then I hit the ground as I realized these were shots. Then all of the people started running up the terrace away from the President's car and I got up and started running also, not realizing what had happened." (Our subsequent inspection of the Zapruder film shows that Mrs. Kennedy yelled out after the head shot.) **Shot after the head shot.**

We also receive a report on an FBI interview with Bill Stinson, the Administrative Assistant to Governor John Connally. It tells us that "Mrs. Connally, was, of course, an eyewitness to the shooting...and that Mrs. Connally would be available for interview by the FBI on November 23, 1963, if requested." No such request is made. (Mrs. Connally is not in fact interviewed until the second week of December, after the FBI Summary Report on the assassination has been completed.)

On the next day we learn of two witnesses who couldn't let themselves believe what they'd seen, and who'd convinced themselves that the explosion of the President's head had been a firecracker going off in the car. **Jack Franzen (11-24-63** FBI report, 22H840) "He said he heard the sound of an explosion which appeared to him to come from the President's car and noticed small fragments flying inside the car and immediately assumed someone had tossed a firecracker inside the automobile. He heard a second and third and possibly a fourth explosion and recognized these sounds as shots fired from some firearm. At the same time he noticed blood appearing on the top and sides of the head of President Kennedy." **Shot or shots after the head shot. Mrs. Jack Franzen (11-25-63** FBI report, 24H525) "She advised shortly after the President's automobile passed by on Elm Street near where she and her family were standing, she heard a noise which sounded to her to as if someone had thrown a firecracker into the President's automobile. She advised at approximately the same time she noticed dust or small pieces of debris flying from the President's automobile. She advised she heard two other sounds which sounded like shots from a firearm and noticed blood appearing on the side of President Kennedy's head." **Shot or shots after the head shot.**

We also receive a statement from another witness from the floor just below the sniper's nest. **James Jarman (11-24-63** FBI report, CD5 p.334-335) "He said that he heard a shot and then saw President Kennedy move his right hand up to his head. After an elapse of three or four seconds, he heard a second shot and then the vehicle bearing President Kennedy speeded up and he was unable to observe any more about the presidential vehicle. He said a third shot was heard by him closely following the second shot possibly within a second or two afterwards. He said these shots sounded to him to be too loud to have been anywhere outside the TSBD building." (Our subsequent inspection of the Zapruder film shows that the limousine sped up after the head shot.) **Shot after the head shot..**

We receive a phone call. While in the protective custody of the Dallas Police, Lee Harvey Oswald has been murdered. Our investigation of a possible conspiracy slows to a trickle. Of the 27 witnesses to the shooting we have heard from so far, 16 have told us, in one way or another, that there was a shot fired after the head shot, 3 others have told us they heard the last two shots fired close together without saying which one struck the President, and another 3 have told us they only heard two shots but thought there may have been a third. 3 additional witnesses have told us they only heard two shots, with the last one being the head shot. This means 26 out of our 27 closest witnesses have made statements consistent with a third shot miss, leaving only 1 witness, Mrs. Gayle Newman, as a witness to a third shot hit. And she dived to the ground after the head shot.

A few days later we receive a report about a third witness from the fifth floor. **Harold Norman (11-26-63** FBI report, CD5 p.26) "He stated that about the time the car in which the president was riding turned on to Elm Street, he heard a shot. He said he thought the shot had been fired from the floor directly above him. He further stated at that time he stuck his head from the window and looked

upward toward the roof but could see nothing because small particles of dirt were falling from above him. He stated two additional shots were fired after he had pulled his head back in from the window.” (12-4-63 affidavit to the Secret Service, 17H208) “Just after the President passed by I heard a shot and several seconds later, two more shots. I knew that the shots had come from directly above me, and I could hear the expended cartridges fall to the floor. I could also hear the bolt action of the rifle...I saw all of the people down on the street run toward the west end of the building, so I went to that side with Williams and Jarman.” While we’re pleased by Norman’s and Jarman’s claims that three shots came from up above them, we’re disheartened by the way they describe the last shot. It seems awfully close to the second shot to have been fired by a bolt action rifle. Norman fails to describe a pause before this shot, or his anticipation of this shot. When he does mention it, it’s by saying he heard two additional shots. This concerns us very much. We really don’t want to tell Mr. Hoover there’s a conspirator on the loose. (

The next day we get some really startling news. The FBI’s ballistics expert, **Robert Frazier**, has conducted a series of tests on the rifle found on the sixth floor, the presumed murder weapon. He has discovered that the fastest the weapon can accurately be fired at a moving target is once every 2.8 seconds. (In the FBI Report of December 10, CD7, p.333-335, an FBI lab report under date of 12-2 states that “It has been determined by actual firing tests that a skilled person can fire three accurately aimed shots with the rifle, K1, in five seconds.” In his 3-31-64 testimony before the Warren Commission, 3H407, however, Frazier explains that he tested the rifle on **11-27-64** and that the fastest he could fire three shots with the rifle was 4.6 seconds. He also testified that the shooting time would have been a second or so longer if he’d been firing at a moving target.) This means that one of the last two shots was probably not fired by Oswald.

That night we watch **Texas Governor John Connally** interviewed live from his hospital bed. (**11-27-63** televised interview with Martin Agronsky, transcript printed in the 11-28-63 New York Times.) ”we had just turned the corner, we heard a shot; I turned to my left—I was sitting in the jump seat. I turned to my left to look in the back seat—the President had slumped. He had said nothing. Almost simultaneously, as I turned, I was hit and I knew I had been hit badly. I knew the President had been hit and I said, “My God, they are going to kill us all.” Then there was a third shot and the President was hit again and we thought then very seriously. I had still retained consciousness but the President had slumped in Mrs. Kennedy;s lap and when he was hit the second time she said, or the first time—it all happened in such a brief span, she said “Oh, my God, they have killed my husband—Jack, Jack.” After the third shot, the next thing that occurred—I was conscious, the Secret Service man, of course, the chauffeur, had pulled out of the line, they said, “Get out of here...” **Final shot head shot.**

The 11-28 New York Times has another article of interest. At the end of an 11-27 datelined article entitled “*Oswald Unable to Keep \$50 Job,*” it relates: “*the Secret Service re-enacted today the assassination of President Kennedy, which is laid to Oswald. The purpose was 'to test whether it could be done the way we believe it was done,' an official said. The convertible drove the presidential route twice.*” The 11-28 Dallas Times Herald fills in the details: “Dallas police and the U.S. Secret Service partly re-enacted the slaying of President John F. Kennedy to determine the trajectory of the bullets which crashed into the presidential car. Traffic was blocked from Houston and Main to Houston and Elm and down Elm to the triple overpass Wednesday as a convertible similar to the presidential car made the same route as President Kennedy on the day of the assassination. On the first trip, Jim Underwood of KRLD-TV took television pictures from the window where Lee Harvey Oswald is believed to have fired the fatal shots. After the convertible passed, Lt. Carl Day of the Dallas Police Department placed traffic markers at the spots where three bullets are believed to have struck. *Lt. Day told The Times Herald that placement of the markers was determined by home movies taken by an amateur photographer on the day of the assassination.* On the second trip, the convertible paused to

take pictures of the window where Oswald is believed to have stood to fire the fatal shots. A number of people witnessed the re-enactment and one amateur cameraman sold Polaroid snapshots at the scene."

An AP article found in the Washington Evening Star on this day describes the re-enactment in a slightly different manner. It reads: *"A gray convertible, similar to the black one in which President Kennedy made his last ride, rolled past the Texas School Book Depository Building. A man and a woman sat in the back seat, just as Mr. and Mrs. Kennedy did last Friday. Two men were in the front. Looking down on this scene yesterday were investigators, and a cameraman. They perched in the same window from which the fatal shots were fired. They were re-enacting the President's assassination. This was another phase of the step-by-step investigation into the tragedy that shocked the world. The determined officers continued to sift through the evidence today. Officers attracted little attention as they slowly and methodically went through what they believed happened. Traffic was stopped about a minute as the car slowly headed down the hill in front of the building. The scene was grimly different. Instead of a jubilant crowd that stood there last Friday, there was a mournful gathering amid hundreds of flowers laid beside the spot where the assassin struck. An officer who said he did not want to be quoted by name said the re-enactment was done "merely to get the sequence of events straight."*

Later that day, we see *"Preliminary Special Dallas Report #1"* by Secret Service Inspector Thomas Kelley (CD87, p267). Kelley announces that *"At the foot of Elm Street, at a point approximately 200 feet east of the Houston Street Triple Underpass, on the approach to the Stemmons Freeway, President Kennedy, who was seated on the right rear seat, was shot. Immediately thereafter Governor Connally, who was seated on the right jump seat, was shot once. The President was then shot the second time."* This has us scratching our heads. Kelley's analysis seems to be in line with the scenario proposed by Life Magazine and CBS' Dan Rather. Could the closest witnesses claiming they'd heard a shot after the President was hit in the head really be mistaken?

The next day, we receive the **11-29-63** memo of FBI Agent Robert Barrett (CD5, p.117), which tells us the conclusions reached from the Secret Service's re-enactment. It reads *"with the aid of a surveyor and through the use of 8 millimeter movie film... (Secret Service Agent John Joe) Howlett was able to ascertain that the distance from the window ledge of the (suspected sniper's nest) to where the President was struck the first time in the neck was approximately 170 feet. He stated this distance would be accurate within two or three feet. The distance from the same window ledge to where the President was struck in the head by the assassin's bullet was approximately 260 feet... Secret Service Agents using the 8 millimeter film had been unable to ascertain the exact location where Governor John B. Connally was struck. SA Howlett advised that it had been ascertained from the movie that President Kennedy had been struck with the first and third shots fired by the assassin, while Governor Connally was struck with the second shot."*

Well, now we're really confused. Witness after witness has grouped the last two shots together. Many of these have indicated that the last shot missed. Now we're being told that Connally was hit by the second bullet, just before the head shot. When we look at the 8mm film viewed by Howlett, the Zapruder film, however, it seems obvious that Connally was hit much closer to the first shot, when Kennedy lifted his arms, than to the last shot, when Kennedy was struck in the head. The film and the eyewitnesses seem to be in conflict.

The Fingerprints of Incompetence

At left: Photo 27 in the FBI Summary Report of 12-9-63, "a photograph of a latent fingerprint..." on Box A.

At left: Photo 28 in the FBI Summary Report of 12-9-63, "a photograph of a latent palm print..." on Box A.

Across bottom: Warren Commission Exhibits 644 and 643, with the prints identified as Oswald's circled. The FBI would later acknowledge that there were 11 prints on Box A made by someone other than Oswald--and that they had made no effort to identify the source of these prints.

The Fingerprints of Incompetence

On **11-29**, we see a lab report that helps us relax...for a minute. A report by the FBI's Latent Fingerprint Section informs *"One latent palm print on a piece of cardboard...taken from a carton from the room in which the shots were fired was identified as the right palm print of Oswald. One latent fingerprint and one latent palm print developed on the cardboard box marked 'A' from the same room have been identified as the fingerprint and palm print of Oswald."* (FBI file 105-82555 sec 12, p 172). We find out the first box was the box supposedly used as a seat by the shooter, and that box "A" was the box supposedly used as a gun rest by the shooter. We become aware of a problem, however. The photos of the prints on box "A" show a whole mess of prints. And only two of these are Oswald's. We talk to Latent Fingerprint Section head Sebastian Latona and he admits that there are in fact 11 unidentified prints on box "A", 13 unidentified prints on boxes "B" and "C" (which were stacked below "A" by the window), and 2 unidentified prints on box "D", the presumed seat of the shooter. We wonder whose prints these are. We recall the 11-23 statements of James Worrell, who claimed he saw someone other than Oswald run out the back of the depository after the shots. Perhaps, we think, Oswald had an accomplice. We recall the bureau's guidebook, *The Science of Fingerprints*, which reads:

"Following the location of any latent prints at the scene of a crime, the prints of all persons whose presence at the place under inspection has been for legitimate purposes must be excluded from further

attention. It is advisable, therefore, during the initial stages of an investigation where latent prints are found, to secure the inked prints of all members of the household, the employees, and any police or other officials who may have touched the objects on which the latent impressions were found. Inked prints taken for this purpose are referred to as elimination prints."

We then ask Latona if he is gonna follow standard procedure and have elimination prints made of the depository employees and Dallas police, and anyone else who may have innocently handled the boxes. Silence.

On **11-29-63** we see a Secret Service report on an 11-28 interview of Linnie Mae Randle. Although the FBI's 11-23 report on an 11-22 interview with Randle reflects that she initially believed the bag Oswald took to work on the 22nd was approximately 3 feet long (long enough to have carried the rifle), this new report quotes her directly, and suggests either that the first report was inaccurate or that she'd had a talk with her brother about the length of the bag he said was about two feet long, and had decided to agree with him. The report quotes her as saying *"At about 7:10 A.M., Friday, November 22, 1963, Oswald came by my house. I glanced through the window of the kitchen-dining area and saw him walking across the street, and coming up the driveway. He was carrying a package. It was wrapped in brown paper. The package seemed to be about 2 feet or over in length. It seemed to have some weight to it from the manner in which he, Oswald, was carrying it."* (CD 87, p. 186).

What the Bodyguards Saw

On **12-1** we receive a file from the Secret Service containing the statements of the agents in the motorcade. We hope these will help us make sense of the shooting sequence. Once again, no such luck. **William Greer** was the driver of the limousine. (**11-28-63** report, 18H 723) *"A short distance ahead the street passed under a railroad or expressway. A building stood on the right side of us that would have been the last building we would have to pass before entering the underpass. The President's automobile was almost past this building and I was looking at the overpass that we were about to pass under in case someone was on top of it, when I heard what I thought was the backfire of a motorcycle behind the President's automobile. After the second shot, I glanced over my right shoulder and saw Governor Connally start to fall, I knew then that something was wrong and immediately pushed the accelerator to the floor and Mr. Kellerman said get out of here."* **Too vague.**

Roy Kellerman sat on the passenger side of the front seat. (**11-29-63** report, 18H724-727) *"As the motorcade completed the main thoroughfare through Dallas, we made a sharp right turn for about 1 block, then a curved left turn into a slight downhill grade, entering an area with little or no spectators... Immediately I heard what I firmly believe was the President's voice, 'My God, I'm hit!' I turned around to find out what happened when two additional shots rang out, and the President slumped into Mrs. Kennedy's lap and Governor Connally fell into Mrs. Connally's lap. I yelled at William Greer (the driver) to 'Step on it! We're hit!' and grabbed the mike from the car radio and called SA Lawson in the lead car."* (Our study of the Zapruder film shows us that Kellerman failed to turn back toward the President until after Governor Connally had obviously been hit. His statement that "two additional shots" rang out after this point is therefore an indication that he heard the last two shots close together, around the time of the head shot.) **Double head shot.**

The men directly behind Kennedy, who would have had the best view of him during the shooting, were the agents in his follow-up car. If there had been a pause between a second shot and the head shot long enough for Oswald to have operated his bolt-action rifle, these men, above all, would have noticed.

Sam Kinney was the driver of the Presidential back-up car. (**11-22-63** report, 18H732) *"The first shot was fired as we were going into an underpass...it appeared that he (the President) had been shot*

because he slumped to the left. Immediately, he sat up again. At this time, the second shot was fired and I observed hair flying from the right side of his head...I did hear three shots but do not recall which shots were those that hit the President. ” (11-30-63 report, 18H730-731) *"As we completed the left turn and on a short distance, there was a shot...I saw the President lean toward the left and appeared to have grabbed his chest with his right hand. There was a second of pause and then two more shots were heard. Agent Clint Hill jumped from the follow-up car and dashed to the aid of the President and first Lady in the President's car. I saw one shot strike the President in the right side of the head."* **Double head shot.** **Emory Roberts** sat next to Kinney in the front seat of the back-up car. He was directly behind the President. (11-22-63 report, 18H739) *"at 12:30 PM, two or three shots were fired, at which time I saw the President lean over on Mrs. Kennedy. I knew he was hit. Just as the second or third shot was fired, Hill ran from follow-up car to president's car."* (11-29-63 report, 18H733-738) *"12:30 PM: First of three shots fired, at which time I saw the President lean toward Mrs. Kennedy. I do not know if it was the next shot or third shot that hit the President in the head, but I saw what appeared to be a small explosion on the right side of the President's head, saw blood, at which time the President fell further to his left... Just after the third shot was fired, I picked up the car radio and said "Halfback (code name for SS. follow-up car) to Lawson, the President has been hit."* **Double head shot.**

We then read the accounts of the two agents riding on the driver's side of the back-up car. **Clint Hill** rode on the outside of the back-up car by the driver's door. (11-30-63 report, 18H740-745) *"On the left hand side was a grass area with a few people scattered along it observing the motorcade passing, and I was visually scanning these people when I heard a noise similar to a firecracker. The noise came from my right rear and I immediately moved my head in that direction. In so doing, my eyes had to cross the Presidential automobile and I saw the President hunch forward and then slump to his left. I jumped from the follow-up car and ran toward the Presidential automobile. I heard a second firecracker type noise but it had a different sound—like the sound of shooting a revolver into something hard. I saw the President slump more toward his left."* **Heard two shots.** **William McIntyre** rode on the outside of the driver's side of the back-up car, behind Clint Hill. (11-22-63, 18H748) *"As we approached the underpass leading to the Thornton Freeway, there was little if any crowd present. I heard three shots fired...I recall a rolling lawn to the right of the area where the President was shot, and seem to also recall an expanse of lawn to the left of the Presidential vehicle."* (11-29-63 report, 18H746-747) *"The Presidential vehicle was approximately 200 feet from the underpass when the first shot was fired, followed in quick succession by two more. After the second shot, I looked at the President and witnessed his being struck in the head by the third and last shot. By that time, Mr. Roberts had used the radio in our car to direct the vehicles to a hospital."* **Last two shots bunched together with the last shot the head shot.**

There were also two agents riding on the outside of the passenger's side of the back-up car. **John Ready** rode by the passenger's side door. (11-22-63 report, 18H750) *"I heard what sounded like firecrackers...The shooting occurred as we were approaching the Thornton Freeway...There appeared to be no spectators on the right side of the roadway...After the initial shot I attempted to locate the area from where they had come from but was not able to. It appeared that the shots came from my right-rear side."* (Undated report, 18H 749) *"I heard what sounded like firecrackers going off...I immediately turned to my right rear trying to determine the source but was unable to determine the exact location."* **Too vague.** **Paul Landis** stood along the right side of the back-up car behind John Ready. (11-27-63 report, 18H758-759) *"At this point the President's car and follow-up car had just completed its turn and both were straightening out. At this moment, I heard what sounded like the report of a high powered rifle behind me. My first glance was at the President... I did not realize that the President was hit...I saw him moving and thought he was turning in the direction of the sound. I immediately returned my gaze to the building which I had observed before, at a quick glance saw*

nothing and dropped my eyes to the crowd, scanning it quickly from right to left... I think I recall Special Agent Jack Ready saying, "What was it? A firecracker?" I remarked "I don't know. I don't see any smoke." ...I glanced back towards the President, he still appeared upright in his seat, leaning slightly towards Mrs. Kennedy. It was at this moment that I heard a second report and saw the President's head split open and pieces of flesh and blood flying through the air." (11-30-63 report, 18H751-757) "At approximately this point, I would say, the President's car and the Follow-up car had just completed their turns and both were straightening out. At this moment I heard what sounded like the report of a high-powered rifle from behind me, over my right shoulder...My first glance was at the President, as I was practically looking in his direction anyway. I saw him moving in a manner which I thought was to look in the direction of the sound. I did not realize that President Kennedy had been shot at this point. I immediately returned my gaze, over my right shoulder, toward the modernistic building I had observed before. With a quick glance I saw nothing and immediately started scanning the crowd at the intersection from my right to my left. I observed nothing unusual...So far the lapsed period of time could not have been over two or three seconds. It must have been another second or two before the next shot was fired...I glanced towards the President and he still appeared to be fairly upright in his seat, leaning slightly toward Mrs. Kennedy with his head tilted lightly back. I think Mrs. Kennedy had her right arm around the President's shoulders at this time. I also remember Special Agent Clinton Hill attempting to climb onto the back of the President's car. It was at this moment that I heard a second report and it appeared that the President's head split open with a muffled exploding sound. I can best describe the sound as I heard it, as the sound you would get by shooting a high powered bullet into a five gallon can of water or shooting into a melon. I saw pieces of flesh and blood flying through the air and the President slumped out of sight towards Mrs. Kennedy. I still was not certain from which direction the second shot came, but my reaction at this time was that the shot came from somewhere towards the front, right-hand side of the road. I did not notice anyone on the overpass, and I scanned the area to the right of and below the overpass where the terrain sloped towards the road on which we were traveling." **Heard two shots.**

We then read the statements of the two men in the back seat. **George Hickey** sat on the driver's side of the back seat of the back-up car. (11-22-63 report, 18H765) "As 100-X made the turn and proceeded a short distance, I heard what seemed to me that a firecracker exploded to the right and rear. I stood partially up and turned to the rear to see if I could observe anything. Nothing was observed and I turned around and looked at the President's car. The President was slumped to the left in the car. I heard what appeared to be two shots and it seemed as if the right side of his head was hit and his hair flew forward." (11-30-63 report, 18H761-764) "Just prior to the shooting the Presidential car turned left at the intersection and started down an incline toward an underpass...After a very short distance I heard a loud report which sounded like a firecracker...I stood up and looked to my right and rear in an attempt to identify it. Nothing caught my attention except people shouting and cheering. A disturbance in 679X caused me to look forward to the President's car. Perhaps 2 or 3 seconds elapsed from the time I looked to the rear and then looked at the President. He was slumped forward and to his left, and was straightening up to an almost erect sitting position as I turned and looked. At the moment he was almost sitting erect I heard two reports which I thought were shots and that appeared to me completely different in sound from the first report and were in such rapid succession that there seemed to be practically no time element between them. It looked to me as if the president was struck in the right upper rear of the head. The first shot of the second two seemed as if it missed because the hair on the right side of his head flew forward and there didn't seem to be any impact against his head. The last shot seemed to hit his head and cause a noise at the point of impact which made him fall forward and to his left again. Possibly four or five seconds elapsed from the time of the first report and the last." (Our inspection of the Zapruder film reveals that Kennedy's hair didn't fly forward until he was struck by the bullet.) **Shot after the head shot.**

Glen Bennett sat on the right side of the back seat of the back-up car. (11-23-63 report, 18H760) *“The motorcade entered an intersection and then proceeded down a grade. At this point the well-wishers numbered but a few, the motorcade continued on down this grade en route to the trade mart. At this point I heard what sounded like a firecracker. I immediately looked from the right/crowd/physical area and looked towards the President who was seated in the right rear seat of his limousine open convertible. At the moment I looked at the back of the President I heard another firecracker noise and saw the shot hit the President about four inches down from the right shoulder. A second shot followed immediately and hit the right rear high of the President’s head. I immediately hollered “he’s hit” and reached for the AR-15 located on the floor of the rear seat.”* **Last two shots bunched together with the last shot the head shot.**

We also receive the statements of the two agents in the lead car of the motorcade, just ahead of the limousine. **Winston Lawson** (11-23-63 report, 17H628-629) *“It was about the time our car was arriving at this bridge that I heard the first shot. I believe I heard two more sharp reports and looking back saw people scurrying away from the route, as though they were taking cover. Almost immediately the President’s car leaped ahead.”* (12-1-63 report, 17H630-634) *“As the lead car was passing under this bridge I heard the first loud, sharp report and in rapid succession two more sounds like gunfire. I could see persons to the left of the motorcade vehicles running away.”* **Last two shots bunched together.** **Forrest Sorrels** (11-28-63 deposition, 21H548) *“When we were at a point approximately three fourths of the distance between the Houston and Elm Street intersections and the first underpass, I heard what sounded like a rifle shot and said “What’s that?”, as I turned to my right to look back in the direction of the terrace and the Texas School Book Depository. When I heard two more shots, I said “let’s get out of here.”* **Last two shots bunched together.**

We are at a loss. The statements of the Secret Service agents largely confirm the statements of the other eyewitnesses. They conflict with both Connally’s recollections and the apparent sequence of events in the Zapruder film. The eyewitnesses taken as a whole assert that the last shot was significantly closer to the second shot than the second shot was to the first. Period.

Not Exactly in the Bag

At left: a Dallas Times-Herald photo of a paper bag believed to have held the sniper rifle, as it was removed from the book depository on 11-22.

At right: a comparison of the bag seen by Frazier (27 x 6 = red), and Randle (27 x 8.5 = dark blue), against the approximate size for the bag in the photo at left (38 x 10.75 = light blue).

Below: Warren Commission Exhibit 1304. The exact measurements of the bag were not revealed by the FBI or Warren Commission, but this photo shows it to be about 38 inches long.

Above: from the FBI's Summary report of 12-9-63. They disassembled the rifle to fit it in the bag. It could not have fit in the bag described by Frazier and Randle.

Not Exactly in the Bag

On **12-1-63** we read another report about another roadblock. The FBI still can't figure out how Oswald, or anyone, got the rifle used to kill Kennedy into the building. On 11-29, agent Vincent Drain followed up on Buell Frazier and his refusal to ID the paper bag found in the sniper's nest as the bag Oswald had brought to work. He talked to Dallas Police Captain Will Fritz, who confirmed that Frazier had told him on the day of the shooting that the bag he saw was "about two feet in length, and of brown paper." (CD7, p290). He talked to Dallas Detective R.D. Lewis, who confirmed that Frazier, while being given a polygraph test, *"was shown what appeared to be a homemade brown heavy paper gun case."* Lewis stated further that *"Frazier said that it was possible this was the case, but he did not think it resembled it. He stated that the crinkly brown paper sack that Oswald had when he rode to work with him that morning was about two feet long."* Detective Lewis also told Drain *"that if this was not identical to the sack that was turned over to the Bureau, it is possible that Oswald may have thrown it away."* (CD7, p291). Apparently, Lewis believed Frazier.

And he was not alone. In the FBI's assassination file (62-109060 sec.14 p123-125) we see an 11-29 memo from Agent Hadley in Dallas to Assistant Director Alex Rosen in Washington. It states that Dallas Crime Lab chief *"Lt. Day stated that he and other officers have surmised that Oswald by dismantling the rifle could have placed it in the thick, brown sack folded over and then placed the*

entire package in the flimsy paper sack." This memo notes the impossibility of this, however, and continues *"however, the entire package would have been longer than two feet since the stock of the rifle alone was over two feet."* This shows us that the Dallas PD is, at least at this point, ready to accept that the bag found in the sniper's nest was not the bag seen by Frazier or Randle. This in itself is intriguing.

The Dallas Police Department's and print media's desire to close the case, particularly as it relates to the paper bag and its use by Oswald to bring the rifle into the building, is further demonstrated by a 12-1 article in the Philadelphia Bulletin, describing the events of 11-22. This article describes the morning's events as follows: *"Oswald picked the blanket roll off the floor and put it on a white leather chair. He was busy with the bundle for perhaps ten minutes, police said. From it, they added, he took the bolt-action rifle which was used to kill the President. Police said he transferred the rifle from the roll to a brown paper bag."* Later in the article, Buell Frazier, who gave Oswald a ride to work, further describes the bag: *"As they drove off, Frazier said, he glanced to the back seat where he saw a paper-wrapped bundle. 'He said, yes, it was his--and he muttered something about curtain rods,' said Frazier. As a matter of fact, said Frazier, Oswald had told him the day before that he would be bringing some rods to exchange them for other rods he wanted for his room at Mrs. Johnson's. 'It didn't look to me as a rifle ought to be,' said Frazier. 'It seemed to me it should have been longer. If it was a rifle, he had taken it apart, to put it together in the warehouse.'" A few paragraphs later, the article returns to the bag one last time: *"Frazier doesn't remember what Oswald did with the paper-wrapped bundle. 'I just lost track of it,' he said, although I guess he took it out of the car because I didn't see it again."* Well, this is quite puzzling, Frazier has signed a statement saying he saw Oswald remove the package from the car, and carry it into the building, and now he says he "guesses" Oswald took it out of the car? Someone's playing games. Either Frazier is lying to the press, for no apparent reason, or the writer of this article is twisting his words to hide that he got a good look at the bag and felt quite sure the "paper-wrapped bundle" was much smaller than a bag holding the rifle. That the article allows Frazier's assertion that the rifle had to have been broken down to fit inside the bag, sack, or bundle, but fails to tell its readers that the bag described by Frazier was a foot shorter than the rifle, even when the rifle was broken down, and that Frazier had refused to ID the bag found near the sniper's nest as the bag he saw in Oswald's possession, suggests that the writers and their sources in the Dallas Police were more concerned with telling a seamless tale than in getting at the truth.*

The New York Times, in an article published the day before, was even worse. The Times avoided the problems with the bag by reporting: *"Mr. Frazier noticed that Oswald put a long package wrapped in brown paper sacks into the back seat, saying it was curtain rods. Evidence showed he had removed it from the Paine garage, where he had kept it with his other belongings wrapped in a blanket. Only the blanket was there when the police came to check. Mr. Frazier said Oswald carried the long package into the depository building and that was the last he saw of him before the assassination."* This, disturbingly, not only avoids the sticky issue that the "long" package described by Frazier was not nearly long enough to have held the rifle, but completely misinforms its readers by asserting there was any evidence whatsoever that the "long package" had ever been in the garage. That the "long package" had been wrapped in the blanket sitting on the garage floor for almost two months, was either pure speculation, or deliberate misinformation. (The FBI had already tested the paper sack and found it to match the paper sample taken from the roll in use at the depository on 11-22. They would soon determine that the depository changed rolls every few days, and that, accordingly, the sack or bag had most probably been created within 24 hours of the shooting.)

On 12-2-63, we find out that Dallas FBI agents Odum and McNeely, desperate to get around the problem created by Frazier's refusal to ID the bag, have visited the school book depository, gathered up some paper and some tape, and created a replica sack to show those who knew Oswald. Significantly, the report on their actions of the day before tells us the paper was described as *"60 pound paper, 24*

inches wide" and that the tape was "gummed, brown paper tape, three inches wide, made on 60 pound paper stock." (CD7, p292). It also tells us that after creating the sack, they took it, along with the original sack, which had been stained by the FBI during testing, over to show Ruth Paine, at whose home Oswald had stayed the night before the shooting. She "advised that she does not recall seeing Lee Oswald in possession of any sack resembling either of these sacks, nor does she recall seeing him in possession of paper or tape of the type used on either of these sacks." (CD7, p293).

Perhaps hoping he would change his mind, they then showed these sacks to Buell Frazier. In their 12-2 report, Odum and McNeeley re-tell Frazier's story. They write: *"As he started to drive out of the yard, Frazier glanced back and noticed a long package, light brown in color, lying on the back of the rear seat and extending from approximately the right rear door to about the center of the seat...Frazier designated an approximate spot on the back seat where he felt the package extended to from the right rear door and measurement by Special Agents Bardwell D. Odum and Gibbon E. McNeeley determined that this spot was 27 inches from the inside of the right door, indicating that Frazier estimates that as the length of the package."* They then recount Frazier's recollection of how Oswald carried the package into the building: *"Oswald had this package under his right arm, one end of this package being under his armpit and the other end apparently held with his right fingers...Frazier stated that when he saw this package under the arm of Oswald, he reached the conclusion that the package was wrapped in a cheap, crinkly, thin paper sack, such as that provided by Five and Ten Cent Stores."* They then describe showing Frazier the replica sack. Agent Odum held the sack under his arm, and they measured how much of the sack was visible to Frazier, when held under his arm. It was 9" by 1". According to Odum's report, Frazier then advised Odum *"that he now realizes that his conclusion that the sack was thin, crinkly paper, of the type used in Five and Ten Cent stores, was based to a considerable extent upon the fact that the color of the sack was a very light brown as compared with the type of dark brown paper used for heavier grocery sacks. He noted that the color of the replica sack was the same color as the package which he had seen in possession of Oswald on the morning of November 22, 1963."* Odum then shows Frazier the original sack. He writes: *"Frazier examined the original found by the sixth floor window of the TSBD Building on November 22, 1963, and stated that if that sack was originally the color of the replica sack, it could have been the sack or package which he saw in the possession of Oswald on the morning of November 22, 1963, but that he does not feel he is in a position to definitely state that this original is or is not the sack."* This is incredibly disingenuous, and fails to note that Frazier was shown this sack, on the night of the shooting, before it had been discolored by the FBI's tests, and had refused to identify it as the sack or bag brought into work by Oswald. Odum then reports: *"Frazier indicated on the replica sack the estimated width of the package in possession of Oswald on the morning of November 22, 1963, and this was found to be an approximate width of six inches". (CD7, 294-297).*

They then showed the sack to Frazier's sister, Linnie Mae Randle. She also has her doubts about the sack. Odum reports: *"Mrs. Randle states that at the time she saw Oswald walking across the street, he was carrying a long package wrapped in brown paper or a brown sack in his right hand. It appeared to contain something heavy. She stated that it was long but did not touch the ground as he walked across the street. She examined a replica of the sack...She stated that this was the same kind of paper that made up the sack or package that she saw Oswald carrying, and was the same heavy grade of paper, since she recalls noting that there was something heavy in the sack when she saw it, and it was the same color paper as the sack she had seen on the morning of November 22, 1963. She was shown the original paper sack...She stated that if the original sack was previously the same color as the replica sack, that the original sack could have been the one which she saw Oswald carrying on the morning of November 22, 1963...The action of Oswald walking across Westbrook Street was re-enacted by Special Agent McNeeley, carrying the replica sack...in accordance with Mrs. Randle's observations, Special Agent McNeeley grasped the top of the sack with his hand...When the proper length of the sack was*

reached according to Mrs. Randle's estimate, it was measured and found to be 27 inches long. She demonstrated the width of the sack as it appeared to her, noting that it did have something bulky in it originally. Her designation on the replica sack was found to be 8 1/2 inches for the width of the original package she had seen Oswald carrying." (CD7, p298-299). Here, once again, Odum acts as though the recollection of the witness is consistent with the sack carried by Oswald being the sack found in the sniper's nest. This just isn't true. Two witnesses saw the sack. The FBI performed two tests to determine the length of the sack seen by the witnesses. They put the replica sack in Frazier's back seat. This confirmed for Frazier that the sack he saw was about 27 inches long. They then re-enacted Oswald walking across the street to get Randle's best estimate of the length of the sack. This led her to conclude the sack she saw was...27 inches long. We've seen some evidence photos. The sack found in the sniper's nest was 38 inches long, approximately 40% longer than the sack described by both Frazier and Randle. We've also seen photos of the original sack, as it was brought out of the school book depository. It appears to have been well over 10 inches in width.

This gets us thinking. We do a quick comparison of photos of the bag as it was removed from the depository, and these convince us the bag was actually about 10.75 inches wide. Okay. The bag in these photos is also about 38 inches long. If the bag holding the rifle was 38 by 10.75, however, it would have covered 408.5 sq. inches on the back seat of Frazier's car. The sack described by Frazier, meanwhile, is 27 x 6, 162 sq. inches...This means that the bag shown Frazier--assuming it was the bag in the press photos--was TWO AND A HALF TIMES as large as the bag he recalled seeing in Oswald's possession. No wonder he'd refused to ID the bag.

The next day we receive a report on an interview with Orville Nix. Nix had filmed the fatal headshot from the opposite of Zapruder. (12-3-63 FBI report, 24H539) "*Nix believed the film depicts the third shot hitting President Kennedy and the sequence of events immediately after including Mrs. Jacqueline Kennedy reaching out over the back trunk lid to assist a secret service agent who is running to her aid.*" Too vague. Why wasn't Nix asked to describe the shooting sequence? Does the description of the head shot as the third shot come from Nix or from the writer of the report? Has the FBI already made up its mind? Apparently so.

The **12-3-63** edition of the Washington Evening Star, a newspaper used by FBI Director J. Edgar Hoover to leak stories he wants before the public, reports: "*An exhaustive FBI report now nearly ready for the White House will indicate that...Oswald was the lone and unaided assassin of President Kennedy, Government sources said today.*"

The next day, we receive a report on an interview with **Marie Muchmore**. We've heard rumors that she filmed the assassination from the east end of the plaza, but she denies them. (**12-4-64** FBI report CD7 p.31) "*She advised that they stood on Main and Houston Streets. As the parade passed by there she heard the first shot but from where they were standing could not observe where the shot came from. She said she panicked after this shot and ran back to the office, later becoming deathly sick over the incident...She said she had a movie camera with her at the time and Wilma Bond had a box camera but she advised that she did not obtain any photographs of the assassination scene.*" **Too vague.**

Also on 12-4, a witness named Carolyn Walther comes forward and claims she "*saw a man standing on either the fourth or fifth floor in the southeast corner window...In his hands this man was holding a rifle with the barrel pointed downward.*" The man she saw "*was wearing a white shirt and had blond or light brown hair.*" She also offered that "*the rifle was different from any she had ever seen. This man was standing in about the middle of the window. In the same window, to the left of this man, she could see a portion of another man standing by the side of this man with a rifle. This other man was standing erect, and his head was above the opened portion of the window. As the window was very dirty, she could not see the head of this second man. She is positive this window was not as high as the sixth floor. This second man was apparently wearing a brown suit coat, and the only thing she could see was*

the right side of the man, from about the waist to the shoulders." (24H522). Hearing this, we ask Latona once again if he's gonna run some elimination prints, and try to find out who, besides Oswald, had been in the sniper's nest. Silence.

But this is not the most disturbing development of the day. In agent Robert Barrett's memo on an interview with Abraham Zapruder we spot an intriguing sentence, one which we know could prove most problematic. It states that, according to Zapruder, who filmed the assassination from beginning to end, his camera was set to take *"normal speed movie film or 24 frames per second."* (CD7, p.12). Since Agent Robert Frazier has already indicated that the shooting would take a minimum of 5.6 seconds with Oswald's rifle, and since Agent Barrett's report on the Secret Service reenactment indicates the first and third shots hit Kennedy, Zapruder's film should show Kennedy first hit at least 134 frames before he suffered his fatal blow, should Oswald have acted alone. We are told this is not the case. We take comfort, nevertheless, in Barrett's statement that he has obtained Zapruder's camera and that the camera will undergo testing at the FBI's crime lab.

On 12-5 we see yet another signed statement from Buell Frazier, who gave Oswald a ride to work on 11-22-63. Frazier was the only person to get a good look at the package Oswald brought to work. Every member of law enforcement working on the case wants to believe this package contained Oswald's rifle, but Frazier told first the Dallas Police, and then the FBI, that the package he saw was only 2 feet long. Unfortunately, the bag reportedly found in the sniper's nest (there is no picture of it in situ) was over 3 feet long. This was barely long enough to have held Oswald's disassembled rifle. This newly-signed statement comes from the Secret Service. The third time's not the charm. Frazier sticks to his guns. He writes: *"He had put a package in the back seat of the car. I got into the car and sort of glanced over my shoulder and saw a package in the seat. The package was approximately two feet in length. It was a brown paper sack and was folded so that the contents could not be seen. I asked Lee about the package and he said it was curtain rods."* Frazier sticks to his guns (or lack of gun) in other ways as well. He writes: *"Lee got out and took the package...The package was under his arm lengthwise and the paper was all that could be seen."* (CD87, p795-796). A three-foot long package would not have fit under Oswald's arm in such a manner. If Frazier is not mistaken, Oswald didn't act alone.

Do It Again

On 11-27-63, the Secret Service and Dallas Police Department performed a re-enactment of the 11-22 motorcade in Dealey Plaza. Three stills from the film of this re-enactment are at left.

This re-enactment, when studied in conjunction with the Zapruder film, should have helped them establish the precise moment of the fatal head shot. An FBI memo indicates they thought they'd done just that.

So why did they return on 12-5, with a different car and a different JFK stand-in, and re-do their re-enactment? And why did they come to an even more inaccurate conclusion regarding the moment of the fatal headshot?

Three stills from the film of this second re-enactment are at right.

Do It Again

On 12-5 we also see an FBI teletype message from Special-Agent-in-Charge J. Gordon Shanklin in Dallas. It discloses that the FBI's Exhibits section, under Leo Gauthier, is in Dallas preparing exhibits depicting the shooting, and that "While Gauthier and assistants were making measurements on the sixth floor of the Texas School Book Depository Building, on December Five, Secret Service Agents Miller and Sorrell arrived on the scene with a motion picture cameraman. These men identified themselves as Secret Service men to Gauthier. At approximately three P.M. on December Five, Secret Service Agents Miller and Sorrell supervised re-enactment of the route of the President's assassination. A white convertible similar to the black one in which President Kennedy made his last ride, rolled past the assassination spot. A man and a woman sat in the back seat just as President and Mrs. Kennedy did, two men were in the front. Looking down on this scene was the movie camera, perched in the same window from which the fatal shots were fired. Field surveyors from the Robert H. West land survey company, apparently employed by the Secret Service, were present, compiling survey data (slope of the road) at the three points on the freeway where it is believed the bullets struck the President and the Governor. Gauthier discontinued making measurements during the time the Secret Service enactment." This tells us that not only are the Secret Service and FBI not working together to investigate the crime, but that they aren't even sharing any basic information.

The 12-5 New York Times further describes this re-enactment: *"An open car with a man and a woman in the back seat simulated again and again today the ride of the President and Mrs. Kennedy on Nov. 22. A motion picture camera in the sixth-floor window that was used by the assassin recorded these trips. A surveyor's transit stood in the parkway on the other side of the street looking up at the window. Each of the simulations differed slightly from the other, either in the speed of the car or the gestures of the occupants, or in some other detail. On one trip both occupants of the back seat waved. On another the man turned to the right, and, moments later, slumped in his seat; then the car's speed picked up. On all simulations, a motorcycle policeman rode on each side near the rear of the car. At all times the car used the middle of the three-lane road."*

On 12-9, we see a memo from Gauthier himself, describing his efforts in Dallas. He is preparing floor plans of the depository and of the police station where Oswald was killed, as well as a mock-up of Dealey Plaza. He lists the advantages of having these exhibits and then declares *"The marks on the freeway indicating where shots one, two, and three were believed to have struck the Presidential car, have been noted and this information can be indicated on the model. From this information, it appears that shot one struck the President momentarily after he came within gun range when his car moved passed the tree top as viewed by the assassin. Shot number two which is believed to have struck Governor Connally occurred after the car had traveled a distance of 95 feet at approximately 15 m.p.h. The markings on the Freeway indicated that shot number three which is believed to have struck the President occurred after the car had traveled another 45 feet. At 15 m.p.h a car moves forward at a speed of about 22 feet per second or one car length. The President's car length is 21 feet long. Based upon this information the second shot occurred about 4.36 second after the first shot was fired and the third shot occurred about 2.0 seconds after the second shot was fired. The total elapse time to fire shots two and three was approximately 6.4 seconds during which time the President's car traveling at 15 m.p.h. covered approximately 141 feet."*

This is disturbing, and raises lots of questions. Hasn't anyone told Gauthier that the FBI's Robert Frazier has already tested the rifle and found that a shooter would need at least 2.8 seconds between shots? And what does he mean by "marks on the freeway"? Has someone placed marks on Elm Street at the limo's locations when the shots were fired? If so, how did they establish these locations and why do these marks differ so greatly from the locations determined by agent Howlett?

The Conclusion That Shouldn't Have Been

Above: a crop from Warren Commission Exhibit CE 882, a surveyors plat of Elm Street. The colored circles reflect the locations and recollections of the closest witnesses to come forward prior to 12-9-63. Black circle=President Kennedy. Red=heard a shot after the head shot. Orange=heard last two shots bunched together. Light orange=possible shot after the head shot. Yellow=heard but two shots. Green=final shot was an isolated head shot. White=too vague.

HSCA Figure II-5: from the HSCA Report of William Hartmann. This chart measures the startle reactions apparent in the Zapruder film, with the frame number at top, the amount of blur depicted above the second line, the degree of panning error below this line, and the speed of camera acceleration measured on the third line.

The startle reaction related to the head shot comes just prior to frame 320, followed by another startle reaction, around frame 330. This confirms the statements of the eyewitnesses portrayed by the red and orange circles at left. The FBI and Warren Commission sided with the witnesses portrayed by the green circles.

The Conclusion That Shouldn't Have Been

On 12-9-63 the FBI gives their summary report to each member of the newly convened Warren Commission. On page 1 it reads: "As the motorcade was traveling through downtown Dallas on Elm Street about fifty yards west of the intersection with Houston Street (Exhibit 1), three shots rang out. Two bullets struck President Kennedy, and one wounded Governor Connally. The President, who slumped forward in the car, was rushed to Parkland Memorial Hospital, where he was pronounced dead at 1:00 p.m. Eyewitnesses at the scene of the shooting saw an individual holding a rifle in a sixth-floor window of the Texas School Book Depository Building located on the corner of Houston and Elm Streets. One individual stated that after he heard what he believed to be a second shot, he looked up, and saw this man take deliberate aim with a rifle and fire in the direction of the Presidential motorcade as it passed." On page 18, the report clarifies: "Medical examination of the President's body revealed that one of the bullets had entered just below his shoulder to the right of the spinal column at an angle of 45 to 60 degrees downward, that there was no exit, and that the bullet was not in the body." As the bullet creating this wound could not have continued on into Governor Connally, it certainly implies the bullet striking Connally was a separate shot. This would undoubtedly suggest the scenarios described by Secret Service Agent Howlett and FBI exhibits chief Gauthier...that the first shot hit Kennedy, the second hit Connally, and the third hit Kennedy in the head.

Outside of the statements of Howard Brennan, whose statements were misrepresented in order to support this shooting scenario (he, in fact, had never said he heard a second shot), the statements of the closest witnesses, normally the backbone of a criminal investigation, have apparently been ignored.

We're also appalled by the report's treatment of the fingerprint evidence. Not only does the report fail to mention that "Oh yeah, while we were able to identify 3 prints on the boxes as Oswald's, there were 25 more that we haven't yet identified," it actually goes out of its way to hide this fact, describing photos showing numerous prints as photos of "a latent fingerprint identified as the right index finger impression of Lee Harvey Oswald" and "a latent palm print identified as the left palm print of Lee Harvey Oswald." (CD1 evidence photos 27 and 28, respectively.)

And we're also disgusted with the report's treatment of the paper bag. As could have been gathered from Agent Bardwell Odum's 12-2 reports, the FBI pretends that Frazier and Randle's statements support that the bag or sack carried by Oswald was the bag or sack found in the sniper's nest. On page 5, the FBI Summary Report declares: "When Oswald left Irving, Texas, on the morning of November 22, 1963, he carried a long package wrapped in brown paper." It later claims "After the assassination, brown wrapping paper in the shape of a long bag was found near the window from which the shots were fired on the sixth floor of the depository building." (CD1, p5). There is no acknowledgment that the only two witnesses to see Oswald with this "brown wrapping paper" refused to ID the paper bag found in the sniper's nest as this bag, and, in fact insisted the sniper's nest bag was far larger than the bag they saw. Apparently such things were just not to be acknowledged.

In our frustration, we make some phone calls, searching for an explanation for the FBI's failure to properly present the evidence. We find that the Summary Report was sent over to President Johnson and Acting Attorney General Katzenbach on 12-5-63, before the FBI had even determined the speed of Abraham Zapruder's camera, and thus, if it was even possible for Oswald to have fired all the shots depicted in the film. If Zapruder is correct, and his camera was filming at 24 frames per second, so we've been told, then Oswald could not have fired all the shots. While complaining about this, we hear a rumor that the National Photo Interpretation Center has studied the film for the Secret Service.

We call a close friend working at the National Photo Interpretation Center. He tells us that on the evening of November 23rd, the Secret Service had given a copy of the Zapruder film to two of the Center's photo experts, Homer McMahon and Ben Hunter, and had asked them to make enlargements on 28 frames of the film. It was believed that the creation of these enlargements would help them identify the moments the bullets struck both the President and the Governor. (While evidence for this incident had been discussed for years, it was not fully investigated until Doug Horne of the ARRB did so in 1997.) Our friend gets access to the worksheets created as part of this study. These worksheets indicate that the initial conclusion was that Kennedy was struck at frame 224, Connally was struck at frame 256, and that Kennedy was struck again at frame 312. This was based on the supposition that the Zapruder film was recording 16 frames per second, and that there was a 2 second gap between the first two shots, and a 3.5 second gap between the second and third. (This apparent conclusion is written in bold on the front side of a worksheet discovered in the CIA files in 1981. McMahon and Hunter recognized their writing on this worksheet.) There are numerous calculations on this worksheet. Most revolve around the number 242, an obvious reference to frame 242, by which time Connally has obviously been struck. On the front side of the worksheet, there is $312 - 242$ (to measure the time between the headshot at 312 and the apparent impact on Connally). There is also $242 - 213$ (to measure the time between when Kennedy would seem to be hit, 213, and when Connally appears to be hit). Next to this is $242 - 32$ (As $242 - 213$ was only 29 frames, too short a time span for two shots to have been fired from a bolt-action rifle, it appears they were measuring what frame would then be acceptable, given that the dead bolt would take at least two seconds to operate). Next to this is $256 - 224$ (which was 32 frames and was thus deemed acceptable). On the back side of the sheet there were

even more calculations, many of them repeated from the first side. These calculations, however, are made with the assumption that the Zapruder film was recording 18 frames per second. Thus, the magic number here is 36 frames, e.g. $213 + 36 = 249$. There are also $242 - 190 = 52$ and $52 / 18 = 2.8$. These last two indicate that if the Zapruder film was shown to record at 18 frames per second, the Secret Service was prepared to say the first shot hit Kennedy at 190, the second hit Connally at 242, and the final shot hit Kennedy at 312.

On the whole, then, these numbers indicate that, rather than trying to isolate the actual moments of impact, the Secret Service was, from the very beginning, assuming that the third shot was the head shot, and trying to make the moments of impact fit neatly within the time constraints of Oswald's bolt-action rifle. This suggests they were always operating under the belief Oswald acted alone. We wonder if this same kind of thinking has not infected the FBI, and negatively influenced the Summary Report.

We look closer at the worksheets, to see if anything they've proposed makes sense. On one sheet they suggest that the shots occurred at frames 213, 263, and 312. This is strange, as it seems obvious that Connally was hit long before 263. Another scenario of 217, 242, and 312 is equally curious, as Robert Frazier's tests back on 11-27 tell us that Oswald would have needed approximately 2.8 seconds or 51 frames between shots. Certainly, they weren't considering that someone other than Oswald fired one of the shots. This makes us suspect that the FBI has failed to tell the NPIC or Secret Service about their tests. As the NPIC is closely associated with the CIA, and as FBI Director Hoover has a problem with the CIA, this is not a big surprise.

When we look further through the worksheets, however, there is a surprise. The Secret Service has seriously considered the scenario offered in the 12-6 edition of Life magazine, holding that Kennedy was hit at 190, Connally at 264, and Kennedy at 312. We just can't accept that Connally was hit so late however. Other scenarios considered at NPIC and by the Secret Service are 206, 242, 312, and 213, 242 and 312, but both of these have the first two shots too close together to have been fired by Oswald. The only single-assassin scenario that works, then, based upon even a cursory study of the Zapruder film, is the Kennedy 190, Connally 242, and Kennedy 312 scenario. Even this scenario is less than convincing, however. Not only does Connally appear to have been hit before frame 242 of the film, but the witnesses, as we well know, clearly suggested that the last two shots were bunched together, with the final shot after the headshot. (A more elaborate analysis of the Zapruder film by Robert Frazier for the Warren Commission concluded that, assuming a rifle was fired from the sixth floor sniper's nest, Connally was turned too far to his right after frame 231 to receive his wounds.)

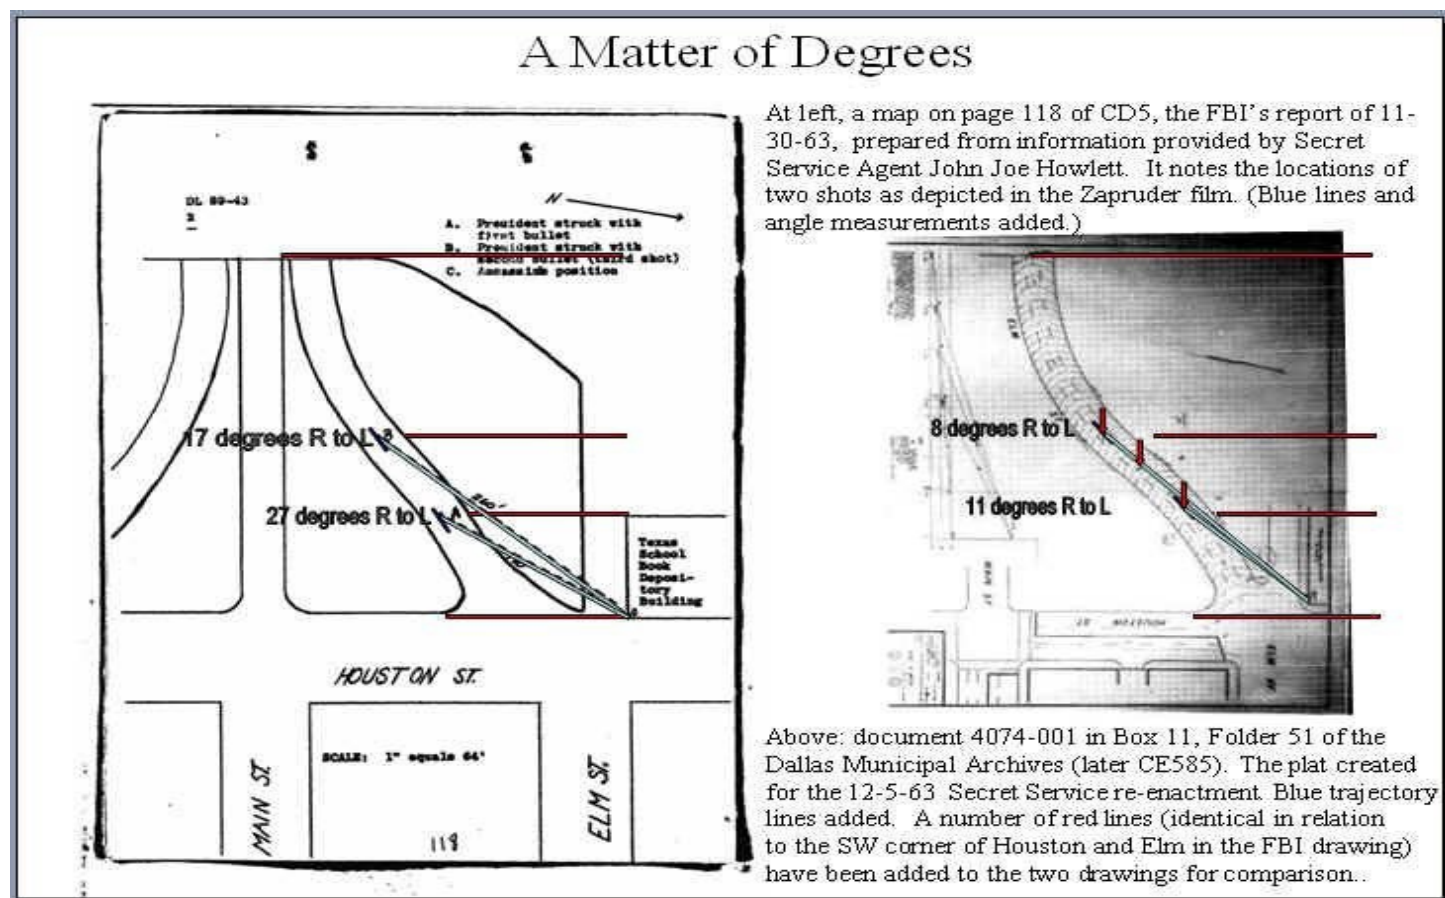

With our re-inspection of the Zapruder film, however, we make another discovery. A number of the frames are blurry. Two blurs in particular stand out, one between frames 190 and 200 and one shortly after frame 313. The thought occurs that these blurs are related to the shots and are perhaps a reflection that Zapruder flinched after hearing the shots. One of us decides to hold the camera, which had been obtained by the FBI crime lab on 12-06, and asks the rest of us to make random loud noises all around while he films someone walking down the hall. This test confirms that the blurred images on the Zapruder film are quite possibly related to Zapruder's jumping at the sound of the gunshots. When we closely analyze the original film, however, we find that his largest startle reaction occurs shortly after the startle reaction seemingly related to the head shot. This supports the many eyewitness statements claiming there were two closely bunched shots, shots fired so close together that many of the witnesses, including the two secret service agents directly behind Kennedy, couldn't remember which one hit the President. We now have real reason to suspect the eyewitnesses were correct and that the last two shots were fired too close together to have been fired by Oswald alone. Do we tell Hoover? Neither the eyewitness statements nor our analysis of the rifle and Zapruder film suggest three shots were fired by a shooter in the sniper's nest. We have real reason to suspect that a second shooter was involved. Do we make the call? Do we ask Hoover if we can expand the investigation and look for this second shooter?

Well, no matter how you answered that last question, the fact is that this has been an imaginary investigation. As far as we know, there was no one in the FBI tasked with making sense of the eyewitness testimony, and seeing if it agreed with the physical and photographic evidence. No effort was made, and consequently no agreement was reached. The FBI search for witnesses and the truth was so half-hearted, in fact, that they failed to establish the photographer of Marie Muchmore's film of the assassination until February, 1964. On 11-26-63, Muchmore's film was shown on television; over the following days it was much discussed in newspapers. And yet the FBI never sought a copy of this film and only acknowledged its existence after its color frames were published in a widely distributed photo book of the assassination. Perhaps no one in the FBI read the paper or had a TV.

(Note: the significance of the blurred frames of the Zapruder film was not discovered until several years after the assassination. I include it here because I have every confidence that these blurs could have and should have been analyzed in 1963 by the FBI, should they have honestly been interested in analyzing the film. Professor William Hartmann studied these blurs for the HSCA in 1978. A chart in his final report, Figure II-5, measures the blurs in the Zapruder film and demonstrates that the largest startle prior to Zapruder's losing control took place around frames 330-332. As most everyone by 1978 had come to believe the last shot was the head shot, however, Hartmann arbitrarily dismissed this substantial startle reaction as a second reaction to the head shot, and to Zapruder's crying out. The consistent movement and blurring one would expect from Zapruder's crying out does not in fact occur until approximately one second after the startle reaction recorded between frames 330-332.)

Chapter 2b: The Secret Service Secrets

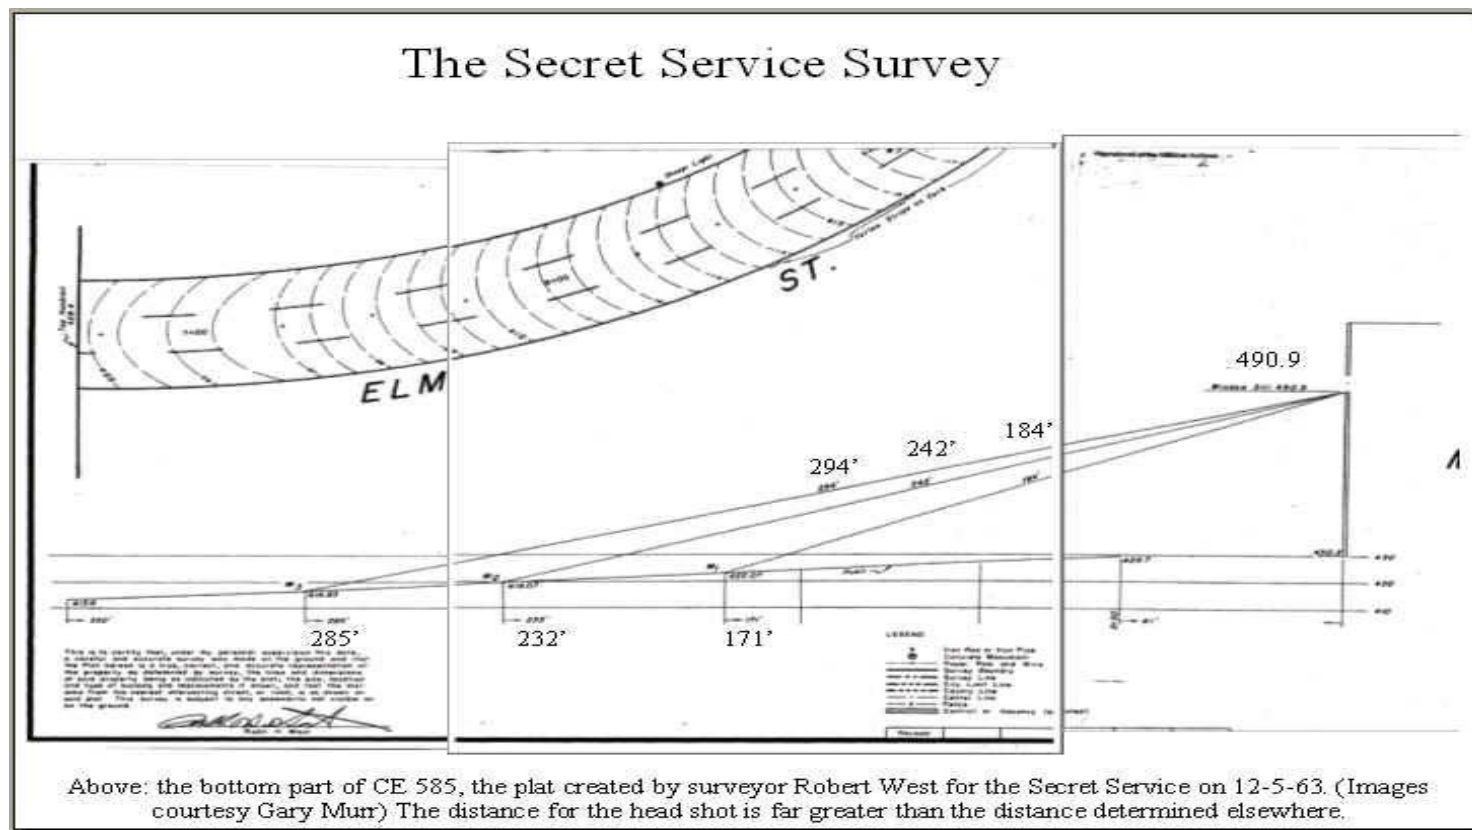

A peek behind the curtain

A Matter of Degrees

So now we're working for the Warren Commission. We've been tasked with studying the statements of the eyewitnesses and coming to a conclusion about the shots independent of the FBI's conclusions. We are also given access to internal Warren Commission documents and new Secret Service and FBI reports as they come in.

On **12-10**, in the office of Secret Service Chief Rowley, we get a brief look at the 12-5 survey plat of Dealey Plaza, prepared by surveyor Robert West under the supervision of the Service's Elmer Moore. We compare this plat to the drawing of the plaza included in the FBI's 11-30 report on the first re-enactment. We see that the school book depository is now much closer to Elm Street, and that, as a result, the angles into the car from the sniper's nest are much less severe. This is a bit of a relief, as the angles in the first drawing cast doubt on the FBI's conclusion that Oswald fired the fatal head shot. It makes little sense, after all, for a bullet heading 17 degrees left to right to strike someone an inch to the right of the mid-line of his skull and exit from the right side of his skull, with the left side undamaged.

The Secret Service Survey

A few days later we get a look at a **12-11-63** report by Secret Service Agent Elmer Moore on the 12-5 survey. He claims it depicts the "probable trajectory of the bullets." We decide to take a closer look.

Sure enough, across the bottom of the plat surveyor Robert West depicts the angles and distances of three shots fired from the sniper's nest. The distance of the first shot is 184 feet. As the Warren Commission would eventually propose that the first shot was fired between frame 210 of the Zapruder film, from a distance of 176.9 feet, and frame 225, at a distance of 190.8 feet, this means the first shot proposed by Moore came around frame 217, when the President was behind the sign in the Zapruder film. The second shot, apparently the shot striking Governor Connally, is purported to have been fired

from 242 feet. This is much closer to the first shot than the second shot described by the FBI's Gauthier in his memo of 12-9. Even so, this would correspond to a shot fired around frame 283 of the Zapruder film, long after it seems clear Connally has been shot. The final shot, which Moore describes in his 12-11 report as "the second bullet which struck the President (the third bullet fired)" is recorded as a shot of 294 feet. 294 feet is 34 feet further than the distance from the sniper's nest to Kennedy at the time of the head shot as determined by Agent Howlett on 11-27 (and 29 feet further than the distance from the sniper's nest to Kennedy determined by the Warren Commission). 294 feet, moreover, reflects the distance of the President from the sniper's nest circa frame 343 of the Zapruder film, almost 2 seconds after the obvious head shot. This is no small mistake. (When printed by the Warren Commission as exhibit CE 585, this plat will be nearly impossible to read. This may not have been a mistake. When Warren Commission counsel Melvin Eisenberg enters this plat into evidence during the 3-30-64 testimony of Ronald Simmons, who'd tested the accuracy of Oswald's rifle, Eisenberg explains "I would like to introduce it into evidence solely to show the basis which Mr. Simmons was using in this test, and not for the truth of the measurements which are shown here.")

Elsewhere in his 12-11 report, Agent Moore explains that the "precise trajectory of bullets striking President Kennedy cannot be positively ascertained by the resulting wounds" but that after studying the Zapruder film, still photographs, eyewitness statements, interviews with the emergency room doctors, the autopsy protocol, and the assassination scene "it is concluded that the wounds indicate that both of the two bullets which struck the President were fired from a position to the rear and above the level of the President." In support of this, Moore goes on to describe the President's wounds, boldly asserting that the missile path of the first bullet to strike the President "is from the upper right posterior thorax to the exit position in the low anterior cervical region and is in slight general downward direction." This is a strange statement. The "cervical region", by most every definition, is above, the "thorax." Unless a body was doubled-over, it makes little sense for a bullet to travel "in a slight general downward direction" from the upper thorax to the lower cervical region.

On **12-12-63**, we're told of an article by Gene Roberts in the Detroit Free Press. It mentions the paper bag presumably used by Oswald to transport the rifle in the building, and gives us good reason to believe Buell Frazier and his sister Linnie Mae Randle are still not convinced the bag they saw in Oswald's possession held his rifle. Roberts reports that on the morning of the shooting, while looking out her window, Mrs. Randle noticed Lee Oswald *"carrying a package. It was something long--maybe two or three feet or more--and wrapped in brown paper, maybe a paper laundry bag. 'I noticed that,' said Mrs. Randle, 'but I didn't think much about it. A lot of people carry packages.'"* A bag two feet long, of course, would be much too short to have held Oswald's rifle.

The next day later, we finally hear from two of the closest witnesses. **Governor John Connally (12-13-63** FBI report CD188, p. 3-5) "Governor Connally stated "First sense or realization of anything unusual I became conscious of a shot or what sounded like a gunshot. I knew it came from my right rear. I instinctively turned to my right to look back and as I did so I sensed more than I saw that President Kennedy was hit. As I turned I realized something was amiss with President Kennedy and then I turned back to my left a little and as I did so I got hit with a bullet in my right shoulder...I believe I remarked "Oh my God, they are going to kill us all!" Realizing I had been hit I crumpled over to Mrs. Connally and she pulled me over towards her...I was conscious of a third shot and heard it...we were all splattered with what I thought was brain tissue from President Kennedy." ...When Governor Connally was asked about the elapsed time between the first and last shot he remarked "Fast, my God it was fast. It seemed like a split second. Just that quick" and he snapped his fingers three times rapidly to illustrate the time and said "unbelievably quick...Governor Connally felt the shots were fired so fast the assassin had hit him by accident on the second shot." **Nellie Connally (12-13-63** FBI report, CD188, p.6-7) "she was facing the front of the car when the first shot was fired and turned

to her right towards President Kennedy and saw him with his hand at his throat and then slump down. ...almost immediately Governor Connally recoiled in the opposite direction from her and was heard to remark "My God, they are going to kill us all." She had feelings that buck shot was falling all around them and then she realized it was probably brain matter from President Kennedy's head...When asked about the lapse of time between the first and last shots she replied "About like saying "crack, crack, crack." She sensed that Governor Connally had been hit when she heard the second shot and she turned to hold him...The direction of all shots were from somewhere to the rear of the car." **Final shot head shot.**

Later that day, we become aware of an article in that day's Dallas Morning News. This article begins: "Did a bullet from Lee Harvey Oswald's rifle chip the curb of Main Street overpass? That question remained unanswered yesterday. And it raised other questions: If one of the three shots from Oswald's mail order rifle struck the curb, is it possible that another bullet ranged through President Kennedy's body and then hit Gov. Connally? If the chip did not result from another bullet, how did it get there?" The article then relates the story of Dallas police investigator Buddy Walthers, who claims that a man came up to him in Dealey Plaza on the 22nd and claimed he'd been hit by something as he watched the motorcade. Walthers then relates that he'd found what appeared to be a freshly-made chip in the curb by where the man had been standing. The article then advises that Gov. Connally said the first and third shots hit the President, and that he'd been hit by the second shot. It then asks: "Was Governor Connally mistaken about what happened during the 10 second period in which the sniper shot him and the President? Did the rifleman fire two bullets into the car, with one striking both President Kennedy and Gov. Connally, and then hurriedly fire a third which passed over their auto? Or did the chipped shot have nothing to do with the shooting? Couldn't the motorist have been struck by a speck of gravel thrown up by a car? Couldn't the chip have been caused by other gravel? FBI and Secret Service agents may have the answer. But they haven't revealed what they have learned during their intensive investigation of the murder of President Kennedy."

Well, this is a bit embarrassing. No one in the FBI or Secret Service has learned anything about this because no one in the FBI or Secret Service has discussed this with anyone who wants to learn about this. Fortunately, the next day, the man who'd been hit by something calls the FBI and forces them to investigate. **James Tague (12-16-63** FBI report, CD205, p31) "Mr. Jim Tague...was stopped in traffic at the Triple Underpass...He stood near the curb of Main Street waiting for the motorcade...When the motorcade was approximately 100 feet from him he heard a loud noise, and at that time he looked around as he thought someone had shot a firecracker. He then heard two more loud noises in quick succession...During the time of the shooting he felt something hit him on the right cheek...He thought that possibly one of the bullets had hit the curb near his feet and possibly a piece of the curbing had hit him on the cheek. He did look around the curb and near where he was standing there was a chip missing, which he stated looked fresh...He did not see the shots take effect and stated he could not furnish any information as to where the shots actually came from." (This report is given to the Warren Commission as part of CD 205 on 12-23.)

Perhaps as a response to the questions raised by Tague, on **12-18-63** the Secret Service delivers a bare-bones report to the Warren Commission describing the shooting only in the statements of its agents, and a vague summary of events. Despite its multiple re-enactments and its extensive study of the Zapruder film, the Secret Service report comes to no official conclusions on the number and timing of the shots.

On this same day, the FBI's Alex Rosen sends a memo to Assistant Director Belmont stating "If approved, Mr. Rankin will be advised that the Bureau is in the process at the present time of preparing three-dimensional exhibits which will accurately portray the locations covering the assassination of the President along with other material which would be of considerable benefit to the Commission...Mr. Gauthier has assured us that the exhibits will be ready by 1/2/64." We can hardly wait.

And then we get another surprise from our old friends at the FBI. On 12-18, we see a strange airtel from Dallas (FBI file 105-82555, sec 39, p7). This airtel alerts us to the fact that the FBI is replacing page 129 of its 11-30 report to the Commission (CD5) with a different page. The airtel references two other documents, a 12-6 airtel from Washington to Dallas requesting a change be made (FBI file 62-109-060 sec 17 p 213), and a 12-11 response from Dallas noting that the "Necessary actions to correct inaccuracy" are "being taken" (FBI file 105-82555, sec 27, p44). Our curiosity aroused, we get a look at the old page before it is replaced. It is a report written by the Dallas FBI's Vincent Drain on the paper bag believed to have concealed the assassin's rifle. The bag was purportedly made by Oswald from materials at his work. His palm print and fingerprint have been found on this bag. The original report refers to a comparison between a paper sample taken from the shipping department of the depository and the paper used to make this bag, and reads: "This paper was examined by the FBI Laboratory and found not to be identical with the paper gun case found at the scene of the shooting." The new page reads "This paper was examined by the FBI Laboratory and found to have the same observable characteristics as the brown paper bag shaped like a gun case which was found near the scene of the shooting on the sixth floor of the Texas School Book Depository Building."

Well I'll be. While the new wording matches the original reports from the lab, we're forced to wonder where Drain--who flew the bag back to Washington on the day after the shooting and may very well have observed the lab at work on the bag--got the idea the paper didn't match. We're also concerned that the FBI is changing the records of the Commission without making note of these changes. (The original document claiming the paper didn't match was actually uncovered by researcher Gary Shaw in 1977. Apparently, he'd found it in the Warren Commission's sub-file on Dallas crime lab chief Lt. J.C. Day. In 1984, writer Henry Hurt contacted Vincent Drain and asked him if he had any idea why his report had been changed. Drain reportedly claimed "I am certainly as perplexed as you are," and asserted that he believed the correct report to be the one stating the paper was the same. He had previously said much the same thing to journalist Earl Golz. While this may very well be--all the other early reports claim the bag and paper matched--Drain's response is still suspicious, and suggests he was not telling the whole truth. In 1984, FBI Assistant Director William Baker admitted to researcher Ed Tatro that, sure enough, Drain had written an inaccurate report and that the FBI had ordered his report corrected. If, as it appears, either Drain or the person typing up his report had made a simple mistake, and had incorrectly claimed the paper didn't match, he most certainly would have heard about it, and would almost certainly have been punished. If so, it seems hard to believe he could forget such a thing. So then why lie about it to Golz and Hurt?)

While we're still puzzling over that, we get a look at the **12-20-63** FBI lab report on Zapruder's camera. (This report is officially provided the Warren Commission on 1-07-64 as part of CD206.) This report gives us yet another reason to believe that, in opposition to the statements of the closest witnesses, the FBI has concluded the final shot was the head shot. The report relates: *"Under date of December 20, 1963, the FBI Laboratory furnished the following information concerning a photographic examination requested by the Dallas Office, December 5, 1963: Specimens received 12-6-63...K51: One Bell and Howell Zoomatic 8mm motion picture camera SN AS 13486, obtained from Abraham Zapruder. Result of Examination: The K51 8mm motion picture camera has been tested to determine the running speed of this camera, and it has been determined that this camera when operated at normal "RUN" speed operates at 18 1/3 frames per second. While it is not possible to establish accurately from the film the moment of impact of the first two shots, applying the above camera speed to the film that was previously submitted which was exposed by Abraham Zapruder and which recorded the assassination, it has been determined that the best estimate of the elapsed time between the first and third shots lies between approximately five and six seconds. It is noted that the President's car moves behind a signboard at about the time of the first shot, and the President's movements during this period are not observable. However, he begins to fall forward immediately upon emerging from behind the sign."*

By indicating that one can establish accurately the moment of the third shot, the report indicates that the easily recognizable head shot was the third shot. This fact is further confirmed by the report's suggestion that this shot came but five to six seconds after the first shot (or, using the report's conclusion that the camera ran at 18.3 frames per second, 92-110 frames after the first shot). 92-110 frames prior to the head shot at frame 313, of course, places the first shot between 203 and 221, around the time Kennedy disappeared behind the sign, when the report claims the first shot was fired.

Yep, there can be no mistake: the FBI has concluded that the first shot struck Kennedy and that the final shot was the head shot. But does the Secret Service concur? Has it confirmed the study performed by the National Photo Interpretation Center, and the apparent findings of the FBI? Or has it come to conclude our earlier interpretation of the eyewitness evidence was correct, and that a shot was fired after the head shot?

The Secret Service Secrets

On **1-8-64**, the Secret Service provides the Warren Commission photos of its 12-5 re-enactment. These photos, taken from the sniper's nest, follow a car as it drives the motorcade route. A tree obstructs the sniper's nest view for part of the route on Elm.

When we look at the photos in the context of the original photo album, Commission Document 88, we see handwritten captions to three of these photos. These captions indicate that these three reflect the proposed locations for the limousine at the time of the first, second and third shots. (Rex Bradford, who placed Commission Document 88 online, confirms that he scanned the photos directly from the National Archives, and that the Warren Commission documents online on the Mary Ferrell website did not come from the files of a private researcher, who might otherwise be blamed.) Strangely, however, even though the Secret Service study of the Zapruder film at the National Photographic Interpretation Center had placed the first shot at frame 190 and the second at frame 242, and even though the 11-27 efforts of Agent John Joe Howlett had placed the second shot halfway in between the first shot, circa frame 200, and the third shot, at frame 313, the second shot depicted in these re-enactment photos comes much later, around Zapruder frame 283. The final shot also looks suspicious.

As these shots are presumed to reflect the distances recorded on the 12-5 plat, we begin to question both the accuracy and the integrity of the 12-5 survey.

(When published in the Warren Report's 26 volumes of supporting evidence as Exhibit 875, these photos were, not surprisingly, published without these captions.)

More Secret Service Secrets

Above: "This photograph taken from the same point where the amateur photographer took the movie of the assassination. This is the point of impact of the first bullet. Number 2 indicates the point of impact of the second bullet." (1-8-64 Secret Service report, CD87, p505-506.)

At right: "This photograph is taken from the same point where the amateur photographer made the movie. This photograph shows the point of impact of the third bullet." (1-8-64 Secret Service report, CD87, p507-508)

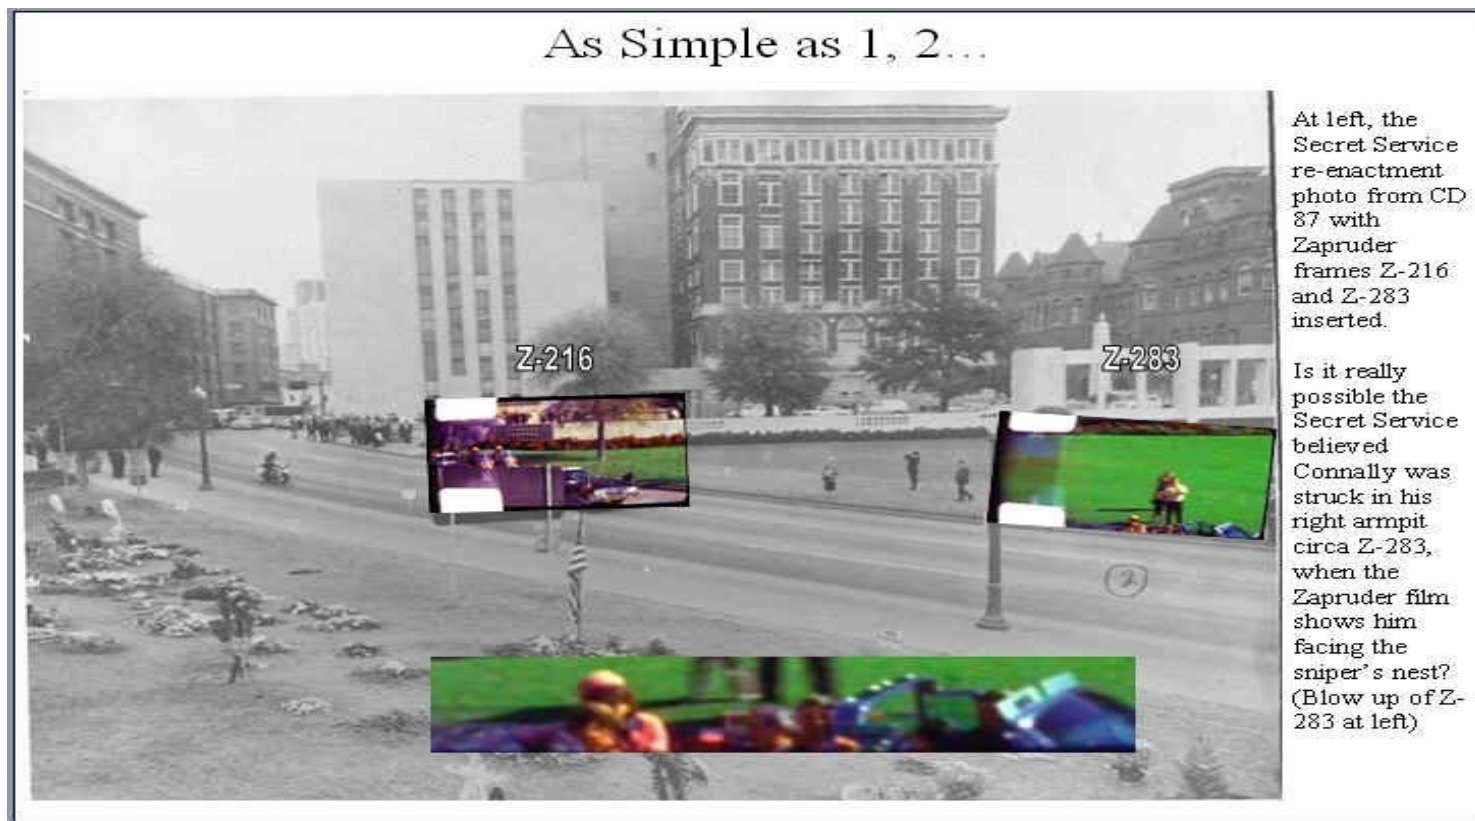

As one can see by the Secret Service's Final report of January 8, 1964, the Secret Service continued to tout that there were three shots, with one between the first shot and the head shot, long after their first re-enactment. The short elapsed time between the shots made such a shooting feat extremely difficult given Oswald's rifle. Was this why the Secret Service gave the shooter a little more time, and moved the head shot "a little further down the road" than at Z-313?

More Secret Service Secrets

As we weed through Commission Document 87, an over-thousand page Secret Service report detailing their investigation, we find more reasons to doubt the accuracy of the Secret Service's reports. We find pictures of a Secret Service re-enactment, taken from the location of Abraham Zapruder's camera. These were, apparently, taken during the 11-27 re-enactment. The captions to these photos indicate that the Secret Service has indeed concluded that the first shot hit Kennedy when he was behind the sign,

and that a second shot, presumably striking Connally, followed, which in turn was followed by the shot striking Kennedy's head. There is something wrong with these photos, however. The SS location for shot 2 seems way beyond the point where Connally is hit in the Zapruder film. The location for shot 3 is past Zapruder, when the head shot in the film comes just as the car pulls even with Zapruder.

As Simple as 1, 2...

We decide to super-impose some slides from the Zapruder film onto the photos taken from his location. While the first shot proposed by the SS takes place when Kennedy is behind the sign in the film, the second shot proposed takes place after Connally has obviously been hit, at a point when he is nearly facing Kennedy. It seems highly unlikely that a bullet coming from the sniper's nest at this moment could enter Connally's right armpit and exit the right front of his chest. We wonder why the Secret Service assumed Connally'd been turned to his right when hit. Perhaps they'd misunderstood his statements. If they had, they missed or ignored that he'd claimed to have yelled out after being shot, and that he'd already yelled out by frame 283.

3???

At left: the Secret Service re-enactment photo from CD 87 with Z-313 inserted.

Why did the Secret Service depict the head shot at a point past Zapruder, when, as determined by the angle of the back seat, the head shot occurred just before the limo pulled even with Zapruder?

3???

When we super-impose Zapruder frame 313, the frame depicting the head shot, onto the Secret Service photo for shot 3 we find that the amount of grass behind Kennedy in frame 313 is inconsistent with the amount of grass behind his purported location in the re-enactment photo. We try to convince ourselves this is a result of a slight difference in camera elevation, but the angle of the back seat to the camera also appears wrong. This leads us to believe the 12-5 survey inaccurately recorded and measured Kennedy's position at the moment of the head shot. We now wonder if Agent Howlett's earlier measurement for the distance of this shot wasn't more accurate, and why someone decided to change it.

We also notice some traffic cones in the photo. We recall a passage in the Secret Service's investigative file, CD 87, describing a short film of the 11-27 re-enactment. It proclaims: "Immediately after the motorcade passes out of view, Lt. Day of the Dallas Police Department walks onto the street from the right-hand side and places a traffic cone at the point of impact of the third shot. He then walks forward and places a traffic cone at the point of impact of the second shot and continues forward to place a traffic cone at the point of impact of the first shot and exits to the left." We recall also that Day had told the Dallas Times Herald that these locations had been established from watching a film, undoubtedly the Zapruder film. Well, this is a bit confusing. The cones in the 11-27 photos do not align with the shot locations Howlett reported to the FBI, nor to the shot locations determined by the Secret Service's 12-5 survey. We decide to ask a friend on the Dallas Police Department if he remembers what the cones in the photos were supposed to represent.

Our feeling that something is suspicious about the FBI and Secret Service's ever-changing interpretation of the shot locations is growing by the hour. A **1-9-64** newspaper column by Robert Allen and Paul Scott only feeds this feeling. It reports: "The FBI has been asked to conduct further tests on the time required to fire three shots. Reason for this is new evidence that the second and third shots came in exceptionally rapid succession. It was the third shot that shattered the back of the President's head and fragmented. This has made very difficult determining whether that round was fired by the

same rifle." Since it appears that someone either on the Commission or within the FBI has told Allen and Scott about this problem, we take heart that someone else has noticed what we thought only we had noticed--that the third shot in the re-enactment photos is much further down the street than the actual location where Kennedy was struck in the head, and that using the actual location puts the second and third shots far too close together to have both been fired by Oswald. We hope things get straightened out before the FBI submits their impression of the shot locations.

A few more witnesses are located, one of whose statements further support the "new evidence" discussed by Scott and Allen, that is, that the last two shots came in rapid succession.

Cecil Ault (1-10-64 FBI report, 24H534) "After the presidential car had turned the corner onto Elm Street, Mr. Ault heard three loud reports...the first and second shots sounded to him to be close together and the third shot was spaced more after the second shot, the first two shots sounding close enough to be from an automatic rifle...Following the first shot Mr. Ault noted that President Kennedy appeared to raise up in his seat in the Presidential automobile and after the second shot the president slumped into his seat." **Shot after the head shot. Lillian Mooneyham (1-10-64 FBI report, 24H531)** "Mrs. Mooneyham heard a gunshot and observed President Kennedy slump to the left of the seat of his car. At the time of the initial shot, Mrs. Mooneyham believed that a firecracker had gone off. Following the first shot, there was a slight pause and then two more shots were discharged, the second and third shots sounding closer together. Mrs. Mooneyham observed Mrs. Kennedy climb up on the back of the car...Mrs. Mooneyham estimated that it was about 4 ½ to 5 minutes following the shots fired by the assassin that she looked up towards the sixth floor of the TSBD and observed the figure of a man standing in the sixth floor window behind some cardboard boxes." **Double head shot.**

On **1-11**, Chairman Warren and General Counsel Rankin present their outline for the Warren Commission's investigation and report. The pre-planned conclusion is that Oswald killed Kennedy and that he acted alone.

On **1-11**, we learn that the FBI's exhibits are ready, and that the Director himself has inspected them and approved them. We wonder if they will satisfy the Commission, however. Apparently, someone on the Commission has read the eyewitness statements, and has realized that the last two shots were fired quite close together, and is openly talking about it. Today's syndicated newspaper column by Robert S. Allen and Paul Scott reports that "The commission also wants more information about the alleged murder rifle. The FBI has been asked to conduct further tests on the time required to fire three shots. Reason for this is new evidence that *the second and third shots came in exceptionally rapid succession*. It was the third shot that shattered the back of the President's head, and fragmented. This has made very difficult determining whether that round was fired by the same rifle."

On **1-13** exhibits section chief Gauthier visits with the Warren Commission's chief counsel Lee Rankin, and Rankin requests 28 copies of a brochure of photos taken of these exhibits. A 1-14 memo on this meeting by Gauthier tells us further that "The Director firmly believes that the FBI should turn over full custody of these visual aids to the Commission as soon as possible in order that inquiries concerning these exhibits can be referred directly to Chairman Warren, particularly requests from news media to publicize the "new development."

We're also shown the FBI's Supplemental Report of **1-13-64**, reporting back on tests conducted since the 12-9 report. On page 3 it states "A motion picture of the assassination taken by an amateur photographer, Abraham Zapruder...was examined by the FBI Laboratory. The best estimate of the time interval of the shots fired is that approximately six seconds elapsed from the first to the final shot, with the second shot occurring approximately in the middle of the six second period. The firing period begins with the first shot, so that it is necessary to operate the rifle bolt only twice to fire three shots within a given period of time." This report reinforces what we already know--that, for Oswald to have

fired all the shots, the shot impacting Connally needed to have been fired 50 frames or so before or after the shots hitting Kennedy in the Zapruder film. Kennedy is undoubtedly hit at frame 313. Should the Secret Service have honestly believed Connally was hit circa frame 283, then they honestly should have concluded there had been more than one shooter. We hold out hope that the FBI's exhibits will be more accurate.

From the Archives

Our friend sends us copies of the DPD's re-enactment photos. These photos are identical to the photos provided by the Secret Service, with one notable difference. The caption to these photos states that the cones in the photos reflect the locations of the shots. Well, this is mighty curious. As the second cone is just past the location of the head shot, and the third cone is far past this point, this suggests the Secret Service initially concluded the head shot was the second shot, precisely as concluded in our analysis of the eyewitnesses.

The Third Shot Miss

Inserts at left: a comparison between Z-313 and the car in the photo below.

At left: document 4174-001 in Box 12, Folder 48 in the Dallas Municipal Archives: "Photograph reconstruction with Secret Service car and position with cones where second and third shots fired." Z-343 and Z-384 have been inserted to demonstrate the locations of the cones.

What made the Secret Service change their mind about the third shot?

The Third Shot Miss

When we superimpose frames from the Zapruder film onto the DPD photos, we discover that Lt. Day's and the Secret Service's original location for the second shot was circa frame 343, considerably past the head shot. The third shot, amazingly, comes at a point when Mrs. Kennedy is already on the trunk of the limousine. As Kennedy has been hit at least twice by this point, it seems likely the Secret Service concluded this third shot missed the President.

But then what happened to it? If Kennedy was hit in the back with the first shot, and hit in the head with the second shot, then this third shot MUST have hit Connally. Connally is laying down in his seat. His right armpit is exposed. A bullet hitting Connally at this moment MIGHT make sense. But that would mean Connally had lied when he'd said he was hit before the head shot. It would also mean that Connally, a former Secretary of the Navy, had crouched in self-protection a few feet from his President, when his President was under fire.

Fortunately, for those concerned with Connally's courage or lack thereof, you can see blood near his armpit as early as frame 340 of the Zapruder film, before either of the last two shots in the DPD and Secret Service re-enactment. Did the Secret Service agents running the re-enactment even look at the film to double-check this theory?

Apparently so. The photos with the cones were taken during the 11-27 re-enactment. The FBI, we should recall, reported Howlett's conclusions on this re-enactment in an 11-29 memo from Agent Barrett. Howlett's conclusions were reportedly that the first shot struck Kennedy at a distance corresponding to the limo's location circa frame 200 of the Zapruder film and that the second one to hit him did so from a distance corresponding to the limo's distance circa frame 313, with a shot hitting Connally in the middle. This suggests that Howlett used the cones during the re-enactment, compared these locations to the Zapruder film, and then decided the cones were placed in the incorrect locations.

So then why, one might ask, did Elmer Moore re-consider the whole thing on 12-5? And create a new

and improved survey that was so obviously wrong?

The Missing Second Shot

When one compares the three stills from the 11-27 re-enactment film in which the shot locations are marked with a cone (which are combined into one frame above) with the three photos from the 12-05 re-enactment purported to indicate the shot locations (which are combined into one photo at right), one gets a surprise. The second shot was originally much further down Elm then later determined (as shown by the blue line).

Above: three photos from Warren Commission Document CD88 merged into one.

The Missing Second Shot

One possible answer to the "why try again?" question comes from watching the 11-27 re-enactment film. While Barrett's 11-29 memo said the Secret Service was unable to identify a moment for the second shot hitting Connally, the film shows Lt. Day of the DPD marking a location for the second shot. And it is clearly at the location of the head shot, and far too close to the location of the third cone to represent a separate shot from a bolt action rifle. From this it seems possible that Howlett reported this problem, that someone decided this problem needed to be "overcome", and that Elmer Moore was sent out to "fix" this problem.

It also seems more than a coincidence that 11-27, the day of the initial re-enactment, was also the day Governor Connally was first interviewed on television. As the 11-27 re-enactment reportedly concluded that the second shot to hit Kennedy was fired from a distance of 260 feet, corresponding roughly with frame 313 of the Zapruder film, the third cone in the re-enactment film, which was far further than 260 feet from the sniper's nest, quite possibly represented the presumed location of Connally at the time he was hit by a third bullet.

If so, it only makes sense then that the Secret Service decided to trash this conclusion once Connally--a close personal friend of the new President--told the nation he was hit by the second shot. Perhaps then Howlett called the FBI's Barrett and told him he'd changed his conclusions, and that he now believed Connally was hit by the second shot, which had been fired in-between the two shots striking Kennedy. Such a last minute change would explain why the FBI's report on the 11-27 re-enactment gave no approximate distance for this second shot.

But this problem defies an easy explanation.

The Smell of Deception

On 1-20-64, we receive another shock. On the first page of a 65-page packet of visual aids and memos from the FBI's Exhibits Section (CD 298) is a letter from J. Edgar Hoover himself, telling us that 28 copies of this packet have been sent out to Warren Commission counsel and staff per General Counsel Rankin's request. This amounts to Hoover's personal seal of approval. When we look inside, however, we find that Gauthier's Exhibits Section has stood by the strange numbers reported in his 12-9 memo. We can't believe it. His conclusions are similar to the original conclusions of the Secret Service, as depicted in the DPD photos. There is photo after photo of the FBI's model of Dealey Plaza, and photo after photo depicting the limousine in front of the concrete steps at the time of the third shot. At the end of the packet, moreover, is a summary of the Exhibit Section's findings. Under the heading "What was the aiming pattern of the assassin's target?" it reads:

- a. SHOT ONE hit the target from a distance of 167 feet, measured downward along a 23-degree angle from the horizontal.

(THIS IS THE LIMO'S APPROXIMATE POSITION AT FRAME 197 OF THE ZAPRUDER FILM,

WHEN A TREE OBSCURED THE SNIPER'S NEST'S VIEW OF THE LIMOUSINE. THIS IS A BIT OF A SURPRISE AS GAUTHIER'S 12-9 MEMO MADE A POINT OF STATING THAT "IT APPEARS THAT SHOT ONE STRUCK THE PRESIDENT MOMENTARILY AFTER HE CAME WITHIN GUN RANGE WHEN HIS CAR MOVED PAST THE TREE TOP AS VIEWED BY THE ASSASSIN." IT WOULD LATER BE DETERMINED THAT THE PRESIDENT DIDN'T MOVE PAST THE TREE TOP UNTIL FRAME 207 OF THE ZAPRUDER FILM.)

- b. SHOT TWO hit the target from a distance of 262 feet, measured downward along an 18-degree angle from the horizontal. The target moved forward 96 feet in 4.4 seconds at 15 mph (22fps) or 5.5 seconds at 12 mph (17.6 fps). Line of sight change from shot one: 5 degrees upward, 4 degrees to the right.

(THIS WOULD SEEM TO BE A REFERENCE TO FRAME 313 OF THE ZAPRUDER FILM, THE MOMENT OF THE FATAL HEADSHOT, A SHOT DETERMINED TO HAVE BEEN 260 FEET IN DISTANCE ON 11-27-63 AND EVENTUALLY DETERMINED TO HAVE BEEN 265 FEET IN DISTANCE.)

- c. SHOT THREE hit the target from a distance of 307 feet, measured downward along a 15 degree angle from the horizontal. The target moved forward 45 feet in 2.0 seconds at 15 mph (22 fps) or 2.5 seconds at 12 mph (17.6 fps). Line of sight change from shot two: 3 degrees upward, 1.5 degrees to the right.

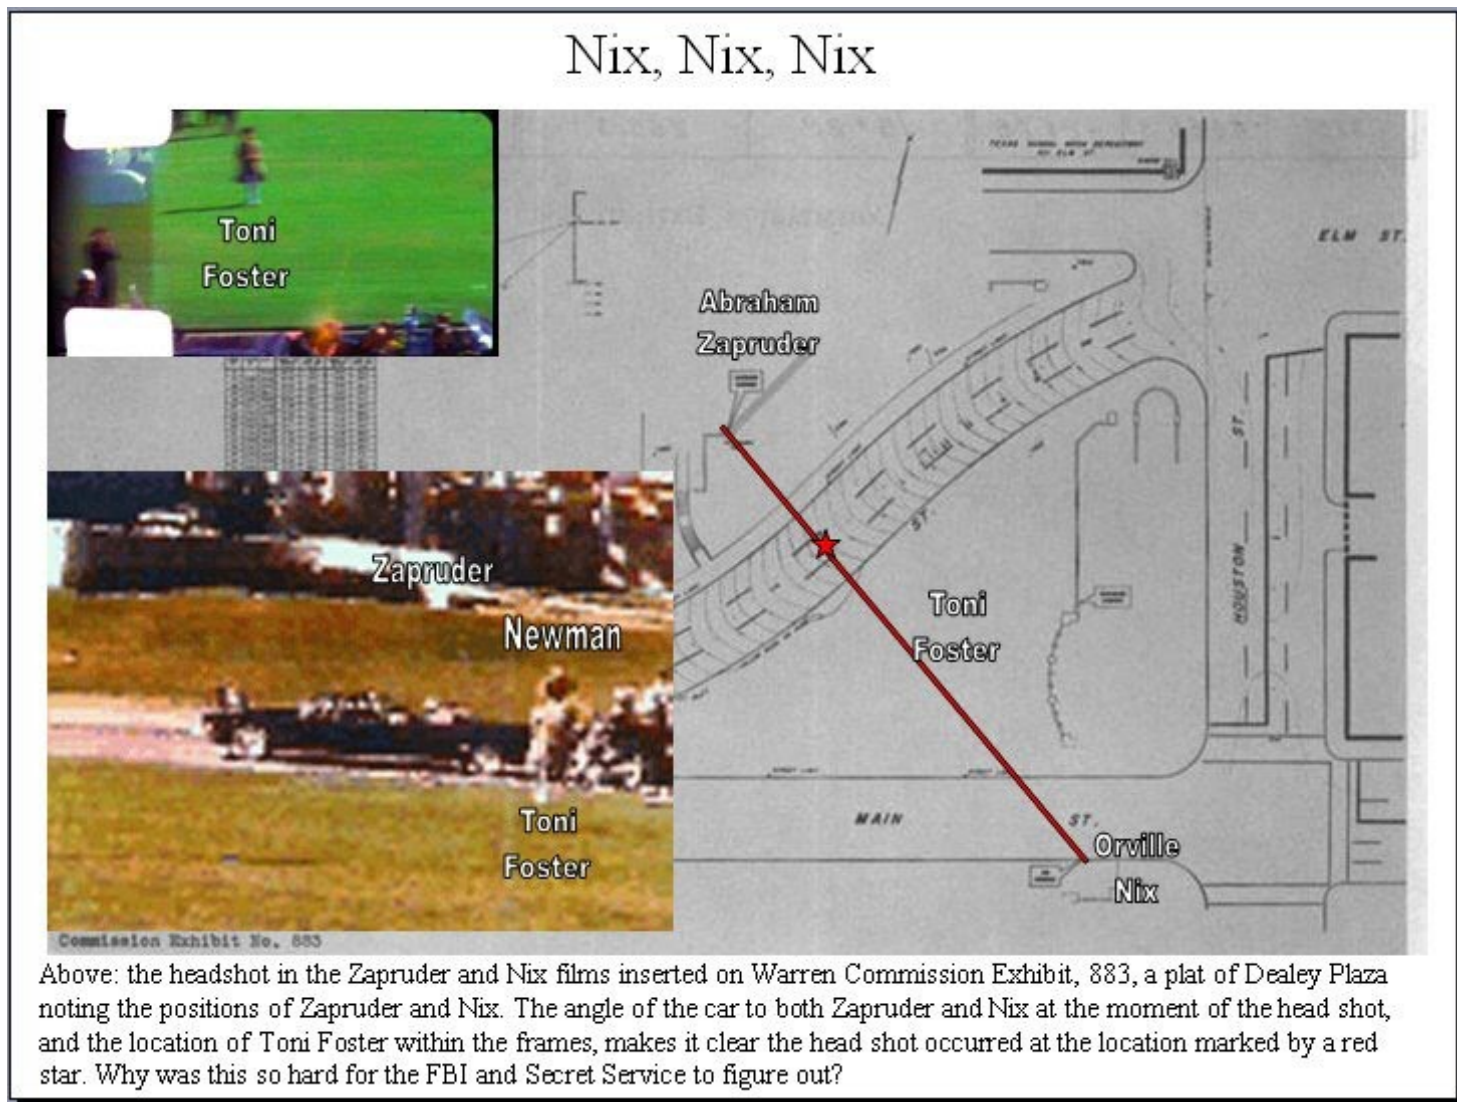

(THIS IS KENNEDY'S APPROXIMATE POSITION AT FRAME 358 OF THE ZAPRUDER FILM, APPROXIMATELY 2 1/2 SECONDS AFTER THE FATAL HEADSHOT.)

- d. ELAPSED TIME to hit targets two and three after hitting target one: 6.4 seconds at 15 mph (22 fps) or 8.0 seconds at 12 mph (17.6 fps).

(THIS PASSAGE IS MIGHTY CURIOUS. ON 1-07, THE FBI HAD PROVIDED THE COMMISSION CD 206, WHICH INCLUDED AN FBI LAB REPORT FROM 12-20, CLAIMING "The K51 8mm motion picture camera has been tested to determine the running speed of this camera, and it has been determined that this camera when operated at normal "RUN" speed operates at 18 1/3 frames per second." FURTHERMORE, ON 1-13,, THEY'D PROVIDED THE COMMISSION WITH A SUPPLEMENTAL REPORT TO THEIR ORIGINAL SUMMARY REPORT. IT CLAIMED "The best estimate of the time interval of the shots fired is that approximately six seconds elapsed from the first to the final shot, with the second shot occurring approximately in the middle of the six second period." SO WHAT'S WITH THEIR OFFERING ELAPSED TIMES FOR TWO DIFFERENT RUNNING SPEEDS? WELL, A CLOSE LOOK AT THE TESTIMONY OF THEIR CAMERA EXPERT LYNDA SHANEYFELT'S TESTIMONY ON 6-4-64 REVEALS THAT THE ESTIMATED RUNNING SPEED OF 18.3 FPS WAS AN AVERAGE. BASED ON THIS REPORT, THEN, ONE MIGHT GUESS THAT THE RANGE OF THE RESULTS AVERAGING OUT TO 18.3 WAS 17.6 TO 22. IN 1967, CBS PURCHASED FIVE IDENTICAL CAMERAS AND FOUND THAT THEY RAN 15.45, 17.7, 18.7, 19.25, AND 20.95 FRAMES PER SECOND, A SIMILAR RANGE WITH A SIMILAR AVERAGE OF 18.4 FPS. IF THE FIRST SHOT FROM THE SNIPER'S NEST WASN'T FIRED UNTIL AFTER KENNEDY HAD EMERGED FROM BEHIND A TREE, AROUND FRAME 210, AND IF THE LAST SHOT WAS THE HEAD SHOT, AT FRAME 313, AND SHOULD THE CAMERA HAVE BEEN RUNNING AS FAST AS 22 FPS, THE FBI'S FASTEST TIME, OR 20.95, CBS' FASTEST TIME, THE TIME-SPAN OF THE SHOOTING SEQUENCE WOULD HAVE BEEN UNDER 5 SECONDS, TOO SHORT A TIME-SPAN FOR OSWALD TO HAVE FIRED ALL THE SHOTS. ONE MIGHT SUSPECT THEN THAT THE EXHIBITS SECTION WAS WELL AWARE OF THIS PROBLEM AND THAT THIS INFLUENCED THEIR PLACEMENT OF THE THIRD SHOT.)

- e. CHANGE OF AIMING PATTERN from shot one to shot three: 8 degrees upward, 5.5 degrees to the right.

From this, we can see that the FBI's photos were not a mistake. The report of their Exhibits Section not only fails to mention the wounding of James Tague, if only to dismiss its relevance, but is in clear contradiction with the 12-20 report on the Zapruder film by the FBI crime lab, which claimed the timing of the first two shots couldn't be established, but that the third shot was the head shot. This new report, conversely, and surprisingly, seems to be claiming there was a shot after the head shot.

Nix, Nix, Nix

Since the head shot in the Nix film (and noted in the Exhibits Section's report) occurs when the limousine is in front of the pedestal, with Zapruder in the background, and since the Exhibits Section's report describes the Nix film as follows: "Nix, standing on the Plaza grass across the road from the Pergola (where Zapruder viewed the motorcade) photographed the motorcade as it approached the triple underpass" it certainly seems they knew Nix was standing across from Zapruder, and not far off to his right. As the third shot portrayed in their exhibits is considerably past Zapruder, and since Nix would have to have been in front of the limousine, with it heading his direction, in order for him to

catch Zapruder in the background of his film at this time, it only makes sense that the FBI Exhibits Section believed the head shot captured by Nix came earlier, and was in fact the second shot.

This becomes even more clear when one realizes that the head shot in the Nix film occurs just after the limo passes William and Gayle Newman on the North side of the street. Shortly after the shooting, William Newman was interviewed on television station WFAA. He reported: "as the car got directly in front of us well a gunshot apparently from behind us hit the President in the side of the temple."

So, establishing the location of Kennedy at the time of the head shot should have been a simple matter of establishing William Newman's location in the various films and photographs, and adding on 10 feet or so, based on Kennedy's distance from him at the moment of impact in the Nix film.

The Newmans Mark the Spot

Photographs by Art Rickerby, above, and Wilma Bond, right, prove that Bill and Gayle Newman, next to Kennedy at the time of the head shot, dived on the grass near the second lamp post.

So why did both the FBI, in CD298, the 1-20-64 report of its exhibits section, as shown at left, and the Secret Service, in its two re-enactments on 11-27-63 and 12-5-63, as shown above center and right, propose that TWO shots were fired after the limousine passed this lamp post? The only reasonable explanation is that they believed a shot was fired after the head shot. Right?

The Newmans Mark the Spot

Well, all the photos of Bill and Gayle Newman taken just after the shooting show them to be laying on the grassy knoll just west of the second lamp post. There is no evidence they ran after the shooting. Their statements indicate they dived down to cover their children where they'd been standing, and no one else ever claimed they'd ran before covering up their children. So, the Secret Service and FBI should have concluded the third shot struck Kennedy within a few feet of this location, should they have honestly believed the head shot was the third and final shot.

Since both the Secret Service and FBI concluded there was a shot after the shot fired when Kennedy was abreast of the Newmans, however, one might logically conclude that both agencies believed there to have been a shot fired after the head shot.

Or is that too logical?

The Question of Competence

Although, the photographic evidence seems overwhelming that the Secret Service and FBI at one time believed the head shot was the second shot, and that another shot followed, there is an equally compelling argument against this possibility. This argument is based upon the paper trail, and suggests that the Secret Service and FBI were simply incompetent.

Let's examine this first possibility. Could the FBI have concluded the second shot was the head shot?

Certainly not at first. Besides the 11-29 phone call from Director Hoover to President Johnson in which Hoover reported that Kennedy was "hit by the first and the third" shots, and that the "second shot hit the governor", and the 11-29 report by Agent Barrett on the 11-27 re-enactment, reporting that "Governor Connally was struck by the second shot", there is the 12-3 report by Agent Abernathy (CD385 p22), stating that the assassination sequence in Nix's film, which depicts the head shot, began "subsequent to the firing of the first two shots."

Well, then perhaps they came to this conclusion at a later date. The FBI's summary report of 12-9 (written around 12-4, after Gauthier's people had begun their work in Dallas) describes the shooting as follows: "As the motorcade was traveling through downtown Dallas on Elm Street about fifty yards west of the intersection with Houston Street (Exhibit 1), three shots rang out. Two bullets struck President Kennedy, and one wounded Governor Connally." Note that here Connally is mentioned last. This raises the possibility that, through their work in Dallas, the FBI's Exhibits Section Chief Leo Gauthier and his team had, if only for a spell, convinced the Bureau that the head shot was the second shot, and that Connally was wounded by the third shot. That the shot after the head shot didn't miss the car entirely is betrayed by the Exhibits Section's conclusion that each of the three shots "hit the target."

But then there's Gauthier himself, in his 12-9 memo, relating "Shot number two which is believed to have struck Governor Connally." And then there's the 12-20 report from the FBI crime lab, which makes it clear they believed the head shot was the third and final shot.

And then there's this. In another section of Gauthier's 1-20 report, in a brief description of the Zapruder film, it's made fairly clear the writer believed Connally'd been hit before the head shot. It relates: "The car momentarily became obscured from Zapruder's line of sight behind a road sign (refer to scale model). As it emerged from behind the sign, the Zapruder film reproduced the action of the occupants of the car as follows: The President is slumped forward in his seat with his right hand partly lowered from the previous waving position, he appears to be leaning toward his left nearer to Mrs. Kennedy; Governor Connally is seen turning his head to the right and rear, falling towards Mrs. Connally, as a circle of light resembling an explosive blast encircles the President's head." If the writer of this report felt Connally was not yet wounded and still under his own power at the moment of the head shot, it seems highly unlikely he'd describe him as "falling" towards his wife.

This convinces us that the first possibility is not true. Which leaves us with the second possibility: that the FBI of 1964 was largely incompetent...

And that the Secret Service was no better... Both the worksheets found at the National Photo Interpretation Center and the captions to the photos in the Secret Service's 1-8-64 report to the Warren Commission, after all, have shown us that the Service, too, has concluded that the final shot was the

head shot.

Yes, as hard as this may be to accept, the bulk of the evidence suggests that the FBI and Secret Service always believed Connally was hit by the second shot, and meant to express this in their exhibits, but failed to do so due to their collective incompetence. While this might sound unduly harsh, what other "innocent" conclusion can be reached from the undeniable fact the FBI and Secret Service each took measurements in Dealey Plaza, and studied two films of the shooting taken from opposite angles, but were nevertheless unable to locate Kennedy's position at the time of the head shot within 25 feet of his easily recognized position? What other "innocent" explanation is there for the FBI's concluding the first shot was 17 feet closer, the second shot 20 feet further, and the third shot 13 feet further from the sniper's nest than the Secret Service's "corrected" conclusions? While it seems possible that someone had fooled the FBI's Gauthier, a man of questionable competence (see below), with some "marks on the freeway" there can be no excuse for the Secret Service's similar mistakes. Someone's measurements were very wrong, or someone's eyesight was very bad, or both.

(In 1976, it would be revealed that FBI Exhibits Section Chief Leo Gauthier's job entailed such tasks as re-modeling FBI Director Hoover's home. This included replacing the patches of Hoover's lawn destroyed by doggy urine.)

The Question of Integrity

There is, of course, a third possibility, one not so "innocent." Perhaps the errors apparent in the 12-5-63 Secret Service Survey and the exhibits prepared by the FBI are not confusing at all, but clear reflections that the Secret Service and FBI were both trying to make sure that, no matter the speed of the camera, no matter the order of the shots, Oswald had enough time to fire the shots.

This makes a great deal of sense. Back in December, when the Secret Service and FBI created their horribly inaccurate exhibits, no one seriously considered that the Warren Commission would actually double-check their work. It was, in fact, widely assumed they'd rubber-stamp their findings. It was assumed, furthermore, that the Zapruder film would never be shown to the public. The combination of these assumptions, therefore, would make it mighty tempting for anyone trying to use the film to suggest Oswald acted alone to quietly fudge his findings. Particularly when there was already so much evidence to suggest Oswald's guilt. After all:

1. Most witnesses heard three shots.
2. Three shells were reportedly found in the sniper's nest.
3. Three hits would help explain the two reported entrances on Kennedy and the three impact locations on Connally.
4. Oswald was a communist-sympathizer. Such a man, in the minds of many Americans, including FBI Director J. Edgar Hoover, was imbalanced. To their mind, Oswald didn't need a rational motive for his actions because, as a communist sympathizer, he was inherently irrational.
5. President Johnson was anxious for the case to be settled. Johnson, the State Department, and the business community were all anxious to show the world that the United States was a stable and strong democracy. Dragging out a criminal investigation would hurt U.S. business interests, jeopardize the country's international relations, and allow communists worldwide a powerful propaganda tool. A long and involved investigation could also be used by Johnson's right-wing opponents to damage him domestically; it might even lead to his downfall. Word had to get out and get out quick that Johnson was definitely not involved, and the easiest way to do that was to say that Oswald acted alone, and concoct a scenario by which he may have acted alone.

Under such circumstances, it certainly seems reasonable to assume both the Secret Service and FBI

were fudging their investigations to cover that Oswald may not have had enough time to have fired all of the shots. Consider that Gauthier's 12-9 memo was written under the assumption the limousine was traveling 15 mph, and that his final report included this assumption as a possible scenario. (The speed of the limousine was eventually determined to have been 11.2 mph.)

This raises the question of why Gauthier even considered the possibility the limo was moving at such a speed. Well, FBI agents Sibert and O'Neill's 11-29 report on an interview of the limo's driver, William Greer, indicated Greer had been driving 15-20 mph when the shots were fired. Their interview of Agent Kellerman, riding next to Greer on the limousine's front seat, furthermore, indicated that the limousine had been traveling "approximately 15 miles per hour." Well, this would make Gauthier suspect the limousine was traveling 15 mph, right? Now let's consider that agent Barrett's 12-4 report on an interview with Zapruder indicated that Zapruder's film of the assassination was recorded at 24 frames per second. This film shows the limousine traveling approximately 136 feet in the 152 frames between Z-162 and Z-313. This means that, if the camera was recording 24 frames per second, as claimed, then the limousine was traveling at just under...21.5 feet per second, or 14.65 mph, which rounds up to 15 mph. This approximation of 15 mph confirms Greer's and Kellerman's estimate. One can only assume then that Gauthier was well aware of these memos when conducting his tests. Now consider that the Secret Service's own undated report on Greer, written by Greer himself, indicated he'd been driving 12-15 mph, and was packaged together in the Secret Service report with reports written on 11-29 and afterward. This suggests that they too would be conducting their 12-5 re-enactment under the belief the limo was traveling approximately 15 mph, even if they were unaware of Barrett's 12-4 report suggesting the camera was recording 24 frames per second. (The test results demonstrating that the camera was recording 18.3 frames per second, and that the limo was therefore traveling approximately 11.2 miles per hour were not released until 12-20.)

This leads us to a disturbing possibility... If BOTH the FBI and Secret Service in the first weeks of December were operating under the assumption the limousine was traveling 15 mph and/or that the camera recorded 24 frames per second, as one might reasonably suspect, then they would BOTH have been conducting their investigation under the assumption the limousine traveled about 22 fps. In such case, as the original reenactment by Howlett on 11-27 had determined that the third shot was fired when the limousine was but 90 feet further down the road than its location at the time of the first shot, they would BOTH have been forced to conclude Oswald would not have had enough time to fire all the shots. 90 feet divided by 22 fps equals 4.09 seconds, after all, presumably less than whatever time the Secret Service had determined Oswald would have needed to fire three shots and far less than the 5.6 seconds or so Agent Frazier had determined would be the minimum time required to fire Oswald's rifle three times at a moving object.

Well, is it really a coincidence then that BOTH the Secret Service and FBI rejected Howlett's conclusions and inaccurately represented the head shot location in their subsequent reports? On 12-5 the Secret Service inaccurately determined that the location formerly believed to be 260 feet from the sniper's nest was really 294 feet from the sniper's nest, and that the limo traveled roughly 110 feet between the first and third shots, not 90. 110 feet, not surprisingly, translates to a 5 second shooting scenario, should the limo have been traveling 15 mph as presumed. (While less than the 5.6 seconds later mentioned by Frazier in his Warren Commission testimony, this 5 second scenario was still more than the 4.6 seconds it took Frazier to fire at three stationary targets in his tests with Oswald's rifle. It follows, then, that the Secret Service in December 63 would have believed 5 seconds to have been more than enough time for Oswald to have fired all the shots.)

But, should the Secret Service have deliberately fudged its numbers in order to buy Oswald more time, they were not to be outdone by the FBI, which actually claimed the limo traveled 140 feet further from the sniper's nest between the first and third shots. This shooting scenario, which began and ended with

the same shots described by Howlett in his 11-27 reenactment, was nevertheless determined to have involved more than 50% more of Elm Street. This translated to a 6.36 second shooting scenario, even if the limo was traveling 22 fps...

It would appear then that the Secret Service and FBI both deliberately fudged their numbers in order to conceal from the Warren Commission the possibility Oswald could not have fired all the shots.

If they assumed the Warren Commission was not gonna double-check their work, however, they were wrong...

Within just a few days of receiving Gauthier's exhibits section's report the Warren Commission counsel tasked with investigating the shooting realized that the FBI had fed them a big steaming pile of nonsense. A 1-23 memo from Gauthier to his boss Nicholas Callahan reveals that on this day he met with Warren Commission counsels Ball, Belin, Eisenberg and Redlich, as well as Inspector Thomas Kelley of the Secret Service, and that the six men spent three hours "re-enacting" the shooting in Dealey Plaza using Gauthier's scale model of the plaza and model cars. (This memo can be found in FBI file 62-109090 Sec. 2 p 143-146). Gauthier reports that Kelley "stated that the versions of the FBI and Secret Service were good approximations" and that "The staff is hoping to eventually be in a position to say exactly where the shots occurred on the Parkway with a plus or minus factor of several feet." He then reports that they will meet again on 1-27, at which time they will view the Zapruder and Nix films and try to come to some sort of agreement on the location of the limo during the shots. Not surprisingly, given the FBI's concern about the Commission, in the comments section of this memo Gauthier (or is it Callahan?) tries to assure his superiors that no one is second-guessing their inept work, although, clearly, they were. He writes: "The points on the Parkway as defined by the FBI are considered to be the best approximations possible and in line with the Secret Service version. Inspector Kelley shares the same views. The FBI has the first shot occurring just before the President's head emerges from behind the sign while the Secret Service approximates the location moments after the President emerges. Approximately one second is involved between the two versions. The Commission realizes that there is no material difference between the FBI's and Secret Service's approximations; however, they wish to attempt to fix shooting sequence with a great degree of accuracy with a plus or minus factor of a few feet." (This is already surprising. How could the Secret Service NOT see that Kennedy was hit before he came out from behind the sign in the Zapruder film?)

Attached to Gauthier's memo is a further comparison of the FBI and Secret Service proposed shooting scenarios. It reads:

- Shot One: It occurred when the Presidential car was unobserved by Zapruder for approximately twenty feet while moving behind a road sign. Shot one was approximately fixed on the model at a point directly behind the center of this sign. The movie reveals that prior to reaching this sign the President was seen waving and moments later after emerging from behind the sign he was slumped forward. The position on the Parkway where shot one occurred as approximated by the Secret Service varies about one car length (13 feet) or about one half second at 15 mph. The FBI's estimate places the President approximately one-half second nearer to the assassin when shot one was fired.

(THE DIFFERENCE BETWEEN THE FIRST SHOT ON THE 12-5 SECRET SERVICE PLAT AND GAUTHIER'S 1-20 EXHIBITS SECTION REPORT WAS 17 FEET, NOT 13 FEET. CLEARLY, GAUTHIER AND KELLEY ARE NOT RELYING ON THEIR PREVIOUS STUDIES. THAT GAUTHIER BELIEVES SHOT ONE RANG OUT WHEN THE MODEL WAS BEHIND THE CENTER OF THE SIGN, WHEN HE'D PREVIOUSLY APPROXIMATED THIS DISTANCE AS 167 FEET, SUGGESTS THAT HIS MODEL OF DEALEY PLAZA WAS INACCURATE. THE WARREN COMMISSION WOULD LATER DETERMINE THAT THE PRESIDENT WAS 167 FEET FROM THE SNIPER'S NEST

BEFORE HE WENT BEHIND THE SIGN. IT IS ALSO INTRIGUING THAT HERE, A MONTH AFTER THE SPEED OF THE Z-FILM AND LIMO WERE RE-INTERPRETED, GAUTHIER IS STILL REPEATING THAT THE LIMO WAS TRAVELING 15 MPH.)

- Shot Two: It occurred approximately at the time Governor Connally was turning his head to the right rear. This point was established through the interpretation of the relative location of trees, shrubs, street lights, curbing, etc, appearing in the movie. The position on the Parkway approximated by the FBI and the Secret Service varies about 1.5 car lengths (22 feet) or about one second at 15 mph. The FBI's estimate places the Governor approximately one second further away from the assassin when shot two was fired.

(GAUTHIER HAD PREVIOUSLY SAID THIS SHOT WAS FIRED WHEN THE LIMO WAS 262 FEET FROM THE SNIPER'S NEST. ON 12-5 THE SECRET SERVICE HAD APPROXIMATED THE DISTANCE FOR THIS SECOND SHOT AS 242 FEET, 20 FEET CLOSER.. NOW, GAUTHIER TELLS US THAT THEY ARE EVEN FURTHER APART, 22 FEET. THIS IS INCREDIBLY PROBLEMATIC. IF ONE PROPOSES THAT GAUTHIER'S MEASUREMENTS ARE WRONG, IT STILL DOESN'T EXPLAIN WHY, EVEN AFTER COMPARING SHOOTING SCENARIOS ON HIS MODEL OF DEALEY PLAZA WITH THE SECRET SERVICE, HE STILL HOLDS THAT THIS SHOT WAS FIRED WELL AFTER THE SECRET SERVICE'S SHOT. EVEN STRANGER, GAUTHIER HAS ALREADY SAID THE FIRST SHOT WAS FIRED WHEN THE LIMO WAS BEHIND THE CENTER OF THE SIGN--WHICH IS AT APPROXIMATELY FRAME 210 OF THE ZAPRUDER FILM--AND HAS PREVIOUSLY REPORTED THAT THE SECOND SHOT WAS AT LEAST 4.4 SECONDS AFTER THE FIRST, WHICH WOULD EQUATE TO ABOUT 80 FRAMES. THIS PLACES THE SECOND SHOT IN GAUTHIER'S ANALYSIS AT FRAME 290--AT THE VERY EARLIEST. THIS, OF COURSE, IS WITHIN TWO SECONDS OF THE OBVIOUS HEAD SHOT AT FRAME 313, AND IS WAY TOO CLOSE IN TIME TO FRAME 313 FOR BOTH SHOTS TO HAVE BEEN FIRED BY OSWALD'S BOLT ACTION RIFLE. GAUTHIER'S INABILITY TO REALIZE THIS, OR HIS DELIBERATE IGNORANCE OF THIS FACT, DOES NOT REFLECT WELL ON THE BUREAU AND ITS COMMITMENT TO THE TRUTH.)

- Shot Three: It occurred approximately at the time a circle of light resembling an explosive blast encircles the President's head. The position on the Parkway approximated by the FBI and the Secret Service varies about 2/3 car length (14 feet) or about 2/3 second at 15 mph. The FBI's estimate places the President approximately 2/3 second nearer to the assassin when shot three was fired.

(APPROXIMATELY? WHO IS HE KIDDING? THE MAN'S HEAD EXPLODES. AND WHAT'S ALL THIS ABOUT A "CIRCLE OF LIGHT"? IS GAUTHIER AFRAID TO REPORT THAT BLOOD AND BRAIN ARE VISIBLE IN THE FILM? WHY? AND WHY, WHEN THE SECRET SERVICE'S 12-5 PLAT HAS THE THIRD SHOT AT 294 FEET, AND GAUTHIER'S 1-20 REPORT HAS IT AT 307 FEET, DOES HE STATE THAT THE FBI'S THIRD SHOT IS 14 FEET CLOSER TO THE ASSASSIN THAN THE SECRET SERVICE'S THIRD SHOT? DOES HE MEAN BY THIS THAT THE SECRET SERVICE'S THIRD SHOT IS NOW 321 FEET FROM THE SNIPER'S NEST? OR THAT HE NOW BELIEVES THE THIRD SHOT WAS ABOUT 280 FEET FROM THE SNIPER'S NEST, JUST 18 FEET PAST HIS PREVIOUSLY DETERMINED LOCATION FOR THE SECOND SHOT? NEITHER OF THESE SCENARIOS, UNFORTUNATELY, MAKES MUCH SENSE.)

The final words of Gauthier's memo speak volumes, and read like a really lame alibi, somewhat akin to "the dog ate my homework".

- Comments: The FBI's analysis of the shooting sequence was determined independently of a similar study made of the movie by the Secret Service. "WHERE ON THE PARKWAY WAS

THE PRESIDENTIAL CAR EXPOSED TO GUN FIRE?" The answer to this question is subject to varying factors such as the speed of the vehicle, the firing position of the assassin and the position of Zapruder. It is a matter of accepting the fact that there will be as many versions as there are analysis made of the shooting sequence. The FBI bases its approximations on an interpretation of the Zapruder movie re-enacted on a scale model, The Secret Service has also used the movie to approximate the shooting sequence; eyewitnesses may vary in locating the car at the time of the shooting; members of the Commission may also have differing opinions regarding this matter.

- The Zapruder movie was utilized by the FBI as the best medium for approximating the points on the Parkway where the shooting occurred.

(IF THE ZAPRUDER FILM AND SCALE MODEL WERE USED AS PURPORTED, THEN WHY DID THE FBI EITHER 1) PLACE THE HEADSHOT FAR PAST ZAPRUDER, BY THE STEPS, WHEN THE FILM SHOWS KENNEDY TO BE ABREAST OF ZAPRUDER AT THE MOMENT OF IMPACT; OR 2) MISTAKENLY BELIEVE ZAPRUDER WAS FILMING FROM ON TOP OF THE BLOCK WALL CLOSEST TO THE STEPS, INSTEAD OF HIS EASILY ASCERTAINED ACTUAL LOCATION BY THE ARCADE? COULD THEY REALLY HAVE BEEN SO INCOMPETENT?)

While it's unclear if the commission really understood how incredibly daft or dishonest the FBI and Secret Service would have to have been to make the mistakes and errors just discussed, it is clear they were largely unimpressed with the work of the FBI and Secret Service. At a pivotal point in the **12-16** executive session, Congressman Hale Boggs voiced his disappointment with the FBI's report of 12-9. He complained: "Everyone has all kinds of questions, reading that FBI report leaves a million questions." After discussing the Commission's need to interview the closest witnesses in order to determine which shots actually struck the President, Boggs returned to this theme, declaring "Well, this FBI report doesn't clear it up." To this complaint, Chief Justice Earl Warren chimed in: "It doesn't do anything." Boggs then observed: "It raises a lot of new questions in my mind."

After reading such a discussion, one might assume that the Warren Commissioners would make certain that their report, issued over nine months later, would be clear about which shots hit the President. One might also assume that these conclusions would be in sync with the recollections of the closest eyewitnesses. But one would be wrong.

Chapter 3: Looking through Arlen Specter's Eyes

The beginning of our look at the Warren Commission's investigation and analysis of the evidence, to determine whether their ultimate conclusions were correct, or just politically expedient.

The Vanishing Act

At left: Zapruder frame 225.

At top: the Bronson photo, taken between frames 220 and 225 of the Zapruder film. After the FBI's rushed investigation, one might think the Warren Commission would want to talk to all the bystanders in the photo. In time, they talked to two: Abraham Zapruder and Jean Hill.

Above: a crop from the Bronson photo, confirming that Mrs. Kennedy had already turned to her husband before she could have heard a shot at Z-224.

For reasons beyond my grasp, the first image in each chapter sometimes fails to appear. If there's nothing up above, don't despair; you can still see the image [here](#)

The Vanishing Act

It is now late-January. The Warren Commission's staff has trickled in from throughout the country and quietly begun their work, which at this point entails reading through the many reports on the assassination previously written by the FBI, Secret Service, and CIA. Howard Willens--an employee of the Justice Department--is serving as General Counsel Rankin's administrative assistant and link to other government agencies. He is also largely responsible for the selection of the commission's staff, and the assignment of their duties. He has divided the staff into teams of Junior and Senior Counsel, and assigned these teams specific areas of investigation.

- Area 1: Francis Adams and Arlen Specter are charged with establishing the "basic facts of the assassination." (It's notable that Specter is an old college chum of Willens', whose loyalty to the commission would later be called into question by commissioner John McCloy.)
- Area 2: Joseph Ball and David Belin are charged with establishing the "identity of the assassin." (Assassin...singular...well, guess who that is...)
- Area 3: Albert Jenner and J. Wesley Liebler are charged with establishing "Oswald's background." (Researcher Tom Scully would later research Jenner's own background, and come to conclude he'd had significant ties to organized crime.)
- Area 4: William Coleman and W. David Slawson are charged with investigating "possible conspiratorial relationships." They are thus tasked with investigating Oswald's actions in Russia and Mexico.
- Area 5: Leon Hubert and Burt Griffin are charged with investigating "Oswald's death," and establishing both whether Ruby knew Oswald, and if Ruby had help in killing Oswald.
- Area 6: Samuel Stern is charged with researching the history of Presidential protection, so that

the commission could make appropriate recommendations.

- Norman Redlich is charged with supervising the investigations of all these areas, and with the subsequent writing of their report. His assistant--the man directly overseeing much of the investigation--is Melvin Eisenberg.

On 1-23 we see a "Statement of Objectives," a memo written by Arlen Specter to General Counsel J. Lee Rankin of the Warren Commission. This memo spells out which aspects of the case Area 1 Junior Counsel Specter and Senior Counsel Francis Adams hope to clear up, and how they plan on clearing them up. Among their objectives: (my comments in italics)

- **g)** There would seem to be considerable amount of confusion as to the actual path of the bullets which hit President Kennedy, particularly the one which hit the right side of the back. *(It would eventually be decided that the Warren Report should refer to this wound as a wound at the base of the neck or a neck wound, and not as a back wound.)*
- **i)** Consideration should be given to taking the sworn testimony of the bystander witnesses. *(Very few bystanders not already questioned by the FBI by 12-9 were identified and interviewed for the Warren Commission, and many of those who were contacted were not asked to describe what they'd witnessed. Even worse, very few of those interviewed by the FBI by 12-9 were asked to testify under oath before the commission, even though a number of those who were asked to testify disputed the FBI's reports on their earlier statements.)*
- **m)** Consideration should be given to obtaining the camera to determine if the speed of the vehicle can be ascertained and the timing between shots from a review of the film. *(The speed of the camera and therefore the vehicle had been determined by the FBI more than a month before this memo was written. Perhaps this is an indication that, as late as 1-23, the FBI was still withholding important information from the Warren Commission.)*
- **n)** The FBI should obtain statements from certain bystanders, identified in prior reports, who have not been interviewed. *(This was done selectively. Key witnesses such as James Chaney--the motorcycle officer riding in the motorcade off Kennedy's right shoulder--and Marilyn Sitzman--Abraham Zapruder's secretary--were never interviewed for the commission.)*
- **o)** Newspaper reports of November 22nd through the next few days should be reviewed to consider questions in the public mind and to determine whether there is any competent evidentiary basis for allegations of fact which differ from the FBI or Secret Service reports. *(The numerous reports of shots fired after the head shot and shots fired closely together were largely ignored by the Commission.)*
- **p)** Obtain expert opinions from medical personnel and professionals in weaponry field to explain the path of the bullet in President Kennedy's body. *(It was decided that the military doctors who'd performed Kennedy's autopsy would serve as the Warren Commission's medical experts as well. Curiously, the wound ballistics experts who served as advisers to the commission were also all affiliated with the military. A truly independent investigation would have contacted civilian experts as well as military experts.)*
- **q)** Obtain the transcript of the television interview by the doctors at Parkland Hospital on the evening of November 22nd. *(This was not done.)*

In the 1-27 Executive Session of the Commission, General Counsel J. Lee Rankin discusses a serious problem with the medical evidence: a "picture" created at the autopsy has the back wound entrance lower than the throat wound exit, when the Zapruder film shows Kennedy sitting up in his seat when first hit, and the bullet is believed to have come from sharply upwards of the President, from the sixth floor of the School Book Depository. He concludes his discussion of the problem by informing the commission he will be seeking "help" from the doctors. (Much more on this later.)

The next day a new witness is brought forward. **F. Lee Mudd (1-28-64 FBI report, 24H538)** "he was watching the parade from a position on the north side of Elm Street and some 75 to 100 feet west of a building, which he later learned was the Texas School Book Depository. He saw the president's car approaching from the east on Elm Street in the parade, and he recognized President Kennedy and saw him waving to the crowd. When the President's car was some 50 feet or more away from him, he heard what sounded to him like two gunshots, and he saw the President slump. Immediately thereafter, he observed the President's car pull out of the line of the parade and continue west on Elm Street toward the underpass. When the President's car came abreast of Mudd, he could see the President slumped down toward his wife, who was leaning over him...Mr. Mudd stated he definitely recalls hearing two shots probably less than a second apart...he said there may have been a third shot fired, but he could not be sure of this. He stated that immediately after the shots were fired, some of the spectators along the side of the street dropped to the ground, and he did so himself." **Double head shot.**

On **1-27** and **1-28**, FBI Exhibits Chief Leo Gauthier watches the Zapruder and Nix films with representatives of the Commission, along with Thomas Kelley of the Secret Service. On **1-28-64**, he writes another memo to his superior Nicholas Callahan, and informs him that, while the Warren Commission staff members are in basic agreement with the location of the FBI and Secret Service's proposed first shot, they have "individual views concerning where Connally was shot" (the second shot), and will agree with neither the FBI nor Secret Service's determination as to the moment of the second shot's impact (which are "13 frames" apart) until they can "obtain a layman's report of the medical account describing the Governor's wounds in order that the turning action of the Governor as viewed in the movie can be used to more nearly fix the position he was in at the time the bullet struck him in the back." (This memo can be found in FBI File 62-109090, sec. 2, p. 248-250). In other words, they've already made up their minds that the shot came from the school book depository, and are waiting to figure out the moment in which Connally's wounds best align with a shot from the depository, before declaring that to be the moment of impact.

The next paragraph in Gauthier's report is also intriguing. He writes: "One staff member, according to Inspector Kelley, quietly spoke about the 'outside' possibility of shot one going through the President with sufficient velocity remaining to penetrate Connally's body, wrist, and leg. Inspector Kelley mentioned this to me confidentially. He was of the opinion that this was a personal remark made on the spur of the moment. Shot two under those ridiculous facts would have gone completely 'wild' according to Kelley." Thus, the single-bullet theory is already on somebody's mind, and is being ridiculed by the FBI. This confirms that, despite the FBI's knowledge of the wounding of bystander James Tague by a stray bullet or bullet fragment, neither the Secret Service nor FBI have seriously considered that one of the shots missed, and thus that one of the other shots must have struck both men. Some investigation.

Gauthier's discussion of the third shot is even more intriguing. Here he acknowledges that the FBI and Secret Service "approximations" for the head shot location "differ between one second (18 frames) and 1.5 seconds (29 frames). Staff members are endeavoring to pinpoint the third shot (frame 89) on the Parkway. The Nix film of the third shot clearly locates Zapruder across the roadway. An approximation which occurs 1.2 seconds before the FBI's approximation is being considered as a tentative location for shot three as re-enacted on the scale model again with a minus or plus factor of 1/3 second (6 feet) either direction. Attorney Norman Redlich asked Secret Service to determine from Orville Nix the exact position at the time he made the movies especially whether he was moving at the time he photographed the Presidential car."

This is beyond bizarre. Gauthier admits that the head shot is at frame 89--which one can only assume means frame 313, 89 frames after Kennedy came out from behind the sign at frame 224--and yet finds nothing strange about his earlier "approximation" of the clear moment of impact being 29 frames off the Secret Service's "approximation" of the clear moment of impact, and at least 1.2 seconds (or 22

frames) past the new "tentative location" for the clear moment of impact. Either he was banking that no one reading this report would ever see the Zapruder film, and thus know how impossible it would be for the Secret Service and FBI to disagree on the location of the head shot in the film, or he was so inept and confused that he spoke of a disagreement on the limo's physical location in the plaza at specific frames of the film in terms of the presumed elapsed time and number of frames it would take to travel the distance between these locations. This, of course, makes little sense, but it makes more sense than the alternative--that there was an actual dispute between the Secret Service and FBI over what frame of the Zapruder film displayed the moment of impact for the head shot.

There is, of course, a third alternative, previously discussed. This holds that both the FBI and Secret Service deliberately misrepresented the location of the head shot as part of an attempt to stretch out their proposed shooting scenarios and make Oswald's purported feat more believable. Under this theory, their "different" interpretations of the head shot location are just cover to hide that they knew where it was all along, and knew its proximity to the locations of the earlier shots was inconsistent with the premise that Oswald acted alone.

A 1-28 memo to FBI Crime Lab Chief Ivan Conrad on this same meeting with the Warren Commission offers another unadulterated view into the soul of the FBI. (FBI File 62-109090, sec. 2, p. 246) Here, Agent W.D. Griffith presents the perspective of the FBI's photographic expert Lyndal Shaneyfelt, who also attended the meeting, and notes that the Commission representatives *"asked whether or not an examination of the Nix camera and film could establish similar distances and car speeds, as well as the location of the Nix camera during the filming which has not been determined."* Griffith then notes *"It is not clear just what the accurate determination of the speed of the car will contribute to the case, since it is known that the car was traveling relatively slowly; however, Commission representatives have requested that this be established as accurately as possible. SA Shaneyfelt stated that this could be done based on an examination of the films and cameras involved, accompanied by a survey of the actual site in Dallas. They requested that the FBI obtain the Nix camera and make the study of the Nix and Zapruder films as set out above."*

This reveals that, amazingly, there seems to be no appreciation by those overseeing the FBI's investigation that the speed of the camera and the limousine can be used to establish the precise timing of the shots, and thus whether or not Oswald's purported shooting feat was even possible. Underlining the incredible apathy and/or malevolence of the FBI, as evidenced by their inability or refusal to accurately place the location of the shots, is a note added to the bottom of this memo by the man himself, J. Edgar Hoover. He writes: *"It sounds like a lot of poppycock to me."*

On 6-4-64, Shaneyfelt, would be asked to testify about these sessions, and his subsequent experiences with the Commission and the film.

Mr. Specter. Now, how many occasions were you a participant in an analysis of these various films which you have just described?

Mr. Shaneyfelt. Seven.

Mr. Specter: And when was the first time that you were a participant in such an analysis?

Mr. Shaneyfelt: On January 27, 1964.

Mr. Specter: And who else has been with you at the time you analyzed those films just stating in a general way without identifying each person present on each of the occasions?

Mr. Shaneyfelt: On most occasions, Mr. Gauthier of the FBI was present, I was present, Mr. Malley of the FBI was present. Inspector Kelley from Secret Service, and Mr. John Howlett from Secret Service. Representatives of the Commission were always present--normally Mr. Redlich, Mr. Specter, or Mr. Eisenberg were present. On several occasions Mr. Ball and Mr. Belin were present. Mr. Rankin was present on some. I believe Mr. McCloy was present on one. Various representatives of the Commission were present.

Mr. Specter. *And how long did those sessions ordinarily last?*

Mr. Shaneyfelt: *They would normally last most of the day, about all day.*

Mr. Specter. *And what would be done during the course of those analytical sessions?*

Mr. Shaneyfelt. *In each case we would take the film and run it through regular speed, slow motion, we would stop it on individual frames and study it frame by frame, trying to see in the photographs anything that would give any indication of a shot hitting its mark, a reaction of the President, a reaction of Mr. Connally or Mrs. Connally, reaction of the Secret Service agents, reaction of people in the crowd, relating it to all the facts that we felt were important. When we obtained the slides from Life magazine, we went through those very thoroughly, because they gave so much more detail and were so much clearer and analyzed again all these things about the reaction of the President and Mr. Connally, trying to ascertain where he was reacting--whether either one was reacting to being Of course the only shot that is readily apparent in any of the films, and it appears in the Zapruder, the Nix, and the Muchmore film, is the shot that hit the President in the head.*

Mr. Specter. *Why do you say that is readily apparent?*

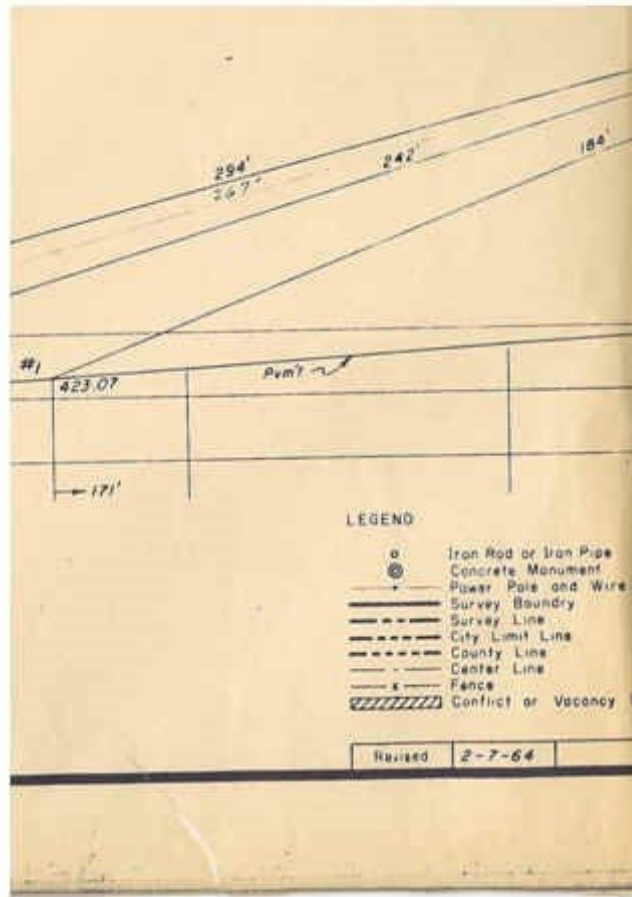

Mr. Shaneyfelt. *Because on the film there is practically an explosion of his head and this is obviously the shot that hit the President in the head. It is very apparent from the photograph.*

On **1-29-64** the FBI contacts Orville Nix and establishes the location from which he shot his film. This report notes that Nix was "about 20 feet west of Houston Street on the south side of Main Street" at the moment of the fatal head shot. This fact, which should have been obvious from viewing the film, proves the fatal shot occurred closer to the corner of Houston and Elm and thus closer to the first shot fired than most recently proposed by the FBI and Secret Service.

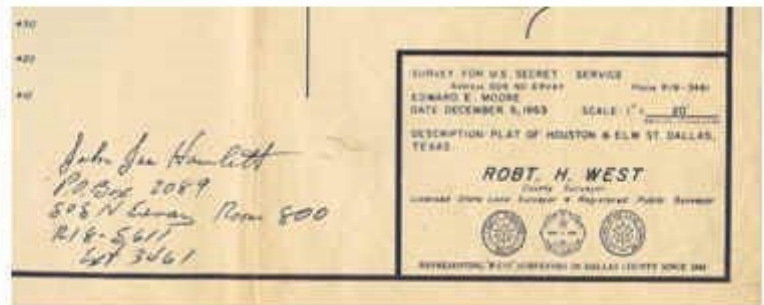

On **1-30-64**, Lyndal Shaneyfelt takes some notes on the Zapruder film that establishes, finally, that the "Third Shot" impacted at frame 313. This obvious conclusion, along with the "new" information regarding the Nix film, assures us that the location of the limo at the time of the head shot will soon be re-appraised.

Also on **1-30-64**, one of the Warren Commission counsel responsible for establishing Oswald's guilt, David Belin, writes a memo regarding Oswald's intent. He presents three possibilities: "Oswald was shooting at Connally and missed two of the three shots, the two misses striking Kennedy; Oswald was shooting at both Kennedy and Connally and all three shots struck their intended target; Oswald was shooting at Kennedy and the second bullet missed its intended target and hit Connally instead." A bullet's missing the limousine was not to be considered. Yet.

Never Mind

At left, the shot trajectories on a survey plat in the possession of researcher Tom Purvis, dated 2-7-64. Note that the third shot now reflects a distance of 267 feet. This confirms that the FBI re-appraised the trajectories and shot locations included in the Exhibits Section's presentation to the Warren Commission, just two weeks before.

Above, a hand-written address near the bottom right corner of the plat, confirming that surveyor Robert West sent a copy of this plat to Secret Service Agent John Joe Howlett. Howlett had worked with West during the Secret Service's original survey of 11-27-63. What did Howlett want with this plat? Were the FBI and Secret Service finally sharing their conclusions, trying to get their stories straight?

And where are the memos about this "re-appraisal" in the Warren Commission's files?

Never Mind

On 2-7-64, apparently at the bidding of the FBI, whose earlier depiction of the shots would have to be seen as an embarrassment, surveyor Robert West revises his 12-5-64 plat of Dealey Plaza, and adds a trajectory line corresponding to a bullet strike on Kennedy's position at Z-313. (West would later claim this was done on behalf of the FBI. If so, this means the FBI has finally acknowledged that Kennedy's location at the time of the head shot, which only 2 weeks prior they'd asserted was 307 feet from the sniper's nest, was really 40 feet closer.) Only adding to the mystery surrounding this plat (which West would eventually provide researcher Tom Purvis) is that the name and address on the plat are those of Secret Service Agent John Joe Howlett, who first used West's services during the Secret Service's 11-27-63 re-enactment in Dealey Plaza. (Documents in the possession of Purvis indicate that the plat used in the 11-27 re-enactment was actually commissioned by Time/Life, Inc., and created by West employees G.H. Breneman and Paul Hardin on 11-26-63.) It's hard to know what to make of this. Perhaps the revision of this plat and its shipment to Howlett indicates that, by 2-07-64, the FBI and Secret Service had finally reached some sort of agreement on the shot locations.

Ironically, this only causes more problems for the Warren Commission. As the distance between the second and third shots is now much too close together for both to have been fired by Oswald, the

Warren Commission is forced to either concede there was a second shooter, or re-interpret the location of Connally at the time of the second shot.

It is also ironic that, at this late date, weeks after the public has been reassured by the media that Oswald acted alone, new evidence is still rolling in. UPI, in collaboration with American Heritage Magazine, has put out a collector's book on the assassination and its aftermath entitled *Four Days*. It has been available to the public since mid-January. It features a number of stills depicting Kennedy and the grassy knoll behind him at the moment of the fatal head shot. They are not from the Zapruder film. They are not from the Nix film. No, they are from a film unbeknownst to both the FBI and Warren Commission.

This is brought to the FBI's attention. A quick investigation leads the FBI to Marie Muchmore. Although her film had been shown on TV within days of the shooting, and she'd sold her film to UPI on 11-25, just three days after the shooting, and UPI published frames from her film in, amongst other places, the San Francisco Chronicle, on 11-27, five days after the shooting, a 12-4 report by the FBI's Robert Bashman reflects that she'd told him she'd taken no photographs of the shooting. (Despite what would seem to have been either total incompetence on the part of Agent Bashman, or Ms. Muchmore's deliberate deception, no investigation is performed to determine who is responsible for the inaccurate report.)

Despite the fact Mrs. Muchmore was clearly looking through her viewfinder at the time of the shots, and was thus one of the best witnesses to the shooting, moreover, her interview on 2-14 by the FBI's Robert Barrett and Ivan Lee is of little value. **Marie Muchmore (2-18-64 FBI report, CD 735 p.8)** "Mrs. Muchmore stated that after the car turned on Elm Street from Houston Street, she heard a loud noise which at first she thought was a firecracker but then with the crowd of people running in all directions and hearing the two further noises, sounding like gunfire, she advised that she began to run to find a place to hide." (As the FBI acquired a copy of her film, and thus came to know what Ms. Muchmore observed, it seems possible they'd decided not to push Ms. Muchmore for a more detailed description of her recollections. Still, as she was clearly looking at the grassy knoll at the moment of the fatal impact, and saw people in that vicinity react to the shooting, it seems possible she saw something suspicious after the shooting she was afraid to talk about. In any event, Mrs. Muchmore was never called before the Warren Commission, and never spoke on the subject again.)

On **2-21-64**, Rankin assistant Norman Redlich writes a memo explaining the basic duties of Melvin A. Eisenberg. It states "The areas in which Mr. Eisenberg are working are as follows...2. Working with me on the problem of studying the assassination films to locate car position when bullets hit President Kennedy and Governor Connally." As this had previously been considered part of Area 1, the responsibility of Francis Adams and Arlen Specter, this reveals that a decision had been made not to trust them entirely on this point. Since Adams stopped showing up around this time, and as Adams reportedly told writer Edward Epstein that "he thought the FBI Summary and Supplemental Reports should have been verified immediately," the possibility exists that Adams simply had no stomach for second-guessing Hoover, and opted out on what he knew would be a politically nasty experience.

But if Redlich and Eisenberg no longer trusted Specter and Adams, a **3-7-64** memo from Eisenberg to Rankin reveals that they no longer trusted anything but their unjustified belief there was but one shooter.

Eisenberg begins: *"Among the most crucial questions to be considered in determining the identity of the President's assassin or assassins are the number of shots fired in the course of the assassination, the spacing between the shots, and the location of the site or sites from which the shots were fired. A great deal of evidence is relevant to these questions, for example, the number of wounds, the path of the missiles causing each wound, the position of the rifle believed to have fired the recovered bullet and*

bullet fragments, the position and number of empty cartridge cases believed to have been fired in this rifle, the number of recovered bullet and bullet fragments and visual observations of bystanders. (Note: by the term "bystanders" I mean everyone but the assassin (s) and the victims.) In addition, a mass of evidence has been collected concerning the aural observation of bystanders. The purpose of this memorandum is to point out that very little weight can be assigned to this last category of evidence."

Well, this is disconcerting. This suggests that Eisenberg is well aware that the bulk of the witnesses believed the last two shots were fired close together, and that this rules out Oswald's having acted alone. His desire to point out that this evidence should be given "little weight" then seems as much as a confession that he knows this evidence suggests there was two shooters...and that he wants Rankin to know that he has found a way to ignore this evidence.

Eisenberg then quotes a textbook on firearms claiming that *"little credence...should be put in what anyone says about a shot or even the number of shots."* This is misleading in that no textbook ever written would say that "little credence...should be put in what *the majority* says about a shot or even the number of shots." It is also misleading in that the Commission's operating thesis--that three shots were fired--has largely been derived by what the majority of witnesses have said about the number of shots.

Eisenberg then asserts that, since *"the sound of a shot comes upon a witness suddenly and often unexpectedly, the witness is not 'ready' to record his perception."* He then asserts, seemingly without foundation, that *"The same is usually true of subsequent shots following hard on the heels of the first."* Thus, he has given himself and the Commission carte blanche to ignore any statements they don't like. He then adds insult to injury by citing anecdotal evidence to support his claim, mentioning that the firearms book he is citing (Firearms Investigation, Identification, and Evidence) presents as an example an instance where a hunter, asked the number of shots fired by a nearby hunter, said he'd heard five shots when the man had fired but two. This is offensive. That Eisenberg is so desperate to write off statements in conflict with his proposition that Oswald acted alone that he will compare the observations of Secret Service agents under fire to the casual observations of a hunter in the woods is an offense against common sense, and indicative of his naked desire to deceive.

Over the course of the next two paragraphs, Eisenberg continues to cite reasons to doubt both the witnesses' perception of distance, and their perception of the weapon fired. It appears, from this, that Eisenberg is trying to cover all the bases, and to make sure Rankin tells the Commissioners they should feel free to disregard any witness statement that conflicts with their foregone conclusion. In an apparent effort to drive this home, Eisenberg then adds *"Obviously, during the assassination the surprise, emotion, confusion and noise were much greater than is even usually the case, and bystanders' aural perception of the gunshots is therefore to be accorded even less weight than is usually the case."*

He then discusses how acoustics may have led these witnesses to incorrectly perceive the direction of the shots. He then relates *"It must be emphasized that the above discussion is not merely theoretical, but is based upon the analysis and observations of professional criminal investigators. Furthermore, this discussion is borne out by the very fact that the testimony of the bystanders to the assassination varies enormously. (Similar variations occur in the testimony relating to the Tippit killing.)"*

Wow. This is not only disconcerting, it is thoroughly misleading. Eyewitness evidence is not routinely overlooked just because it "varies". It is in fact the job of investigators like ourselves to collate this evidence and determine just what happened. Eisenberg's apparent reluctance to do so then can be taken as an indication that he knows what's coming, and is afraid that the recollections of the witnesses will prove to be at odds with what he personally has come to accept.

This is borne out by the next paragraph. Eisenberg writes: *"In my opinion in examining the Secret Service agents the utmost care should be taken to avoid giving the Commission the impression that the aural perception of these agents have much validity. These witnesses may or may not be more familiar*

with the sound of gunshots fired in the open than the other bystanders. Probably they are not." Now, this is absurd on its face. It's hard to understand how Eisenberg could possibly believe that agents of the Presidential Detail of the Secret Service would have no more credibility regarding the number and spacing of the shots fired at the limousine than bystanders who'd never undergone their training.

Eisenberg then writes *"The fact is, that the contemporaneous reaction of the two agents in the President's car does not indicate that they immediately were aware that the sounds that they heard were gunshots."* Eisenberg fails to note how this affects their credibility regarding the number and spacing of the sounds they heard.

He then cites inconsistencies in the statements of agents Kellerman and Greer and the statements of these agents as presented by the FBI. Tellingly, in order to damage the credibility of these witnesses, he accepts that the FBI's reports are accurate.

He then concludes: *"Even if agents do have more familiarity with such sounds, many of the other factors which sap the credibility of aural perception of gunshots would still be applicable...I do not mean to imply that the agents should not be examined on this subject but no impression should be given that their testimony is sacrosanct. I intend in the near future to analyze the recorded testimony of bystanders as to the number of shots, etc. giving particular attention to factors which may have affected their perception. In addition I think we should have expert testimony on the subjects discussed in this memorandum."* (Neither Eisenberg's analysis of the eyewitness and earwitness testimony nor the testimony of any experts claiming that earwitness testimony can routinely be ignored can be found in the Commission's records.)

Well, this is disappointing. It seems clear from this memo that Eisenberg has made up his mind about what happened, and is determined to make sure the Commissioners stay on board. We thought we were through with this nonsense when we signed on with the commission. But it's beginning to look as though the commission's investigation is as much a whitewash as the FBI's initial investigation, only with more smoke and lawyers.

A few days later, the Commission finally starts questioning witnesses. Confirming Eisenberg's fears, the first of the Secret Service agents questioned by Arlen Specter re-enforce that the last two shots were bunched together. **Roy Kellerman (3-9-64** testimony before the Warren Commission, 2H61-112") *"So, in the same motion I come right back and grabbed the speaker and said to the driver, "Let's get out of here, we are hit!," and grabbed the mike and I said, "Lawson, this is Kellerman,"--this is Lawson, who is in the front car. "We are hit; get us to the hospital immediately." Now, in the seconds that I talked just now, a flurry of shells come into the car."* Specter also asks Kellerman about the location of the wound on Kennedy's back, and is told *"The upper neckline, sir; in that large muscle between the shoulder and the neck, just below it."* **William Greer (3-9-64** testimony before the Warren Commission, 2H112-132 *"I glanced over my shoulder. And I saw Governor Connally like he was starting to fall. Then I realized there was something wrong. I tramped on the accelerator, and at the same time Mr. Kellerman said to me, "Get out of here fast." And I cannot remember even the other shots or noises that was. I cannot quite remember any more. I did not see anything happen behind me any more, because I was occupied with getting away."* (When asked how many shots he heard) *"I know there was three that I heard - three. But I cannot remember any more than probably three. I know there was three anyway that I heard...I knew that after I heard the second one, that is when I looked over my shoulder, and I was conscious that there was something wrong, because that is when I saw Governor Connally. And when I turned around again, to the best of my recollection there was another one, right immediately after."* (When asked how much time elapsed between the first and second shots.) *"It seems a matter of seconds, I really couldn't say. Three or four seconds."* (When asked how much time elapsed between the second and third shots.) *"The last two seemed to be just simultaneously, one behind the other..."* **Double head shot. (Previously Too vague)**

Specter then questions agent Clint Hill, who raced for the limousine from the Secret Service back up car but arrived too late. At one point Specter asks Hill to describe the sound he heard at the time of the head shot--the sound Kellerman has just described as a "flurry" of shots and the sound Greer has just described as two shots fired "simultaneously." Clint Hill (3-9-64 testimony before the Warren Commission, 2H132-144) *"it had a different sound, first of all, than the first sound that I heard. The second one had almost a double sound--as though you were standing against something metal and firing into it, and you hear both the sound of a gun going off and the sound of the cartridge hitting the metal place, which could have been caused probably by the hard surface of the head. But I am not sure that that is what caused it."* Specter then asks Hill about the President's wounds. He replies: *"I saw an opening in the back, about 6 inches below the neckline to the right-hand side of the spinal column."*

It's not as if Specter gave a damn what Hill had to say, mind you. In keeping with Eisenberg's 3-7-64 memo suggesting that the testimony of the Secret Service agents not be taken seriously, Specter sends a memo to J. Lee Rankin on 3-11-64, in which he asserts that *"All four witnesses (Note: he means Kellerman, Greer, Hill, and Johnson bodyguard Rufus Youngblood) impressed me as being credible...In my opinion all these witnesses did their very best to recount the situation as they recollected it. Notwithstanding that, it is my conclusion that they do not accurately recall many of the details on the precise time or sequence of shots or their exact movements and reactions during the crucial 5 or 6 seconds."*

If the testimony of these Secret Service witnesses suggests that there are some issues which can never be resolved, however, testimony taken on this very day positively proves it. On 3-11-64, the Warren Commission calls Buell Frazier to the stand, to see if they can succeed where the Dallas Police, the FBI, and the Secret Service have failed; that is, to see if they can get him to agree that the paper bag Oswald brought to work was big enough to have held the rifle. No such luck. Frazier tells them the bag covered *"I would say roughly around 2 feet of the seat...If, if you were going to measure it that way from the end of the seat over toward the center, right. But I say like I said I just roughly estimate and that would be around two feet, give and take a few inches."* Counsel Joe Ball then asked him its width. He replies: *"Well, I would say the package was about that wide...Oh, say, around 5 inches, something like that. 5, 6 inches or there. I don't--"* He then described its appearance: *"You have seen, not a real light color but you know normally, the normal color about the same color, you have seen these kinds of heavy duty bags you know like you obtain from the grocery store, something like that, about the same color of that, paper sack you get there."* Frazier later describes Oswald's walk into the depository: *"He got out of the car and he was wearing the jacket that has the big sleeves in them and he put the package that he had, you know, that he told me was curtain rods up under his arm, you know, and so he walked down behind the car...he had it up just like you stick it right under your arm like that...The other part with his right hand...Right, straight up and down."*

Under repeated questioning from Ball, Frazier gives a little but not enough. He testifies: *"I didn't pay much attention to the package other than I knew he had it under his arm."* Ball eventually shows him the bag found by the sniper's nest. Ball asks him if the bag he saw in Oswald's possession was about the same length. Frazier responds *"No, sir."* Ball asks him if it was about the same width. Frazier responds: *"Well, I would say it appears to me it would be pretty close but it might be just a little bit too wide. I think it is, because you know yourself you would have to have a big hand with that size but like I say he had this cupped in his hand because I remember glancing at him when he was a walking up ahead of me."* Ball asks him if the bag he saw was the same color as either the bag found in the sniper's nest or the replica bag created on 12-1. Frazier replies: *"It would be, surely it could have been, and it couldn't have been. Like I say, see, you know this color, either one of these colors, is very similar to the type of paper that you can get out of a store or anything like that, and so I say it could have been and then it couldn't have been."* Ball keeps pressing, and asks Frazier what he told the FBI on 12-1, when first

shown the bag. Frazier answers: *"I told them that as far as the length there, I told them that was entirely too long."* He's then asked about the width. Frazier relents: *"Well, I say, like I say now, now I couldn't see much of the bag from him walking in front of me. Now he could have had some of it sticking out in front of his hands because I didn't see it from the front, The only time I did see it was from the back, just a little strip running down from your arm and so therefore, like that, I say, I know that the bag wouldn't be that long. So far as being that wide like I say I couldn't be sure."* Ball then pounces and asks if the bag carried by Oswald could have been as wide as the bag from the sniper's nest. Frazier admits: *"Right."* Ball then tries to get Frazier to admit that he wasn't sure about the length either. Frazier cuts him off: *"What I was talking about, I said I didn't know where it extended. It could have or couldn't have, out this way, widthwise not lengthwise."* (2H210-245). When it came to the length of the bag, Frazier hadn't budged an inch. Which meant the package he saw was still 11 inches too small to be the bag found in the sniper's nest. His story was as problematic as ever.

Frazier's sister, Linnie Mae Randle, follows him to the stand. Her description of the bag is almost as problematic as his, seeing as it confirms his opinion that the package was too small to conceal the rifle. She describes her sighting of Oswald on the morning of the assassination: *"He was carrying a package in a sort of a heavy brown bag, heavier than a grocery bag it looked to me. It was about, if I might measure, about this long, I suppose, and he carried it in his right hand, had the top sort of folded down and had a grip like this, and the bottom, he carried it this way, you know, and it almost touched the ground as he carried it..."* (She later compared it to the replica bag) *"Well, it wasn't that long, I mean it was folded down at the top as I told you. It definitely wasn't that long...The width is about right...What he had in there, it looked too long."* Counsel Ball then asks *"This package is about the span of my hand, say 8 inches, is that right? He would have about this much to grip?"* She responds: *"What I remember seeing is about this long, sir, as I told you it was folded down so it could have been this long."* He then asks: *"I see. You figure about 2 feet long, is that right?"* She answers: *"A little bit more."* Ball measures out the length on the replica sack. He asks *"Is that about right? That is 28 1/2 inches."* She answers: *"I measured 27 last time."* (2H245-251). The Warren Commission thus goes 0 for 2. Two witnesses saw Oswald with a bag on the morning of the 22nd. Two witnesses testified the bag was too small to conceal the rifle. The bag found in the sniper's nest was 38 inches long and would have appeared about 10 inches wide when holding a rifle, much larger than the bag described by Randle, and more than twice as big as the bag described by Frazier. This issue has never been resolved.

(Frazier would eventually discuss the pressure put on him and his sister by the Warren Commission. In a 2-16-87 interview with Gus Russo first published in 1998, Frazier complained: *"They had me in one room and my sister in another. They were asking us to hold our hands apart to show how long the package was. They made me do it over and over--at least ten times. Each time they measured the distance, and it was always 25 inches, give or take an inch. They did the same with my sister and she gave the same measurement...But I don't understand what the problem is--Lee could have taken the rifle in on another day and hidden it in the warehouse. Why did he have to take it in on Friday?"* Many years later, Frazier returned to this question, telling Hugh Aynesworth in a November 16, 2008 Dallas Morning News article: *"I know what I saw, and I've never changed one bit"* and declaring, when asked his response to the Warren Commission's disregard of his testimony, *"I wasn't surprised. They seemed to have a pre-arranged agenda when they questioned Linnie and me. Our refusal to agree with their agenda simply caused them to state that we were mistaken."* And this wasn't his last word on the subject. An April 1, 2013 article in the Dallas Morning News described a recent appearance of Frazier, along with Aynesworth, at the Irving Central Library, and noted *"To this day, Frazier insists that the package Oswald took to work wasn't long enough or big enough around to hold a rifle — even if its stock had been disassembled from the barrel."*

What Frazier fails to appreciate, it seems, is that Oswald hadn't been to the Paine residence, where his

rifle had been in storage, for more than a week, and that the paper bag purportedly found in the depository on 11-22 and believed to have held Oswald's gun, had been made with paper believed to have come from the roll of paper in use on 11-22-63. As these rolls were replaced every few days, the commission had little choice but to propose that Oswald had made the paper bag at work on the 21st, transported it to the Paine residence after work, and used it to transport the rifle into the building on the 22nd. There were but two roadblocks to their selling this scenario: Frazier and his sister, and the Warren Commission couldn't accept them at their word without simultaneously calling into question the progeny of the paper bag supposedly found in the sniper's nest, and submitted into evidence by the DPD and FBI. In retrospect, he should see, he never stood a chance.)

After the testimony of Frazier and Randle, FBI agent Cortlandt Cunningham testifies, and reveals yet another problem with the "Oswald brought the rifle in the bag" theory. In order to fit the rifle in the bag, the rifle would have to have been dismantled. If it was dismantled to fit in the bag, however, it would have to have been re-assembled before it could be fired. Cunningham testifies that the rifle could be re-assembled in two minutes using a screwdriver. No screwdriver was found in the sniper's nest. No screwdriver was found on Oswald. No screwdriver was found in Oswald's rented room. To the Commission's credit, they ask Cunningham if the rifle could be assembled without the use of a screwdriver. He says it could be assembled with a dime. They time him assembling it with a dime. It takes him six minutes. (2H251-253).

(Note: there is reason to believe Cunningham rehearsed this assembly, in order to get it "right." As reported in a November 1994 article, and in a subsequent book *No Case to Answer*, Ian Griggs, a former policeman, bought an M/C rifle and familiarized himself with its parts before attempting to replicate Cunningham's purported assembly of an M/C rifle using only a dime in six minutes. He was unable to do so. While he concluded the assembly of a rifle of this type using only a dime was possible, he reported that it was quite difficult for him to turn the screws, and that he, in fact, gave up after running overtime on several attempts and developing two blood blisters on his fingers, and a cut on his right thumb.)

In any event, Bonnie Ray Williams was on the sixth floor only a few yards away from the sniper's nest until about 10 minutes before the assassination. He said he heard nothing from that direction. Not the rustling of the paper as the dismantled rifle was removed from the bag. Not the sounds of someone assembling a rifle made of metal and wood with a dime. If Oswald had put the rifle together somewhere else in the building, why would the bag be found in the sniper's nest? And if he put the rifle together in the sniper's nest, why didn't Williams hear him? Did he finish putting the rifle together just before Williams arrived? Or did he have just enough time to put the rifle together after Williams left? This issue has, as one might expect, never been resolved.

But there is another aspect to Cunningham's testimony that is even more troubling. Cunningham worked in the FBI's ballistics department. He test-fired the rifle numerous times. Since, as anyone familiar with guns knows, the assembly of a rifle inevitably affects its accuracy, why hadn't Cunningham test-fired the rifle immediately after its re-assembly, to see if it remained accurate enough to hit the shots purportedly made by Oswald? And, assuming he hadn't thought of it, why didn't the Warren Commission ask him to perform the tests anyway? Certainly someone on the Commission must have realized that what they were asking of this rifle--that it be disassembled, wrapped up in a paper bag, carried around, re-assembled with a dime, and still fire accurately from its very first shot--was highly unlikely? This issue, not surprisingly, has never been resolved.

But if the behavior of Eisenberg and Ball is questionable, it's not because they are the only staff members to have already made up their minds. In mid-March, a memo to Rankin from Commission historian Alfred Goldberg regarding a proposed outline for the final report reflects that "*Part IV: Analysis of Theories and Rumors should be relatively brief because it will deal with the great variety of*

the autopsy, the FBI's report repeating their conclusions on the autopsy, nor Specter's memo discussing their recollections, will be published by the Commission in its 26 volumes of evidence in November. Only after researchers uncover and publish the FBI's differing account of the wounds, in 1966, does J. Edgar Hoover come forward and admit the FBI neglected to read the autopsy report in a timely fashion, and that this led them to base their findings on the initial statements of the doctors to Agents Sibert and O'Neill at the autopsy. Sibert and O'Neill, however, never change their minds about the back wound, and to the present day insist the back wound was a shallow wound below the shoulder line and that there was no path connecting it to the throat wound. One can only wonder then what would have happened had Specter called them before the Commission.)

On 3-16, Specter takes the testimony of the three autopsy doctors, **Dr. James J. Humes, Dr. J. Thornton Boswell, and Dr. Pierre Finck**. As requested by Specter on 3-11, Dr. Humes brings along three drawings created by a young Navy artist, Skip Rydberg. These drawings portray the back wound at the base of the neck and significantly higher than the throat wound and suggestive of a shot from above and behind. The location of this back wound is also, most obviously, at odds with the previously received testimony of agents Kellerman and Greer, and the recently-reviewed report of agents Sibert and O'Neill. Humes testifies that *"We had made certain physical measurements of the wounds, and of their position on the body of the late president, and we provided these and supervised directly Mr. Rydberg in making these drawings."* We have reason to believe this is untrue. The autopsy protocol written by Humes and in our possession reports "Situated in the upper right posterior thorax just above the upper border of the scapula there is a 7 x 4 millimeter oval wound. This wound is measured to be 14 cm. from the tip of the right acromion process and 14 cm. below the tip of the right mastoid process." We do a quick measurement and see that the wound at the base of the neck in the drawing is no more than 10 cm below the mastoid process. We also look up the word "thorax" in some medical dictionaries. Gray's Anatomy specifies that "The thorax or chest, is an osseo-cartilaginous cage containing and preserving the principle organs of respiration and circulation...The upper opening of the thorax is ...formed by the first dorsal vertebrae behind, the upper margin of the sternum in front, and the first rib on each side." Blankiston's Pocket Medical Dictionary describes it as "The chest; the portion of the trunk above the diaphragm and *below the neck*." The Human Organism defines "thorax" as "The Chest, the portion of the trunk that contains the heart and lungs." Ottenheimer's Medical Dictionary defines it simply as "The chest." As the wounds in Rydberg's drawings are in the muscles at the base of the neck, and could not reasonably be described as on the back of the chest, we conclude Humes misrepresented the location of the back wound in the drawings.

While questioning Humes, moreover, Specter inquires about a wound in the "upper part of the back" or "the President's back or lower neck" and asks Dr. Finck about a "back wound." Humes, however, repeatedly describes the back wound as a wound in the "low neck," "low neck," "low posterior neck," or as being "low in the neck." This seems to be a deliberate ploy, on Humes' part, to sell that this wound, formally described as a back wound, was really a wound low on the back of the neck.

We wonder if Specter is orchestrating Humes' deception. Something is rotten in Denmark and Specter has to smell it.

(His partner in the investigation, Francis Adams, almost certainly smelled something. In Specter's 2000 autobiography Passion for Truth he claimed that, although he hadn't been around much in the previous weeks or even participated in a brief discussion with the autopsy doctors a few days before, Francis Adams showed up to work for the commission on the day the doctors were to be questioned, only to leave for good after Chief Justice Warren mistook him for one of the doctors. While Specter makes out that Adams' unhappy departure was ultimately due to his refusal to commit to the large workload needed to perform the tasks before him, there's almost certainly more to it, as Specter in his book approvingly quotes fellow counsel David Belin's assertion Warren's decision not to replace

*Adams as both "political" and "chilling." I mean, if it was just a matter of Adams' being too busy, why would Warren dump his work on Specter, forcing Specter to leave many of the tasks he'd outlined in his February memos undone? Why wouldn't he have just split these responsibilities up among others? What was Warren trying to hide? Perhaps this...surprise, surprise, Specter was not telling the truth in his self-serving autobiography *Passion for Truth*. Adams did not just disappear after March 16. Adams, in fact, re-appeared on May 25, 1964, to conduct the lengthy and involved questioning of Kennedy assistant Lawrence O'Brien. This, then, suggests that Adams did not stop working for the commission on March 16, as claimed by Specter, but instead stopped working with one person in particular...Arlen Specter. Well, why? One can only guess. But Specter's having met with the autopsy doctors without Adams' being present, and convincing them to have schematics made depicting the shooting (in which the wound below the shoulder described in both the autopsy report and the FBI report on the autopsy suddenly and mysteriously transformed itself into a wound at the base of the back of the neck) may have been too much for Adams, a successful and wealthy attorney in his own right, without the driving political ambition of his much-younger colleague.)*

We try to talk to Rydberg about his drawings, but he tells us he's been sworn to silence by his and Humes' Commanding Officer, Captain John Stover. A few weeks later, however, he shows us a 3-27 commendation letter from Stover that tells us all we need to know. It says, in part "During the period 12 to 15 March 1964 you were called upon to prepare, on extremely short notice, highly technical medical illustrations, using *only verbal directions* given you by officers of this Command...The illustrations thus produced *most accurately depicted the situation required* and immeasurably assisted the medical presentation."

(While there is no reason to believe anyone working for the Commission actually saw this letter, published online by Barry Keane, an April 30 memo from Specter to General Counsel J. Lee Rankin reveals that he suspects or knows that the location of the back wound in Rydberg's drawings is inaccurate, and that he wishes to establish the actual location. Much, much more on this in the Examining the Examinations chapter.)

The Sin of Pride

A storm is brewing. On 3-11, Warren Commission Counsel Melvin Eisenberg and David Belin visit the FBI crime lab. An internal FBI memo to FBI crime lab chief Ivan Conrad reflects the growing tension: "*During the further course of the discussion, Mr. Belin advised that inasmuch as it appeared that almost all of the investigation in this matter had been conducted by the FBI, and since the firearms identification was crucial to the case, the Commission felt that there was merit in having the firearms evidence examined by some other organization and was considering making such a request. Under any other circumstances a comment of this kind would have been the basis for an immediate discontinuance of FBI Laboratory cooperation and service; however, Belin was merely advised in this instance that any decision as to such course of action, of course, was strictly up the Commission.*" To this memo FBI Director Hoover adds that it is "*getting to be more and more intolerable to deal with this Warren Commission.*"

This problem comes to a head a few weeks later. According to a 3-24 memo from Alex Rosen to Alan Belmont: "*This matter was discussed with J. Lee Rankin, General counsel, the President's Commission, in the early evening of March 23, 1964. Mr. Rankin was advised that in view of the action taken by the Commission concerning the firearms evidence, it was obvious the Commission does not have confidence in the FBI Laboratory, and that in view of the independent examinations being requested, it would appear desirable for the Commission to have whatever examination they desire from independent experts made and for the Bureau to step out of the picture from the standpoint of Laboratory examinations. It was pointed out to Mr. Rankin that our Laboratory was greatly burdened with a large volume of work and that if the examinations that we made were not going to be accepted,*

it would appear that there would be no reason for our Laboratory experts to be tied up on these examinations in utilizing the time it requires to furnish testimony concerning matters where independent examinations are being made...Throughout the discussion, Mr. Rankin seemed to be a little disturbed over the Bureau pointing out to him that the Commission obviously lacked confidence in our Laboratory and he repeatedly commented that the independent examinations of evidence were being made at the instructions of the seven members of the Commission. He gave no indication, however, whether this was the desire of certain members of the Commission and others were going along, or whether the Commission was in full agreement concerning this matter."

It is clear from these memos that the FBI considers itself above the Commission, and answerable to the "President's Commission" only as a courtesy. The Commissioners, no doubt, know that dumping the FBI as their main investigative agency would be a political nightmare, and that Hoover would use his media sources to make it look like the Commissioners had gone overboard, and were wasting taxpayers' money. And Rosen knows the Commissioners know this. His threats, then, are really a warning: stop requesting outside help, which could only hurt the reputation of the FBI, or else.

(These threats were far from idle, and, although the Commission proceeded to use a few outside experts, they seem to have had an effect on the Commission's investigation. By way of example...On 3-26, while preparing for the testimony of the FBI's fingerprint expert, Sebastian Latona, the Commission realizes that there were 19 fingerprints and 6 palm prints found on the cardboard boxes of the sniper's nest that were not Oswald's prints. J. Lee Rankin then writes Director Hoover a memo and asks him if they could "please determine, as far as may be possible without the taking of new fingerprints, whether any of these latent prints were made by persons employed in the TSBD building on November 22, 1963." Notice that he doesn't ask them to run the prints through their files and find out whose prints these actually are--the entire FBI's Most Wanted list could have been in the sniper's nest, and he cared not a wit--he only asks them to check them against Oswald's co-workers, and then only if the FBI already has their prints. This suggests that Rankin is more concerned with not causing Hoover any unnecessary inconvenience than with finding out who was in the sniper's nest on 11-22-63. For his part, on 3-30, Hoover writes back, and tells Rankin "For your information, employees of the Texas School Book Depository were not fingerprinted or palm printed by this Bureau, the United States Secret Service or the Dallas Police Department." He then tells Rankin that the FBI checked their files and found the fingerprints for 16 individuals believed to have been depository employees, and that none of them matched the 19 unidentified prints. And that's that. On 4-2, Latona testifies that the prints are unidentified. It's not until late August that Rankin realizes the magnitude of this over-sight, and asks the FBI to identify the prints.)

On with the Show

On **3-18**, two of the three men on the floor below the sniper's nest testify they heard the last two shots the same way as the two men in the front seat of the limousine--with the last two shots close together. The third man's earlier statements suggested this as well. **James Jarman (3-18-64** statement to the FBI, 22H655) "At the time President Kennedy was shot I was at the third window from the east side on the fifth floor. I was with Harold Norman...and Bonnie Ray Williams." (**3-24-64** testimony before the Warren Commission, 3H198-211) "After the motorcade turned, going west on Elm, then there was a loud shot, or backfire, as I thought it was...A backfire or an officer giving a salute to the President. And then at that time I didn't, you know, think too much about it. And then the second shot was fired, and that is when people started falling on the ground and the motorcade car jumped forward, and then the third shot was fired right behind the second one...after the third shot was fired, I think I got up and I run over to Harold Norman and Bonnie Ray Williams, and told them, I said, I told them that it wasn't a backfire or anything, that somebody was shooting at the President...I couldn't say that I saw him actually hit, but after the second shot I presumed that he was...I saw him lean his head." **Harold**

Norman (3-18-64 statement to the FBI, 22H666) “I was with James Jarman and Bonnie Ray Williams watching the motorcade bearing President John F. Kennedy pass the Texas School Book Depository Building when I heard three shots fired from, I believe, the floor directly above me.” **(3-24-64** testimony before the Warren Commission, 3H186-198) “About the time that he got past the window where I was, well, it seems as though he was, I mean you, brushing his hair. Maybe he was looking at the public...I can’t remember what the exact time was but I know I heard a shot, and then after I heard a shot, well, it seems as though the President, you know, slumped or something, and then another shot and I believe Jarman or someone told me, he said “I believe someone is shooting at the President,” and I think I made a statement “it is someone shooting at the President, and I believe it came from up above us. Well, I couldn’t see at all during the time but I know I heard a third shot fired, and I could also hear something sounded like the shell hulls hitting the floor and the ejecting of the rifle.” **Bonnie Ray Williams (3-24-64** testimony before the Warren Commission, 3H161-184) “After the President’s car the last thing I remember seeing him do was, you know—it seemed to me he had a habit of pushing his hair back. The last thing I saw him do was he pushed his hand up like this. I assumed he was brushing his hair back. And then the thing that happened then was a aloud shot—first I thought they were saluting the President, somebody even maybe a motorcycle backfire. The first shot—there was two shots rather close together. The second and the third shot was closer together than the first shot and the second shot, as I remember...the first shot—I really did not pay much attention to it, because I did not know what was happening. The second shot it sounded like it was right in the building, the second and third shot. And it sounded—it even shook the building.”

Throughout March, the FBI interviews just about everyone who was up on the railroad bridge watching the motorcade. While Frank Reilly, George Davis, Clemon Johnson, Walter Winborn, Nolan Potter, James Simmons, Ewell Cowsert, Curtis Bishop, and Thomas Murphy don’t tell us much of about the shots, two other railroad bridge witnesses confirm the statements of Sam Holland and Royce Skelton, and describe a shot after the head shot **Richard Dodd (3-18-64** FBI report, 22H835) “when the motorcycle escort and the automobile carrying President Kennedy approached the area where he was standing his attention was directed on President Kennedy...he saw president Kennedy slump forward and simultaneously heard shots ring out. He stated he did not know how many shots were fired, but that the sounds were very close together.” **Double head shot. J.W. Foster** was the police officer on top of the railroad bridge. **(3-26-64** FBI report, CD897 p.20-21) “Just as the vehicle in which President Kennedy was riding reached a point on Elm Street just east of the underpass, Patrolman Foster heard a noise that sounded like a large firecracker...he realized something was wrong because of the movement of the President. Another report was heard by Patrolman Foster and about the same time the report was heard, he observed the President’s head appear to explode and immediately thereafter, he heard a third report which he knew was a shot.” **(4-9-64** testimony before the Warren Commission, 6H248-253) “After he came onto Elm...I heard a loud noise, sounded like a large firecracker. Kind of dumbfounded at first, and then heard the second one. I moved to the banister of the overpass to see what was happening. Then the third explosion.” **Shot after the head shot.**

During this same period the FBI questions just about everyone who worked in the Texas School Book Depository. Strangely, even though a number of these witnesses admit they were standing on Elm Street when the motorcade passed by, very few of them are asked what they witnessed. Based upon their statements, in fact, it seems all the FBI wanted to know from these witnesses was where they were when the shots rang out and if they knew Oswald. Among the women not saying much of anything: Gloria Holt, Sharon Simmons, Stella Jacob, Carol Reed, Karen Hicks, Gloria Calvery, Billie Clay, Peggy Hawkins, Mary Sue Dickerson, Mary Lea Williams, Betty Thornton, Jane Berry, and Karen Westbrook.

One witness, however, tells us something. **Georgia Ruth Hendrix (3-24-64** statement to the FBI,

22H649) reveals "At approximately 12:15 PM on November 22, 1963, I left the Depository Building and took up a position along the parade route along Elm Street about 150 feet west from the Depository Building entrance and viewed the presidential motorcade... I recall that just a few seconds after the car in which President John F. Kennedy was riding passed the position where I was standing, I heard a shot. At first I thought it was salute to the President, but when the second shot was fired and I saw the President fall down in the car I knew someone was shooting at him. When I heard the third shot I turned and fled back into the Depository Building." **Shot after the head shot.**

In March we also get the sworn testimony of the one man to ever claim he saw Oswald fire the rifle. **Howard Brennan (3-24-64)** testimony before the Warren Commission, 3H140-161) "I told Mr. Sorrels and Captain Fritz at that time that Oswald--or the man in the lineup that I identified looking more like a closest resemblance to the man in the window than anyone in the lineup...I saw his picture twice on television before I went down to the police station for the lineup...I told them I could not make a positive identification...I believe some days later--I don't recall exactly--and I believe the Secret Service man identified himself as being Williams, I believe, from Houston. I won't swear to that--whether his name was Williams or not...Well, he asked me he said, 'You said you couldn't make a positive identification.' He said, 'Did you do that for security reasons personally, or couldn't you?' And I told him I could with all honesty, but I did it more or less for security reasons--my family and myself...I believed at that time, and I still believe it was a Communist activity, and I felt like there hadn't been more than one eyewitness, and if it got to be a known fact that I was an eyewitness, my family or I, either one, might not be safe...After Oswald was killed, I was relieved quite a bit that as far as pressure on myself of somebody not wanting me to identify anybody, there was no longer that immediate danger...(When asked if he could have sworn that Oswald was the shooter when he saw Oswald in the line-up) I could at that time I could, with all sincerity, identify him as being the same man."

We have reason to doubt Brennan's story. First, by his own admission, he lied to the Dallas Police and Secret Service and said he could not identify Oswald when he could. Second, he says he felt relief when Oswald was killed, even though Oswald's death at the hands of Ruby made a conspiracy, communist or otherwise, only more likely. Third, the whole series of events surrounding Brennan just doesn't ring true. On 11-22 Brennan had signed a statement (19H470), asserting "I believe that I could identify this man if I ever saw him again." He then refused to ID Oswald in a line-up. An 11-23-63 FBI report (CD5 p12) confirms "He advised he attended a lineup at the Dallas Police Department on November 22, 1963 on which occasion he picked Lee Harvey Oswald as the person most closely resembling the man he had observed with the rifle in the window of the Texas School Book Depository building. He stated, however, he could not positively identify Oswald as the person he saw fire the rifle." This means, if Brennan's testimony is to be believed, that he lied to the FBI as well as the Dallas Police and Secret Service.

To make things worse, Brennan didn't admit his deception until weeks after Oswald's death, after the nation had been assured of Oswald's sole guilt by the FBI's leaks to the media, and he did so then only at the urging of the government. A 12-18-63 FBI report on a 12-17 interview (CD205, p15) relates that Brennan "now can say that Lee Harvey Oswald was the person he saw in the window at the time of the President's assassination. He pointed out that he felt a positive identification was not necessary when he observed Oswald in the police line-up at the Dallas Police Department at about 7 P.M., November 22, 1963, since it was his understanding Oswald had already been charged with the slaying of Dallas Police Officer J.D. Tippit. He said that another factor which made him hesitate to make a positive identification of Oswald in the police line-up was that prior to appearing at the police line-up on November 22, 1963, he had observed a picture of Oswald on his television set at home when his daughter asked him to watch it. He said that he felt that since he had seen Oswald on television before picking Oswald out of the line-up at the police station that it tended to "cloud" any identification of

Oswald at that time." The problem with this report is that it leaves out a couple of the important elements of Brennan's testimony. For one, it fails to report that Brennan was coerced to come forward by a government agent. For two, it fails to relate that Brennan had failed to identify Oswald because he'd been in fear for his life. Instead it explains that Brennan had seen Oswald on television and that he was afraid that this had "clouded" his judgment. Pathetically, it even blames his viewing Oswald on his daughter. What it does not relate--which is key--is Brennan's response to seeing Oswald on television. Clearly, if his eventual testimony is to be believed, he would have to have had an immediate response to seeing Oswald on television. If he felt Oswald was the man from seeing him on television, then why didn't he say so later? And if he knew Oswald was the shooter from the first time he saw him on television, then why is his seeing Oswald on TV before the line-up even an issue?

That the FBI refused to put much stock in Brennan's subsequent positive ID of Oswald is confirmed by a 1-10-64 report based on a 1-07-64 re-interview of Brennan (CD329 p7). It concludes: "Mr. Brennan added that after his first interview at the Sheriff's office, on November 22, 1963, he left and went home at about 2 P.M. While he was at home, and before he returned to view a lineup, which included the possible assassin of President Kennedy, he observed Lee Harvey Oswald's picture on television. Mr. Brennan said that this, of course, did not help him retain the original impression of the man in the window with the rifle; however, upon seeing Lee Harvey Oswald in the police line-up, he felt that Oswald most resembled the man whom he had seen in the window." (This wasn't saying much, as the other men only marginally resembled Brennan's earlier description of the man in the window.) Here, there is no mention of Brennan's telling an agent almost a month after the shooting that "Oh, by the way, I knew it was Oswald all the time!" and that he did so now at a government agent's urging. Here, there is still no hint that Brennan had been too frightened to identify Oswald on the 22nd. As a result, it seems likely that Brennan was unable to ID Oswald based on the picture he saw on television, and was unsure whether his subsequent belief that Oswald, of the four divergent men in the line-up, "most resembled" the shooter, was based on his own recollections, or by his seeing Oswald on television. This makes his subsequent positive Identification of Oswald, at a government agent's urging, essentially worthless.

Even so, Brennan proves he has some credibility by refusing to say he heard two shots fired from the sniper's nest before he saw Oswald fire his last shot. When taken with the statements of all the other witnesses, this suggests that one of the last two shots came from somewhere else. Brennan testifies: "after the President had passed my position, I really couldn't say how many feet or how far, a short distance I would say, I heard this crack that I positively would say was a backfire... Well, then something, just right after this explosion, made me think it was a firecracker being thrown from the Texas book store. And I glanced up. And this man I saw previous was aiming for his last shot... it appeared to me he was standing up or leaning against the left window sill, with gun shouldered to his right shoulder, holding the gun with his left hand and taking positive aim and fired his last shot. As I calculate a couple of seconds. He drew the gun back from the window as though he was drawing it back to his side and maybe paused for another second as though to assure himself that he hit his mark and then he disappeared. And at the same moment, I was diving off of approximately that firewall and to the right for bullet protection of this stone wall that is a little higher on the Houston side... I don't know what made me think that there was firecrackers throwed out of the book store unless I did hear the second shot, because I positively thought the first shot was a backfire, and subconsciously I must have heard a second shot but I do not recall it. I could not swear to it."

Time Out: A Quick Glimpse of the Warren Commission at Work.

On **3-30-64**, Dr. Malcolm Perry testifies before the Warren Commission. Despite his stated objective of finding a transcript for Dr. Perry's November 22nd press conference, Arlen Specter has failed to obtain one, and instead interviews Dr. Perry about his *recollections* of the press conference. Not

surprisingly, Perry's memory is that he made no solid statements about Kennedy's wounds, and that the media misrepresented what he said. While it might sound overly-conspiratorial to suggest that Specter and the Warren Commission would deliberately mislead the public by using the flawed recollections of witnesses when concrete evidence was available, the fact is they have employed this technique before. On 3-16-64, when the autopsy doctors testified about Kennedy's wounds, they were asked to do so without referring to the autopsy photos and x-rays taken for the express purpose of assisting them with their testimony. Even worse, Specter asked them to create drawings based purely upon their *recollections* of the President's wounds, and then placed these drawings into evidence.

Here, then, is Dr. Perry's testimony about the press conference:

Dr. Perry - *Mr. Specter, I would preface this by saying that, as you know, I have been interviewed on numerous occasions subsequent to that time, and I cannot recall with accuracy the questions that were asked. They, in general, were similar to the questions that were asked here. The press were given essentially the same, but in no detail such as have been given here. I was asked, for example, what I felt caused the President's death, the nature of the wound, from whence they came, what measures were taken for resuscitation, who were the people in attendance, at what time was it determined that he was beyond our help.*

Mr. Specter - *What responses did you give to questions relating to the source of the bullets, if such questions were asked?*

Dr. Perry - *I could not. I pointed out that both Dr. Clark and I had no way of knowing from whence the bullets came. (This is not true. At one point, Dr. Perry said "There was an entrance wound in the neck. As regards the one on the head, I cannot say.")*

Mr. Specter - *Were you asked how many bullets there were?*

Dr. Perry - *We were, and our reply was it was impossible with the knowledge we had at hand to ascertain if there were 1 or 2 bullets, or more. We were given, similarly to the discussion here today, hypothetical situations. "Is it possible that such would have been the case, or such and such?" If it was possible that there was one bullet. To this, I replied in the affirmative, it was possible and conceivable that it was only one bullet, but I did not know.*

Mr. Specter - *What would the trajectory, or conceivable course of one bullet have been, Dr. Perry, to account for the injuries which you observed in the President, as you stated it?*

Dr. Perry - *Since I observed only two wounds in my cursory examination, it would have necessitated the missile striking probably a bony structure and being deviated in its course in order to account for these two wounds.*

Mr. Specter - *What bony structure was it conceivably?*

Dr. Perry - *It required striking the spine.*

Mr. Specter - *Did you express a professional opinion that that did, in fact, happen or it was a matter of speculation that it could have happened?*

Dr. Perry - *I expressed it as a matter of speculation that this was conceivable. But, again, Dr. Clark and I emphasize that we had no way of knowing.*

Mr. Specter - *Have you now recounted as specifically as you can recollect what occurred at that first press conference or is it practical for you to give any further detail to the contents of that press conference?*

Dr. Perry - *I do not recall any specific details any further than that--*

Representative Ford - *Mr. Specter was there ever a recording kept of the questions and answers at that interview, Dr. Perry?*

Dr. Perry - *This was one of the things I was mad about, Mr. Ford. There were microphones, and cameras, and the whole bit, as you know, and during the course of it a lot of these hypothetical situations and questions that were asked to us would often be asked by someone on this side and recorded by some one on this, and I don't know who was recorded and whether they were broadcasting*

it directly. There were tape recorders there and there were television cameras with their microphones. I know there were recordings made but who made them I don't know and, of course, portions of it would be given to this group and questions answered here and, as a result, considerable questions were not answered in their entirety and even some of them that were asked, I am sure were misunderstood. It was bedlam.

Representative Ford - *I was thinking, was there an official recording either made by the hospital officials or by the White House people or by any government agency?*

Dr. Perry - *Not to my knowledge.*

Representative Ford - *A true recording of everything that was said, the questions asked, and the answers given?*

Dr. Perry - *Not to my knowledge.*

Mr. Dulles - *Was there any reasonably good account in any of the press of this interview?*

Dr. Perry - *No, sir.*

Representative Ford - *May I ask--*

Dr. Perry - *I have failed to see one that was asked.*

Representative Ford - *In other words, you subsequently read or heard what was allegedly said by you and by Dr. Clark and Dr. Carrico. Were those reportings by the news media accurate or inaccurate as to what you and others said?*

Dr. Perry - *In general, they were inaccurate. There were some that were fairly close, but I, as you will probably surmise, was pretty full after both Friday and Sunday, and after the interviews again, following the operation of which I was a member on Sunday, I left town, and I did not read a lot of them, but of those which I saw I found none that portrayed it exactly as it happened. Nor did I find any that reported our statements exactly as they were given.*

They were frequently taken out of context. They were frequently mixed up as to who said what or identification as to which person was who.

Representative Ford - *This interview took place on Sunday, the 24th, did you say?*

Dr. Perry - *No, there were several interviews, Mr. Ford. We had one in the afternoon, Friday afternoon, and then I spent almost the entire day Saturday in the administrative suite at the hospital answering questions to people of the press, and some medical people of the American Medical Association. And then, of course, Sunday, following the operation on Oswald, I again attended the press conference since I was the first in attendance with him. And, subsequently, there was another conference on Monday conducted by the American Medical Association, and a couple of more interviews with some people whom I don't even recall.*

Representative Ford - *Would you say that these errors that were reported were because of a lack of technical knowledge as to what you as a physician were saying, or others were saying?*

Dr. Perry - *Certainly that could be it in part, but it was not all. Certainly a part of it was lack of attention. A question would be asked and you would incompletely answer it and another question would be asked and they had gotten what they wanted without really understanding, and they would go on and it would go out of context. For example, on the speculation on the ultimate source of bullets, I obviously knew less about it than most people because I was in the hospital at the time and didn't know the circumstances surrounding it until it was over. I was much too busy and yet I was quoted as saying that the bullet, there was probably one bullet, which struck and deviated upward which came from the front, and what I had replied was to a question, was it conceivable that this could have happened, and I said yes, it is conceivable. I have subsequently learned that to use a straight affirmative word like "yes" is not good relations; that one should say it is conceivable and not give a straight yes or no answer. "It is conceivable" was dropped and the "yes" was used, and this was happening over and over again. Of course, Shires, for example, who was the professor and chairman of the department was identified in one press release as chief resident.*

(Dr. Perry's insistence that his words were taken out of context at the press conference is self-serving and inaccurate. Nobody trapped him into saying anything that he didn't suggest with his own statements. From the transcript: "DR. MALCOM PERRY... There are two wounds, as Dr. Clark noted, one of the neck and one of the head. Whether they are directly related or related to two bullets, I cannot say. QUESTION- Where was the entrance wound? DR. MALCOLM PERRY- There was an entrance wound in the neck. As regards the one on the head, I cannot say. QUESTION- Which way was the bullet coming on the neck wound? At him? DR. MALCOLM PERRY- It appeared to be coming at him..)

Moments later, Arlen Specter returns to the topic of the November 22nd press conference:

Mr. Specter - *"we have been trying diligently to get the tape records of the television interviews, and we were unsuccessful. I discussed this with Dr. Perry in Dallas last Wednesday, and he expressed an interest in seeing them, and I told him we would make them available to him prior to his appearance, before deposition or before the Commission, except our efforts at CBS and NBC, ABC and everywhere including New York, Dallas and other cities were to no avail. The problem is they have not yet cataloged all of the footage which they have, and I have been advised by the Secret Service, by Agent John Howlett, that they have an excess of 200 hours of transcripts among all of the events and they just have not cataloged them and could not make them available.*

(Howlett was, intriguingly, the same Secret Service Agent who ignored all the eyewitness testimony, even the testimony of his fellow agents, and determined the order of the shots simply by watching the Zapruder film.)

Mr. Dulles - *Do you intend to catalog them?*

Mr. Specter - *Yes, they do, Mr. Dulles. They intend to do that eventually in their normal process, and the Secret Service is trying to expedite the news media to give us those, and it was our thought as to the film clips, which would be the most direct or the recordings which would be the most direct, to make comparisons between the reports in the news media and what Dr. Perry said at that time, and the facts which we have from the doctors through our depositions and transcript today.*

Representative Ford - *Can you give us any time estimate when this catalog and comparison might be made?*

Mr. Specter - *Only that they are working on it right now, have been for sometime, but it may be a matter of a couple of weeks until they can turn it over.*

(These last few exchanges are priceless. Dulles asks Specter if he plans on going through the transcripts and he responds by saying that the Secret Service is going to help him. He then estimates that it should only take a few weeks. The Commissioners were, in fact, never provided with the transcript, and one was not uncovered for more than a decade. It was created by the White House staff and was found, not surprisingly, in the LBJ Library. No one knows what became of the original recordings seized by the Secret Service. But it seems quite possible they were made to disappear.)

(Discussion off the record.) (God only knows what they talked about.)

Mr. McCloy - *Mr. Chairman, I have some doubt as to the present propriety of making, of having the doctor make, comments in respect to a particular group of newspaper articles. There have been comments, as we all know, around the world, of great variety and great extent, and it would be practically impossible, I suppose, to check all of the accounts and in failing to check one would not wish to have it suggested that others, the accuracy of others was being endorsed. I would suggest that the staff make an examination of the files that we have of the comments, together with such tape recordings as may have been taken of the actual press conferences, and after that examination is made*

we can then determine, perhaps a little more effectively, what might be done to clarify this situation so that it would conform to the actual statements that the doctor has made.

Mr. Dulles - Well, Mr. McCloy, it is quite satisfactory with me and I agree with you we cannot run down all of the rumors in all of the press and it is quite satisfactory with me to wait and see whether we have adequate information to deal with this situation when we get in the complete tapes of the various television, radio and other appearances, so that we have a pretty complete record of what these two witnesses and others have said on the points we have been discussing here today. So I quite agree we will await this presentation to the doctors until we have had a further chance to review this situation. What I wanted to be sure was that when we are through with this we do have in our files and records adequate information to deal with a great many of the false rumors that have been spread on the basis of false interpretation of these appearances before television, radio, and so forth and so on.

And with that, Dr. Perry's public and properly quoted description of Kennedy's throat wound as an "entrance wound" is successfully disposed of as a "false rumor" spread by an over-zealous media...

Chapter 3b: Men at Work

A look at the Commission's attempts to get their story straight...

High and to the Right

A comparison of Warren Commission Exhibits CE 548, 549, and 550 indicates that something was amiss with Robert Frazier's 3-31-64 testimony before the Warren Commission.

On 11-27-63, in order to determine the accuracy and speed of the Mannlicher-Carcano rifle found in the depository, the FBI ran a series of tests. Agents Cunningham and Frazier fired three rounds each on CE 548, above, in 8 and 5.9 seconds, respectively. These shots landed 4 inches high and 1 inch to the right, a distance depicted by the red line.

Red lines stretch approximately 4 inches above and 1 inch right of the aiming point

Agent Killion then fired three rounds on CE 549, above, in 9 seconds. His shots landed approximately 2 1/2 inches high and 1 inch to the right. As the shots fired on CE 548 and CE 549 were fired from but 15 yards away, it's clear the rifle, while consistent, was misaligned. It was then decided to further test the speed at which the rifle could be fired.

And so Frazier fired two sets of three shots each on CE 550, above, from 25 yards. He did this in 4.8 and 4.6 seconds. While Frazier would later testify that these shots, save one, landed "4 to 5 inches high", and that the first three landed "1 to 2 inches to the right of the aiming point," it's clear he was incorrect. A comparison with CE 548 and 549 proves the bulk of the shots landed 6 to 8 inches high, and that all of them landed between 2 and 5 1/2 inches to the right of the center of the circle.

High and to the Right

On 3-31-64, the testimony of two weapons experts casts grave doubt on the theory that Oswald fired all the shots. Under questioning by Melvin Eisenberg, FBI ballistics expert **Robert Frazier** testifies that on 11-27-63 he and two other ballistics examiners fired the rifle found in the depository in order to judge both the speed at which three shots could be fired, and the accuracy of those shots. He relates that, when firing on targets but 15 yards away, agent *"Killion fired in 9 seconds... (agent) Cunningham fired his three shots in 8 seconds and I fired my three shots in 5.9 seconds."* He testifies further that, after moving to a 25 yard range, he attempted to fire the rifle as rapidly as possible, and was able to fire three times in 4.6 seconds, and then 4.8 seconds. He then relates that on March 16, 1964, after adjusting the rifle to make it fire as accurately as possible while using the scope, he fired on outdoor targets at 100 yards, and was able to fire three shots in 5.9, 6.2, 5.6, and 6.5 seconds, respectively. When asked by counsel Eisenberg if firing at a moving target would have lengthened these times, he states *"It would have lengthened the time to the extent of allowing the crosshairs to pass over the moving target."* When asked how long this would take, he answers *"Approximately 1 second. It would depend on how fast the target was moving."* When asked if increased familiarity with the rifle would have helped him shorten his time, he replies *"Oh yes"* but then talks about how it would improve his accuracy. He eventually answers the question in the negative by replying *"4.6 is firing this weapon as fast as the bolt can be operated, I think."*

(The date of this last test is intriguing. Let's recall that a January 9, 1964 column by Allen and Scott reported that the FBI had been asked to conduct more tests on the speed at which the rifle could be fired. Well, here are the tests, only two months later... Hmmmm... This gives us something to think about. Let's reflect...should these March tests have proved that Oswald could not have acted alone, would Hoover have even allowed this information be given to the Commission? Would he have risked criticism that he'd dragged his feet while Oswald's accomplices escaped? One can only assume "No". Then what follows is that Hoover and the FBI knew that no matter what these tests showed, they were not to be used to suggest that more than one shooter was involved.)

But if Frazier's testimony raises questions about Oswald's ability to fire all the shots, and the FBI's honesty about this ability, it raises even more questions about the accuracy of the weapon purportedly used by Oswald. Frazier tells the Commission that the first six shots fired by the FBI on 11-27 hit 4 inches high and 1 inch to the right at only 15 yards. He says the next three hit 2 1/2 inches high and 1 to the right at 15 yards. He then discusses the next six shots fired with the weapon, fired from 25 yards in an effort to fire the rifle as rapidly and accurately as possible. He claims *"The first series of three shots were approximately--from 4 to 5 inches high and from 1 to 2 inches to the right of the aiming point...The second series of shots landed--one was about 1 inch high, and the other two about 4 or 5 inches high..."* A close look at the target used for these six shots, and a comparison of this target with the targets created from 15 yards, is most revealing, however. It shows that Frazier was way off, and that the shots he claimed landed 4 to 5 inches high in fact landed 6 to 8 inches high, and 2 1/2 to 5 inches to the right of the aiming point. This confirms that the shots from 15 yards were not an anomaly, and that the scope was, in fact, considerably misaligned.

So misaligned, apparently, that the FBI and Warren Commission felt the need to cover up. At one point in Frazier's testimony regarding the scope and scope mount, almost certainly to downplay that the rifle was so woefully inaccurate, Frazier interjects *"apparently the scope had even been taken off of the rifle, in searching for fingerprints on the rifle. So that actually the way it was sighted-in when we got it does not necessarily mean it was sighted-in that way when it was abandoned."*

Well, this is suspicious on three fronts. The first is that the scope, while being removed from the rifle in Dallas, was almost certainly never taken off the barrel with which it is aligned. Lt. Day, who inspected the rifle in Dallas, never admitted removing the scope. No one ever claimed to see him remove the

scope. No report exists, furthermore, in which his removal of the scope is described. (This, of course, failed to prevent Frazier from continuing to claim Day had removed the scope. As late as three decades later, in David Fisher's *Hard Evidence*, a 1995 defense of the FBI crime lab, Frazier would claim *"The scope of the rifle had been taken off by the Dallas police to search for latents, and when we got it, it was loose; we had to tighten the screws down. I think there were shims under the scope when it was used and the Dallas police lost them when they took it off."*)

What Frazier fails to say leads to more suspicion. While in his Warren Commission testimony Frazier sets up his claim the scope had been removed by offering that the mount holding the scope on the rifle *"was loose on the rifle when we received it,"* he later admitted *"The mount is not screwed to the rifle in such a fashion that it points the scope at the target closely enough to permit adjusting the crosshair to accurately sight-in the rifle."* He then claimed that one could fix this problem *"merely by putting shims under the front of the scope and over the back of the scope to tip the scope in the mount itself, to bring it into alignment."* As the problem with the rifle was that it fired high and to the right...consistently...one can hardly claim this was caused by the looseness of the two mount screws. They are mount screws, after all; they either hold down the scope or do not. If they are loosened, the scope does not automatically point downward. If they are tightened, the scope does not suddenly rise back up and align with the aiming point of the rifle. Separate adjustment screws serve this purpose.

We should recall here that Frazier's co-worker Cunningham has already testified that the bag supposedly used to conceal the rifle was too small to conceal the rifle unless it was disassembled, and that no screwdrivers were found in Oswald's possessions, and that this had led the FBI to assume the rifle had been assembled with a dime. Well, if the simple loosening of a mount screw could lead the rifle to be as inaccurate as Frazier had found it on 11-27, how can Frazier simultaneously pretend that the rifle would fire accurately after being assembled with a dime? He can't. This should make us suspect then that Frazier's reference to "loose" screws was meant not as a suggestion the scope would have been aligned if not for these screws, but that the looseness of these screws had made him suspect someone had removed the scope in Dallas, and that this someone had, in the process, lost the shims needed for the rifle to fire accurately. That he failed to come out and say this, moreover, should make us suspect he'd been coached not to do so. Perhaps we should recall here that the Warren Commission has cut a deal with Texas Attorney General Waggoner Carr "to be fair to Texas," else risk a Texas-based investigation that might not be "fair" to the Federal Government, including the Secret Service, the CIA, the FBI, and the current President.

Which brings us to the third front on which Frazier's testimony is suspicious... When we study Frazier's testimony it becomes clear that he is trying to give the Commission reasons to believe the scope had been damaged after the shooting, even though he himself suspected that NOTHING had happened to knock it out of alignment. In his testimony, Frazier not only admits that when the FBI eventually tried to sight-in the rifle and make it fire as accurately as possible, he found that the scope was mounted in such a manner that accurate shooting was impossible (as the rifle still fired 4-5 inches high and an inch to the right at 100 yards) but that it took 5 or 6 shots to stabilize the crosshairs on the scope after an adjustment. This, of course, is problematic for the Warren Commission's belief Oswald used the scope. They suspect, after all, that Oswald had only decided to kill the president a few days before the shooting, and that he hadn't practiced with his rifle. Well, this problem with the crosshairs suggests then that he'd either adjusted his scope before the shooting, and fired his shots with an unstable scope, or fired his shots without making any adjustment whatsoever. Both situations require more than a bit of luck. This makes it unsurprising then that, after dropping this bombshell, Frazier quickly offers *"on the back end of the scope tube there is a rather severe scrape which was on this weapon when we received it in the laboratory, in which some of the metal has been removed, and the scope tube could have been bent or damaged."*

But there's a problem with this proffered explanation. A big problem. While Frazier no doubt understood that the bumping of the scope he'd suggested would destabilize the scope, he would later admit *"When we fired on November 27th, the shots were landing high and slightly to the right. However, the scope was apparently fairly well stabilized at that time, because three shots would land in an area the size of a dime under rapid-fire conditions, which would not have occurred if the interior mechanism of the scope was shifting."*

Hmmm... Let's try and sort this all out. While Frazier had fired two comparison bullets on the 23rd, he later found it took 5 or 6 shots to stabilize the crosshairs in the scope. It follows then that, absent Frazier's unstated and unfounded belief shims were removed from the rifle, the scope was at least somewhat misaligned at the time of the shooting, and that, absent both his speculation regarding the shims and the equally unstated and unfounded speculation that the Dallas Police had fired three or more shots with the rifle before sending it on to Washington, the scope was not only erratic and bound to cause the shooter problems, but was as woefully misaligned at the time of the shooting on 11-22 as it was on 11-27, when Frazier first tested its accuracy...

Questions about the scope dominate Frazier's testimony. Counsel Melvin Eisenberg eventually asks Frazier a series of questions about the sniper's having to lead his target, in order to hit his target. He gives some specifics, telling Frazier: *"I would like you to make the following assumptions in answering these questions: First, that the assassin fired his shots from the window near which the cartridges were found--that is, the easternmost window on the south face of the sixth floor of the School Book Depository Building, which is 60 feet above the ground, and several more feet above the position at which the car was apparently located when the shots were fired. Second, that the length of the trajectory of the first shot was 175 feet, and that the length of the trajectory of the third shot was 265 feet. And third, that the elapsed time between the firing of the first and third shots was 5 1/2 seconds. Based on those assumptions, Mr. Frazier, approximately what lead would the assassin have had to give his target to compensate for its movement--and here I would disregard any possible defect in the scope."*

Well, this is interesting. Eisenberg is telling Frazier that, in the opinion of the Commission, the limousine traveled but 90 feet between the first and third shots. This is in keeping with the findings of Secret Service Agent Howlett on 11-27, but is a total refutation of the FBI's later claim the limousine traveled 140 feet between the shots. Perhaps Eisenberg, then, is telling Frazier to play ball, or else the Commission will expose the FBI's scandalous deception regarding the distance the limo traveled.

If so, it worked. Well, sort of... Frazier at first testifies that the proper lead for the target at 175 feet would be 6 to 8 inches. But there's a problem with this. Frazier can't leave well enough alone. Dissatisfied with Eisenberg's asking him to disregard the misalignment of the scope in making his calculation, he offers: *"the gun, when we first received it in the laboratory and fired these first targets, shot high and slightly to the right. If you were shooting at a moving target from a high elevation, relatively high elevation, moving away from you, it would be necessary for you to shoot over that object in order for the bullet to strike your intended target, because the object during the flight of the bullet would move a certain distance. The fact that the crosshairs are set high would actually compensate for any lead which had to be taken. So that if you aimed with this weapon as it actually was received at the laboratory, it would be necessary to take no lead whatsoever in order to hit the intended object. The scope would accomplish the lead for you."*

Uhhh,,,there's a problem with this. It's nonsense! If the rifle was firing 4 inches high and 1 inch to the right at only 15 yards, as suggested by Frazier's own testimony, then it follows that it would fire 24 inches high and 6 inches to the right at 90 yards, the approximate location of Kennedy at the time of the head shot. If the proper lead for this shot was 6.1 inches, as Frazier later specified, it follows that, in order to hit Kennedy in the head at frame 313 of the Zapruder film, the sniper would have to 1) know

that the rifle was firing significantly high, and 2) aim almost 18 inches LOW, at the middle of Kennedy's back.

But there's a problem with this as well. The middle of Kennedy's back was obscured by the backseat of the limo. That's right. If one assumes that the rifle as fired on 11-22 was in the same condition it was on 11-27, one has to acknowledge that the sniper hitting Kennedy in the head was actually aiming at the backseat of the limo. This is counter-intuitive.

And it's actually understating the case. It is believed that Oswald's Mannlicher-Carcano rifle was sighted-in to strike targets at 200 meters. At 200 meters gravity will have taken effect and the bullet will no longer be flying in a straight path. As a result, the bullet of a rifle sighted in at 200 meters will start out low, gradually lift above its line of sight, and then slowly drop back to the line of sight, and hopefully the center of its target, at 200 meters. Frazier testified that a bullet sighted in such a manner at 200 yards would land about a half-inch high at 100 feet, two inches high at 200 feet, and three inches high at 300 feet. This suggests that a bullet fired from 265 feet, a la the fatal bullet if fired from the sniper's nest, would land about 2 1/2 inches high.

And Frazier was probably understating the case. Ballistics calculators (such as those found online at Hornady ammunition website) and charts (such as those found in the book American Ammunition and Ballistics) suggest that the bullet fired in Oswald's rifle would actually have been around 5 inches above the line of sight at 265 feet.

And even this is understating the case. If one accepts Frazier's testimony regarding the inaccuracy of the weapon on 11-27 and the stabilizing effect of shots on the scope, and then considers that the fatal bullet was heading on a downward path, and not be subject to the usual amount of gravity, it seems likely that the fatal bullet supposedly fired from Oswald's Mannlicher-Carcano on 11-22-63 would have landed even greater than 23 inches higher than aimed (29 inches minus the 6 inches or so traveled by the limousine between the moment the rifle was fired and the moment the bullet struck) and that the only way for the sniper to have hit Kennedy in the head was for him to have aimed at the trunk of the car.

The confusion related to leading a moving target by firing below or behind the target becomes even more confusing when we consider Frazier's next statement. He added *"I might also say that it also shot slightly to the right, which would tend to cause you to miss your target slightly to the right."* Uhhh... he said the rifle shot but an inch to the right at 15 yards...which translates to 6 inches to the right at 90 yards. Although Frazier has supplied the Warren Commission with no information regarding the left-right lead necessary to hit the target, photos taken from the sniper's nest suggest that the left-right lead would be about the same as the vertical lead. This would be about 6 inches. This suggests that, while the rifle was firing high and to the right, the sniper would need to make a large adjustment for the former--an adjustment which Frazier denies--but no adjustment at all for the latter--which Frazier also denies.

Something is just askew with Frazier's testimony. First, he under-reports how badly the rifle performed during his 11-27 tests of the rifle from 25 yards. Then he conjures up imaginary incidents--the Dallas Police Department's removal of shims from under the scope, the scope's being damaged after the shooting--in an attempt to explain the problems with the scope. Then he under-reports the adjustment needed to overcome the problems with the scope, and actually suggests the misalignment of the scope was an advantage to the sniper. What is he doing? Is he deliberately trying to conceal that such a large adjustment for the rifle's shooting high would have been necessary? If so, then why did he turn around and make it sound like the rifle's shooting right was the bigger problem? Is he simultaneously trying to conceal that the limo was not heading straight away from the sniper, but moving left to right? Or is he just following orders to the best of his ability?

We suspect the latter. On 3-26-64, J. Edgar Hoover sent J. Lee Rankin a letter discussing the accuracy

of the rifle. This letter was published as Commission Exhibit 2724. Most of the information contained in this letter was repeated in Frazier's testimony. But not all of it. While Frazier had accidentally indicated that the condition of the scope had probably not changed between 11-22 and 11-27, Hoover would have no part of it. He wrote *"It is pointed out that the grouping of the shots in the targets shows an inherent capability of great accuracy under rapid fire conditions. No other significance whatever can be attached to these tests since there is no way of determining whether the present condition of the telescopic sight is the same as at the time of the assassination. It is to be noted that at the time of firing these tests, the telescopic sight could not be properly aligned with the target since the sight reached the limit of its adjustment before reaching accurate alignment."* (Now here comes the spin.) *"The present error in alignment, if it did exist at the time of the assassination, would be in favor of the shooter since the weapon is presently grouping slightly high and to the right with respect to the point of aim, and would have tended to reduce the need for "leading" a moving target in aiming the rifle."*

Well, I'll be. Hoover said that the present error in alignment--which would mean the alignment demonstrated on 3-16 AFTER the scope had been sighted in as accurately as possible--would be an advantage, and Frazier testified that the misalignment of the rifle as received by the laboratory would be an advantage. There's a huge difference. And Hoover, for once, was right. The misalignment of the scope on 11-27, when Frazier first tested the accuracy of the rifle, was in no way an advantage. It is of no help at all to a sniper to have to aim at a car trunk to hit a man in the head. But the slight misalignment of the rifle on 3-16, after it was sighted in, would be a slight advantage to someone tracking an object moving left to right and away, provided the person is aware of this misalignment. This leads us to suspect that Frazier was given specific orders on how to testify, and screwed them up.

This gives us plenty to think about. IF the scope was severely misaligned on 11-22, as suggested by Frazier's testimony, then the shooter was either 1) a marginally talented shooter, like Oswald, who was just firing in the President's general direction and got "lucky", 2) an expert marksman well acquainted with the rifle's tendency to fire high and to the right, and talented enough to compensate for this tendency, or 3) someone familiar enough with Oswald's rifle to know the scope was nearly worthless and yet talented enough to accomplish the shooting without the use of the scope. (Testimony of Robert Frazier, 3H390-441).

(FWIW: subsequent to my writing this section, I became aware of an old letter in the FBI's files addressing some of the problems with Frazier's testimony we've examined. This letter was written in March 1969 by a Richard Bernabei on the stationery of Queen's University, London, Ontario. Bernabei's conclusions were similar to my own, with the notable exception that while I presumed the rifle--should it have been in the condition Frazier received it when fired on 11-22-63--would have fired a bit more than 23 inches high at 90 yards, Bernabei--presumably not taking into account that the president was moving away from the shooter--concluded it would have fired about 29 inches high at 100 yards. He claimed, furthermore, that he'd actually tested this using a 6.5 mm Mannlicher-Schoenauer rifle, and had found that the bullets landed 28 1/2 inches high of the point of aim at 100 yards. FBI file 62-109060 Sec 170 p 45-55.)

In the Interests of Accuracy

COMMISSION EXHIBIT 582

COMMISSION EXHIBIT 583

On 3-27-63, the Warren Commission, unsatisfied with the FBI's results, had the Army conduct their own tests on the rifle. They had three Master rifleman fire on three stationary targets at the distances presumed for the shots in Dealey Plaza. (Exhibits 582 and 583, left, and 584, above) Shims were added to the scope mount to bring it in alignment. Even so, in 7 runs of 8.25, 7, 6.75, 6.45, 4.6, 5.15, and 4.45 seconds, NOT ONE of the 14 shots rapid fired by these Masters hit as close to the center of the target as the TWO hits attributed to Oswald (as depicted by the red stars).

In the Interests of Accuracy

After Frazier, **Ronald Simmons**, the Chief of the Weapons Evaluation Branch of the Ballistics Laboratory of the Department of the Army, testifies, and things only get worse. He states that Oswald's rifle was as accurate as the current standard issue rifle of the U.S. Army, the M-14, but acknowledges that his three test shooters "*could not sight the weapon in using the telescope and no attempt was made to sight it in using the iron sight. We did adjust the telescopic sight by addition of two shims, one which tended to adjust the azimuth, and one which adjusted an elevation.*" He was thereby acknowledging that the scope and rifle as discovered were fatally out of alignment, and that this misalignment was not the result of a Dallas police officer bumping the scope or some such thing.

Simmons also discusses a simulation of the shooting performed by these shooters. He relates that they made seven attempts to replicate the shooting by rapid firing on three stationary targets at the presumed distances of the shots in Dealey Plaza. Simmons details: "*All firers hit the first target, which was emplaced at 175 feet...for the first four attempts, the firers missed the second target...there were only two rounds which did not hit the target at 270 feet...*" He then gives the time it took for his shooters to fire these shots: "*Mr. Hendrix fired twice. The time for the first exercise was 8.25 seconds; the time for the second exercise was 7.0 seconds. Mr. Staley, on the first exercise, fired in 6 3/4 seconds; the second*

attempt he used 6.45 seconds. Specialist Miller used 4.6 seconds on his first attempt, 5.15 seconds in his second attempt, and 4.45 seconds in his exercise using the iron sight..."

He then discusses Mr. Miller's shots in more detail: *"Mr. Miller succeeded in hitting the third target on both attempts with the telescope. He missed the second target on both attempts with the telescope but he hit the second target with the iron sight. And he emplaced all three rounds on the target, the first target...On the third target he missed the boards completely. And we have not checked this out. It appears that for the firing posture which Mr. Miller--Specialist Miller uses, the iron sight is not zeroed for him, since his impacts on the first and second targets were quite high, and against the third target we would assume that the projectile went over the top of the target, which extended only a few inches over the top of the silhouette."* When asked what preparation these shooters were allowed to undertake, before attempting these shots, Simmons then relates: *"They had each attempted the exercise without the use of ammunition, and had worked the bolt as they tried the exercise. They had not pulled the trigger during the exercise, however, because we were a little concerned about breaking the firing pin."*

Simmons eventually concludes that *"in order to achieve three hits, it would not be required that a man be an exceptional shot. A proficient man with this weapon, yes."* (Testimony of Ronald Simmons, 3H441-451)

Curiously, there is no evidence that Oswald was proficient with his weapon. Prior to 11-22-63, the only time Oswald was believed to have fired his rifle at a living thing was back in April, 1963. And that purported shot, fired at a right-wing fanatic named General Walker as he sat at a desk in his home, *missed*. There is no record of Oswald firing his rifle in the months leading up to the assassination. The rumors of his practicing at various shooting ranges around Dallas were all discredited by the FBI. Furthermore, there were no rifle-cleaning supplies or even extra ammunition found among his possessions. Thus, when Simmons testifies that Oswald's rifle was substandard and that only someone with a lot of experience with the rifle could compensate for its shortcomings, he is unwittingly arguing for Oswald's innocence. Particularly in that Simmons knew full well his test shooters did not fire nearly as well as claimed...

When one looks at the targets his men fired upon, Commission Exhibits 582-584, it's startlingly clear Simmons' definition of a hit is not what any reasonable person would consider a hit. Oswald was purported to have hit Kennedy once in the base of the neck and once in the head in 6 seconds or less. The targets the Army shooters fired upon were not only stationary targets, they were far larger than the small area on Kennedy hit by the sniper...twice. While one might claim the shooters were merely interested in hitting the targets, and not specific points on the targets, one cannot reasonably claim they would deliberately not hit this target in as central a location as possible. Thus, a re-examination of the Army's targets, counting as hits only those hits landing between the extended sides of the neck on the target, indicates that the Army's shooters hit the first shot 6 of 7 times, the second shot 3 of 7 times, and the third shot but 2 of 7 times, with both hits landing on the back.

When one looks even closer, and considers that the Army's shooters would also be trying to hit the center of the target vertically, and compares their hits between the neck lines on the targets to the purported location of the hits on Kennedy, it gets even worse. (Simmons, in fact, testified that he'd assumed the shooters were firing at the intersection of lines at the center of the target.) Only one or two of the hits on the first target, when the shooters had ALL THE TIME IN THE WORLD, landed as close to the center of the target as the two hits purportedly rapid-fired by Oswald. Even worse (yes, even worse), NOT ONE of the 14 shots rapid fired on the last two targets landed anywhere near as close the center of the target as the two hits attributed to Oswald.

The Army shooters' failure to replicate the fatal head shot, even though the rifle had been re-aligned just for this purpose, and even though their target was quite stationary, is incredibly problematic for the

Commission, and should force them to re-evaluate Oswald's presumed ability with a rifle. They must know the public will not buy that such fantastic shots with such a mediocre rifle were fired by a man who hadn't practiced in months, and was never very good to begin with. They must know that the only way they can maintain any credibility is to stand by the incredible, and insist that, no matter how difficult the shots, Oswald somehow just got "lucky". Or so one would assume...

On **4-2-64**, just two days after the FBI's Frazier had asserted that the scope had been removed by someone in Dallas looking for fingerprints, (and slyly suggested that this person had lost the shims needed for the scope to be effective), Lt. J.C. Day, who'd inspected the rifle in Dallas, is called to testify. Amazingly, however, he is never asked about the scope, let alone about the shims. He does state, however, that after removing the barrel from the wood stock and trying to photograph the palm print on the underside of the rifle barrel which had immediately attracted his attention, he was told to stop working on the rifle, and that he *"did not process the underside of the barrel under the scopic sight, did not get to this area of the gun."* (4H249-278) This undoubtedly suggests the scope was not removed. So much for Frazier's speculation. So much for his and the commission's belief the scope was of assistance on 11-22-63.

Later that day, in Dallas, Postal Inspector **Harry Holmes**, the last man to interview Oswald, testifies before the Commission. It turns out that he'd watched the assassination through binoculars from his office on the south side of Dealey Plaza. (**4-2-64** testimony before the Warren Commission, 7H289-308) *"the motorcade turned north on Houston and went to Elm and turned left on Elm where it started on a downgrade to what we refer to as a triple underpass. As it turned in front of the school book depository, I heard what to me sounded like firecrackers, and it was my recollection that there were three of them. I had my binoculars on this car, on the presidential car at the time. I realized something was wrong but I thought they were dodging somebody throwing things at the car like firecrackers or something, but I did see dust fly up like a firecracker had burst up in the air."* (When asked where he saw the dust) *"Off of President Kennedy and I couldn't tell you which one of the cracks of the firecracker resulted in this."* **Too vague.** (Years later, however, Holmes would make clear that while he couldn't remember which of the cracks of the "firecracker" brought "dust off" the President, he couldn't remember if it was the first shot or the second shot. In Larry Sneed's "No More Silence" Holmes distinctly recalls hearing a shot after the head shot.)

Many others are brought in to testify during March and April. For the most part, their statements are consistent with the statements they'd made in November and December. One "new" witness to testify is the motorcycle officer riding just behind the limousine on the far left. Strangely, the two escorts to the right of the limousine were never called to testify, and not even interviewed. **B.J. Martin** (**4-3-64** testimony before the Warren Commission, 6H289-293): *"one of the agents got off of the car after the first shot...I looked to my right (after the first shot)...I looked at the President after I heard the (first) shot and he was leaning forward—I could see the left side of his face. At the time he had no expression on his face"* (Then I heard) *"Two more shots...immediately after the first shot I saw him (the President) and after that I couldn't see him."* **Double head shot.** (While many will say that "two more shots" is too vague to assume the shots came together, a better way of looking at it is that "two more shots" is too vague to assume they're not together. Law enforcement professionals like Martin knew that they were expected to describe what happened as accurately as possible. Consequently, if there was an appreciable delay between the last two shots we can expect he would have said so, and then described what he observed between the shots.)

A **4-4** FBI memorandum from Rosen to Belmont reveals that the strain between the Bureau and the Commission, so readily apparent in the weeks leading up to the testimony of the FBI's experts, has failed to dissipate now that some of the experts have testified. In this memorandum, Rosen writes that J.Lee Rankin *"stated that he would appreciate the Director being advised of the very favorable*

impression the Bureau experts made and that Chief Justice Earl Warren had made favorable comments and had asked Mr. Rankin to make known to the Director his feelings concerning the Bureau experts' testimony...Mr. Rankin advised that the testimony of the Bureau personnel was far superior to testimony received from anyone else that has appeared before the Commission, each of the Bureau employees testified with complete confidence and their testimony was given in such a manner that any possible doubt that anyone had had been completely removed by the Bureau experts' testimony." Hoover, still fuming over the Commission's use of outside experts, however, is not impressed. In the margins of this memo, he writes: "I place no credence in any complimentary remarks made by Warren nor the Commission. They were looking for FBI 'gaps' and having found none yet they try to get 'syrupy.'"

Ye Olde Switcheroo?

Red lines = 12 inches.
Blue lines = 19.25 inches.

At left: a Dallas Times-Herald photo of the paper bag found in the sniper's nest as it was removed from the depository by Dallas detectives L.D. Montgomery and Marvin Johnson on 11-22-63.

At top: Exhibit 4 from the FBI Summary Report of 12-9-63. Directly above: Warren Commission Exhibit 142. A comparison of matching blue and red lines suggests that, while the bag at top has been split open and the bag at bottom has been unfolded at the top, they are probably the same bag. The length of this bag appears to match the length of the bag at left. Not so the width.

Ye Olde Switcheroo?

On **4-6-64**, the Commission takes the testimony of Dallas Detective Robert Studebaker. He briefly discusses the finding of the bag found in the sniper's nest. He offers no explanation for why he failed to photograph this bag where it was found. A 3-10 interview of Studebaker by the FBI is equally unclear, stating "According to Studebaker, the paper bag was removed prior to taking photographs of the southeast corner." (FBI file 105-82555 section 142 p9) This bag, we should recall, is believed to have been used by Oswald to bring the assassination rifle in to work. The only witnesses to Oswald with a

bag, however, have insisted the bag carried by Oswald was far smaller than this bag. Studebaker testifies that the bag he found was *"I would say, 3 1/2 to 4 feet long"* and *"Approximately 8 inches"* wide. (7H137-149). This catches our attention. On 3-11-64, Counsel Joe Ball had been able to get one of the two witnesses to see Oswald with a bag, Buell Frazier--who'd previously said the bag he saw was 5 or 6 inches wide--to agree that the bag he saw could have been as wide as the bag found in the sniper's nest. Ball then got the second witness, Linnie Mae Randle, to testify that the width of the bag found in the sniper's nest was *"about right."* Of the bag found in the sniper's nest, Ball said, furthermore, that *"This package is about the span of my hand, say 8 inches."* This suggests the package shown both Frazier and Randle was about 8 inches wide.

There's a huge problem with this. An FBI memo on the creation of a replica bag states that the paper used was 24 inches wide (CD7, p292). One can only assume that this paper would have been folded in half to make the bag, and that the resulting bag would be about 12 inches wide. Sure enough, photographs of the bag pulled from the sniper's nest on the day of the assassination suggest it was about a foot wide. So why was the bag shown to Frazier and Randle during their testimony barely 8 inches wide?

The words of a 12-2-63 FBI report on the showing of this replica sack to Randle are also telling. When discussing her impression of the package she saw on 11-22, it states *"Her designation on the replica sack was found to be 8 1/2 inches for the width of the original package she'd seen Oswald carrying."* (CD7, p299). She couldn't have designated an 8 1/2 inch width on a package only 8 inches wide, now could she? From this it seems clear that someone or some group, possibly the FBI in unison with the Warren Commission, has pulled some evidentiary origami, and has altered the proportions of the bag between early December, 1963, and March, 1964.

That someone might be James Cadigan, the FBI's paper expert, who testified only 3 days before Studebaker. When asked if he found any marks inside the bag on 11-23 that could tie it to the rifle, he testified: *"I couldn't find any such markings."* When asked if one could make an inference from this he testified further that: *"I don't know the condition of the rifle. If it were in fact contained in this bag, it could have been wrapped in cloth or just the metal parts wrapped in a thick layer of cloth, or if the gun was in the bag, perhaps it wasn't moved too much. I did observe some scratch marks and abrasions but was unable to associate them with this gun. The scratch marks in the paper could come from any place. They could have come from many places. There were no marks on this bag that I could say were caused by that rifle or any other rifle or any other given instrument."* When asked further if, assuming the rifle had not been wrapped in cloth, it should have left marks of some sort, he replied: *"The absence of markings to me wouldn't mean much. I was looking for markings I could associate. The absence of marks, the significance of them, I don't know."* (4H89-101). Clearly, Cadigan and his superiors were not the curious sort. They had Oswald's rifle. Within a few more days they had a replica bag. All they had to do was put the rifle in the bag and re-enact Oswald's trip to work and see if the bag was scratched or marked by the grease on Oswald's gun. That they failed to do so, and that the Warren Commission failed to ask them to do so, reveals either their incredible incompetence or deliberate negligence.

One might suspect the latter. While Cadigan has testified that the tape found on the paper bag was 25/1000 of an inch wider than a tape sample taken from the depository on 11-22, only to say that this doesn't really matter, he has failed to provide any measurements for the bag he studied, both inside and out. Why wasn't he asked this? Why has Ball asked Studebaker to guess about the size of an object he only saw for a minute, when only days before he had Cadigan, who'd studied this object in detail, at his disposal, and had failed to ask him its actual size? And is it a coincidence that Studebaker has said the bag he found in the sniper's nest was 8 inches wide, and that the bag now being shown to witnesses is 8 inches wide, when the bag pulled from the sniper's nest was clearly much wider? Has someone pulled a switcheroo? Are the FBI and the Dallas detectives in cahoots? Is Ball in on it? The testimony on the

bag couldn't smell any worse if the bag had been wrapped around day-old fish.

The next week, **Nelson Delgado**, a Marine who'd served with Oswald, testifies about Oswald's proficiency with a rifle. (4-16-64 testimony before the Warren Commission, 8H228-265): *"he didn't show no particular aspects of being a sharpshooter at all...He always got gigged for his rifle (meaning that he got in trouble for keeping it in poor condition)...we were on line together, the same time, but not firing at the same position, but at the same time, and I remember seeing his. It was a pretty big joke because he got a lot of "Maggie's drawers," you know, a lot of misses, but he didn't give a darn...he was a couple of targets down. It was very comical to see."*

The week after that, the Connallys finally testify, confirming their earlier statements. **Nellie Connally** (4-21-64) testimony before the Warren Commission, 4H146-149) *"I heard a noise...I turned over my right shoulder and looked back, and saw the President as he had both hands at his neck...he made no utterance, no cry. I saw no blood, no anything. It was just sort of nothing, the expression on his face, and he just sort of slumped down. Then very soon there was the second shot that hit John. As the first shot was hit, and I turned to look at the same time, I recall John saying, "Oh, no, no, no." Then there was a second shot, and it hit John, and as he recoiled to the right, just crumpled like a wounded animal to the right, he said, "My God, they are going to kill us all" ...I never again looked in the back seat of the car after my husband was shot...The third shot that I heard I felt, it felt like spent buckshot falling all over us, and then, of course, I too, could see that it was the matter, brain tissue, or whatever, just human matter, all over the car and both of us."* **Governor John Connally** (4-21-64 testimony 4H129-146) *"I reclined with my head in her lap, conscious all the time, and with my eyes open, and then, of course, the third shot sounded, and I heard the shot very clearly. I heard it hit him. I heard the shot hit something...I heard it hit. It was a very loud noise, just that audible, very clear...Immediately, I could see on my clothes, my clothing, I could see on the interior of the car...brain tissue...on my trousers there was one chunk of brain tissue as big as almost my thumb."*

We also finally hear from the fourth occupant of the lead car. **Dallas Police Chief Jesse Curry** (4-22-64 testimony before the Warren Commission, 4H150-202) (When asked where the President's car was at the time of the first shot) *"I would say it was approximately halfway between Houston Street and the underpass, which would be, I would say probably 125- 150 feet west of Houston Street...(when asked how far it had gone by the time of the second shot) "perhaps 25 or 30 feet further along" (and the third shot) "A few feet further, perhaps 15-20 feet further" (when asked the duration of the shots) "perhaps 5 or 6 seconds...I heard three shots. I will never forget it."* Although he doesn't describe the head shot, we can't help but notice that Curry's statement that the car traveled much further between the first and second shots than between the second and third shots and is suggestive that the last two shots were fired closer together.

From: L.J. Gauthier

Subject: Assassination of President John F. Kennedy

Examination of Visual Aids by President's Commission

Reference memo Gauthier to Callahan 4-7-64

Staff members of the President's Commission and specialists of the armed services, Dr.s Humes, Heany, Fink, Light and Olivia (ph.) attended a conference on 4-14-64 for purposes of reviewing motion pictures and slides of the assassination site. Representatives of the Secret Service and FBI were present to assist in projecting the film and the use of the scale model.

Dr. Humes, U.S. Navy Commander, who performed the autopsy on the President, appeared to lead the discussion throughout the 4-hour session. All of his associates were generally in agreement with previous findings of the Commission as to where shots 1, 2, and 3 approximately occurred.

The most revealing information brought out by the doctors is as follows:

1. That Shot 1 struck the President high in the right shoulder area, penetrating the torso near the base of the neck damaging the flesh of the throat but not tearing the throat wall. This bullet, according to the doctors, continued and entered Governor Connally's right shoulder, emerging below the right nipple. The velocity of the missile, according to the doctors, apparently was snagged in the coat and shirt, eventually falling out on Connally's stretcher.

2. That Shot 2 struck the wrist of the Governor, continuing on into his thigh.

3. That Shot 3 struck the right side of the President's head, carrying much bone and brain tissue away, leaving a large cavity. There is nothing controversial about where Shot 3 occurred inasmuch as the Zapruder movie indicates with much clarity where this happened.

Heretofore it was the opinion of the Commission that Shot 1 had only hit the President, that Shot 2 had entered the Governor's right shoulder area penetrating his torso through the chest area emerging and again entering the wrist and on into his leg.

Staff attorneys of the Commission extensively questioned the doctors concerning their conclusions and their views were made a matter of record by Attorney Melvin Eisenberg.

Mr. Eisenberg advised that Governor Connally would be in Washington on Tuesday April 21, 1964, to assist the Commission in describing as to where the three shots occurred and that he, Eisenberg, would request that Shaneyfelt and Gauthier be available to assist them in handling visual aids while the Governor's views are obtained.

Mr. Eisenberg also inquired whether Special Agent Shaneyfelt of the FBI Laboratory, Special Agent John Howlett of the Secret Service and Gauthier would be able to arrange for a re-enactment of the shooting scene in Dallas using the data collected by the Commission, to make movies of the areas where each shot occurred using Zapruder's camera, to have people simulate the positions of the occupants of the President's car in a car similar to the one used by the President, which would be furnished by the Secret Service, to take ground measurements from the Texas School Book Depository from each points where shots occurred to determine the distances between gun muzzle and target, etc.

Mr. Eisenberg inquired as to whether I had any suggestions concerning his request. He was advised that, of course, the FBI would do whatever possible to assist in this matter; however, it was felt that as he, Eisenberg, had a good working knowledge of what the Commission desired it would appear to me to be the advantage to the Commission if he, Eisenberg, would be present in Dallas to insure the development of the desired technical data. He and his immediate superior, Attorney Norman Redlich, agreed to this suggestion. Without saying as much, it was felt that considerable publicity will definitely stem from this type of operation in Dallas and a representative of the Commission should be present to handle the inquiries of the press concerning the fact that this was a Commission field operation and not an operation of the FBI or Secret Service.

Mr. Eisenberg stated he would make his proposal for this field trip known to the members of the Commission recommending that the FBI and Secret Service assist the Commission's legal staff in gathering on-site data relating to the assassination of President John F. Kennedy.

RECOMMENDATION: None--for information only

SEE ADDENDUM PAGE THREE:

ADDENDUM: AHB:hw 4-15-64

It is questionable what the Commission expects to gain by an additional re-enactment of the scene of the assassination, bearing in mind that Secret Service has already gone through this exercise at least once, and Inspector Gauthier made actual models of the assassination area. It is inevitable that there will be considerable publicity attendant to the proposed re-enactment of the scene.

It is our opinion that it would be undesirable for the FBI to become involved as the speed of the car, protection measures, etc, were the basic responsibility of the Secret Service at the time. We would prefer not to become identified with the actual scene and happenings at the assassination in the minds of the public.

It is recommended that Inspector Malley advise Mr. Rankin that this proposal appears to be without merit; that the FBI has done its utmost to be of assistance by providing models of the area, technical data, and technical advice in assisting the Commission to interpret events as they occurred. Mr. Malley should advise Rankin that we suggest that if such a re-enactment of the scene is considered desirable by the Commission, it should be carried out by Secret Service which has already gone through this exercise at least once.

4/15/64

Memorandum

To: Mr. Belmont

From: A. Rosen

Subject: Assassination of President Kennedy

Request of the President's Commission

In accordance with the request of the President's Commission, Bureau personnel, including Mr. Shaneyfelt of the the Laboratory, Mr. Gauthier of the Exhibits section, and Mr. Malley were present at which time certain slides printed from the Abraham Zapruder movie film depicting the assassination of President Kennedy, which were obtained by the Bureau from "Life" Magazine, were shown. Also present at the Commission office were the following:

Commander James J. Humes, Director of Laboratories, Navy Medical School, U.S. Naval Hospital, Bethesda, Maryland;

Commander J. Thornton Boswell, Chief Pathologist, U.S. Navy Medical School, Bethesda;

Colonel Pierre A. Finck, Chief of Wound Ballistics Branch, Pathology Branch of the Armed Forces Institute of Pathology, Washington, D.C.

Dr. A.G. Olivier, Chief of Wound Ballistics Branch, Edgewood Arsenal;

Dr. F.W. Light, Jr., Deputy Chief, Biophysics Division, and Chief of Wound Assessment Branch, Edgewood Arsenal.

The purpose of the showing of this film, as it developed during the meeting, was to give the doctors present an opportunity to see the actual movie of the shooting of the President as well as the slides which had been made which were much clearer than the actual movies. The Commission desired the doctors present in order to obtain from them their views concerning the actual manner in which the President was shot.

During this session Commander James J. Humes advanced the theory that the first shot entered the President's body in the rear in the neck region a few inches below the head and followed a pattern through the neck and exited in the front without encountering any bone or other objects which slowed the bullet to any degree. Commander Humes was of the opinion the bullet continued and struck Governor Connally in the back on the right-hand side below the shoulder and exited on the right-hand side of Governor Connally in the chest area. Commander Humes stated that here again, based on medical reports received from doctors in Texas who examined Governor Connally, the bullet met with no serious obstruction and passed through the body, merely grazing one of the rib bones. It was Commander Humes' opinion that the bullet from the first shot apparently lodged in some manner in the clothing of Governor Connally, and this bullet is the one which was found on the stretcher on which Governor Connally was brought to Parkland Hospital in Dallas, Texas. Commander Humes states this bullet was not damaged in any way and it is for this reason he feels that the first shot definitely passed through both the body of the President and Governor Connally.

In explaining his feelings concerning this theory, Commander Humes stated that another shot is believed to have hit the right wrist of Governor Connally with such an impact that it caused the bullet to break into many fragments and he noted that many fragments were found in the right wrist area of Governor Connally as well as in the thigh of the left leg.

Relative to the third shot which was fired, which based on the photographic material available is believed to be the one which hit the President's head, Commander Humes advised that there is no question that this bullet separated into many fragments upon impact and many fragments were found in the skull area of the President. He noted that one fragment had apparently struck the front windshield from the inside inasmuch as the examination of the windshield did detect some lead deposit where an object had struck the inside of the windshield. Commander Humes states that the fragment which struck the windshield could have been from this shot which struck the President's head or could have been a fragment from the shot which hit Governor Connally's wrist.

The other doctors present did not completely confirm the theory of Commander Humes but felt, based on their review of the pictures, noting the movements of Governor Connally in the President's automobile and the general location of the occupants in the car, that there was a possibility this theory was correct.

Staff members of the Commission gave no indication what additional action they planned relative to this theory. It is noted that any comments made in the past by the Bureau relative to the shots that struck the President and Governor Connally were based completely on medical reports furnished the Bureau by Doctors at Parkland Hospital and the results of the autopsy of (sic) the U.S. Naval Hospital, Bethesda, Maryland.

The foregoing is submitted for information.

Melvin Eisenberg's Memo on the April 14 conference

April 22, 1964

MEMORANDUM FOR THE RECORD

FROM: *Melvin A. Eisenberg*

SUBJECT: *Conference of April 14, 1964, to determine which frames in the Zapruder movies show the impact of the first and second bullets.*

On April 14, 1964, a conference was held to determine which frames in the Zapruder film portray the instants at which the first and second bullets struck. Present were: Commander James J. Humes, Director of Laboratories of the Naval Medical School, Bethesda, Maryland; Commander J. Thorton Boswell, Chief Pathologist, Naval Medical School, Bethesda; Lt. Col. Pierre A. Finck, Chief of Wound Ballistics Pathology Branch, Armed Forces Institute of Pathology; Dr. F.W. Light, Jr. Deputy Chief of the Biophysics Division at Edgewood Arsenal, Maryland, and Chief of the Wound Assessment Branch of the Biophysics Division; Dr. Olivier, Chief of the Wound Ballistics Branch of the Biophysics Division at Edgewood Arsenal; Messrs. Malley, Gauthier, Shaneyfelt, and two other unidentified agents of the FBI; Messrs. Kelley and Howlett of the Secret Service; and Messrs. Redlich, Specter and Eisenberg of the Commission staff.

A screening was held of the Zapruder film and of slides prepared by LIFE from the film. Each slide corresponded with a separate frame of film, beginning with frame 171. The consensus of the meeting was as follows:

(a) The President had been definitely hit by frames 224-225, when he emerges from behind a sign with his hands clutching his throat.

(b) The reaction shown in frames 224-225 may have started at an earlier point - possibly as early as frame 199 (when there appears to be some jerkiness in his movement) or, with a higher degree of possibility, at frames 204-206 (where his right elbow appears to be raised to an artificially high position).

(c) If the reaction did not begin at 199 or 204-206, it probably began during the range of frames during which the President is hidden from Zapruder's camera by a sign, namely, frames 215-24.

cc: Mr. Rankin

Mr. Belin

Mr. Willens

Mr. Specter

Mr. Redlich

Mr. Eisenberg

Mr. Ball

(d) The President may have been struck by the first bullet as much as two seconds before any visible reaction began. In all likelihood, however, the maximum delay between impact and reaction would be under one second, and it is possible that the reaction was instantaneous. Putting this in terms of frames, the President may have been struck as much as 36 frames before any visible reaction is seen. If the visible reaction begins at 199, the President may have been struck as early as 163, if the visible reaction begins at 204-206, he may have been struck as early as 168-170, if the visible reaction begins while the President is behind the sign, he may have been struck as early as 179-188.

(e) The velocity of the first bullet would have been little diminished by its passage through the President. Therefore, if Governor Connally was in the path of the bullet it would have struck him and (probably) caused the wounds he sustained in his chest cavity. Strong indications that this occurred are provided by the facts that (1) the bullet recovered from Governor Connally's stretcher does not appear to have penetrated a wrist and (2) if the first bullet did not hit Governor Connally, it should have ripped up the car, but apparently did not. Since the bullet recovered from the Governor's stretcher does not appear to have penetrated a wrist, if he was hit by this (the first) bullet, he was probably also hit by the second bullet.

(f) If Governor Connally was hit by the first and second bullets, it is impossible to say definitively at what point, or by what point, he had been hit by the second bullet.

(g) Governor Connally seems to straighten up at frames 224-226, and may be reacting to a wound at this point. (If so, it would be a wound from the first bullet).

(h) Governor Connally seems to begin showing an expression of anguish around 242. If he was hit with two bullets, this expression may have resulted from his second wound.

*(i) After Governor Connally straightened up at frames 224-226, he starts to turn to the right. As a result of this turn, at no time after frame 236 was Governor Connally in a position such that a bullet fired from the probable site of the assassin would have caused the wound in his chest cavity which Governor Connally sustained--that is, after frame 236, the Governor presented a side view to the assassin rather than a back view.**

(j) It is not possible to say whether prior to 236 Governor Connally was ever in a position such that one bullet could have caused the five wounds he sustained.

(k) As in the case of the President, Governor Connally could have conceivably been hit two seconds before he begins to react, but the maximum likely time interval between hit and reaction is one second, and the reaction may have been instantaneous. The likelihood of an instantaneous reaction is particularly great in regard to the wrist wound, since pain is usually felt more quickly in a limb than in the torso.

**/ Mr. Specter disagrees with this, and feels the Governor was in position to receive the chest wound up to 242.*

Analysis of the Memos on the April 14 Conference

These memos tell us quite a bit about the mindset of the Warren Commission attorneys and FBI. The stated reason for the conferences—to decide the impact times and locations of the first two shots—reveals a built-in bias. The eyewitness evidence available so far suggests that the head shot was the second shot heard by most witnesses, and yet this inconvenient truth is not even to be considered. The attitude of everyone at the conference seems to be that “We have a piece of film that may show three separate hits. Kennedy shows a reaction between 199 and 224, Connally shows one between 224 and 236, and Kennedy is hit at 313. Therefore, those are our three shots.” Never mind that a number of witnesses heard a shot after the head shot. Never mind that the majority of witnesses indicated that the last two shots were bunched together. Never mind that our study of the rifle indicates that the first two shots would have to have been at least 51 frames apart...

The memos reveal a few other wet spots on the slow-motion whitewash. On “d” of the memo by Eisenberg, he writes that everyone agrees that Kennedy could have been hit 2 full seconds, as early as frame 163, before he reacted. This is nonsense. NOT ONE eyewitness reported a two second delay in Kennedy’s response to the first shot. Even worse, Kennedy is actively waving and smiling at the crowd after frame 163. It hardly seems likely he would be waving and smiling at the crowd if he’d even heard a loud shot, let alone been hit by one. It seems likely, therefore, that these 2 seconds are a “gift” to Arlen Specter, to give him some wiggle room should he need more time to have the shots make sense.

That Specter was looking for this wiggle room is demonstrated by his lone dissent in the memo’s “i”. Here he is bucking the crowd in an effort to pick up just 6 more frames. Is it just a coincidence that by Specter taking 163 as the earliest time for a hit on Kennedy, and by his insisting on 242 as the latest time for a hit on Connally, a first shot 163, second shot 242, and final shot 313 shooting scenario is made possible, and that this would place the last two shots closer together than the first two? Is it

possible that Specter, who had counted interviewing all the bystanders as one of his earliest objectives was, in fact, acutely aware that the scenario accepted by the others after watching the Zapruder film failed to match the testimony of the eyewitnesses? Was he, in fact, looking for ways to make it all fit?

Also interesting is Specter's selection of frame 242 as the frame by which Connally must have been hit. Frame 242 was, let's remember, the frame selected as the moment of impact on Connally in the secret analysis of the film performed at the National Photographic Interpretation Center in November and December. It seems clear from this that someone from the Secret Service told Specter their findings. Specter did, in fact, work closely with the Secret Service throughout his investigation. He was later to admit that Secret Service Inspector Thomas Kelley showed him an autopsy photo, apparently without the knowledge of their superiors.

Point "e" in Eisenberg's memo is also intriguing. Eisenberg writes: "if the first bullet did not hit Governor Connally, it should have ripped up the car, but apparently did not." As the limousine was cleaned up within days of the shooting, before anyone from the Warren Commission could ever get a look at its seats, Eisenberg's skepticism is well-placed. While the Warren Report criticized the Secret Service and FBI's performance in protecting the President, it offered few if any criticisms about their subsequent investigations of the assassination. Eisenberg's "apparently," however, can be taken as an indication that, behind the scenes, the Warren Commission's counsel were less than pleased with the Secret Service's willful destruction of evidence in the limousine.

The Gauthier memo to Callahan is also quite interesting in that it makes no secret of the FBI's deep-rooted apathy toward investigating the case. This apathy is first revealed by Gauthier's mention of a Dr. Heany, but no mention at all of Dr. Boswell; this suggests he wrote down the wrong name. It is also intriguing that Gauthier fails to report the commission's interpretation of the shooting scenario, which is quite different than the FBI's, and even notes that "*There is nothing controversial about where Shot 3 occurred inasmuch as the Zapruder movie indicates with much clarity where this happened,*" knowing full well he'd previously placed this shot 40 feet further down the street than now proposed by the Commission. This apathy is further documented in the addendum, in which Assistant Director AHB (Alan Belmont) makes clear that the FBI feels quite comfortable with their own theory on the shooting, and would prefer not be associated with the Secret Service's solution, or the Commission's conclusion. As he specifies that establishing the speed of the limo is beyond the scope of the FBI's investigation, when this question is central to the question of conspiracy v. no-conspiracy, it seems likely he has concerns over the political ramifications of the Secret Service's having erred and driven the limousine too slow, and that this outweighs his interest in establishing if Oswald could have fired the shots as purported.

Assistant Director Alex Rosen's memo is also intriguing. Since this memo reads like a first person account, it would appear he was one of the two "unidentified agents" mentioned in Eisenberg's memo. He, as Gauthier, fails to note at which frames the attendees felt Kennedy had been hit. But he evades much more. For some strange reason, Rosen not only fails to acknowledge that Eisenberg wants the FBI's help in performing a re-enactment, he claims "*Staff members of the Commission gave no indication what additional action they planned relative to this theory.*"

This suggests either that the agents in attendance failed to tell Rosen of Eisenberg's plans, or that Rosen himself was in attendance and was trying to hide this from his immediate superior Belmont, and, by extension, FBI Director Hoover.

Excerpts from an April 16 memo of Arlen Specter

April 16, 1964

To: Mr. J. Lee Rankin

From: Mr. Arlen Specter

Subject: Remaining Work in Area I.

1. Obtain accounts of the assassination from the eyewitness celebrities

...

2. Obtain further medical evidence

a. Photographs and x-rays of the autopsy should be examined to make certain of the accuracy of the artist's drawings of President Kennedy's wounds.

...

3. Plot the position of the President's automobile at the times of the three shots to calculate, as precisely as possible, distances and angles.

4. Present testimony on the clothing of President Kennedy and Governor Connally, and perhaps on the President's automobile.

5. Review and correct transcripts of my witnesses before the Commission.

6. Review, correct, and summarize transcripts of the depositions I have taken.

Analysis of Specter's April 16 Memo

It's clear from Specter's April 16 memo that he has no interest in interviewing the closest bystanders to the shooting, very few of whom have testified before the commission, and is only interested in interviewing the "celebrity" witnesses, whom he identifies as Mr. and Mrs. Johnson, Mrs. Kennedy, Governor and Mrs. Connally, Senator Yarborough, Clifford Carter, David Powers, and Kenneth O'Donnell. This suggests, then, that he is not interested in determining what happened as much as he's interested in obtaining accounts of the shooting from the people whom the Washington press might expect him to interview. Point 2 is also of interest, as it reveals that Specter does not trust the Rydberg drawings to be accurate, and would like to have their accuracy double-checked. Plot 3 is also intriguing, as it does more than suggest that Specter is unsatisfied with the mock-up of Dealey Plaza provided by the FBI, and would like to perform some sort of re-enactment.

The issues raised in Points 2 and 3 would rise and rise again.

FBI memo on the April 21 conference

April 22, 1964

MEMORANDUM

TO: *Mr. Conrad*

FROM: *W.D. Griffith*

SUBJECT: *Assassination of President Kennedy*

Request of the President's Commission

At the request of the President's Commission, Inspector J. R. Malley of the General Investigative Division, Inspector L.J. Gauthier of the Administrative Division and Special Agent Lyndal L.

Shaneyfelt of the Laboratory on 4/21/64 were at the Commission for a review of the Zapruder film of the assassination. Purpose of this review was to determine from Governor and Mrs. John Connally, who were present, whether or not it could be established at what point in the film the Governor was shot.

The following individuals were also present:

Dr. Gregory and Dr. Shaw who examined Governor Connally at Parkland Hospital in Dallas.

Dr. F.W. Light, Jr., and Dr. A.G. Olivier from the Wound Assessment and Wound Ballistics Department of Edgewood Arsenal

Dr. Joseph Dolce, consultant to the Biophysics Division of Edgewood Arsenal

It is noted that representatives of the Secret Service who have attended past reviews were not present.

The principal fact brought out by the Governor and Mrs. Connally was their selection of a portion of the film where "he has been hit"; however, they could not pin point the exact frame of the motion picture film where the bullet struck. The portion of the sequence they selected is only one-fourth to one-half second after the approximate point where the President was believed to have been shot at the base of the neck. Allowing for variations in reaction times, this lends support to the theory that one bullet passed through the President's neck, the Governor's chest, hit in the Governor's leg, and lodged in his clothing.

Both the Governor and Mrs. Connally stated that they heard the first shot and the second shot was the one that hit the Governor; however, neither of them saw the President between the first and third shots or can state that the President was actually hit by the first shot.

RECOMMENDATION: None. For information only.

Melvin Eisenberg's memo on the April 21 conference

April 22, 1964

MEMORANDUM FOR THE RECORD

FROM: *Melvin A. Eisenberg*

SUBJECT: *Conference of April 21, 1964, to determine which frames in the Zapruder movies show the impact of the first and second bullets.*

On Tuesday, April 21, 1964, a conference was held to determine which frames in the Zapruder film portray the instants at which the first and second bullets struck.

Present were: Dr. F.W. Light, Jr., Deputy Chief of the Biophysics Division and Chief of the Wound Assessment Branch of the Biophysics Division at Edgewood Arsenal, Maryland; Dr. Olivier, Chief of the Wound Ballistics Branch of the Biophysics Division at Edgewood Arsenal, Maryland; Dr. Joseph Dolce, Consultant to the Biophysics Division at Edgewood Arsenal; Dr. Charles F. Gregory and Dr. Robert Shaw of Parkland Hospital, Dallas, Texas; Messrs. Geuthier, Shaneyfelt, and one other unidentified agent of the FBI; and Messrs. Redlich, Specter, Belin and Eisenberg. Later in the proceedings, Governor and Mrs. Connally, Mr. Rankin and Mr. McCloy joined the conference.

A screening was held of the Zapruder film and of slides prepared by LIFE from the films. Each slide corresponded with a separate frame of film, beginning with frame 171. The consensus of the meeting was as follows:

(a) The President had been definitely hit by frame 224-225 when he emerges from behind a sign with

his hands clutching at his throat.

(b) After the Governor Connally straightened up at frames 224-225 he starts to turn to the right. As a result of this turn, at no time after frame 236 was Governor Connally in a position such that a bullet fired from the probable site of the assassin would have caused the wound in the chest cavity which Governor Connally sustained -- that is, after frame 236 the Governor presented a side view to the assassin rather than a back view. (1) Mr. Specter disagrees.

(c) In many frames up to 250, the Governor's wrist is held in a position which exposed him to the type of wrist wounds he actually received.

(d) After viewing the films and slides, the Governor was of the opinion that he had been hit by frame 231.

(e) The Governor stated that after being hit, he looked to his right, looked to his left, and then turned to his right. He felt the President might have been hit by frame 190. He heard only two shots and felt sure that the shots he heard were the first and third shots. He is positive that he was hit after he heard the first shot, i.e., by the second shot, and by that shot only.

In a discussion after the conference, Drs. Light and Dolce expressed themselves as being very strongly of the opinion that Connally had been hit by two different bullets, principally on the ground that the bullet recovered from Connally's stretcher could not have broken his radius without having suffered more distortion. Dr. Oliver withheld a conclusion until he has had the opportunity to make tests on animal tissue and bone with the actual rifle.

Analysis of the memos on the April 21 conference

The memos on the April 21 meeting are also quite revealing. While Eisenberg noted the various impressions of the moment of impact on both Kennedy and Connally, the FBI agents in attendance once again failed to record anyone's thoughts on this subject, and instead spun the information to support the status quo. As a result, Connally's belief he was hit a quarter second after it's painfully obvious Kennedy was hit does not cast one bit of doubt on the single-assassin conclusion, but instead "lends support" to the single-bullet theory holding they were hit at the same time. This is more than a bit short-sighted. To make matters worse, the Griffith memo concludes by claiming neither Connally nor Mrs. Connally "can state that the President was actually hit by the first shot." This is grossly deceptive. Eisenberg's memo reflects that Connally felt the President was hit by the first shot. Far worse, Mrs Connally testified to the Commission just after the conference and related "I heard a noise...I turned over my right shoulder and looked back, and saw the President as he had both hands at his neck...he made no utterance, no cry. I saw no blood, no anything. It was just sort of nothing, the expression on his face, and he just sort of slumped down." She was thereby testifying that Kennedy was hit by the first shot. So why the deception? Why pretend the Connallys would be open-minded to the contention the President and Governor were hit by same bullet with the second shot, when Mrs. Connally had just testified that this wasn't true?

Well, one possibility is that the agent reporting to Griffith, presumably Shaneyfelt, had come to believe the only way to sell the single-assassin conclusion was to sell the single-bullet theory, and that the only thing preventing their successfully doing so was the testimony of the Connallys. John Connally felt positive he was not hit by the first shot. Nellie Connally felt positive the President WAS hit by the first shot. This put the FBI in a bind. What to do? Shaneyfelt would have known, after all, after studying the film with the commission's counsel, that the film does not support that three separate shots were fired and that three separate hits were created by Oswald's rifle. Perhaps then he lied about what Nellie said in order to pretend there was no conflict between the recollections of the Connallys and the single-

bullet theory.

That Griffith or the man reporting to him was trying to hide problems with the theory is supported as well by his failure to mention Dr.s Dolce and Light's fervent belief Connally was hit by more than one bullet. Only the week before, we should recall, Dr. Humes pushed that Connally's back wound and wrist wound were brought about by separate bullets, and now here were two top wound ballistics experts claiming the same thing. But is this reported? No, not at all. Eisenberg's memo notes as well that Connally had insisted he was hit by but one bullet. But is this reported? No, not at all.

But the FBI's agents weren't the only ones failing to put on the record what they didn't want to hear... After complicating matters by insisting Connally must have been hit by two bullets, Dr. Dolce was cut out of the loop and never asked to testify.

(In 1976, Dr. Dolce wrote the HSCA and complained about his treatment. He noted that he was the pre-eminent expert on wound ballistics present at the 4-21-64 conference, and yet his impressions were ignored. He also complained that his colleagues, Dr.s Olivier and Dziemian, testified in a manner inconsistent with the tests they'd performed. He noted that the entrance wounds were smaller than the exit wounds on all the cadaver wrists they'd fired upon, but that Dr. Olivier ultimately accepted the word of Connally's physician, Dr.Gregory, that the larger wound in Connally's wrist was the entrance wound. Dolce concluded his letter by listing his interpretation of the shooting scenario: "1) The first bullet went through JFK's neck and this is the so-called pristine bullet. 2) The second bullet went through Governor Connally's chest and wrist and the film clearly demonstrates Connally's wrist against his chest wall. I feel that this is the bullet that is missing. 3) The third bullet struck JFK in the head and one fragment of this bullet struck Connally in the left thigh and also struck the windshield of the car." Apparently, Dolce just couldn't grasp that this scenario was, at least in the eyes of the commission, too reliant on Oswald's shooting ability, as it necessitated two shots being fired incredibly close together... Ironically, the HSCA, which ultimately concluded that Oswald WAS able to get two shots off within two seconds, also ignored Dolce; they failed to call him to testify, or even consult with their medical panel.)

Melvin Eisenberg and Norman Redlich memos proposing a re-enactment

April 24, 1964

MEMORANDUM

TO: Messrs. Redlich, Specter, Belin

FROM: Melvin A. Eisenberg

SUBJECT: *Determination of the Trajectories of the Three Shots*

1. My memos of the conferences of April 14, 1964, and April 21, 1964, designate the frames in the Zapruder film which portray or may portray the impact of the first and second bullets. My memo of earlier conferences designated the frames in the Zapruder, Nix, and Muchmore films which portray the impact of the third shot. In order to translate these determinations into actual distances, it appears to me to be necessary to go to Dallas.

2. The first step to take in Dallas is to place viewfinders on the spots at which Zapruder, Nix and Muchmore were standing, and place a replica car, bearing six occupants on Elm Street. The replica car should then be positioned so that, viewed through the viewfinders, the relationship between the actual car and the landmarks on November 22, as shown in the designated frames.

3. Pictures should be made showing the car (positioned under paragraph 2) from the following vantage points: (a) the spots at which the photographers were standing; (b) a point in the TSBD approximating the point at which the muzzle of the rifle was located; and (c) several point on the overpass. Still pictures, and moving pictures taken through the cameras actually used by Zapruder, Nix, and Muchmore should be taken from vantage point (a). Two sets of still pictures, one through a 4x telescopic sight, should be taken from vantage points (b) and (c).
4. Tapes should then be laid on Elm Street over the points or ranges at which the President and Governor were located when the three shots struck. Each tape should be marked to show every designated frame, and at the first tape should also be marked at the point where the President first became visible from vantage point (b) after emerging from behind the tree. On-the-street measurements should then be taken of the distances (i) from the marked points on each tape to the marked points on every other tape and (ii) from the marked points on each tape to the mid-point of a line connecting the southeast and southwest curbs of Elm street.
5. The position of the tapes and all marked points thereon should then be mapped on a survey, and the lengths of the various possible trajectories should be measured by the surveyor on a trigonometric basis, measuring from the point at which the muzzle was probably located to the beginning, end, and marked points of each tape. The surveyor should also determine the angle each trajectory makes with the horizontal. Copies of the surveyor's work-sheets and calculations should be sent to us.
6. The steps outlined herein are not to be deemed as exclusive. In particular, an attempt should be made to photograph various relative positions of the persons simulating the President and Governor Connally with a view to determining whether the first bullet probably did or did not hit the Governor as well as the President.

April 27, 1964

MEMORANDUM

TO: J. Lee Rankin

FROM: Norman Redlich

The purpose of this memorandum is to explain the reasons why certain members of the staff feel that it is important to take certain on-site photographs in connection with the location of the approximate points at which the three bullets struck the occupants of the Presidential limousine.

Our report presumably will state that the President was hit by the first bullet, Governor Connally by the second, and the President by the third and fatal bullet. The report will also conclude that the bullets were fired by one person located in the sixth floor southeast corner window of the TSBD building.

As our investigation now stands, however, we have not shown that these events could possibly have occurred in the manner suggested above. All we have is a reasonable hypothesis which appears to be supported by the medical testimony but which has not been checked out against the physical facts at the scene of the assassination.

Our examination of the Zapruder films shows that the fatal third shot struck the President at a point which we can locate with reasonable accuracy on the ground. We can do this because we know the exact frame (no. 313) in the film at which the third shot hit the President and we know the location of the photographer. By lining up fixed objects in the movie frame where this shot occurs we feel that we have determined the approximate location of this shot. This can be verified by a photo of the same spot

from the point where Zapruder was standing.

We have the testimony of Governor and Mrs. Connally that the Governor was hit with the second bullet at a point which we probably cannot fix with precision. We feel we have established, however, with the help of medical testimony, that the shot which hit the Governor did not come after frame 240 on the Zapruder film. The governor feels that it came around 230, which is certainly consistent with our observations of the film and with the doctor's testimony. Since the President was shot at frame 313, this would leave a time of at least 4 seconds between the two shots, certainly ample for even an inexperienced marksman.

Prior to our last viewing of the films with Governor Connally we had assumed that the President was hit while he was concealed behind the sign which occurs between frames 215-225. We have expert testimony to the effect that a skilled marksman would require a minimum 2 seconds between shots with this rifle. Since the camera operates at 18 1/3 frames per second, there would have to be a minimum of 40 frames between shots.

*It is apparent, therefore, that if Governor Connally was hit even as late as frame 240, the President would have to have been hit no later than frame 190 and probably even earlier. We have not yet examined the assassination scene to determine whether the assassin in fact could have shot the President prior to frame 190. We could locate the position on the ground which corresponds to this frame and it would then be our intent to establish by photography that the assassin could have fired the first shot at the President prior to this point. **Our intention is not to establish the point with complete accuracy, but merely to substantiate the hypothesis which underlies the conclusions that Oswald was the sole assassin.***

I had always assumed that our final report would be accompanied by a surveyor's diagram which would indicate the appropriate location of the three shots. We certainly cannot prepare such a diagram without establishing that we are describing an occurrence which is physically possible. Our failure to do this will, in my opinion, place this Report in jeopardy since it is a certainty that others will examine the Zapruder films and raise the same questions which have been raised by our examination of the films. If we do not attempt to answer these questions with observable facts, others may answer them with facts which challenge our most basic assumptions, or with fanciful theories based on our unwillingness to test our assumptions by the investigatory methods available to us.

I should add that the facts which we now have in our possession, submitted to us in separate reports from the FBI and Secret Service, are totally incorrect and, if left uncorrected, will present a completely misleading picture.

It may well be that this project should be undertaken by the FBI and Secret Service with our assistance instead of being done as a staff project. The important thing is that the project be undertaken expeditiously.

Analysis of the Eisenberg and Redlich memos proposing a re-enactment

These memos suggest that Specter did some talking after the showing of the Zapruder film, and convinced the others there were real problems with the shooting scenario if Connally was hit before frame 242. Their desire to test out the various scenarios is admirable. There is more (or less) to the story, however.

On point number 6 of the Eisenberg memo there is a curious statement. While it was his hope to measure the vertical angles into the car from the purported sniper's nest (point 5) he expresses no interest in measuring the cross-angle of a trajectory connecting Kennedy's throat wound with Connally's wound in his right armpit; instead, he states "an attempt should be made to photograph various relative positions of the persons simulating the President and Governor Connally with a view to

determining whether the first bullet probably did or did not hit the Governor as well as the President.” Surprisingly, he fails to mention comparing the positions of the men in the Zapruder film and other images of the motorcade to these “various relative positions.” It seems apparent from this that he has no plans of seeing if the single-bullet theory is likely, only possible.

The Redlich memo confirms this impression, and is interesting from start to finish. In the second paragraph, he reveals that, as late as this date, almost 5 months after the beginning of the Warren Commission, the intent of the Commission is to rubber-stamp the FBI and Secret Service conclusions. In the third paragraph, he tells Rankin, however, that the Zapruder film shows these conclusions were wrong. In the fourth paragraph, he makes the same mistake as the FBI and Secret Service, however, and assumes with little basis that the third shot was the head shot at frame 313. In the fifth paragraph, he displays his ignorance of the eyewitness evidence by accepting the testimony of the Connallys as the gospel truth. Ironically, by later accepting the single-bullet theory, he would show a distinct lack of faith. In the sixth paragraph, he incorrectly represents Frazier’s testimony as saying that a talented shooter could get off two shots in 40 frames, but correctly adds 10 frames to what could be expected of Oswald. In the seventh paragraph, he spills the beans, and admits that the whole proposed re-enactment is not to establish what DID happen, or even what most likely happened, but “merely to substantiate the hypothesis which underlies the conclusions that Oswald was the sole assassin.” In other words, he is telling Rankin not to worry, that no one has any intention of upsetting anybody by saying Oswald had assistance, but that in order for the Oswald-did-it theory to stick they would need to come up with a better story.

That "better story" was the single-bullet theory. It's mighty curious that Eisenberg's memo to his fellow counsel ends with his suggestion they test the feasibility of this theory, but Redlich's memo to Rankin never raises the issue, and pretends instead that the re-enactment will be testing whether or not Kennedy could have been shot prior to frame 190. From this, we might conclude that the FBI was not the only house divided, with junior members trying to get senior members to go along with Specter's theory.

April 30 memo of Arlen Specter

April 30, 1964

MEMORANDUM

TO: Mr. J. Lee Rankin

FROM: Arlen Specter

SUBJECT: Autopsy Photographs and X-rays of President John F. Kennedy

In my opinion it is indispensable that we obtain the photographs and x-rays of President Kennedy's autopsy for the following reasons:

1. THE COMMISSION SHOULD DETERMINE WITH CERTAINTY WHETHER THE SHOTS CAME FROM THE REAR. Someone from the Commission should review the films to corroborate the autopsy surgeons' testimony that the holes on the President's back and head had the characteristics of points of entry. None of the doctors at Parkland Hospital in Dallas observed the hole in the President's back or the small hole in the lower portion of his head. With all the outstanding controversy about the direction of the shots, there must be independent viewings of the films to verify testimony which has come only from Government doctors.

2. THE COMMISSION SHOULD DETERMINE WITH CERTAINTY WHETHER THE SHOTS CAME

FROM ABOVE. It is essential for the Commission to know precisely the location of the bullet wound on the President's back so that the angle may be calculated. The artist's drawing prepared at Bethesda (Commission Exhibit #385) shows a slight angle of declination. It is hard, if not impossible, to explain such a slight angle of decline unless the President was farther down Elm Street than we have heretofore believed. Before coming to any conclusion on this, the angles will have to be calculated at the scene; and for this, the exact point of entry should be known.

3. THE COMMISSION SHOULD DETERMINE WITH CERTAINTY THAT THERE ARE NO MAJOR VARIATIONS BETWEEN THE FILMS AND THE ARTIST'S DRAWINGS. Commission Exhibits Nos. 385, 386, and 388 were made from the recollections of the autopsy surgeons as told to the artist. Some day someone may compare the films with the artist's drawings and find a significant error which might substantially affect the essential testimony and the Commission's conclusions. In any event, the Commission should not rely on hazy recollections, especially in view of the statement in the autopsy report (Commission Exhibit #387) that:

"The complexity of those fractures and the fragments thus produced tax satisfactory verbal description and are better appreciated in the photographs and roentgenograms which are prepared."

When Inspector Kelly talked to Attorney General Kennedy, he most probably did not fully understand all the reasons for viewing the films. According to Inspector Kelly, the Attorney General did not categorically decline to make them available, but only wanted to be satisfied that they were really necessary. I suggest that the Commission transmit to the Attorney General its reasons for wanting the films and the assurances that they will be viewed only by the absolute minimum number of people from the Commission for the sole purpose of corroborating (or correcting) the artist's drawings, with the film not to become a part of the Commission's records.

Excerpt from the April 30, 1964 transcript of the Executive Session of the President's Commission on the Assassination of President Kennedy. (The Warren Commission).

Present: Chief Justice Earl Warren, Chairman; Senator John Sherman Cooper, member; John J. McCloy, member; Allen Dulles, member; J. Lee Rankin, General Counsel..

(Chairman Warren is going down a list of issues that need to be discussed.)

Warren: *Five, autopsy pictures of President Kennedy.*

Rankin: *The staff feels that we should have some member of the Commission examine those pictures. We have a very serious problem in the record now that Dr. Humes testified, as you recall, that the bullet in his opinion probably passed through the President and then through Governor Connally. And we now have the testimony of Governor Connally that that couldn't have happened. He is certain it didn't happen. And that the bullet that struck him is one that did not hit the President... We also have some drawings of President Kennedy which are reconstructions by the men that participated in the autopsy. And these men have not seen these pictures of the autopsy, but they had these drawings made, and we don't know whether these drawings conform to the pictures of the autopsy or not. Now I thought we could avoid having these pictures, possibly avoid these pictures being a part of the record, because the family has a strong feeling about them, and I think we should respect it insofar as can possibly be done, and carry out the work of the Commission—because they don't want the President to be remembered in connection with those pictures. That is their basic thought. I know that the Commission would like to respect that and not have them in any way become a part of the records which the public would get to see. But I do feel that a doctor and some member of the Commission should examine them sufficiently so that they could report to the Commission that there is nothing inconsistent with the other findings in connection with the matter in those pictures. In that way we can avoid any question that we have passed anything up that the Commission should know or that we haven't tried to take advantage of*

information that should be available to us.

Dulles: *Would the people who made the pictures have access to these photographs—because they would be the ones to tell, as to whether the pictures were consistent with the drawings they made?*

Rankin: *We, they were made, as I understand it, under the supervision of the doctors conducting the autopsy. And so they just have never been developed because of the family's wishes. And I think that the Attorney General would make them available now—although they were denied to us before because he said that he didn't think there was a sufficient showing of our need. But upon a showing now, I think that he would recognize the need and permit that limited examination. And then I feel that in dealing with the Attorney General, however, we should make it plain to him that if the member of the Commission who examines them, with the doctor, feels the whole Commission should see them, that there would be that reservation—because I don't know what might appear to some member of the Commission or the doctor in connection with them.*

McCloy: *There is this element. In the record there is an indication by the doctor that there was a certain—he would prefer to have the pictures in connection with the charts that he was representing to us. There was a certain little note of minor inadequacy in connection with the chart which he had, without the pictures.*

Dulles: *Which doctor was that?*

Rankin: *Humes—you remember it was the doctor that made the autopsy.*

Dulles: *Out at Bethesda?*

Rankin: *Yes.*

Dulles: *Yes, I remember that. As I recall the testimony, I think it was the doctor from Dallas.*

Rankin: *Dr. Gregory.*

Dulles: *The one who said that the bullet—I understood he said might have passed through President's throat and then through Connally. But I didn't think he said that he thought it did. I think he said he thought it might have. Is that correct?*

Rankin: *That is right.*

Dulles: *Could have.*

McCloy: *I thought the chief testimony on that came from the Bethesda doctor. I remember he said "I think I could show you this better on the photographs than I could through these charts."*

Rankin: *That is right.*

Warren: *Well, I think you can work that out, Lee, to do that, but without putting those pictures in our record. We don't want those in our record.*

McCloy: *Certainly not.*

Warren: *It would make it a morbid thing for all time to come.*

Rankin: *Is that effort to proceed in that manner, without having them in the record, and having an examination by the doctor and one of the members of the Commission satisfactory then?*

Warren: *Only for verification purposes. Yes, I think that would be all.*

Dulles: *By the doctor and a member of the Commission.*

McCloy: *Oh yes, you would need a doctor present to interpret it to you.*

Warren: All right. If there is nothing further on that item, the next is interview of Mrs. Kennedy.

Analysis of the April 30 memo of Arlen Specter and the April 30 executive session of the Warren Commission

These memos and the subsequent session of the Commission reveal that the Commission was not the blatant white-wash many believe it to be. Here, Specter, who took the testimony of the autopsists on 3-16, even though they'd been inexplicably denied the opportunity to compare their memories to the autopsy photos and x-rays they'd created, finally steps up and tries to do what's right. In light of his previous and subsequent actions, these memos are incredibly ironic. In point number 2 of the April 30 memo, Specter mentions that the angle of descent in the drawing is smaller than expected, and is suggestive that Kennedy was further down the street than believed. This indicates that Specter is convinced that Kennedy was sitting upright in the car and was not leaning over when shot. The irony of this is that, on May 24, 1964 Specter would see an autopsy photo of the back wound that showed the bullet entrance to be two inches lower than the wound in the drawing, and on a flat trajectory with the neck wound, but would say NOTHING about this to the commissioners. In 1978, the HSCA would not only decide the bullet entrance was two inches lower than in the drawing, but that Kennedy was significantly closer to the sniper's nest when shot. For Specter's single-bullet theory to have taken place under these conditions Kennedy would have to have been leaning quite far forward when shot. Specter knew this wasn't true, but once again, said nothing.

Point number 3 in the April 30 memo is especially ironic. Here Specter observes (accurately as it turned out) that the inaccuracy of the drawings HE put into evidence may come back to haunt the Commission later. He admits "Commission Exhibits Nos. 385, 386, and 388 were made from the recollections of the autopsy surgeons as told to the artist." This indicates that he knows measurements were not used. Specter prepared and received Dr. Humes' 3-16 testimony, in which he said "We had made certain physical measurements of the wounds, and of their position on the body of the late President, and we provided these and supervised directly Mr. Rydberg in making these drawings." And yet here Specter admits to his boss Rankin that the drawings were based on recollections, not measurements. Curiously, it appears that Specter knows Humes lied, but has failed to tell the Commission as much.

Specter's final paragraph is also important, as it indicates his belief that Robert Kennedy will not interfere with this inspection, and that Thomas Kelley of the Secret Service has discussed it with Kennedy. In 1978, Nicholas Katzenbach testified before the HSCA that he discussed the Warren Commission's use of the autopsy materials with Kennedy at one point, and that Kennedy gave his permission. Ironically, Specter told the doctors that it was Kennedy who forbade them from seeing the photos before their testimony, and they would repeat that story for many years to come, unaware that Kennedy had, in fact, granted them permission, once someone related to the commission had explained to him why it was necessary.

The April 30 executive session is even more revealing than Specter's memo. Here, Rankin, McCloy, and Dulles argue for the necessity of having a DOCTOR review the photos, and Warren agrees. Warren even tells Rankin that he thinks it can be worked out where the photos are reviewed but not placed in the record. These statements take on added meaning when one considers what ultimately transpired.

May 7 letter of J. Lee Rankin to J. Edgar Hoover and May 12 memo of Arlen Specter

May 7, 1964

Mr. J. Edgar Hoover

Director, Federal Bureau of Investigation

Department of Justice

Washington, D.C. 20535

Dear Mr. Hoover,

This commission has been making a careful study of the various motion picture films taken at the scene of the assassination. In this project we have had the valuable assistance of members your Bureau, particularly Inspector James Malley, Inspector Leo Gauthier and Special Agent Lyndal A. Shaneyfelt. As a result of the information obtained from these films, the Commission would like the cooperation of your Bureau in the performance of certain additional investigation at the scene of the assassination.

I will personally be available to supervise this work and will have such other staff members present as may be deemed necessary. We would hope to be able to perform this work in Dallas on May 18 and May 19. The purpose of this letter is to set forth the steps which we feel are necessary to properly complete this project.

I. PROBABLE RANGES FROM WHICH FIRST TWO SHOTS OCCURRED

Our examination of the Zapruder films indicates that Governor Connally was hit at some point prior to frame 240. (All references to frames in the Zapruder films are on the basis of a numbering system worked out with the FBI personnel who have been working on this project). Doctors familiar with the Governor's wounds concluded that after frame 236 his body was not in a position to have received the wound from a projectile fired from the sixth floor southeast corner window of the Texas School Book Depository Building. The Governor feels he was hit at approximately frame 230; some members of our staff feel that it could have been as late as frame 240. Governor and Mrs. Connally also testified that the Governor was hit by the second shot.

The FBI laboratory examination of the Zapruder camera establishes that it operates at a speed of 18 1/3 frames per second. Weapons experts have testified that the minimum time required to operate the assassination weapon is 2 1/4 seconds. It would appear, therefore, that a minimum of 41 frames would have to elapse between the first and second shots. ($18 \frac{1}{3} \times 2 \frac{1}{4}$).

The Commission is aware that it is impossible to determine the exact point at which the first two shots were fired. We request the following on-site investigatory steps, however, in order to determine whether it was possible for a person located on the sixth floor southeast corner window of the TSBD building to fire two shots at the Presidential car, the second of which occurred no later than frame 240:

(1) A point should be marked on the road corresponding to frame 199 on the Zapruder film, which is the last point at which the assassin could have fired from the window and still have been able to fire again by frame 240. A car should be photographed on this spot from the point where Zapruder was standing so that this photograph can be compared with frame 199 to make certain that the location is accurate. This should be done with the Zapruder camera, which has been retained for this purpose. A Polaroid should also be used for immediate comparison.

(2) After a car has been placed at this point on the road it should be photographed from the assassination window to determine whether the assassin had a clear shot at the occupants of the rear seat, with particular reference to the tree which at some point blocks the view from this window.

(3) If the car had passed the tree at frame 199, when viewed from the window, the car should be moved forward to the point at which there is a first clear view from the window and photographed at this point from both the window and at the place where Zapruder was standing so that we may determine what frame in the Zapruder films corresponds with this location.

(4) If the car has in fact passed beyond the tree at frame 199, it should be moved back to the point where it first cleared the tree and photographed from the window and the Zapruder location to establish the corresponding frame reference.

(5) The car should also be placed at the point where there is the last clear shot before it goes behind the tree and photographed from the window and the Zapruder location to determine the frame reference at this point.

(6) All the above points should be mapped on a survey. Lineal distances should be measured on the ground between these various points. Trigonometric readings should be taken to determine the distances from these various points to the assassination window and the surveyor should also determine the angle with the horizontal which is made when a line is plotted from each of these point to the assassination window.

II. PROBABLE LOCATION OF THE THIRD SHOT

Unlike shots one and two, the third shot has been fixed at a particular frame in the Zapruder films (frame 313), as well as a particular frame in the other two films (frame 24 of the Nix film and frame 42 of the Muchmore film). A car should be placed at the point which we believe to be the approximate location corresponding to these frames and then photographed from the point where the three cameramen were standing to establish the accuracy of this location. Distances should be measured from this point to the various points described in part I and angles and distances established between this point and the assassination window to establish the view which the assassin had when he fired the third shot.

III. PLOTTING TRAJECTORIES FROM THE RAILROAD OVERPASS

From each of the ground points established in parts I and II trigonometric readings should be taken from a point on either end of the overpass to chart the path which a bullet would travel if fired from those points on the overpass to the rear seat of the car. It should be determined whether a bullet could reach the rear seat without hitting the windshield, and the angle with the horizontal which would be made by a bullet fired from these points to a car located at each of the points to a car located at each of the points on the ground as determined in parts I and II.

A copy of this letter has been sent to Chief Rowley of the Secret Service with a request that the Secret Service provide such assistance in this work as the Commission and your Bureau may require. The Secret Service has furnished the Commission with photographs, surveys, and measurements which we have used in our examination of the films and which will no doubt be useful to your Bureau in completing this project. We would like your Bureau to make all necessary arrangements for this project. Members of the Bureau assigned to this project should contact either Mr. Norman Redlich or Mr. Melvin Eisenberg of the Commission staff if additional information is required.

Sincerely, J. Lee Rankin, General Counsel

cc: Mr. Rankin Mr. Redlich Mr. Willens

May 12, 1964

Memorandum

To: Mr. J. Lee Rankin

From: Arlen Specter

Subject: Examination of autopsy photographs and x-rays of President Kennedy.

When the autopsy photographs and x-rays are examined, we should be certain to determine the following:

- 1. The photographs and x-rays confirm the precise location of the entrance wound in the back of the head depicted Commission exhibits 386 and 388.*
- 2. The photographs and x-rays confirm the precise location of the wound of entrance in the upper back of the President as depicted in Commission Exhibits 385 and 386.*
- 3. The photographs and x-rays confirm the precise area of the President's skull which was disrupted by the bullet when it exited as depicted in Commission Exhibit 388.*
- 4. The characteristics of the wounds on the President's back and on the back of his head should be examined closely in the photographs and x-rays to determine for certain whether they are characteristic of entrance wounds under the criteria advanced by Doctors Finck, Humes, Boswell, Gregory, Shaw, Perry, and Carrico.*

The films and x-rays should be viewed in conjunction with Commission Exhibit 389 (a photograph of the frame of the Zapruder film immediately before the frame showing the head wound) and Commission Exhibit 390 (the frame of the Zapruder film showing the head wound) to determine for certain whether the angle of declination is accurately depicted in Commission Exhibit 388.

I suggest that we have a court reporter present so that we may examine Dr. Humes after the x-rays and photographs are reviewed to put on the record:

- 1. Any changes in his testimony or theories required by a review of the x-rays and films, and*
- 2 Corroboration of the portions or all of his prior testimony which may be confirmed by viewing the photographs and x-rays.*

Analysis of the May 7 letter of J. Lee Rankin and May 12 memo of Arlen Specter

The Rankin letter is fairly straightforward, and indicates that, since the writing of Redlich's April 27 memo to him, he has been convinced of the necessity of the single-bullet theory. Rankin mentions that they are trying to establish whether Connally was hit before frame 240 by the second of the three shots. He fails to mention that the eyewitness testimony suggests the second shot was fired after frame 240. It may very well be he has no idea that the statements of the bystanders, motorcycle cops, and Secret Service agents almost all disagree with the Connallys, and suggest the second shot was fired very close to frame 313. Rankin shows his bias in other ways as well. He tells Hoover that they need to show that the shots were 41 frames or more apart, saying that a weapons expert testified that the shots were no closer than 2 ¼ seconds apart. Apparently, he has forgotten that this "weapons expert" was one of Hoover's own men and that he'd testified that a half second should be added onto his time of 2.3 seconds in order to estimate the time necessary to fire at a moving target. Rankin makes another mistake as well. Along with just about everyone else, he discusses a third and final shot at frame 313 as if it were an established fact, when it is in opposition to the bulk of the eyewitness evidence as well as the visual aids packet supplied by the FBI in January. On May 24, the proposed simulation took place. (It is discussed in more detail in the Back Wound in Motion section of the Examining the Examinations chapter.)

The Specter memo is far more intriguing. Here, Specter reveals that the examination of the autopsy photos discussed in the April 30th executive session is about to take place. Specter also expresses that he is now interested in determining the exact locations of the wounds. Especially ironic is his suggestion that Exhibit 388 be compared to Exhibit 389. Any layman could look at the two and see that they were not compatible. In 1967, the discrepancy between these two exhibits led researcher Josiah Thompson to print them side by side in his book *Six Seconds in Dallas*. This showed that for the

purported entrance and exit wounds in Kennedy's skull to be aligned as in Exhibit 388, the sniper would have to have fired from the trunk of the Presidential limousine. Specter seems to know this and is apparently hoping to get it straightened out.

The most shocking aspect of Specter's memo, of course, is that the examination he found so necessary, and the examination agreed upon by Rankin, McCloy, Dulles, and Warren, NEVER HAPPENED. Dr. Humes was not permitted to look at the photos he'd ordered to be created. Specter was then forced to go to Dallas and analyze the trajectories without adequate knowledge of the entrance locations. The supposed reason for this is that Chief Justice Warren took a look at the photos by himself and found them so horrible that he shuddered at the thought of the photos becoming part of the public record. This is nonsense, however...a complete fairy tale. The transcript of the April 30 executive session shows that it was agreed that a doctor would be necessary to interpret the photos. The transcript shows that it was *Warren's belief* that the photos could be analyzed without being entered in the record. Since Dr. Humes had already testified, and since doctors performing autopsies are routinely entitled to view (and quite frequently retain) the photos of the autopsies they perform, there would have been no reason for the photos to be entered into the record, simply because Humes had looked at them. The only possible reason they would be entered in the record would be if WARREN looked at them, which he later admitted doing. From this, Warren's refusal to let Humes look at the photos can be interpreted in two ways: one, Warren was senile; and two, he knew that the wounds in the photos failed to match the wounds in the drawings, and lacked the nerve or desire to open up that door and see what lay inside. This is discussed in more detail in the Examining the Examinations section of this website.

As for Specter, he doesn't exactly get away clean. He would later admit that he went around Warren's back and got the Secret Service to allow him a look at the autopsy photo of Kennedy's back on the day of the re-enactment. As we will discuss later, this means he KNEW that the drawings of the President's wounds he'd placed into evidence were incorrect. It also means he knew that the single-bullet theory he was pushing on the Commission was highly doubtful. And yet, by all accounts, he failed to tell the Commission that he'd even looked at the photo. Arlen Specter was, of course, a long-time member of the Senate Judiciary Committee. One wonders if he'd have fired an underling who'd withheld such vital information.

Questions and More Questions

On **5-1-64**, Marine Lt. Col. Allison G. Folsom testifies before the Warren Commission on Oswald's military record. When asked about Oswald's shooting scores, Folsom was asked if it's correct that the top level is Expert, the middle level is Sharpshooter, and the bottom level is Marksman, and he agreed. Folsom then went through Oswald's score book, and commented that "at 200 yards slow fire...he got out in the three ring, which is not good...As a matter of fact, at 200 yards people should get a score of between 48 and 50 in the offhand position...he got a score of 34 out of a possible 50 on Tuesday. On Wednesday he got some 38." When asked if Oswald was a particularly outstanding shot, he responded "No, no, he was not...His scorebook indicates, as a matter of fact—that he did well at one or two ranges in order to achieve the two points over the Marksman score for Sharpshooter." When asked if that meant that Oswald had to have a "good day" to avoid being classified as a Marksman, Folsom responded "I would say so." Folsom was not asked to comment on Oswald's subsequent shooting scores, where his skills dropped to 1 point above the lowest level of Marksman.

The **5-9-64** Saturday Evening Post brings more bad news for the investigation. Republican Senator Hugh Scott of Pennsylvania publishes an article in which he denounces six Democratic Senators on the Rules Committee for obstructing an investigation into the crimes of President Johnson's long-time associate, Bobby Baker, some of which involved Johnson. Scott writes: *"in my five months on that unhappy panel I found it increasingly clear that the Democratic majority had fashioned blinders for their own eyes, plugs for their ears, and handcuffs for their wrists. They were hoping against hope that*

Bobby Baker and all his works would miraculously vanish with a minimum of embarrassment to all concerned...The watchdogs spurned the scent at every chance...many of the most important and disturbing disclosures were never followed up...dissent was firmly discouraged in a variety of unmistakable ways...No Senator could foresee the full consequences of a thorough investigation. In my own case, several thinly veiled threats were transmitted through friends and associates. I was warned that the safest course would be to let the matter sleep. I was told that discretion now could prevent nasty publicity against me later. Suffice it to say that the nasty innuendos have begun to appear in print. Democratic senators must have been under even greater pressure to keep silent, for the reputation of their party was involved...Not a single witness requested by the minority was ever called...The Rules Committee is armed with the staff investigators, subpoena powers and the vast authority of the Senate itself, but it lacks the simple determination to use them fully. The result is an appalling travesty of democratic government."

Upon reading this article, many Americans would undoubtedly have asked themselves the painful question of how they could possibly trust the Warren Commission--men hand-picked by Lyndon Johnson--to tell them the truth, when men not hand-picked by Johnson so readily covered up for his crony, Baker, and shut down an investigation that had led to testimony--AT THE VERY MOMENT KENNEDY WAS SHOT-- implicating Johnson in a kick-back scheme that would almost certainly have ended his career. (In 1978, another Senator from this panel, Carl Curtis of Nebraska, when asked in an oral history "Do you think it was the assassination that changed the nature of this investigation, though, and really slowed it down, because people were reluctant to testify?" would support Scott's claims. He responded "No. No. It was ironclad political control." Curtis asserted as well that he knew who had this control. He said: "Everything would appear as though Lyndon didn't know the investigation was going on. *He had the ability to direct things and not be anywhere near the scene.*" Should one think this was partisan sour grapes, moreover, 1978 saw the confirmation of Scott's and Curtis' claims, and from a most surprising source. In his book *Wheeling and Dealing*, an expert on the Bobby Baker scandal named...Bobby Baker...asserted that "LBJ had threatened to close down the Philadelphia Navy Yard unless Senator Scott closed his critical mouth.")

The Hoover Truth

On **5-14-64**, a week after President Johnson waived his impending mandatory retirement, FBI Director J. Edgar Hoover testifies before the Commission. (5H96-120) Despite his taking an oath to tell the truth, the whole truth, and nothing but the truth, he offers up the Hoover truth.

- **Hoover Truth:** *"I have read many of the reports that our agents have made and I have been unable to find any scintilla of evidence showing any foreign conspiracy or any domestic conspiracy that culminated in the assassination of President Kennedy."* (**Note:** Hoover had known for three years or more that organized crime and the anti-Castro elements likely to set up Oswald were linked and were conspiring to murder Fidel Castro, Oswald's supposed hero. Even though this information could lead one to suspect that Oswald killed Kennedy in retaliation, or that Oswald was indeed set up, Hoover failed to mention anything about this to the Commission.)
- **Hoover Truth:** *"There have been publications and books written, the contents of which have been absurd and without a scintilla of foundation of fact."* *"I, personally, feel that any finding of the Commission will not be accepted by everybody, because there are bound to be some extremists who have very pronounced views, without any foundation for them, who will disagree violently with whatever findings the Commission makes."* (**Note:** two of the loudest voices to argue against the Commission's findings were not extremists at all, but former FBI agents William Turner and Jim Garrison. More pointedly, the President for whom the report was written, Lyndon Johnson, never believed its findings.)

- **Hoover Truth:** *"I don't think you can get absolute security without almost establishing a police state, and we don't want that."* (Note: by 1964 Hoover had long been using the FBI to infiltrate and discredit organizations he found personally despicable. These FBI-trained infiltrators would frequently encourage the targeted organizations to engage in violent activity, in order to help discredit them in the public eye. Curiously, one of the organizations targeted by Hoover under this program (COINTELPRO) was the Fair Play for Cuba Committee, an organization publicly discredited in New Orleans by the actions of Lee Harvey Oswald.)
- **Hoover Truth:** (When asked if he still agreed that Oswald acted alone.) *"I subscribe to it even more strongly today than I did at the time the report was written. You see the original idea was that there would be an investigation by the FBI and a report would be prepared in such a form that it could be released to the public... Then a few days later, after further consideration, the President decided to form a commission, which I think was very wise, because I feel that the report of any agency of Government investigating what might be some shortcomings on the part of other agencies of Government ought to be reviewed by an impartial group such as this Commission."* (Note: Hoover failed to acknowledge that he originally told Johnson the Commission would be a *"three-ring circus."* Hoover also failed to acknowledge that with the FBI's report, it was not only investigating the shortcomings of other agencies, i.e. the State department, CIA, Secret Service, and Dallas Police Department, but the potential shortcomings of the FBI itself, as the FBI had failed to add Oswald's name to the Security Index used by the Secret Service to track possible threats to the President.)
- **Hoover Truth:** (When asked by Congressman Hale Boggs if he had thoughts on Oswald's motivation.) *"My speculation, Mr. Boggs, is that this man was no doubt a dedicated Communist... He stayed in Moscow awhile and he went to Minsk where he worked. There was no indication of any difficulty, personally on his part there, but I haven't the slightest doubt he was a dedicated Communist."* (Note: Hoover was obsessed with Communism, and saw Communists as evil and everywhere. His domestic intelligence chief William Sullivan later wrote a book admitting that by the early 1960s a large percentage of American communists were in fact FBI informants.)
- **Hoover Truth:** *"Now some people have raised the question, why didn't he shoot the President as the car came toward the storehouse where he was working? The reason for that is, I think, the fact there were some trees between his window on the sixth floor and the cars as they turned and went through the park. So he waited until the car got out from under the trees, and the limbs, and then he had a perfectly clear view of the occupants of the car, and I think he took aim, either on the President or Connally, and I personally believe it was the President in view of the twisted mentality the man had."* (Note, as demonstrated by the photos of the assassination scene taken by the Secret Service, and published by the Warren commission as Exhibit 875, there was a clear shot down Houston, should a sniper have been so inclined. The only trees were to the right of the sniper's nest, blocking its view down Elm.)
- **Hoover Truth:** (When discussing the attitude of the Soviet Government, and the KGB in particular, towards Oswald) *"I think they probably looked upon him more as a kind of a queer sort of individual and they didn't trust him too strongly. But just the day before yesterday information came to me indicating that there is an espionage training school outside of Minsk—I don't know whether it was true—and that he was trained in that school to come back to this country to become what they call a 'sleeper,' that is a man who will remain dormant for 3 or 4 years and in case of international hostilities rise up and be used."* (Note: this from the man who just swore there was not one "scintilla" of evidence indicating a foreign conspiracy. It seems Hoover couldn't help but kick a little sand in the direction of Russia when given the opportunity.)

- Hoover Truth:** *“Now, we interviewed Oswald a few days after he arrived...There was nothing up to the time of the assassination that gave any indication that this man was a dangerous character who might do harm to the President or to the Vice-President, so his name was not furnished at the time to the Secret Service. Under the new criteria which we have now put into force and effect, it would have been furnished because we now include all defectors.”* (Note: here, Hoover almost certainly commits perjury. Hoover concealed from the commission that on December 10, 1963, he’d censured or placed on probation 17 employees (5 field investigators, 1 field supervisor, 3 special agents in charge, 4 headquarters supervisors, 2 headquarters section chiefs, 1 inspector, and 1 assistant director) for what the inspector of the internal investigation, James Gale, termed *“shortcomings in connection with the investigation of Oswald prior to the assassination.”* When Assistant director Alan Belmont complained about this action, stating that since *“all of the supervisors and officials who came into contact with this case...are unanimous in the opinion that Oswald did not meet the criteria for the Security Index...it would appear that the criteria are not sufficiently specific,”* Hoover blasted him. On Belmont’s addendum to Gale’s December 10, 1963 memo, Hoover wrote *“They were worse than mistaken. Certainly no one in full possession of all his faculties can claim Oswald didn’t fall within this criteria.”* On September 24, 1964, the day the Warren Report, which included criticisms of the FBI’s investigation of Oswald prior to the assassination, was released, Hoover pounced again, writing that the employees who failed to properly investigate Oswald *“could not have been more stupid.”* He then punished these employees a second time. On September 30, 1964, Inspector Gale wrote *“It is felt that it is appropriate at this time to consider further administrative action against those primarily culpable for the derelictions in this case which have now had the effect of publicly embarrassing the Bureau.”* When a number of top FBI officials reacted angrily to the Warren Report’s criticism of the Bureau, and began planning ways to defend the FBI in the press, Hoover reiterated his position that the FBI was in fact to blame. On a 10-1-64 memo from Alan Belmont to Clyde Tolson, he wrote: *“We were wrong. The administrative actions approved by me will stand. I do not intend to palliate actions which have resulted in forever destroying the Bureau as the top level investigative organization.”*)
- Hoover Truth:** *“There was very aggressive press coverage at Dallas. I was so concerned that I asked my agent in charge at Dallas, Mr. Shanklin, to personally go to Chief Curry and tell him that I insisted that he not go on the air any more until this case was resolved. Until all the evidence had been examined, I did not want any statements made concerning the progress of the investigation. Because of the fact the President had asked me to take charge of the case I insisted that he and all members of his department refrain from public statements.”* (Note: immediately following Oswald’s death, Hoover’s man in Dallas, Mr. Shanklin, listed all the evidence against Oswald for the New York Times. Moreover, the Times’ 11-25 description of the evidence indicates that Shanklin misrepresented the results of the paraffin tests, stating that they showed *“particles of gunpowder from a weapon, probably a rifle, on Oswald’s cheek and hands.”* While the tests results were consistent with Oswald firing a pistol, the test results were negative for his cheek. Therefore, there was nothing whatsoever about the tests that suggested Oswald had fired a rifle.)
- Hoover Truth:** *“Well, I can tell you so far as the FBI is concerned the case will be continued in an open classification for all time. That is, any information coming to us or any report coming to us from any source will be thoroughly investigated, so that we will be able to either prove or disprove the allegation.”* (Note: in February 1967, Edward Morgan, a lawyer representing CIA front-man Robert Maheu and mafia strategist Johnny Rosselli, contacted columnist Drew Pearson and told him about the joint CIA/Mafia attempts to kill Castro, and the possibility they’d backfired on Kennedy. Pearson then told Chief Justice Earl Warren, who in turn told

Secret Service Chief James Rowley. When Rowley told Hoover about the incident, Alex Rosen drafted the FBI response. Rosen would later testify that he was sick and that an unidentified subordinate wrote this under his name. His response: *"no investigation will be conducted regarding the allegations...to Chief Justice Warren."* The letter, which was sent to Chief Rowley under Hoover's name on 2-15-67, went on to state *"The Bureau is not conducting any investigation regarding this matter. However, should Mr. Pearson, (Morgan), or (his) source of information care to volunteer any information to the Bureau, it would be accepted."* The internal memo from Rosen to White House/FBI liaison Cartha DeLoach, for that matter, added: *"Consideration was given to furnishing this information to the White House, but since this matter does not concern, nor is it pertinent to the present Administration, no letter was being sent."* It follows then, that if Hoover's testimony to the Warren Commission had been truthful, and that the FBI was in fact committed to investigating any leads that would subsequently come their way, well, then he had failed to tell as much to the men who would be tasked with conducting such an investigation.)

Meanwhile, back in 1964, the Warren Express rolls forward. By now, the scenario of a final shot head shot has been repeated so many times by the FBI and the media that two of Kennedy's closest aides, Kenneth O'Donnell and David Powers, who'd been riding in the motorcade in the car behind Kennedy, go along with it. One of them, Kenneth O'Donnell, is so anxious to get along that he fails to put into the record that his immediate impression was that the last shot came from in front of the limousine. (He would later tell Speaker of the House Tip O'Neill that he thought the last shot came from in front of the limousine.) **Kenneth O'Donnell (5-18-64** testimony before the Warren Commission, 7H440-457) *"My first impression was it was a firecracker. And then either somebody said 'He has been hit,' or I noticed the slump—he had been waving out the right side of the car and I noticed him slump over toward Mrs. Kennedy, and I realized then that they had been shots. But as fast as that realization occurred, I saw the third shot hit."* **Final shot head shot. David Powers (5-18-64** affidavit, 7H472-474): *"the first shot went off and it sounded to me as if it were a firecracker. I noticed then that the President moved quite far to his left after the shot from the extreme right hand side where he had been sitting. There was a second shot and Governor Connally disappeared from sight and then there was a third shot which took off the top of the President's head and had the sickening sound of a grapefruit splattering against a wall."* **Final shot head shot.**

But the source and order of the shots is not the only question whose answer seems increasingly out of reach. Oswald's capability with a rifle, and his rifle's capability to shoot accurately, are also still in doubt. On **May 20, 1964**, William Waldman testifies before the Commission as a representative of Klein's Sporting Goods, the company that sold Oswald the rifle. He testifies that the scope had been installed at Klein's but that it was not sighted in by Klein's. (7H360-369) This raises the question of whether the scope had EVER been sighted in prior to the FBI's attempt to sight it in on March 16, 1964. (This question would never be answered.)

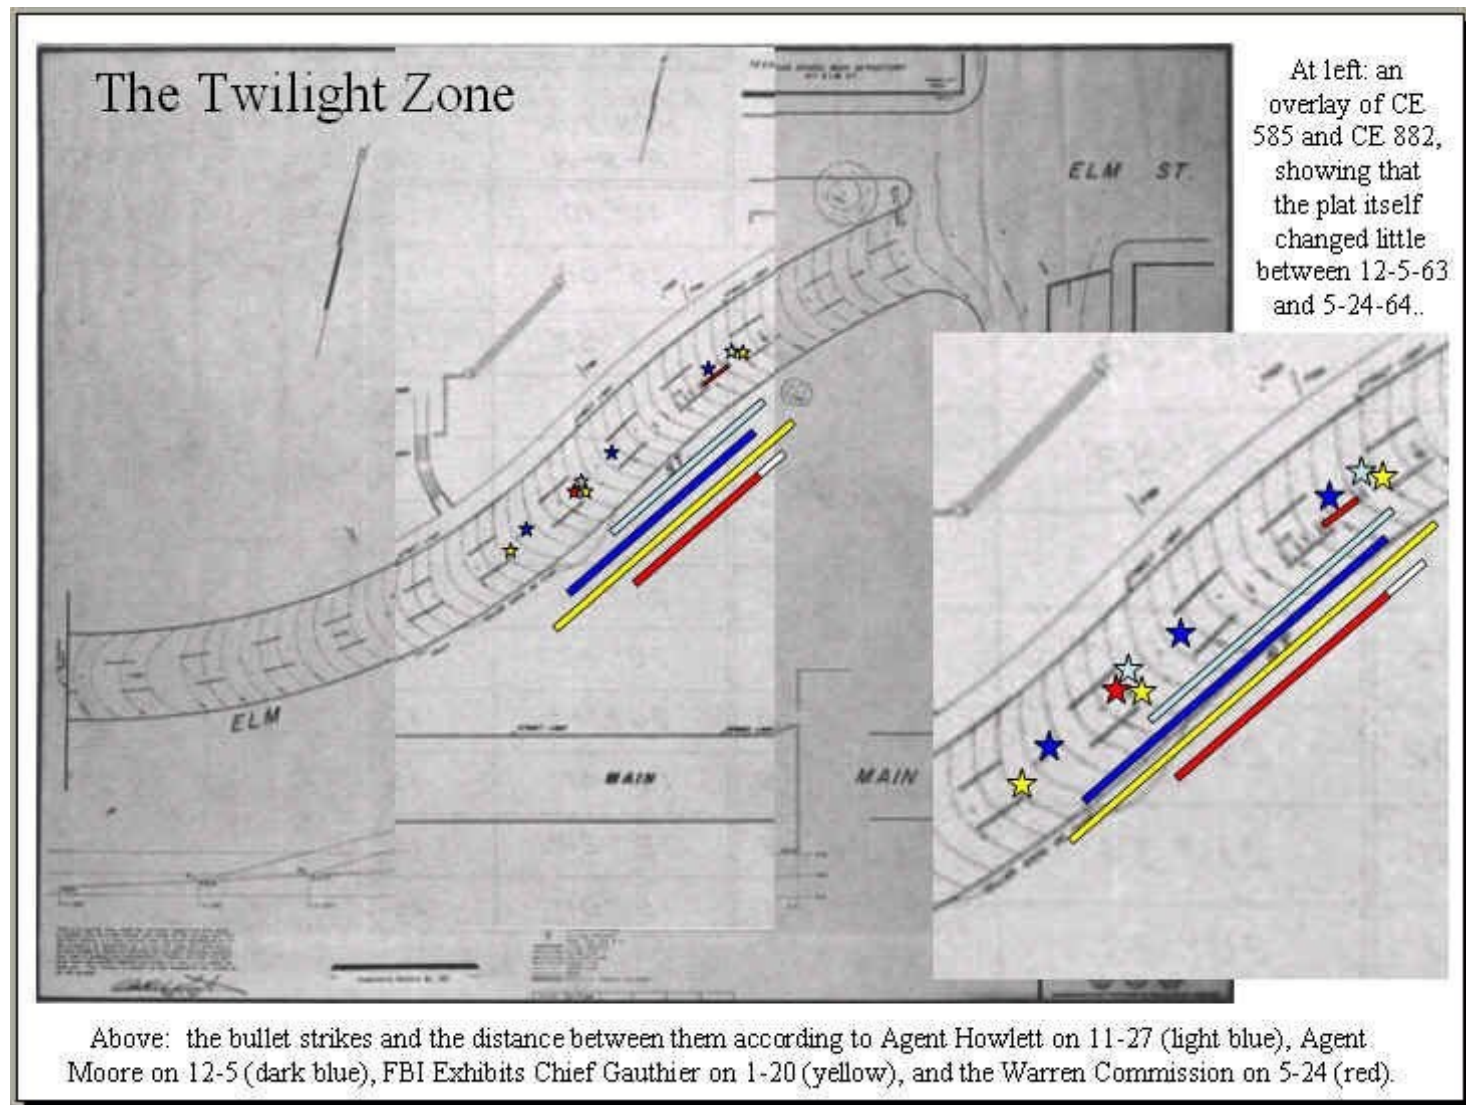

Questions are popping up everywhere. On **May 24, 1964**, the very day of the Warren Commission's re-enactment of the shooting in Dallas, The New York Journal-American runs an article on a photograph taken by James Altgens just after the first shot was fired on 11-22. Some have claimed a man in a doorway in the background of this photo is Oswald, proving Oswald's innocence. While the article features an interview with Billy Lovelady, who both claims and is claimed by others to be the man in this doorway, it raises more questions than it settles on other aspects of the shooting. It presents a series of *"claims"* and responds to these with *"facts."* Many of these facts are not quite accurate, however. Some, in fact, are absolute nonsense. To the claim more than one shooter must have fired upon Kennedy, as his neck wound was an entrance, while Oswald was shooting from behind, for instance, the article presents the *"fact"* that *"films show that he had turned his body far around to the right to*

wave at someone in the crowd just as the first shot struck him. In that position, his throat was fully exposed to the sniper." Yikes. This was the bill of goods pushed by Life Magazine in early December, almost SIX months before. The FBI had long ago tried to replace this with its own bill of goods--that the throat wound was an exit for a fragment from the bullet creating the head wound.

This leads us to become even more cynical. If the press can't make sense of what happened, and continues pushing "facts" long since discredited, then what hope is there the public will suddenly see the "light" when all the evidence is before them?

Chapter 3c: The Whitewash

A look at the last days of the Warren Commission

The Twilight Zone

On **5-24-64**, the Warren Commission and FBI conduct their on-site tests in Dealey Plaza. A few days later Arlen Specter takes the testimony of the FBI's photographic expert Lyndal Shaneyfelt. Shaneyfelt testifies about the distance of the limousine from the sniper's nest at relevant moments of the Zapruder film. He submits that Kennedy was 176.9 feet from the rifle at frame 210 of the film, and 190.8 feet

from the rifle at frame 225, the frames book-ending Kennedy's disappearance behind the Stemmons Freeway sign, and representing the purported moment of the first shot. While discussing frame 313, the moment of the fatal headshot, he testifies that the "*Distance to the rifle in the window is 265.3 feet. The angle to rifle in the window is 15'21' and this is based on the horizontal.*" (6-4-64 testimony of Lyndal Shaneyfelt before the Warren Commission, 5H139-164).

The establishment of this distance at 265 feet raises questions never properly asked or answered. If Specter had looked back through the records he would have seen that on 11-27-63 Agent Howlett, using the Zapruder film, determined the distance to be 260 feet. Close enough. He would also have seen that, on 12-5-63, just after the formation of the Warren Commission, Agent Elmer Moore, using the Zapruder film and the same surveyor used for the previous re-enactment, determined the distance to have been 294 feet. Something's beginning to smell. He then would have remembered that on 1-20-64 the FBI had provided him with exhibits indicating this distance was 307 feet. An even closer look would have indicated that, while the May 24 re-enactment determined the limo traveled no more than 88 feet further away from the sniper's nest between Kennedy's receiving his two wounds, and may have traveled as little as 74 feet, the Secret Service on 12-5 indicated it traveled 110 feet, and the FBI Exhibits Section, after surveying the plaza and studying the films for 5 weeks, 140 feet. While the inflation of this distance may have been on purpose, and designed to increase the length of the shooting scenario, the Zapruder film had already been tested, and the speed of the camera calculated, and the time span of the shooting widely reported. This suggests then that the inflation of the distance traveled, should it have been on purpose, was designed to cover something else. But what?

Well, how bout this? As the distance traveled between the first and third shots, when correlated to the shooting time span established by the Zapruder film, concurrently established the speed of the limousine at the time of the shots, perhaps the Secret Service and FBI inflated the distance to hide the uncomfortable and politically embarrassing fact that the limousine slowed down just before the head shot, and was traveling less than 10 miles an hour. Specter almost certainly considered this possibility. I mean, he and his fellow counsel must have wondered why the FBI and SS, when left to themselves, couldn't establish a consistent location for the President at the time of the third shot. They must have had discussions, conveniently kept off the record, of course, of whether the Secret Service and FBI were deliberately misleading the commission, or whether they were merely incredibly incompetent. As Specter had called Dr. Malcolm Perry before the commission and forced him to explain why he had initially described Kennedy's throat wound as an entrance wound, he should have called Agent Moore of the Secret Service and Chief Gauthier of the FBI's Exhibits Section before the commission to explain how they could be so wrong about the distance of the sniper's nest from Kennedy's position at the time of the head shot, when the location of Kennedy at this time is easily established by the Zapruder film, Nix film, and Moorman photograph. That he left their phenomenal errors unexplained suggests the commission was scared of undermining the credibility of its prime investigators, the Secret Service and the FBI, and hoped no one would notice the contradictory conclusions contained within the Secret Service and FBI reports. They nearly got their wish.

The FBI's ballistics expert Robert Frazier is another participant in the re-enactment. Testifying after Shaneyfelt on 6-4-64, he relates "At frame 231 the Governor is, as I saw it from the window on that date, turned to the front to such an extent that he could not have been hit at that particular frame. In frame 235, which is Commission Exhibit no. 897, the Governor...was also facing too far, too much towards the front...In frame 240 the Governor again could not have been shot." (6-4-64 testimony of Frazier before the Warren Commission, 5H165-175). The re-enactment thereby confirmed that Connally was out of position to receive his wounds at frame 231 of the Zapruder film, 11 frames earlier than Specter had hoped for. Specter now knows the only way he can have the last two shots close together, a la the eyewitnesses, is to have the first shot hit both Kennedy and Connally, and have one of

the last two shots miss.

On **5-27-64**, Chief Counsel Rankin gets some interesting news of his own. Richard Helms of the CIA sends him a memo recounting a meeting between an unnamed source (columnist Drew Pearson) and Chairman Nikita Khrushchev of the Soviet Union. According to Helms, when the unnamed source told Khrushchev that Oswald had acted alone, Khrushchev was “utterly incredulous.” The unnamed source described this attitude as “archetypical of every European I have ever talked to on this subject.” He “got the impression that Chairman Khrushchev had some dark thoughts about the American Right Wing being behind this conspiracy.” The unnamed source then “repeated that the reaction of Chairman Khrushchev and his wife was one of flat disbelief and archetypical of the universal European belief that there was some kind of American conspiracy behind the assassination of President Kennedy and the murder of Oswald.” One can only speculate that news like this would inspire the Commission to redouble its efforts to convince the world that Oswald acted alone.

On **5-29**, Dallas station KRLD broadcasts a scoop related to the 5-24 re-enactment. The Associated Press reports the details of this scoop the next day. *"DALLAS, Tex. (AP) - Television station KRLD said Friday it has learned the Warren Commission's report on the assassination of President John F. Kennedy will show that the first bullet hit both the president and Texas Gov. John B. Connally, and that the third shot went wild. In a copyright story, KRLD said this information came from a highly placed source to the Warren Commission following last Sunday's re-enactment of the assassination. Previous thinking had been that the first bullet hit the president, the second hit the governor, and the third fatally wounded Kennedy. KRLD said it also had learned the commission's report, which it said was to be released in a few weeks, will show the following: The first bullet entered the president's body slightly above the right collar bone and exited just to the left of the tie knot, then entered the body of Connally just above the fifth rib. The second bullet struck the president in the back of the head. The third bullet followed a much flatter trajectory than the first two, because the motorcade was moving down a sloping street, and it struck a manhole cover, then ricocheted off the curb and never was found. Medical opinion in the commission's report will show that chances for the president's recovery from the first wound would have been excellent. Also, had the first hit been a fraction lower, the force of the bullet probably would have knocked the president to the floor of the car and removed him from the line of sight for the second— and fatal — shot. The first bullet traveled 168 feet before it hit, the second 207 feet. There was an interval of 4 1/2 seconds between the first and second shots, and about 2 1/2 seconds between the second and third shots, and experts contend a crack marksman could have fired all three in the time it took the assassin to fire the first two."*

Well, this is most interesting. The information provided is all garbled. The source reportedly said the commission concluded the third shot missed but the shot distances provided, with the first shot being fired from 168 feet and the second shot being fired from 207, suggests instead that the first shot hit Kennedy (167 feet was the distance for this shot in the FBI's 1-20 report) and that the second shot hit Connally. This inexplicably leaves out the headshot. The purported distance for the second shot--207 feet--correlates to frame 242 of the Zapruder film, the earliest point at which Kennedy and Connally could have been hit by separate shots, and the point which Specter had been holding out as the last moment Connally could have been shot. The reported 4 1/2 second gap between the first and second shots, furthermore, is clearly a reference to the shot at frame 242 and the head shot at frame 313, which comes about 4 1/2 seconds afterward. This then indicates that the source believed the final shot came two and half seconds after frame 313, at approximately frame 358. The final shot in the January report of the FBI exhibits section, we should recall, came at approximately frame 358. This suggests that the source for this article was not simply mistaken about the commission's concluding the first shot was fired from 168 feet, and that the last shot missed around frame 358, but was inferring as much from the FBI's earlier report. Since that report specified that the last shot hit Kennedy, moreover, this suggests

that the source for this article was futilely trying to correlate the contradictory information contained in that report, with subsequent information derived from Specter and the re-enactment. The result was nonsense. Who was this source?

On 6-1-64, more leaks reach the public. Anthony Lewis, a writer with a close working relationship with the Supreme Court, writes an article for the New York Times with the headline "Panel to Reject Theories of Plot in Kennedy's Death. Warren Inquiry is Expected to Dispel Doubts in Europe that Oswald Acted Alone." Lewis would go on to claim "*The commission's report is expected, in short, to support the original belief of law enforcement agencies in this country that the President was killed by one man acting alone, Lee H. Oswald...A spokesman for the commission said that none of the critical works, foreign or domestic, had come up with any new factual information. He said that the commission had found 'just a rehash of the same material. The same questions and each man's conclusions.'...The commission's spokesman expressed the conviction that its report, when issued, would completely explode the theories published (abroad). He said that not even the authors would stand by them. 'We'll knock them out of those positions,' he said.*" In its 6-12-64 issue, Time Magazine jumped on board and echoed the Times' endorsement of the commission's conclusions months before they were even released. An article on the attitudes of Europeans to the assassination began "*The most myth-filled aftermath of John F. Kennedy's assassination is the stubborn refusal of many Europeans to accept the belief that the U.S. President could have been killed by a lunatic loner*" and admitted "*Last week word leaked from the Warren Commission that its report would spike each of the overseas theses and endorse with few changes the FBI's original version that Oswald killed alone. However, this is hardly likely to end the myth-making in Europe.*" From these articles, it seems likely the "spokesman" speaking to Lewis was either Warren himself or someone acting with his blessing.

If so, however, it's clear these leaks were not "authorized" by the full commission. The 6-4 executive session of the commission reflects that Congressman Ford, for one, is irritated by these leaks, as he is not at all convinced there was no foreign involvement in the assassination. He, furthermore, threatens Warren that if these leaks persist he will find it necessary to tell the press that "*the Commission has not discussed these matters as a Commission*" as yet, and that whoever is telling them otherwise is not to be trusted. Warren then interjects that he "*personally cannot account for any of these stories*", and that he has not spoken to any newspapers and that he has urged General Counsel Rankin to urge the staff not to do so as well. This, of course, leaves open the possibility that Warren nudged someone on the staff to make these calls behind Rankin's back. Perhaps sensing that Ford suspects as much, then, Warren adds "*I have no knowledge of anybody talking to anybody...If I knew that anybody from the Commission or the staff has been discussing these things with the press, I would feel very badly about it. But I don't have any belief that they have.*" This leads Ford to refer back to the articles published around the time of the Commission's creation, and to Acting Attorney General Katzenbach's request that they immediately release the results of the FBI's report, and the concurrent leak of this report to the press. It seems clear from this that Ford suspects Katzenbach.

In any event, after input from John McCloy, who offers "*Until you complete the testimony, you cannot have a final conclusion*" and voices his own suspicions of the Justice Department, it is decided that a statement should be issued announcing that the Commission is still taking testimony, and that therefore no conclusion has been reached. This, of course, is a bit disingenuous, as the commission, acting as both prosecutor and defense, has the option of taking only the testimony that will help support its already scripted conclusions.

(It would later become clear that in the Spring of '64 the writer of the New York Times' article, Anthony Lewis, was working on a book, Gideon's Trumpet, whose main source was President Johnson's closest adviser Abe Fortas. This, in turn, raises the possibility that Johnson and Fortas were behind the leaks. Perhaps Johnson, angered by the Commission's failure to meet its original June 1 deadline, had simply

decided that enough was enough, and had decided to assure the world that neither he nor the Soviets had been involved in the assassination, and had asked Fortas to leak the story to Lewis. Perhaps not.)

On **6-2-64** Rankin writes a letter to Lt. Col. Allison G. Folsom requesting an appraisal of Oswald's shooting ability, based upon Oswald's test scores while in the Marines. On **6-8-64**, he receives an unexpected response. Folsom writes "In view of the lapse of time since Mr. Oswald was separated from the Marine Corps, it would be impossible to ascertain precisely the number of hours in which he participated in weapons marksmanship practice or how many rounds of ammunition he fired." He then gives a breakdown of the training received by Oswald and his subsequent tests scores. These show that Oswald was tested on the M-1 rifle on December 21, 1956 and received a score of 212, or sharpshooter ranking. This was the test discussed in Folsom's 5-1-64 testimony. The record shows that Oswald was tested on the M-1 rifle a second time on May 6, 1959, however, and received a score of 191, only 1 point above the bottom of the Marksman ranking. These were the scores reported by the New York Times on 11-23-63. The big surprise for Rankin comes in Folsom's summary. He tells Rankin "The Marine Corps considers that any reasonable application of the instructions given to Marines should permit them to become qualified as a marksman. To become qualified as a sharpshooter, the Marine Corps is of the opinion that most Marines with a reasonable amount of adaptability to weapons firing can become so qualified. Consequently, a low marksman qualification indicates *a rather poor "shot"* and a sharpshooter qualification indicates a fairly good "shot." Folsom was thus telling Rankin that Oswald was a poor shot when he left the Marines and would have been an even worse shot after 4 years without practice.

After the letter from Folsom, Rankin should have had great doubt that Oswald was capable of hitting the shots described by the FBI. The FBI, after all, claimed Oswald fired three times at a moving target and created two hits and one near miss (the bullet striking Connally) in a time span of roughly 5.6 seconds. In an ideal world, this would have led Rankin to push for more rifle tests, with civilians firing rifles similar to Oswald's at moving targets on a mock Dealey Plaza.

The Tests That Should Have Been

In fact, when one considers that the 2 hits attributed to Oswald were around 7 inches apart, near the center of Kennedy's exposed head and shoulders (as shown on CE 386, at right), and that CBS counted as a hit ANY strike on a target at least 3-4 times this area (as shown at far right), it becomes clear that Oswald's purported feat was highly unlikely.

In 1967, CBS News attempted to replicate Oswald's purported shooting feat, using shooters purportedly of comparable skill. Despite the fact the rifle used by these men was properly sighted-in, and that these men had nine practice shots apiece before making their attempts, only 1 of the 11 shooters was successful in replicating Oswald's purported feat (3 shots fired and two successful hits in 5.6 seconds or less) on the first try. Even worse, of the 37 recorded attempts, only 4 proved successful. The Warren Commission should have performed similar tests. If they had, and had received similar results, one can only hope they would have decided that Oswald needed more than 5.6 seconds to fire his shots, and that either the first shot or last shot missed.

The Tests That Should Have Been

In 1967, CBS News, realizing the Warren Commission's error in not conducting these tests, conducted some tests of their own. While the shooters used by CBS were all well-practiced rifleman, their over-all skill level was roughly that of Oswald at his best. (Of course, Oswald hadn't been at his best since his first years in the Marines, a half a dozen years before the assassination.)

There were still other problems with the test. For one, the rifle used by these shooters was in prime operating condition, and was in no need of the adjustments performed by those test-firing Oswald's rifle for the Warren Commission. For two, the CBS shooters, unlike the man firing Oswald's rifle in Dealey Plaza, who was firing cold, were given NINE practice shots before making their attempts. For three, the target upon which these men fired, unlike the limousine in Dealey Plaza, moved at a constant speed away from the shooter, and at a constant angle.

Now, all these problems should have worked to the advantage of CBS' shooters, and have led to their easily replicating the shots purported for Oswald... That is, if the shots have been indeed easily replicable...

But let the test results speak for themselves...

1. Col. Jim Crossman, ret. (expert rifleman). First attempt--3 near misses in 6.54 seconds. Best attempt (of 6) ---2 hits and 1 near miss in 6.20 seconds. 2 hits or more in 3 of 6 attempts. (6.34, 6.44, and 6.2 seconds)
2. Douglas Bazemore (ex-paratrooper). First attempt—unable to operate bolt effectively to fire the shots. Best attempt (of 4)—unable to operate stiff bolt action; gives up. 2 hits or more in 0 of 4 attempts.
3. John Bollendorf (ballistics technician). First attempt—2 hits and 1 near miss in 6.8 seconds. Best attempt (of 4)—the same. 2 hits or more in 1 of 4 attempts. (6.8 seconds)

4. John Concini (Maryland State Trooper). First attempt—no record of where shots went in 6.3 seconds. Best attempt (of 2)—1 hit and 2 near misses in 5.4 seconds. 2 hits or more in 0 of 2 attempts.
5. Howard Donahue (weapons engineer). First attempt—too fast with bolt—gun jammed. Best attempt (of 3)—3 hits in 5.2 seconds. 2 hits or more in 1 of 3 attempts. (5.2 seconds)
6. Somerset Fitchett (sportsman). First attempt—gun jammed at 3rd shot. Best attempt (of 3)—2 hits and 1 near miss in 5.5 seconds. 2 hits or more in 2 of 3 attempts. (5.9 and 5.5 seconds)
7. William Fitchett (sporting goods dealer). First attempt—3 borderline hits in 6.5 seconds. Best attempt (of 3)—the same. 2 hits or more in 1 of 3 attempts. (6.5 seconds)
8. Ron George (Maryland State Trooper). First attempt—gun jammed at 2nd shot. Best attempt (of 3)—2 hits and 1 near miss in 4.9 seconds. 2 hits or more in 1 of 3 attempts. (4.9 seconds)
9. Charles Hamby (shooting range employee). First attempt—gun jammed. Best attempt (of 3)—2 near misses and 1 complete miss in 6.5 seconds. 2 hits or more in 0 of 3 attempts.
10. Carl Holden (shooting range employee). First attempt—gun jammed with first shot. Best attempt (of 3)—3 near misses in 5.4 seconds. 2 hits or more in 0 of 3 attempts.
11. Sid Price (shooting range employee). First attempt—1 hit, 1 near miss, and 1 complete miss in 5.9 seconds. Best attempt (of 4)—the same. 2 hits or more in 0 of 4 attempts.
12. Al Sherman (Maryland State Trooper). First attempt—2 hits and 1 near miss in 5.0 seconds. Best attempt (of 5)—the same. 2 hits or more in 2 of 5 attempts. (5.0 and 6.0 seconds)

Of the 12 first attempts, only 1 shooter was able to hit the target twice in less than 5.6 seconds. Of the 43 total attempts, moreover, these well-seasoned shooters were able to replicate Oswald's purported feat—2 hits in less than 5.6 seconds—just 4 times.

In fact, it's even worse. Not counting Crossman, an acknowledged rifle expert, those purportedly of Oswald's skill level landed but 25 hits TOTAL, in their 20 successful attempts at getting off 3 shots. In other words, they hit 25 out of 60 shots--far worse on average than Oswald's purported 2 out of 3.

But it's actually FAR WORSE than that. You see, CBS counted any strike on the FBI silhouettes used as targets--even those far down the back, or out on the shoulders--as a hit. This, in effect, tripled or quadrupled the size of the target for their shooters, in comparison to the small area on the back and head purportedly hit by Oswald. It seems clear then that, of the 60 shots total, and 25 hits, no more than 9 hit the target in the small central area purportedly hit by Oswald, not once but twice. This, then, suggests that, even IF Oswald was a well-practiced shooter, and even IF his rifle were in optimal condition, and even IF he had been provided NINE practice shots, the odds of his hitting the small area he supposedly hit from the sniper's nest on any given shot were less than 1 in 6, and of his hitting this area 2 of 3 times something like 1 in 16.

In other words, Oswald's purported feat was highly unlikely...

(This fact has not escaped the attention of those continuing to argue Oswald acted alone. In his mammoth tome *Reclaiming History*, Vincent Bugliosi deceives his readers by arguing that, as Oswald was clearly aiming for Kennedy's head, he actually hit but one of three shots. This avoids, of course, that the vast majority of "hits" by the professional shooters attempting to simulate Oswald's purported feat for the Warren Commission, and what one can only assume were the vast majority of "hits" by the amateur shooters attempting to simulate Oswald's purported feat for CBS News in 1967, were torso hits even further from the center of the target as the hit on Kennedy's back.)

In any event, if the Warren Commission had conducted similar tests, they would almost certainly have

concluded that Oswald needed more than 5.6 seconds to fire the shots, and that either the first shot or last shot missed. But this was not to be...

Slips and Spills

Above: autopsy face sheet, Warren Commission Exhibit 397. The FBI's Robert Frazier testified that the measurements on this sheet were the source for the mark on the back of the stand-in at bottom right.

Above: autopsy photo of the President's back wound, viewed by Arlen Specter and Thomas Kelley in Dallas, May 24, 1964.

Warren Commission Exhibit 386: a drawing of the President's wounds entered into evidence by Arlen Specter. On June 4, 1964, Specter drew testimony from Kelley that this drawing was the source of the mark in the photo below.

At right: a photo of the May 24 re-enactment of the assassination printed in the June 1, 1964 New York Times. Why did Specter and Kelley mislead the commission about the location and source for the mark used in the re-enactment? Were they trying to hide that the wound was really on the back? Or that Dr. Humes had misinformed the commission when he told them that measurements taken at the autopsy were used to create CE 386? Or both?

Slips and Spills

On 6-4-64, Secret Service Inspector Thomas Kelley testifies about the May 24 re-enactment (5H129-134). Under Arlen Specter's guidance, he tells the commission that the location of the back wound mark on President Kennedy's stand-in was established by a "medical drawing." Strangely, Counsel Specter is quick to insert "*Permit me to show you Commission Exhibit 386...I ask you if that is the drawing you were shown as the basis for the marking of the wound on the back of the President's neck?*" Kelley answers "Yes." Later, Kelley slips up and says that "*the wound in the throat was lower than the wound in the shoulder*" and Specter leaps again "*By the wound in the shoulder, do you mean the wound in the back of the President's neck, the base of his neck?*" (5H175-176) Once again, Kelley agrees. The problem is that, while CE 386, one of the drawings submitted by Specter during the testimony of Dr. Humes, shows the wound to be on the base of the back of the neck and higher than the throat wound, Specter and Kelley (as they would subsequently admit) looked at a photo of this wound on the day of the re-enactment, and this photo showed the wound to be on the BACK, at the same level or lower than the throat wound. Specter was thus coaxing Kelley to mislead the commission, and hide that the wound was in fact on the President's back, at the same level or lower than his throat wound.

That Specter and Kelley were conspiring on such a deed, unfortunately, seems quite clear. While trying to establish the alignment of Kennedy and Connally during the shooting--that is, while trying to establish that they were in the proper alignment to receive simultaneous wounds from the rear in Kennedy's neck and Connally's right armpit--Specter asks Kelley the distance of Connally's seat from

the right door, and Kelley replies *"There is 6 inches of clearance between the jump seat and the door."* The problem is, once again, that this just isn't true. (The schematic of the limousine to which Kelley refers, Exhibit CE 872, does not have this measurement, but a schematic obtained by the HSCA from the same source does have the measurement, and it is, in fact, 2.5 inches, not 6.) That Kelley misrepresents the facts on two key points, and that both of these mis-statements (or lies, take your pick) just so happen to help Specter sell his theory that all the wounds save Kennedy's head wound were created by the same bullet, is undoubtedly suspicious.

After Kelley's initial testimony, FBI Exhibits Section Chief Leo Gauthier testifies about the scale model he created of Dealey Plaza (5H135-138). Here Arlen Specter carefully avoids questioning Gauthier about Gauthier's earlier conclusion, using largely the same tools used in the May 24 re-enactment, that the President was 307 feet from the sniper's nest at the time of the head shot, 42 feet further than is now proposed.

After Gauthier testifies, the FBI's photography expert Lyndal Shaneyfelt takes the stand (5H138-165). He testifies that the location of the President's back wound was, when viewed from the sniper's nest, obscured by an oak tree from frames 167 to 209 of the Zapruder film. When asked the last frame before Kennedy appears to be hit, Shaneyfelt testifies in accord with this testimony. A hit on Kennedy before frame 210, after all, might suggest there'd been a shot fired from somewhere other than the sniper's nest. Shaneyfelt testifies: *"Approximately--I would like to explain a little bit, that at frames in the vicinity of 200 to 210 he is obviously still waving, and there is no marked change. In the area from approximately 200 to 205 he is still, his hand is still in a waving position, he is still turned slightly toward the crowd, and there has been no change in his position that would signify anything occurring unusual. I see nothing in the frames to arouse my suspicion about his movements, up through in the areas from 200 on and as he disappears behind the signboard, there is no change. Now, 205 is the last frame, 205 and 206 are the last frames where we see any of his, where we see the cuff of his coat showing above the signboard indicating his hand is still up generally in a wave. From there on the frames are too blurry as his head disappears you can't really see any expression on his face. You can't see any change. It is all consistent as he moves in behind the signboard."* (If Shaneyfelt sounds tentative, and unsure of himself, it's quite possibly because he's not used to perjuring himself in such a manner. In 1978, a panel of 20 photographic scientists studied these same Zapruder frames for the House Select Committee on Assassinations. Their report, included in volume Appendix number 6 of the HSCA's report, reflects *"By a vote of 12 to 5, the Panel determined that President Kennedy first showed a reaction to some severe external stimulus by Zapruder frame 207, as he is seen going behind a sign that obstructed Zapruder's view."*)

Shaneyfelt also testifies that Kennedy was struck in the head when he was 265 feet away from the sniper's nest. The vast difference between Gauthier's earlier report and Shaneyfelt's conclusions are not discussed, nor noted. Shaneyfelt also tells the commission what they need to hear before they can accept Specter's theory that Kennedy and Connally were hit by the same shot—that the angle from the sniper's nest to Kennedy's throat wound to Connally at the moment they both could have been hit *"passed through a point on the back of the stand-in for the President at a point approximating that of the entrance wound."* To support this, Specter introduces Commission Exhibit 903 into evidence. Suspiciously, this re-enactment photo of Specter holding a rod at the angle from the sniper's nest at the presumed moment Kennedy and Connally were hit against the stand-ins in the limo was taken from the front and fails to show the location of the back wound. In the FBI's files, however, there are several photos taken from the opposite angle. These show the rod passing several inches above the location of the back wound. Well, at least Shaneyfelt was correct in stating the wound was on the back. (This is discussed in more detail in the Examining the Examinations chapter.)

After Shaneyfelt, the FBI's Robert Frazier comes on and explains that Connally was out of position to

have his wounds be caused by one bullet after frame 231 (5H165-175). This means that he must have been hit before this point, at a point too close to Kennedy's being shot to have both shots fired by Oswald, unless...they were in fact hit by the same shot. This proves that Specter knew going in, prior to taking this day's testimony, that his single-bullet theory was essential to the Commission's single-assassin conclusion.

Frazier drops another bomb as well. Under questioning by Commissioner Dulles (notably not Specter), he lets slip his recollection that the back wound location used in the re-enactment was established by the measurements taken at the autopsy. This contradicts the statement Specter drew from Kelley that the mark was established by looking at CE 386. So which one's telling the truth? Well, although Specter, as either a gross oversight or a deliberate deception, failed to introduce a photo of this chalk mark into evidence, photos of the re-enactment, in which the chalk mark is shown, were published in some newspapers, including the 6-1-64 New York Times. These photos show the marked location of the President's back wound to be...on the back, in line with the autopsy measurements and face sheet, as stated by Frazier, and inches away from the location at the base of the neck on CE 386, its source according to Kelley, and Specter.

And Specter knew the wound was marked in this location. He was, after all, the one running the re-enactment. And yet here he was, less than two weeks later, asking Thomas Kelley *"Permit me to show you Commission Exhibit No. 386, which has heretofore been marked and introduced into evidence, and I ask you if that is the drawing that you were shown as the basis for the marking of the wound on the back of the President's neck."* Well, do you see it? He was asking Kelley if a drawing of a wound at the base of the neck was used to mark a jacket at a location several inches below the base of the neck, and then hid from the record that this mark was in fact several inches below the base of the neck by 1) failing to introduce any photos of this mark into evidence, and 2) making out as though this mark was *"on the back of the President's neck?"*

So why did Specter deceive the commission about 1) the actual location of the back wound; 2) the location of the mark used during the re-enactment; 3) the location of this mark relative to a trajectory from the sniper's nest, and 4) the distance from the right door of the limousine to Governor Connally's seat?

Well, when one considers that, by this time, Specter knew that 1) the FBI and Secret Service had disregarded the evidence and come to questionable conclusions about the shooting scenario; 2) Dr. Humes had lied about the use of measurements in the creation of the Rydberg drawings, and 3) Chief Justice Warren had forbidden the use of materials necessary to establishing the facts, perhaps he decided it was time he join the crowd.

The Home Stretch

The investigation reaches its final turn.

The Justice Department's man on the commission, Assistant Counsel Howard Willens, realizes that the commission's upcoming report will never be accepted without Attorney General Robert Kennedy's signing off on it in some way. On **6-4-64** he dashes off a memo to General Counsel Rankin in which he proposes Chief Justice Warren write Kennedy a letter asking if Kennedy has *"any information suggesting that the assassination of President Kennedy was caused by a domestic or foreign conspiracy"* and Kennedy respond with a letter stating *"I know of no credible evidence to support the allegations that the assassination of President Kennedy was caused by a foreign or domestic conspiracy."* Willens notes *"The Attorney General would prefer to handle his obligations to the Commission in this way rather than appear as a witness."* He presents full drafts for both Warren's

letter, and Kennedy's response, noting *"The proposed response by the Attorney General has, of course, not been approved by him, or on his behalf by the Deputy Attorney General. It represents a revision of an earlier letter which I did show to them during my conference with them earlier today. At that time the Attorney General informed me that he had not received any reports from the Director of the Federal Bureau of Investigation regarding the investigation of the assassination, and that his principle sources of information have been the Chief Justice, the Deputy Attorney General, and myself."* (Willens' proposed drafts are discussed over the next week, and Warren sends "his" letter to Kennedy on June 11.)

Only six months after the shooting, and the same day that Arlen Specter turns in his initial draft for the Warren Report's chapter on the shooting, the Commission finally gets around to questioning the closest eyewitness, the former First lady. **Jacqueline Kennedy (6-5-64** testimony before the Warren Commission, 5H178-181) "Well there must have been two because the one that made me turn around was Governor Connally yelling. And it used to confuse me because first I remembered there were three and I used to think my husband didn't make any sound when he was shot. And Governor Connally screamed like a stuck pig. I heard Governor Connally yelling and that made me turn around, and as I turned to the right my husband was doing this (indicating with hand at neck). He was receiving a bullet. And those are the only two I remember." **Unsure. Only heard two clear shots.**

On this same day, the FBI reports the recollections of another vital witness, whose photographs of the assassination were everywhere. Strangely, they had no intention of interviewing him until a 5-25 column in the Chicago American asked why he'd not been interviewed. **James Altgens (6-5-64** FBI report, CD 1088 p.1-6) "at about the instant he snapped the picture, he heard a burst of noise which he thought was firecrackers...he does not know how many of these reports he heard...After taking the above photograph...he heard another report which he recognized as a gunshot. He said the bullet struck President Kennedy on the right side of his head and the impact knocked the President forward. Altgens stated pieces of flesh, blood, and bones appeared to fly from the right side of the President's head and pass in front of Mrs. Kennedy to the left of the Presidential limousine. Altgens stated Mrs. Kennedy grabbed the President and Altgens heard her exclaim "Oh, no!" as the president slumped into her lap."

On **6 7-64**, almost three months after the conclusion of his trial, the Commission finally gets around to questioning Oswald's assassin, **Jack Ruby**, about his possible role in a conspiracy involving Oswald. Ruby requests he be given a lie detector test. He tells Judge Warren *"I would like to request that I go to Washington and you take all the tests that I have to take. It's very important."* Later, he returns to this theme. *"Gentleman, unless you get me to Washington, you can't get a fair shake out of me. If you understand my way of talking, you have got to bring me to Washington to get the tests...Unless you can get me to Washington, and I am not a crackpot, I have all my senses—I don't want to evade any crime I am guilty of...Unless you get me to Washington immediately, I am afraid..."* Ruby then goes on to accuse his own lawyer of conspiring against him, to make it look like he'd planned out Oswald's murder, which Ruby insists was a spontaneous act. Ruby then throws in *"Well, it's too bad, Chief Warren, that you didn't get me to your headquarters 6 months ago."* Ruby then asks Sheriff Decker and all other law enforcement officers to leave the room. After they leave, he tells Warren and his staff *"Gentleman, if you want to hear any further testimony, you will have to get me to Washington soon, because it has something to do with you, Chief Warren. Do I sound sober enough to tell you this? ...I want to tell the truth, and I can't tell it here. I can't tell it here. Does that make sense to you?"* He then muses *"Boy, I am in a tough spot, I tell you that...But this isn't the place for me to tell what I want to tell..."*

Ruby then gets serious, and comes straight to the point: *"Chief Warren, your life is in danger in this city, do you know that?"* He requests again he be given a lie detector test, which will help him clear his

name, and concludes *"Gentleman, my life is in danger here. Not with my guilty plea of execution. Do I sound sober enough to you as I say this?...Then I follow this up. I may not live tomorrow to give any further testimony...the only thing that I want to get out to the public, and I can't say it here, is with authenticity, with sincerity of the truth of everything and why my act was committed, but it can't be said here. It can be said, it's got to be said amongst people of the highest authority that would give me the benefit of the doubt. And following that, immediately give me a lie detector test after I do make the statement."* During a stenographer's break to change paper, Ruby then corners Warren and Counsel Arlen Specter (the source for this story) and begs them to *"Get to Fortas. He'll get the job done...Get to Fortas. He'll get it worked out."* Ruby then goes on to assert that the John Birch Society is trying to use that he's a Jew to persecute other Jews, and claims *"The Jewish people are being exterminated at this moment. Consequently, a whole new form of government is going to take over our country, and I know I won't live to see you another time. Do I sound sort of screwy--in telling you these things?...It may not be too late, whatever happens, if our President, Lyndon Johnson, knew the truth from me. But if I am eliminated, there won't be any way of knowing...I won't be around, Chief Justice. I won't be around to verify these things you are going to tell the President...I have been used for a purpose..."*

While Ruby appears to be unstable, the fact that he's paranoid doesn't mean no one's out to get him. Warren and Specter are certainly aware that the radical right, including the John Birch Society, a prominent presence in Dallas, have been pushing the story (in newspapers such as The Thunderbolt) that Oswald killed Kennedy on behalf of a Jewish/Communist cabal, and that Ruby silenced Oswald on behalf of this same cabal. One book, just coming out in May '64, *Legacy of an Assassination*, offered that Ruby was a communist, and that as a communist, was ready to sacrifice his life for his cause. It mused further that Oswald, Ruby, Tippit, and others were all *"concealed Reds"* and that Ruby and Oswald had previously worked together on the attempted assassination of General Walker but were *"protected from arrest afterwards by concealed Reds in the CIA who got Attorney General Robert Kennedy to intercede with the FBI and the Dallas Police."*

Another book, *A Texan Looks at Lyndon*, by J. Evetts Haley, was a bit more scholarly. While not specifically targeting Ruby, it focused on Oswald's background as a communist, and excoriated President Johnson for covering up the possibility Oswald acted as part of a conspiracy. It reported: *"Thus the American people are convinced that the truth of the Oswald case, and its Jack (Rubenstein) Ruby connections, will never be known. At least not until they elect a President who believes they have the right to know the truth."* The insertion of "Rubenstein" was not a coincidence, and was clearly added to remind Evetts' readers that Ruby was a Jew, and not to be trusted. This book became a best-seller.

Still another book, soon to be released, entitled *None Dare Call It Treason*, noted that Kennedy was killed by a *"self-admitted communist"* and railed *"Volumes could and should be written on the press coverage of President Kennedy's assassination by a Communist killer. Even after Oswald was captured and his Marxist affiliations disclosed, TV and radio commentators have conducted a continual crusade of distortion and smear to direct the blame against right-wing or conservative groups."* This, as we've seen, is a lie. Sure, the press conducted a *"continual crusade of distortion and smear"* but it was a crusade to convict Oswald as a lone-nut assassin, not a crusade to blame the right-wing. This deliberate lie, then, seems designed to make *None Dare Call It Treason's* readers--and there were plenty of them--the book sold over 7 million copies--believe that a communist conspiracy to kill Kennedy had infiltrated the mainstream media, and that the enemy within was all around. Ruby's concerns were very real.

If Warren and Specter consider that Ruby, by his own admission, had immediately grown suspicious that Jews were being set-up as patsies in the killing of Kennedy (He'd learned that the Kennedy Wanted for Treason ads in the Dallas papers on the day of the assassination had been paid for by a Jew named

Bernard Weissman, and was so distressed by this fact that he contacted the Dallas Post Office at 4:30 AM the next morning in hopes they'd give him Weissman's address) they might reasonably suspect that Ruby had received orders to kill Oswald by someone other than this non-existent cabal, and was worried that his silencing Oswald on their behalf was gonna be used against his fellow Jews. (What else could he mean by *"I have been used for a purpose"*?) Ruby's cornering Specter, who was only involved in the questioning because he was Jewish and Ruby felt he could be trusted, and telling him to *"Get to Fortas...He'll get the job done"* should have aroused their suspicions even further. Fortas was President Johnson's most trusted and secret adviser, and a JEW, and would be the man best in position to shut down any orchestrated efforts to deflect attention from Johnson or other possible conspirators by blaming the assassination on Jews. So does Warren bring Ruby to Washington and let Ruby tell his whole story? Nope. Does he have Fortas interviewed or investigated so he can determine what, if any, ties he has to Ruby? Nope. Does he even get a doctor to testify that Ruby's unstable, so he can justify his not bringing Ruby to Washington? Nope, nope and nope again. Ruby's testimony has opened a door to a room that Warren refuses to enter.

The next day, **6-8-64**, another door is opened, and ignored. An internal FBI memo on this date from Alex Rosen to Alan Belmont relates that on 6-3 the FBI was contacted by President Kennedy's physician, Dr. George Burkley, wondering what became of a statement, dated 11-27-63, he'd given to the U.S. Secret Service, and why he hasn't been contacted by the Warren Commission. Rosen relates further that he's discussed this matter with Warren Commission Chief Counsel J. Lee Rankin, who requested he call the Secret Service and find out what happened to Burkley's statement regarding the events of 11-22-63. Rosen then relates that he talked to Secret Service Inspector Thomas Kelley, and Kelley told him he was indeed aware of Burkley's statement, *"was of the opinion it had been made available to the President's Commission,"* and *"would see that a copy of the memorandum was sent over to the Commission per Mr. Rankin's request."*

(Burkley's statement is eventually published by the Commission as Exhibit 1126. Strangely, however, despite this incident, and despite his name appearing in the autopsy report, numerous Secret Service reports, and in the testimony of witnesses such as Secret Service agent Roy Kellerman, Dr. Paul Peters, and Dr. Charles Carrico, no one from the FBI or Warren Commission was ever to interview Burkley, the only witness to see the President's body at both Parkland and Bethesda. This oversight is made suspicious, moreover, by the fact that Warren Commissioner Gerald Ford asked Congressman James D. Weaver, a former military surgeon, to take a look at the medical testimony, and that, in an April 23, 1964 letter (found in the Ford Presidential Library), Weaver told Ford that the lack of information regarding Burkley's actions in the testimony was an *"outstanding omission."*

While Ford's subsequent failure to demand Burkley be interviewed may have been yet another *"outstanding omission,"* it would eventually be revealed as an incredibly convenient omission for those hoping to convince others that Oswald acted alone. On October 17, 1967, in an interview conducted for the Kennedy Library, Burkley was asked if he agreed with the Warren Report's conclusions *"on the number of bullets that entered the President's body."* He replied *"I would not care to be quoted on that."* Similarly, on March 18, 1977, Burkley's attorney, Willaim Illig, contacted HSCA Chief Counsel Richard Sprague and told him that Burkley had information indicating that Oswald did not act alone. While no one followed up on this letter, the record suggests that Burkley suspected both that the back wound was too low on Kennedy's body to support the single-bullet theory, and that more than one bullet struck the President's skull.)

On **6-18-64**, Secret Service Chief James Rowley is called to testify. He admits that members of Kennedy's protection detail had been out drinking the night before the assassination, but asserts they were not punished for what would normally have been cause for termination because it might send the message that their actions had been a factor in Kennedy's death. Newspaper reports reflect that he is the

last person scheduled to testify before the commission. This means that all the witnesses subsequent to Rowley were NEVER supposed to testify.

Clean-up Time

The investigation is now over. The remaining months will be spent tying up loose ends, interviewing witnesses who should already have been called (so that the commission can say that they spoke to them), and finding experts to tell the commission what it's already decided to say.

One of these "missing" witnesses is Phil Willis, whose photograph of Kennedy just after the first shot has been studied extensively by the FBI. He has never been interviewed. Nor has his wife, who claimed to have witnessed the head shot... They are finally interviewed on 6-17 and 6-18. **Marilyn Willis (6-19-64** FBI report, CD1245 p. 44-45) "Mrs. Willis advised when the motorcade passed on Elm Street in front of where she was standing she heard a noise that sounded like a firecracker or a backfire. A few seconds following this she stated she heard another report and saw the top of President Kennedy's head "blow off and ringed by a red halo." She stated she believes she heard another shot following this."

Shot after the head shot. Phil Willis (6-22-64 FBI report, CD1245 p. 46-48) "*Willis advised that just about the same time that the limousine carrying President Kennedy was opposite the Stemmons Freeway road sign he heard a loud report and knew immediately it was a rifle shot and knew also the shot "had hit" ...About two seconds later he heard another rifle shot which also hit, as did the third, which came approximately two seconds later. Willis said he knew from his war experience the sound a rifle makes when it finds its mark and he said he is sure all three shots fired found their mark.*"

And then, on **6-20-64**, President Kennedy's youngest brother Teddy, serving out his brother's term in the Senate, is seriously injured in a small plane crash in which two others--the pilot and Kennedy's assistant--are killed.

Meanwhile, behind the scenes, the Warren Commission counsel charged with writing its report are turning in their chapters and the Commissioners themselves are making changes. On **6-24-64**, Commissioner John J. McCloy writes Rankin: "*I think too much effort is expended on attempting to prove that the first bullet which hit the President was responsible for all Connally's wounds. The evidence against this is not fully stated.*" This indicates that McCloy has his doubts about the single-bullet theory. It will eventually come out that Senators Russell and Cooper, and Congressman Boggs, also have doubts about the theory. Which means that just 3 of the 7 commissioners—Warren, Dulles, and Ford, wholeheartedly support the cornerstone of the Commission's conclusions, without which they would rightfully have to conclude the probability of a second gunman.

Ford at least is witting enough to understand the importance of the theory to the Commission's conclusions. On a **6-26-64** draft of Chapter 1 of the report, Congressman Ford changes the statement "*A bullet had entered his back at a point slightly above the shoulder and to the right of the spine*" to "*A bullet had entered the back of his neck at a point slightly to the right of the spine.*" (The published report reflects a compromise: "*A bullet had entered the base of the back of his neck slightly to the right of the spine.*" From this change it seems clear that Ford was deliberately skewing the report to help convince the public that a bullet fired from above could enter a man's back and exit his throat on a straight trajectory, a la the single-bullet theory.)

Dyeing the Grass Green

When the working papers of J. Lee Rankin were given to the Archives in 1997 and Ford's changes were discovered, the Former President reportedly responded "*My changes were only an attempt to be*

more precise.” While the inaccurate drawings entered into evidence by the doctors may have confused Ford into thinking his correction *was more precise*, a less generous interpretation is also reasonable, particularly when one notes that this very topic came up in Ford's 12-17 meeting with the FBI. Cartha DeLoach's memo on his meeting with Ford reflects: *"Two members of the Commission brought up the fact that they still are not convinced that the President had been shot from the sixth floor window of the Texas Book Depository. These members failed to understand the trajectory of the slugs that killed the President. He (Ford) stated he felt this point would be discussed further but, of course, would represent no problem."*

Apparently, Ford knew the caliber of men he was working with. Apparently, he knew that nothing could dissuade these men from claiming Oswald killed Kennedy. On July 2, 1967, an interview of Commissioner John McCloy was aired on Face the Nation. Although CBS' treatment of the assassination in its just-broadcast four part special on the Warren Commission was questionable, and at times quite deceptive, here Walter Cronkite actually did some digging. McCloy's answers, accordingly, are quite revealing. When asked why the Commissioners doubting the single-bullet theory claimed Oswald acted alone, even though, in Cronkite's words, it is *"inescapably obvious that without the single bullet theory, the whole case made by the Commission collapses into a mass of incredibility,"* McCloy gave a jaw-dropping response. He said: *"Well, what is the case? The case is, as--and, I think, this about right, and I can--I think I can summarize the conclusions. One. Oswald killed the President by shots fired from the sixth floor window of the school book depository in Dallas. He also killed Tippit...Now that's--that's the conclusion. Those are the essential conclusions of the Commission. They don't stand or fall by whether there was a single bullet there, or not."*

In other words, McCloy told Cronkite that they'd decided to blame the shooting on Oswald, EVEN IF THE EVIDENCE INDICATED IT WAS IMPOSSIBLE FOR HIM TO HAVE FIRED ALL THE SHOTS. The possibility that a conspiracy existed outside Oswald, and had set him up as the "patsy" he'd claimed to be, was not even to be considered.

4th Time's the Charm

4th Times the Charm

The FBI, Secret Service, and Warren Commission's absolute conviction that all the shots came from the sixth floor of the depository, no matter when or how the shots rang out, is by now abundantly clear. Perhaps no one is better able to see this than Dallas County Surveyor Robert West. Between December 7, 1963 and June 25, 1964, he has created and revised four plats of Dealey Plaza, with the angles of trajectory for proposed shots from the sniper's nest. All four of these plats were purportedly based on a careful analysis of the Zapruder film, and were created for a government agency. And yet, from plat to plat, not one shot has been of a consistent distance or at a consistent angle! (West will eventually testify at the trial of Clay Shaw in 1969, and acknowledge that he was in Dealey Plaza when the President was shot, and that he in fact heard four shots. This raises the question of whether or not he mentioned this fact to the Secret Service, FBI, and Warren Commission investigators employing his services, and, if so, why none of them ever interviewed him as a witness.)

On 6-29-64, the Warren Commission meets and deliberates over the submitted chapters of its report. (Intriguingly, little was known of this meeting until 1997, when General Counsel J. Lee Rankin's private papers were donated to the National Archives following the JFK Records Act. Rankin's notes reveal that this meeting consists of his running down a list of questions, and the Commissioners' deciding whether the proposed chapters adequately answer these questions. Over and over, on the questions of the number of the shots, the order in which the wounds were inflicted, etc, they answer "*Treatment in proposed draft satisfactory.*" This indicates that by June 5, Specter's conclusions were written in stone, and that the subsequent testimony of crucial witnesses such as Jacqueline Kennedy, James Altgens, Phil Willis, Abraham Zapruder, Emmett Hudson, and James Tague was taken entirely for political reasons, i.e., to convince the American people that the words of all the prominent witnesses had been considered, when in fact they had not.)

An AP dispatch from later that day only confirms that the investigation is over, and unlikely to meet any public resistance. It reads:

KRAKOW, POLAND, JUNE 29 CAP)-U.S. ATTORNEY GENERAL ROBERT F. KENNEDY SAID

TONIGHT LEE HARVEY OSWALD KILLED HIS BROTHER, PRESIDENT JOHN F. KENNEDY, AND "THERE IS NO QUESTION THAT HE DID IT ON HIS OWN AND BY HIMSELF."

"I BELIEVE IT (THE ASSASSINATION). WAS DONE BY A MAN NAMED OSWALD WHO WAS A MISFIT IN SOCIETY," KENNEDY TOLD A GROUP OF CIVIC LEADERS AND STUDENTS IN THIS SOUTHERN POLISH CITY.

AIDES SAID IT WAS THE FIRST TIME THE HEAD OF THE U.S. DEPARTMENT OF JUSTICE HAS SPOKEN PUBLICLY ABOUT WHO KILLED HIS BROTHER IN DALLAS, TEX., LAST NOV. 22. OSWALD WAS SHOT BY JACK RUBY, DALLAS CAFE OWNER, BEFORE HE COULD BE BROUGHT TO TRIAL, THERE HAVE BEEN SUGGESTIONS IN EUROPE, ESPECIALLY COMMUNIST COUNTRIES SUCH AS POLAND, THAT THE SLAYINGS OF KENNEDY AND OSWALD WERE PART OF THE SAME CONSPIRACY.

KENNEDY SAID IT WAS NOT OSWALD'S PROFESSED BELIEF IN COMMUNISM THAT PROMPTED HIM TO MURDER THE PRESIDENT.

"HE WAS A PROFESSED COMMUNIST BUT THE COMMUNISTS--BECAUSE OF HIS ATTITUDE--WOULD HAVE NOTHING TO DO WITH HIM," KENNEDY SAID. "IDEOLOGY IN MY OPINION DID NOT MOTIVATE HIS ACT, IT WAS THE SINGLE ACT OF AN INDIVIDUAL PROTESTING AGAINST SOCIETY."

KENNEDY WAS REPLYING TO A QUESTION BY HIERONYM KUBIAK, 25-YEAR-OLD HEAD OF, THE POLISH STUDENT UNION IN KRAKOW, WHO HAD DECLARED: "WE ALWAYS GREATLY RESPECTED PRESIDENT KENNEDY AND WE ARE VERY INTERESTED IN YOUR VERSION OF HIS DEATH, WE HOPE YOU WILL FORGIVE US FOR ASKING SUCH A DIRECT QUESTION BUT WE REALLY WOULD LIKE YOUR VIEW."

THE ATTORNEY GENERAL REPLIED "IT IS A PROPER QUESTION WHICH DESERVES AN ANSWER." HE CALLED OSWALD "A MISFIT IN SOCIETY WHO HAD LIVED IN THE UNITED STATES AND WAS DISSATISFIED WITH OUR GOVERNMENT AND OUR WAY OF LIFE. HE TOOK UP COMMUNISM AND MOVED TO THE SOVIET UNION BUT WAS DISSATISFIED THERE. HE CAME BACK (TO AMERICA), WAS ANTI-SOCIAL AND FELT THE ONLY WAY TO TAKE OUT HIS STRONG FEELINGS AGAINST SOCIETY AND DISSATISFACTION WITH THE WAY HE WAS TREATED WAS BY KILLING THE PRESIDENT OF THE UNITED STATES."

On **6-30-64** the New York Times carries its own version of this story. It takes the opportunity to throw in that the Attorney General's conclusions reflect those of the Warren Commission. It reads:

"Attorney General Robert F. Kennedy said today that his brother had been assassinated by Lee H. Oswald, "a misfit," who took out his resentment against society by killing the President of the United States. Answering questions at a meeting of the City Council of Cracow, the Attorney General said that Oswald was "a professed Communist" but had not been motivated by Communist ideology when he shot the President last Nov. 22. It was in response to a hesitant question put by a Communist youth leader of Cracow, who attended the council's meeting, that the Attorney General spoke about Oswald and the assassination. It was Mr. Kennedy's first public discussion of the accused assassin, aides said... The Attorney General briefly sketched Oswald's life story, describing him as a man who had embraced Communism, and had gone to the Soviet Union, but found no place for himself there. He was a professed Communist," but the Communists, because of his attitude, would have nothing to do with

him," he said. "What he did he did on his own, and by himself."

Discredits Plot Theories

Mr. Kennedy said that the assassination was not a racist plot, such as some persons had speculated. "Ideology in my opinion did not motivate his act," the President's brother said. "It was the single act of one person protesting against society." The Attorney General is known to be fully acquainted with the findings of the Warren Commission. It is presumed by persons close to him that the Commission's report will reflect the views expressed by Mr. Kennedy today."

Between the Lines: a Discussion of RFK's Comments

It is intriguing that Robert Kennedy's first and only public comment on the assassination during the Warren Commission's investigation comes on a goodwill trip to a communist country, where he was pretty much boxed in. If, in such a setting, he said anything suggesting he had doubts about the Warren Commission's findings, and thought a domestic conspiracy responsible for his brother's death, it's almost certain he would be crucified back home, and accused of encouraging communism worldwide. If, in such a setting, he said anything suggesting he had doubts about the Warren Commission's findings, and thought a foreign conspiracy responsible, on the other hand, he would be crucified by his fellow liberals for spreading fear of World War III, and providing fuel for the right-wing fanatics back home. It was a lose-lose proposition. This, then, left him little alternative but to pin the tail on Oswald, and claim everything he'd seen proved Oswald to be a lone nut.

The possibility exists, for that matter, that Kennedy's being asked this question in this setting was no coincidence. While it's perfectly possible Hieronym Kubiak, who would rise within the ranks of the Polish Communist Party and become the member of its Central Committee in charge of Science and Education--only to resign in 1982 after voicing his support for Solidarity, the movement which led to the end of Communism in Poland--had a sincere interest in Kennedy's answer, or that he knew Kennedy would disavow a conspiracy and was anxious that he do so, it seems possible as well that he was convinced to ask this question by the CIA, who had a number of assets in Communist youth organizations. If so, their operation was successful. A July 6 Airgram from the American Embassy in Rome found in the CIA's files reports that Kennedy's statements *"were given particular prominence in the Italian Press."* As the CIA had a number of assets in the international press, this could very well have been bragging. There is a note of discord, however. The Airgram also reports that the Communist paper L'Unita has chosen to comment on Kennedy's comments, and has noted *"Kennedy's declarations about the death of his brother and about the personality of Oswald seem disconcerting and...are in striking contrast not only with numerous facts but also with Robert Kennedy's attitude, declarations, and initiatives after the Dallas tragedy."* While it's unclear which *"declarations"* and *"initiatives"* are being referenced in this article, it seems possible that Russian Premier Khrushchev or one of his emissaries has been indiscreet about Robert Kennedy's private communication in December, and has told Communist organizations and newspapers worldwide of Kennedy's private suspicion his brother was killed by a domestic conspiracy.

Gone Fishin'

While the commission itself is prepared to join Robert Kennedy and declare that Oswald acted alone in killing his brother, it's ironic indeed that they aren't as sure as he (or at least the 'he' he was pretending to be) that Oswald's act was a "protest." In fact, they still can't figure out exactly why Oswald performed his purported act.

And for good reason... If Oswald did it because he hated Kennedy then why was everyone close to Oswald so convinced he actually liked Kennedy? If he did it for fame or for political reasons, on the other hand, then why oh why did he try to get away and then deny his involvement once caught? (It's so hard to be a martyr without a cause.) And if he was simply a raving lunatic then why was he so calm before the cameras?

By **July**, the commission counsel tasked with answering this question, Wesley Liebler, is so perplexed that he gives in and asks Oswald's brother Robert for guidance. Robert is unable to give him an answer. (In an interview published in *The Nation* on March 9, 1992, Liebler would voice his continued inability to understand Oswald's motive. He revealed: *"I drafted a psychological profile of Oswald for chapter seven of the report. It was reviewed by a panel including the chief of psychiatry at the Mayo Clinic, who threw my draft down and said, 'This is very interesting stuff, but it tells me a lot more about you, Liebler, than it does about Oswald.' So how the hell do I know why Oswald killed the President?"*)

On **7-6**, Chief Justice Warren sends yet another message that he wants to wrap things up, and leave critical questions unanswered. Tired of waiting for a finalized report, but comfortable with the conclusions he'd reached weeks if not months before, he flies off on an extended fishing trip. (His personal papers reflect that while he left on this trip on 7-6, he did not return to work till 8-1. As a result, while one reads the events for July 64, one should keep in mind that while the dance was proceeding, Warren--supposedly the guiding light of the Commission, and master of the dance--was fishing.)

A few days later, we see a **7-7-64** letter from the Dallas FBI office, written in response to a 5-20 letter from the Commission, asking they establish the chain-of-evidence for a number of items. When discussing the chain-of-evidence for FBI C1/Warren Commission Exhibit CE 399, a near-pristine bullet found on a stretcher at Parkland hospital, an hour or more after the President and Governor were admitted, and purported to have caused Kennedy's back and throat wound, and all of Connally's wounds, it relates: *"On June 12, 1964, Darrell C. Tomlinson...was shown Exhibit C1, a rifle slug, by Special Agent Bardwell D. Odum...Tomlinson stated it appears to be the same one he saw on a hospital carriage at Parkland Hospital on November 22, 1963, but he cannot positively identify the bullet as the one he found and showed to Mr. O.P. Wright...On June 12, 1964, O.P. Wright...advised Special Agent Bardwell D. Odum that Exhibit C1, a rifle slug, shown to him at the time of the interview, looks like the slug found at Parkland Hospital on November 22, 1963 which he gave to Richard Johnsen, Special Agent of the the Secret Service...He advised he could not positively identify C1 as being the same bullet which was found on November 22, 1963...On June 24, 1964, Richard E. Johnson...was shown Exhibit C1, a rifle bullet, by Special Agent Elmer Lee Todd, Federal Bureau of Investigation. Johnsen advised he could not identify this bullet...On June 24, 1964, James C. Rowley, Chief, United States Secret Service...was shown Exhibit C1, a rifle bullet, by Special Agent Elmer Lee Todd. Rowley advised he could not identify this bullet as the one he received from Special Agent Richard E. Johnsen and gave to Special Agent Todd on November 22, 1963. On June 24, 1964, Special Agent Elmer Lee Todd...identified C1, a rifle bullet, as being the one he received from James Rowley, Chief, United States Secret Service."* We note that the Secret Service has refused to swear by the bullet, and that an agent of the FBI itself, fifth in a line of possession, is the first to assert the bullet is the one found in the hospital. As this bullet has been linked to Oswald's rifle and is necessary to demonstrate that Oswald fired the lethal shots, this is problematic. Fortunately, the first men to see the bullet, Tomlinson and Wright, appear to agree with Agent Todd's identification.

By now well familiar with the FBI's inadequacies, however, we decide to do a little digging. We uncover a 6-20 Airtel from Dallas Special Agent in Charge J. Gordon Shanklin to J. Edgar Hoover telling him that *"neither Darrell C. Tomlinson, who found bullet at Parkland Hospital, Dallas, nor O.P.*

Wright, Personnel Officer, Parkland Hospital, who obtained bullet from Tomlinson and gave to Special Agent Richard E. Johnsen, Secret Service at Dallas 11/22/63, can identify bullet." As this memo specifies that Tomlinson and Wright could not identify the bullet, and as the letter sent to the Commission indicates they believed the bullets appeared to be the same, we find yet another reason to suspect the FBI's integrity, and to seriously question the Commission's reliance upon its services.

The Switcheroo That Wasn't: a Brief Discussion In Which I End Up Defending The FBI (No, Really, I'm Not Kidding)

The apparent contradiction between the FBI's 6-20-64 Airtel and 7-7-64 letter was just the beginning of the mystery surrounding the bullet. In November 1966, Josiah Thompson showed O.P. Wright a photo of the bullet supposedly found on the stretcher (by then dubbed Commission Exhibit CE 399) and asked him if CE 399 was in fact the bullet he'd remembered seeing on the day of the assassination. Amazingly, Wright told him that the bullet he'd handed the Secret Service on that day had had a pointed tip, while CE 399 had had a rounded tip. Wright then showed Thompson a bullet with a pointed tip like the one he'd remembered seeing. Thompson then showed Darrell Tomlinson a photo of a Mannlicher-Carcano bullet, along with the bullet shown him by Wright. While Tomlinson was reportedly non-committal, and couldn't remember if the tip was rounded like CE 399, or pointed like the bullet shown him by Wright, Thompson, and a large swath of his readers, took from Wright's statements that the stretcher bullet had been switched.

Thirty-five years passed. In 2002, Thompson and Dr. Gary Aguilar finally contacted the FBI's Bardwell Odum, to see if he remembered Tomlinson and Wright saying CE 399 looked like the bullet found on the stretcher, per the FBI's 7-7-64 letter to the Commission, or their not identifying the bullet, per the 6-20-64 FBI memorandum. Amazingly, Odum insisted he had no recollection of ever handling CE 399, let alone showing it to Tomlinson and Wright. Now, for some this was a smoking gun. If Odum had never shown the bullet to Tomlinson and Wright, and the FBI letter said he had, and that they'd told him the bullet looked like the one they saw on 11-22-63, then someone was almost certainly lying. Deliberately.

In December, 2011, however, I came across something that gave me great doubts about the smoke coming out of this gun. A transcript was posted on the alt.assassination.JFK newsgroup by author Jean Davison. This transcript, acquired by Ms. Davison from the National Archives, was of a 7-25-66 conversation between Darrell Tomlinson and researcher Ray Marcus. This transcript asserted that when asked if he'd ever been shown the stretcher bullet after giving it to Wright, Tomlinson had admitted *"I seen it one time after that. I believe Mr. Shanklin from the FBI had it out there at the hospital in personnel with Mr. Wright there when they called me in."* When then asked by Marcus if "Shanklin" and Wright had asked him if this bullet looked the same as the one he'd recovered on November 22, 1963, Tomlinson responded *"Yes, I believe they did."* When then asked his response to their question, he replied *"Yes, it appeared to be the same one."*

Let's note the date of this transcript. This was months prior to Tomlinson's being shown the pointed tip bullet by Thompson. And yet, at this early date, he'd thought the bullet he'd been shown by "Shanklin" (more probably Odum--Tomlinson was unsure about the name of the agent and there is little reason to believe Shanklin--the Special Agent-in Charge of the Dallas Office--would personally perform such a task) resembled the bullet he'd found on the stretcher. This suggests, then, that his subsequent inability to tell Thompson whether the bullet was rounded or pointed was brought about by his not wanting to disagree with Wright.

In November 2012, moreover, I found additional support for this suspicion. It was a 4-22-77 article on

the single-bullet theory by Earl Golz for The Dallas Morning News, which reported *"Darrell C Tomlinson, the senior engineer at Parkland who found the slug, told The News he 'could never say for sure whose stretcher that was ... I assumed it was Connally's because of the way things happened at Parkland at that time.' Tomlinson acknowledged he was not asked to identify the bullet when he testified before the Warren Commission in 1964. He said some federal agents earlier 'came to the hospital with the bullet in a box and asked me if it was the one I found. I told them apparently it was, but I had not put a mark on it. If it wasn't the bullet, it was exactly like it.'"*

So there it is. Tomlinson told Marcus in 1966 that he thought the bullet he'd found looked like CE 399, was less certain on this point when talking to Thompson later that year, and then returned to telling reporters the bullets looked the same by the time he talked to Golz in 1977. Either he'd misled Marcus and Golz, or was momentarily confused by the bullet Wright provided Thompson. Wright was a former policeman. Perhaps Tomlinson had momentarily deferred to his expertise. In any event, Tomlinson's recollection of the bullet over the years did not support Wright's recollection, and supported instead that he'd been shown CE 399 by the FBI in 1964, had told them it appeared to be the same bullet as the one he'd found on the stretcher, and had nevertheless refused to identify it. This scenario was consistent, moreover, with the FBI's 6-20-64 memo and 7-7-64 letter to the Warren Commission. It seems hard to believe this was a coincidence. As a result, Tomlinson's recollections cast considerable doubt on Wright's ID of a pointed bullet, and the scenario subsequently pushed by Thompson and Aguilar--that the FBI had lied in its 6-20 memo and 7-7 letter about the bullet--appears to be inaccurate.

Still Fishin'

In its **7-10-64** issue, Life Magazine resumes its campaign to convict Oswald in the public eye and bolster the by-now certain conclusions of the Commission. Its introduction to Oswald's diary from his time in Russia claims that the diary "is one of the most important pieces of evidence studied by the Warren Commission in its effort to unravel the character and motives of President Kennedy's assassin." No "accused" No "presumed." Assassin. Singular. Period.

On 7-10-64, in lieu of his testimony, the commission accepts a 7-page affidavit signed by President Johnson describing what he remembered of the shooting and its aftermath. Not everyone is happy about this, as some--particularly junior counsel staff Arlen Specter and David Belin--feel he should be questioned as both a suspect and witness. (In his 2000 memoir *Passion for Truth*, Specter revealed that although he didn't think Johnson *"complicit in the assassination...no self-respecting investigator would omit a thorough investigation of the slain president's successor"* and that, as a result, he'd prepared 78 questions in anticipation he'd be allowed to grill Johnson.)

On **7-22-64**, the Commission finally takes the testimony of some key witnesses.

Phil Willis took a photograph during the shooting. (**7-22-64** testimony before the Warren Commission, 7H492-497) "my next shot was taken at the very—in fact the shot caused me to squeeze the camera shutter, and I got a picture of the President as he was hit with the first shot. So instantaneous, in fact, that the crowd hadn't had time to react...I proceeded down the street and didn't take any other pictures instantly, because the three shots were fired approximately two seconds apart, and I knew my little daughters were running alongside the Presidential car, and I was immediately concerned about them, and I was screaming for them to come back, and they didn't hear me."

His 12 year-old daughter was also a witness. **Linda Willis** (**7-22-64** testimony before the Warren Commission, 7H498-499) (When asked if she heard shots) "Yes; I heard one. Then there was a little bit of time, and then there were two real fast bullets together. When the first one hit, well, the President

turned from waving to the people, and he grabbed his throat, and he kind of slumped forward, and then I couldn't tell where the second shot went... I was right across from the sign that points to where Stemmons Freeway is. I was directly across when the first shot hit him...I heard the first shot come and then he slumped forward, and then I couldn't tell where the second shot went, and then the third one, and that was the last one that hit him in the head. No; when the first shot rang out, I thought, well, it's probably fireworks, because everybody is glad the President is in town. Then I realized it was too loud and too close to be fireworks, and then when I saw, when I realized that the President was falling over, I knew he had been hit." **Last two shots bunched together with the last shot head shot.**

James Altgens was a photographer for the Associated Press. (7-22-64 testimony before the Warren Commission, 7H512-525) *"I wasn't keeping track of the number of pops that took place, but I could vouch for number 1 and I can vouch for the last shot, but I can not tell you how many shots were in between. There was not another shot after the President was struck in the head."* (on the head shot) *"up to that time I didn't know that the President had been shot previously. I still thought up until that time that all I heard was fireworks and that they were giving some sort of celebration to the President by popping these fireworks. It stunned me so at what I saw that I failed to do my duty and make the picture I was hoping to make."*

Emmett Hudson was the groundskeeper of Dealey Plaza. (7-22-64 testimony before the Warren Commission, 7H558-565) *"the first shot rung out and, of course, I didn't realize it was a shot... when the second one rung out, the motorcade had got further on down Elm...I happened to be looking right at him when that bullet hit him, the second shot...it looked like it hit him somewhere along a little bit behind the ear and a little bit above the ear."* (When asked where the car was when he heard the first shot) *"I remember it was right along about this light post here."* (indicating the first light post) (When asked if he heard three shots) *"Yes, sir."* (When asked if he was sure the second shot hit Kennedy in the head) *"Yes, I do believe it was—I know it was."* (When asked what happened during the third shot) *"the young fellow that was sitting there with me—standing there with me at the present time, he says 'Lay down, Mister, somebody is shooting at the President'...so I just laid down over the ground and resting my arm on the ground and when that third shot rung out and when I was close to the ground—you could tell the shot was coming from above and kind of behind."* (When asked if he'd "heard it come from sort of behind the motorcade and then above?") *"Yes."*

Abraham Zapruder, a dressmaker, took a home movie of the assassination. (7-22-64 testimony before the Warren Commission, 7H569-576) *"Well, as the car came in line almost...as it reached about--I imagine it was around here--I heard the first shot and I saw the President lean over and grab himself like this (holding his left chest area)...In other words, he was sitting like this and waving and then after the shot he just went like that...Leaning—leaning toward the side of Jacqueline. For a moment I thought it was—you know, like you say, 'Oh, he got me,' when you hear a shot...but before I had a chance to organize my mind, I heard a second shot and then I saw his head opened up and the blood and everything came out and I started—I can hardly talk about it. (the witness crying)."* (When asked how many shots he heard) *"I thought I heard two, it could be three, because to my estimation I thought he was hit on the second—I really don't know...I heard the second—after the first shot—I saw him leaning over and after the second shot—it's possible after what I saw, you know, then I started yelling, 'They killed him, they killed him.'" Here is one of the best witnesses to the shooting--a nearby witness watching the shooting through a zoom lens, for chrissakes, and here he is looking through stills taken from his movie of the shooting, and here he tells the commission his impression of the moment of the first shot--"I imagine it was around here"--and here the commission fails to note where his "here" is. Since Zapruder says Kennedy was waving when shot, and says nothing about Kennedy coming from out behind the sign when shot, the clear impression is that he thought Kennedy was hit just after he stopped waving and just before he went behind the sign, between frames 190 and 200 of Zapruder's*

film. As the commission believes a tree hid Kennedy from the sniper's nest between frames 170 to 210, moreover, and as they've already decided Kennedy was hit while behind the sign in frames 210-225, they, apparently, have no interest in telling the public Zapruder's proposed moment of impact. And so they fail to ask him to mark an exhibit indicating the moment of the first shot on his film, and allow his "here" to slip forever into "where?".

In the subsequent discussion of his famous film and camera, Zapruder makes another interesting statement: *"Well, they claimed, they told me it was about 2 frames fast--instead of 16 it was 18 frames and they told me it was about 2 frames fast in the speed and they told me that the time between the 2 rapid shots, as I understand, that was determined--the length of time it took to the second one and that they were very fast and they claim it has proven it could be done by 1 man. You know there was indication there were two?"* This statement indicates that someone, probably from the FBI, has been keeping him informed on the FBI's tests on his camera. Instead of telling him that the speed of his camera calls into doubt that one man could have fired the shots, however, they have told him the opposite, that the tests revealed it could have been done by one man. One can only assume this is a reference to the tests performed in December.

And then, at the last second, a problematic witness resurfaces. The FBI had forwarded an interview with this witness to the Commission on 12-23-63, but the Commission had not sought him out for further investigation, or even acknowledged his existence, until a 6-5-64 article in the Dallas Times Herald brought his story to the public's attention. Even then, however, word on this witness moved slow. Commissioner John McCloy had sent his notes on the drafts of chapters 2 through 5 of the Warren Report to Chief Counsel J. Lee Rankin on 6-24-64. On page 8 of these notes, he had asked a question suggesting that he had never even heard of this witness. He had written: *"Who was the person near the overpass who was struck on the cheek?"*

James Tague (7-23-64 testimony before the Warren Commission, 7H552-558) *"I was standing there watching, and really I was watching to try to distinguish the President and his car. About this time I heard what sounded like a firecracker. Well, a very loud firecracker. It certainly didn't sound like a rifle shot. It was more of a loud cannon-type sound. I looked around to see who was throwing firecrackers or what was going on and I turned my head away from the motorcade and, of course, two more shots."* (When asked if he saw the President hit) *"I did not"* (When asked which shot hit him) *"maybe the second or third shot, I couldn't tell you definitely"* (When asked if he heard any shots after he was hit) *"I believe I did...I believe it was the second shot, so I heard the third shot afterwards."* (When asked where he thought the shots came from) *"my first impression was that up by the, whatever you call the monument...somebody was throwing firecrackers up there."* As Tague was hit by a fragment from one of the last two shots, his testimony cuts into Specter and the Commission's options. If Specter says the first shot missed then he has to hold that Tague was injured by a fragment from the head shot, which many might find far-fetched.

A 7-24-64 FBI report on **Mrs. Clotile Williams** is also revealing. Mrs. Williams is a previously undiscovered eyewitness to the assassination. The bulk of the report is not on Mrs. Williams' recollections, however, nor on the names of her co-workers in the building across from the school book depository, who may have seen something. The report's focus, instead, is on trying to establish the identities of two independent researchers who contacted Mrs. Williams after someone recognized her in one of the photos of the motorcade. The investigating agent goes as far as taking a detailed description of these researchers from Mrs. Williams' neighbor. The FBI, of course, has not found the time to interview either of the motorcycle officers to Kennedy's right, nor Abraham Zapruder's secretary.

Elsewhere, on 7-24-64 the Warren Commission engages the Marine Corps in a little self-protection. To counter Lt. Col. Folsom's description of Oswald's marksmanship as "poor," they take the testimony of **Major Eugene D. Anderson**, an assistant head of the Marksmanship branch of the Marines, and

Master Sergeant James Zahm, an NCO of Marksmanship Training. Arlen Specter takes their testimony. After being shown Oswald's test scores, Anderson offers an explanation for Oswald's lowly score in 1959, shortly before he left the Marines: "It may well have been a bad day for firing a rifle, windy, rainy, dark. There is little probability that he had a good, expert coach. and he probably didn't have as high a motivation because he was no longer in recruit training and under the care of the drill instructor. There is some possibility that the rifle he was firing might not have been as good a rifle as the rifle he was firing in his A course firing. because he may well have carried this rifle around for some time, and it got banged around in normal usage." Anderson summarizes Oswald's abilities as follows: "I would say that as compared to other Marines receiving the same kind of training, that Oswald was a good shot, somewhat better than or equal to--better than average let us say. As compared to a civilian who had not received this intensive training, he would be considered as a good to excellent shot." Specter then shows Anderson frames from the Zapruder film and asks him if hitting Kennedy from the distances determined at the re-enactment would be within Oswald's capabilities, and Anderson repeatedly says the shots were within Oswald's capabilities. He then asks him if Oswald could fire three shots in a time span between 4.8 and 5.6 seconds, and Anderson once again replies in the affirmative. Specter fails to ask Anderson the more pertinent question if Oswald could be expected to hit the 2 "not particularly difficult" shots within a 4.8-5.6 second time span while firing at a moving target with a Mannlicher-Carcano rifle. Perhaps he already knew the answer. After finishing with Anderson, Specter makes a point of asking Zahm about Oswald's ability "based on the tests." This avoids that the most recent test was 4 years before the shooting and that Oswald had failed to keep in practice. Zahm tells Specter what he undoubtedly wants to hear: "I would say in the Marine Corps he is a good shot, slightly above average, and as compared to the average male of his age throughout the civilian, throughout the United States, that he is an excellent shot." Clearly, this is the new company line.

Commissioner Dulles was especially receptive to this line. A letter from Dulles to Rankin on **7-27-64**, available on the Princeton University website, asks "Where have we dealt with the evidence as to Oswald's ability to handle a rifle?" This confirms that Rankin and his men had held off writing anything about Oswald's shooting ability, until after they could get "friendly" witnesses, such as Major Anderson and Master Sergeant Zahm, on the record.

In this attempt they were not particularly concerned with the truth. Only hinted at in the testimony of Anderson and Zahm is the strange fact that the Commission has already concluded that Oswald, who'd received no training whatsoever on firing at moving targets, firing from elevation, firing with a telescopic site, or even firing a bolt-action rifle, was able to rapid-fire a bolt-action rifle equipped with a telescopic site and hit a moving target from elevation two out of three times without one lick of practice. This is like a man with a driver's license--who hasn't driven a car in several years--getting behind the wheel of a dragster and winning a championship race. Also unmentioned in the testimony is that there was a stack of books found in the sniper's nest, and that the commission had presumed these books were used as a rifle rest by a sniper shooting Kennedy. The use of such a prop is not taught in the Marines. Instead, Marines like Oswald are taught to fire from a standing, kneeling, or prone position, with the rifle at a 45 degree angle to the body, and to track moving objects, such as a car, by moving the site along the path of the target, even after firing. The use of a "rifle rest", therefore, precludes such a tactic, and suggests that, instead, the shooter waited for the target to cross a pre-selected point. There is also a question about the angle of the rifle to the sniper's body. The location of the box purportedly used as a seat by the sniper, and the indentation on the "rifle rest," indicates that the shooter was sitting back from the sixth floor sniper's window, aiming toward its right. Someone with Oswald's training, on the other hand, in order to fire far off to his right, would have to have been up near the windowsill, with his profile clearly visible to those on the street below. No one saw such a profile.

On **7-27-64** Chief Counsel Rankin receives yet another correspondence relating to Oswald's

marksmanship abilities, this one from J. Edgar Hoover. Someone at the Commission recalled the claim in the December 6 issue of Life Magazine that Oswald's purported shots had been duplicated by someone at the NRA, and asked the FBI to look into it. The FBI report forwarded by Hoover is quite damaging to Life's credibility. While Life claimed the shooter was an official of the NRA, it turned out the shooter had merely been recommended by the NRA. The shooter, Clayton Wheat, moreover, admitted that he'd had 8 or 9 practice shots and had used a 7.35mm Carcano in his tests, not the 6.5 mm Carcano purportedly used by Oswald. He also acknowledged that he'd fired on a moving deer target traveling slowly, 3-5 mph, right to left over 33 feet, and not at a human head and shoulders-sized target traveling 12 mph away on an angle over a distance of 100 feet or so. He also mentioned that that he'd fired at the target from a distance of 150 feet, from approximately 10 degrees above horizontal, as opposed to firing from a distance of 160-265 feet from approximately 22-16 degrees above horizontal for the purported shots on Kennedy from the sniper's nest. In short, he didn't reproduce the shots at all. While Wheat stood by his claim that he'd had three hits in 6.2 seconds on his first try, he admitted that he'd missed two shots in his five runs due to poor ammunition, and couldn't remember the times of the other runs.

On 7-29, President Johnson finally tells Robert Kennedy that he will not be his running mate in the November election, and will not be the next Vice-President of the United States.

Polishing a Turd

On 8-1 Chief Justice Warren returns from his nearly month-long fishing trip.

On 8-4-64 Robert Kennedy finally replies to "Warren's" June 11 letter seeking any information he may have suggesting a possible conspiracy. "His" letter is identical to the draft proposed by Warren Commission Counsel Willens. He has merely signed it. It asserts that he knows of no credible evidence suggesting a conspiracy. It admits, however, that *"As you know, I am personally not aware of the detailed results of the extensive investigation in this matter which has been conducted by the Federal Bureau of Investigation. I have, however, received periodic reports about the work of the Commission from you, Deputy Attorney General Katzenbach, and Mr. Willens of the Department of Justice, who has worked for the Commission for the past several months. Based on these reports, I am confident that every effort is being made by the President's Commission to fulfill the objectives of Executive Order No. 11130 by conducting a thorough investigation into all the facts relating to the assassination."* (It is curious that Kennedy specifies that what little information on the investigation he's received has come purely from Warren, Katzenbach, and Willens. As discussed in Chapter 1, it would later become clear that Warren and Katzenbach had, within a week of the shooting, been strong-armed by President Johnson and FBI Director Hoover into pushing Oswald's sole guilt. As Willens was, in the words of Commissioner McCloy, one of "Katzenbach's boys," moreover, this suggests that Kennedy was not, at this time, in touch with anyone who would keep him informed regarding evidence for a possible conspiracy.)

On 8-4-64, 8-21-64, and 9-10-64, the FBI creates reports on the "Mark Lane Security Matter" and forwards them to the Warren Commission. While ostensibly an investigation of communist involvement in Lane's Citizen's Committee of Inquiry, which he'd formed to unveil the truth about the assassination, these reports are really designed to feed the Commission what its critics are saying, so that the Commission can counter these arguments in their final report. (Indeed, many of Lane's questions would be answered by the report.) There are unnerving elements to these FBI reports however. The 8-4 report details a number of Lane's speeches, and cites ten separate confidential sources, the 8-21 report includes a complete transcript of Lane's appearance on a radio show, and the 9-10 report details more of Lane's speeches, and cites twelve confidential sources. This raises a few

questions: Where was all this manpower when it came time to identify the unidentified witnesses in the photographs of the shooting? Where was all this manpower when it came time to interview the witnesses who were known to the media, or mentioned in the early reports of the Dallas Police? Where was all this manpower when it came to accurately simulate the conditions in Dallas, to see if Oswald could actually have performed his purported feat? Furthermore, where was all this manpower when it came time to review the autopsy report? Study Kennedy's wounds? Study the reactions of the human body to gunshot wounds, and see if the exact moments of impact could actually be identified in the Zapruder film? And finally, where was all this manpower when it came time to match the eyewitness testimony to the proposed shooting scenario? Spying on Oswald's mother? Watching Mark Lane?

The Commission and its remaining staff are now busy busy busy preparing for the release of their report, re-writing draft after draft, trying to be clear as heck that Oswald was guilty as heck. An **8-8-64** critique by Commission Counsel Howard Willens of a 7-21 draft of the report's chapter on "The Assassin," however, gives us reason to be pessimistic about the thoroughness of the report. Willens, the Justice Department's point man on the commission, notes *"I still have a question about the validity of including as a minor finding Oswald's capability with a rifle. I think our case remains the same even if Oswald had limited or negligible capability with a rifle. In a way, we are emphasizing an argument we don't really need, which prompts controversy and may tend to weaken the stronger elements of our proof."* This confirms our worst suspicion--the commission and its staff have decided that, no matter how difficult the shots, and how incredible it would be for someone like Oswald to have made these shots, they're prepared to say he made them, without any assistance. This is weak sister stuff. IF Oswald had negligible ability with a rifle, it's unlikely he fired the shots; IF it's unlikely he fired the shots, then, Willens, a criminal attorney, should be asking, how is it that so much evidence exists that he did fire the shots? Was he, in fact, the patsy he claimed he was?

Fortunately, at least a few members of the staff have an interest in doing their jobs--investigating the possibility Oswald was set up. On **8-23-64**, Commission Counsel Wesley Liebeler writes a memo to Chief Counsel Rankin informing him that Burt Griffin, David Slawson, and himself are troubled by the circumstances under which Oswald's palm print was identified on a lift taken from the rifle...days after the FBI had inspected the rifle and concluded there was no such print on the rifle. To be specific, Liebeler seeks to clarify a number of matters with Lt. J.C. Day of the Dallas Police. (Day claimed he'd taken a lift from the rifle before handing it off to the FBI, but did not give it to the FBI along with the other key evidence on 11-22, nor analyze the lift before giving it to the FBI on 11-26). In essence, Liebeler seeks to:

1. Determine whether or not anyone had assisted Day when working on the prints who could corroborate his story.
2. Determine why Day covered the prints on the trigger guard (which the FBI had failed to identify) with cellophane tape, but failed to cover the print he later claimed he'd found on the barrel.
3. Determine why he lifted the print from the rifle barrel, but failed to lift the prints from the trigger guard.
4. Determine if Day felt certain the print was still on the rifle after the lift (the FBI claimed no such print was visible on the barrel when they received the rifle).
5. Determine if Day had in fact photographed the palm print on the barrel, as he had taken numerous photographs of the trigger guard prints and had forwarded them to the FBI, and it made no sense for him to fail to take pictures of the barrel print he thought was a "better bet" for identification.
6. Determine if there is any way the FBI could study the lift of the palm print and conclude it had in fact come from the rifle barrel.

On **8-28-64**, General Counsel Rankin and Counsels Liebeler and Griffin meet with the FBI's fingerprint expert Sebastian Latona, and ask the FBI's help not only with the problematic palm print but in ascertaining whose fingerprints and palm prints were found on the boxes of the sniper's nest. Here, only NINE MONTHS after the shooting, it finally dawns on them that not knowing whose prints were found in the sniper's nest "leaves room for the allegation and speculation that Oswald had a co-conspirator in killing President Kennedy." The FBI's memo on this meeting reflects no genuine interest on their part in finding out whose prints these were, mind you, only that they were concerned about the speculation should they not endeavor to find out whose prints, besides Oswald's, were found in the nest. In any event, Rankin makes a formal request that the FBI help "resolve this issue by whatever additional investigation was necessary." Within days, the FBI compares the unidentified prints to those of 16 current and former employees of the depository, 4 employees of the Dallas Police Department, and 5 employees of the Bureau itself. From this they discover that 14 of the 19 fingerprints, and 4 of the 6 palm prints, came from the DPD Crime Lab's Robert Studebaker, who originally dusted the boxes for prints. They discover as well that of the other 5 fingerprints and 2 remaining palm prints, all but one palm print came from an FBI clerk named Forrest Lucy. Despite their best efforts, however--over the course of the next month, the FBI checks this lone palm print against the prints of another 85 Dallas Police and FBI employees--they are unable to identify the source of this print.

On **9-1-64**, in an effort to tie up loose ends, the Commission calls upon FBI photo expert Lyndal Shaneyfelt. This is the the third time he's testified. He discusses the various photos of Oswald with his rifle, and how the newspapers and magazines showing these photos had tampered with them, and accidentally created the illusion the rifle was not the rifle recovered at the Book Depository. He then discusses photos of Oswald's shirt, which essentially prove nothing other than that Oswald had been wearing that shirt when arrested. He also discusses a photograph by Phil Willis. This photo was taken, per Willis' testimony, a split second after the first shot. Egged on by Norman Redlich, Shaneyfelt testifies "it is my opinion that photograph A of Shaneyfelt exhibit no. 25 was taken in the vicinity of the time that frame 210 of the Zapruder film was taken. This is not an accurate determination because the exact location of Mr. Willis is unknown. This would allow for some variation, but the time of the photograph A, as related to the Zapruder film, would be generally during the period that the President was behind the signboard in the Zapruder films, which covers a range from around frame 205 to frame 225." Redlich then interjects "Prior investigation has also revealed that when viewed from the southeast corner window of the sixth floor, the President emerges from the oak tree at approximately frame 210." Redlich then asks Shaneyfelt if it would be possible to fix Willis' exact location, and thus the exact time of his photograph as compared to the Zapruder film. Shaneyfelt replies "Yes, it would be possible having Mr. Willis' camera, to fix his location with some degree of accuracy..." When then nudged by Redlich "You are reasonably satisfied, however, that the technique that you have used to fix his location is a reasonably accurate one upon which you can base your conclusions which you have stated today?" Shaneyfelt responds "Yes, yes. I feel that the exact establishing of the position of Mr. Willis would not add a great detail of additional accuracy to my present conclusions."

Well, wait a minute. On June 4, Shaneyfelt testified in a curious manner that Kennedy appeared to be un-hit before he went behind the sign around frame 210 of the Zapruder film. Now he has testified that the Willis photo was taken around frame 210, the exact moment, as Norman Redlich was so kind to point out, that Kennedy was first visible to the sniper's nest after passing under the oak tree. A more accurate location for Willis might mean that Willis took his picture before Kennedy went behind the sign. It might be an indication that someone fired a shot when Kennedy was hidden from the sniper's nest. It might be an indication there was a second shooter. That Shaneyfelt refused to accurately plot Willis' location, and thus the timing of his photo, when added to the fact that he and Redlich went to such great lengths to assure everyone a more accurate assessment was unnecessary, when added to the fact that this testimony is being taken in the last weeks of the Commission, suggests the possibility that

both men know the photo was taken when Oswald couldn't have fired the shot, and were trying to keep this off the record. (Sure enough, it was subsequently demonstrated that the photo was taken at frame 202 of the Zapruder film, before Kennedy went behind the sign. Equally intriguing, when deposed in a Freedom of Information act lawsuit brought by Harold Weisberg in 1977, and asked about his work on the Willis photo by Weisberg's lawyer Jim Lesar, Shaneyfelt testified "I may have" three times and "I don't recall" five times, and concluded smugly that "I am sure the record speaks for itself." Yes, it does--to those who listen.)

On **9-4-64**, FBI Director Hoover sends Chief Counsel Rankin a letter claiming that the FBI's examiners have studied the background marks and irregularities of the palm print lift and have been able to positively identify it as having come from the assassination rifle. Accompanying this letter is a blurry illegible comparison of a small part of the barrel with and the palm print lift. This comparison is nevertheless accepted into evidence as exhibit CE 2637. No testimony is taken from the actual examiners, and Hoover is not asked to submit under oath that his letter is anything more than a fantasy. There is nothing to indicate, furthermore, that the small part of a barrel used in the comparison was even on the famous rifle.

Cover-ups are afoot. The wound ballistics expert at Kennedy's autopsy, Dr. Pierre Finck, writes a memo to himself on **9-11-64**, stating: "I am called by Captain Stover, CO of Naval Med school. He tells me that Adm Burkley, White House Physician called him. The Warren Commission Report will be released to the Press shortly. However, the prosecutors involved in Kennedy's autopsy are still required not to release information to the press. Inquiries should be referred to the White House Press Office. Brig Gen Blumberg, AFIP Director, calls me within two hours, notifying me of the same White House orders." This memo suggests that Johnson himself is behind the scenes, orchestrating a hush-hush of the medical evidence. For who else could pressure the President's personal physician into making phone calls first to the boss of Dr.s Humes and Boswell (Stover) and then to Finck's boss (Gen. Blumberg) insisting that the doctors stay quiet? While one might venture that Burkley has taken this upon himself, due to his loyalty to his former patient, Kennedy, it is highly doubtful that an Admiral in the Navy would give orders to a Brigadier General in the Army without first obtaining backing from his Commander-in-Chief.

On **9-16-64**, FBI Director Hoover sends Rankin more of the info he'd requested regarding the palm print allegedly lifted from the rifle. Included in this info is a 9-9-64 FBI report on an interview of Lt. J.C. Day, the Dallas crime scene investigator claiming to have lifted the print on 11-22. According to the report, Lt. Day claimed he'd meant to photograph the palm print on the rifle, but didn't have time, as he was told to give all his evidence to the FBI as soon as possible. He said furthermore that he'd tentatively ID'ed the print on the night of the 22nd as Oswald's and had told this to Capt. Will Fritz and Dallas Police Chief Jesse Curry. Strangely, however, the FBI has failed to follow-up on this, and neither Fritz nor Curry have been asked to confirm Day's account. Even stranger, Lt. Day has refused to provide a signed statement presenting his account, and has opted instead to present the commission with a strangely vague 1-8-64 report he'd written for the Dallas Police. As a result, the only evidence provided the Commission confirming that the palm print was lifted from the rifle, and that this was discussed within the Dallas Police Department on 11-22-63, come via last minute letters and reports, as opposed to sworn testimony and signed statements. (FWIW, neither Fritz nor Curry would ever confirm Day's claim he'd told them of the print on the 22nd.)

On **9-18-64**, President Johnson and Warren Commissioner Richard Russell have an intriguing conversation. This conversation further illuminates Johnson's desire that the murder of his predecessor just disappear. The conversation reflects the dissent within the Commission over Arlen Specter's single-bullet theory, as well as Russell and Johnson's inability to understand the importance of the single-bullet theory to the single-assassin conclusion.

Senator Richard Russell: *"No, no. They're trying to prove that the same bullet that hit Kennedy first was the one that hit Connally, went through him and through his hand, his bone, and into his leg...I couldn't hear all the evidence and cross-examine all of 'em. But I did read the record...I was the only fellow there that...suggested any change whatever in what the staff got up. This staff business always scares me. I like to put my own views down. But we got you a pretty good report."*

President Lyndon Johnson: *Well, what difference does it make which bullet got Connally?*

Senator Richard Russell: *Well, it don't make much difference. But they said that...the commission believes that the same bullet that hit Kennedy hit Connally. Well, I don't believe it.*

President Lyndon Johnson: *I don't either.*

Senator Richard Russell: *And so I couldn't sign it. And I said that Governor Connally testified directly to the contrary and I'm not gonna approve of that. So I finally made 'em say there was a difference in the commission, in that part of 'em believed that that wasn't so. And, course if a fellow was accurate enough to hit Kennedy right in the neck on one shot and knock his head off in the next one—and he's leaning up against his wife's head—and not even wound her—why he didn't miss completely with that third shot. But according to their theory, he not only missed the whole automobile, but he missed the street! Well, a man that's a good enough shot to put two bullets right into Kennedy, he didn't miss that whole automobile."*

This last conversation becomes even more intriguing once one takes into account that the minutes of the **9-18-64** executive session of the Warren Commission fail to note Russell's dissent, or even that the single-bullet theory was discussed. (When researcher Harold Weisberg pointed this out to Russell in 1968, Russell cut-off contact with his one-time protege Johnson. While this was probably not the only reason for his cutting Johnson off—he was also upset about Johnson dragging his feet on the appointment of a judge—it is symptomatic of most historians' refusal to understand the dark legacy of the assassination and subsequent investigation that they fail to mention it as even one of many reasons.)

This suggests, then, that the fix is in. The commission's report and records are to indicate that Oswald did it alone, no matter what the commissioners actually suspect. No dissent is acceptable, as it might reflect negatively on President Johnson, and the country as a whole. That the Johnson Administration and intelligence community are banking on having a unanimous report claiming Oswald did it alone, moreover, is made clear by a **9-22** CIA memo entitled "Propaganda Notes." This memo, (not released until 1976), declares *"Reports from around the world indicate that there is a strong belief in many countries that the assassination of the president was the result of a 'political plot,' the unwarranted interpretation that Ruby's murder of Oswald was committed to prevent Oswald from revealing the purported conspiracy adds to this belief. Communist regimes have used both murders to denigrate American society and the release of the Report will undoubtedly be used as a new peg for the same purpose. Covert assets should explain the tragedy wherever it is genuinely misunderstood and counter all efforts to misconstrue it intentionally--provided the depth of impact warrants such action. Communists and other extremists always attempt to prove a political conspiracy behind violence. In countries accustomed to assassination by political conspiracy, American dedication to institutions of law and government with stable administrative procedures can be described, and American presidents can be shown the victim (with the exception of Lincoln) of single, fanatical individuals."* The memo then explains that copies of the report have been purchased and will be widely disseminated.

It's ironic, then, that Chief Justice Warren agreed to chair the commission so he could help prevent the right wing of American politics from convincing the public there was a communist conspiracy, and that his finalized report is to be used primarily to stop communists from convincing the public there was a right wing conspiracy. If he ever noted this irony, and wondered if it wasn't, hmmm, by design, or if he

in fact knew it from the start, is unclear.

That at least someone was aware of this irony, however, is hinted at in Drew Pearson's **9-24-64** newspaper column, Washington Merry-Go-Round. Pearson notes that Warren was asked by Johnson to serve as *"a soldier for his country."* He notes that members of Warren's court *"scolded him"* when he told them of his appointment to the commission. He notes further that the 73-year-old Warren was *"accustomed to swimming, relaxing, and storing up energy during recent summers,"* but that *"Warren spent most of this summer working until 7 o'clock PM each evening."* In closing, Pearson offers that Warren's job was a *"thankless"* one, but that he had indeed *"served, as LBJ asked him to, as a soldier for his country."*

Pearson was the ultimate Washington insider. He almost certainly knew that, at the height of the Warren Commission's investigation, Warren had slipped out to go fishing. Pearson was also smart enough to know that the role of a chief justice is quite different, and thoroughly at odds, with the role of a soldier. It only makes sense then that we read Pearson's column as a dig at both Pearson and Johnson, as if to say *"I'm not stupid; I see what happened; but don't worry, I'll play ball with you as long as you play ball with me."* The Washington Merry-Go-Round indeed.

Later, on this day, the Commission gives their completed report to President Johnson. Although the report's conclusions are supposedly hush-hush until the 28th, it's fairly obvious that copies of the report are also provided the press, so that the release of the report can be orchestrated and the report's conclusions can reach the widest audience possible. U.S. News and World Report, as but one example, publishes the commission's findings in its 10-5-64 issue, an issue that hits the stands on the September 28th, and goes to print on September 25th.

In any event, a quick look at the report reveals that there have been some last-minute changes. After Chief Justice Warren compromises with Senator Richard Russell, the Single-Bullet Theory that had once been supported by *"compelling evidence"* is now only supported by *"persuasive evidence."* This, in effect, conceals Russell's skepticism. (In time it would be revealed that three other Commissioners--Senator Cooper, Congressman Boggs and John McCloy--had also expressed misgivings about Arlen Specter's single-bullet theory.)

So, now we're in the shoes of the Commissioners. Of the 40 closest witnesses hearing three shots, 35 have indicated that either the last two shots were close together or that the last shot came after the head shot. Only 5 have indicated the last shot was the head shot without also indicating the last two shots were grouped together. Since 3 of those indicating the last two shots came together said the last shot was the head shot, this makes a total of 8 witnesses hearing 3 shots to state the last shot was the head shot. And 2 of these were the Connallys who ducked down in the car before the head shot. And another of these was Gayle Newman, who dived to the grass after the head shot. And 4 of these were men in the Secret Service back-up car; 3 of whom made no statements indicating the last shot was the head shot until after the Secret Service had studied the film and come to its conclusion the last shot was the head shot. Which leaves just one bystander witness to assert the last shot was the head shot: a 14-year old girl who testified for the first time eight months to the day after the assassination. On the other hand there are 22 witnesses claiming to have heard shots after the head shot, including the young girl's mother and the majority of the closest witnesses. So how do Arlen Specter (who wrote the original chapter on the basic facts of the shooting), Norman Redlich (who re-wrote much of Specter's chapter) and ultimately the Warren Commission itself (who made a few changes before signing off on the chapter) describe the shots?.

The Specter Solution: The Warren Report's Conclusions (with Comments in Bold)

Number of shots

The consensus among the witnesses at the scene was that three shots were fired. However, some heard only two shots, while others testified that they heard four and perhaps as many as five or six shots. The difficulty of accurate perception of the sound of gunshots required careful scrutiny of all of this testimony regarding the number of shots. The firing of a bullet causes a number of noises, the muzzle blast, caused by the smashing of the hot gases which propel the bullet into the relatively stable air at the gun's muzzle, the noise of the bullet caused by the shock wave built up ahead of the bullet's nose as it travels through the air, and the noise caused by the impact of the bullet on its target. Each noise can be quite sharp and may be perceived as a separate shot. The tall buildings in the area might have further distorted the sound.

The physical and other evidence examined by the Commission compels the conclusion that at least two shots were fired. As discussed previously, the nearly whole bullet discovered at Parkland Hospital and the two larger fragments found in the Presidential automobile, which were identified as coming from the assassination rifle, came from at least two separate bullets and possibly from three. The most convincing evidence relating to the number of shots was provided by the presence on the sixth floor of three spent cartridges which were demonstrated to have been fired by the same rifle that fired the bullets which caused the wounds. It is possible that the assassin carried an empty shell in the rifle and fired only two shots, with the witnesses hearing multiple noises made by the same shot. Soon after the three empty cartridges were found, officials at the scene decided that three shots were fired, and that conclusion was widely circulated by the press. The eyewitness testimony may be subconsciously colored by the extensive publicity given the conclusion that three shots were fired. Nevertheless, the preponderance of the evidence, in particular the three spent cartridges, led the Commission to conclude that there were three shots fired.

The Shot That Missed

From the initial findings that (a) one shot passed through the President's neck and then most probably passed through the Governor's body, (b) a subsequent shot penetrated the President's head, (c) no other shot struck any part of the automobile, and (d) three shots were fired, it follows that one shot probably missed the car and its occupants. The evidence is inconclusive as to whether it was the first, second, or third shot which missed.

The First Shot

If the first shot missed, the assassin perhaps missed in an effort to fire a hurried shot before the President passed under the oak tree, or possibly he fired as the President passed under the tree and the tree obstructed his view. The bullet might have struck a portion of the tree and been completely deflected. On the other hand, the greatest cause for doubt that the first shot missed is the improbability that the same marksman who twice hit a moving target would be so inaccurate on the first and closest of his shots as to miss completely, not only the target, but the large automobile.

Some support for the contention that the first shot missed is found in the statement of Secret Service Agent Glen A. Bennett, stationed in the right rear seat of the President's follow-up car, who heard a sound like a firecracker as the motorcade proceeded down Elm Street. At that moment, Agent Bennett stated:

...I looked at the back of the President. I heard another firecracker noise and saw that shot hit the President about four inches down from the right shoulder. A second shot followed immediately and hit the right rear high of the President's head.

Substantial weight may be given Bennett's observations. Although his formal statement was dated November 23, 1963, his notes indicate that he recorded what he saw and heard at 5:30 p.m., November 22, 1963, on the airplane en route back to Washington, prior to the autopsy, when it was not yet known

that the President had been hit in the back. It is possible, of course, that Bennett did not observe the hole in the President's back, which might have been there immediately after the first noise. (It is interesting that Specter accords Bennett's observations substantial weight here, considering that Bennett was never called to testify and that elsewhere Specter completely ignores Bennett's appraisal of the back wound and head wound. It is also interesting that Specter gives Bennett's statement substantial weight, because it was based on notes written within hours of the shooting, but ignores the notes themselves. In the notes Bennett says that after he heard the first shot and he looked at the President he saw "a shot that hit the boss" and that "a second shoot followed immediately and hit the right rear high of the boss's head." This suggests that writing skills were not Bennett's strong point, and that he may have merely seen "that a shot had hit the boss" before a second shot followed. In other words, Bennett may very well have heard only two shots and have seen the President hit by the first of these shots. This makes using him to support that the first shot missed--without ever talking to him to get a clarification--surprising, even more surprising when one considers that the commission's counsel would later deny having done such a thing. On 12-4-64, shortly after the issuance of the Warren Commission's 26 volumes of supporting testimony and exhibits, Warren Commission counsel Joseph Ball, who had worked closely with Specter on his investigation, insisted in a debate with Commission critic Mark Lane that "We didn't take a single bit of evidence into consideration unless it was under oath." Wrong.)

Governor Connally's testimony supports the view that the first shot missed, because he stated that he heard a shot, turned slightly to his right, and, as he started to turn back toward his left, was struck by the second bullet. He never saw the President during the shooting sequence, and it is entirely possible that he heard the missed shot and that both men were struck by the second bullet. Mrs. Connally testified that after the first shot she turned and saw the President's hands moving toward his throat, as seen in the films at frame 225. However, Mrs. Connally further stated that she thought her husband was hit immediately thereafter by the second bullet. If the same bullet struck both the President and the Governor, it is entirely possible that she saw the President's movements at the same time as she heard the second shot. Her testimony, therefore, does not preclude the possibility of the first shot having missed. (Specter is being disingenuous here, and is attempting to hide that the single-bullet theory he proposes elsewhere is at odds with the testimony of the Connallys. Mrs. Connally would have heard a shot from the sniper's nest only 1/10th of a second after the bullet impacted on Kennedy. It is not reasonable to assume she would hear a shot, turn, see Kennedy's reaction to a second shot at the same time she heard this second shot, and then attribute Kennedy's reaction to the first shot heard more than 2 ½ seconds earlier.)

Other eyewitness testimony, however, supports the conclusion that the first of the shots fired hit the President. As discussed in chapter II, Special Agent Hill's testimony indicates that the President was hit by the first shot and that the head injury was caused by a second shot which followed about 5 seconds later. James W. Altgens, a photographer in Dallas for the Associated Press, had stationed himself on Elm Street opposite the Depository to take pictures of the passing motorcade. Altgens took a widely circulated photograph which showed President Kennedy reacting to the first of the two shots which hit him. (See Commission Exhibit No. 900, p. 113.) According to Altgens, he snapped the picture "almost simultaneously" with a shot which he is confident was the first one fired. Comparison of his photograph with the Zapruder film, however, revealed that Altgens took his picture at approximately the same moment as frame 255 of the movie, 30 to 45 frames (approximately 2 seconds) later than the point at which the President was shot in the neck. (See Commission Exhibit No. 901, p. 114.) Another photographer, Phillip L. Willis, snapped a picture at a time which he also asserts was simultaneous with the first shot. Analysis of his photograph revealed that it was taken at approximately frame 210 of the Zapruder film, which was the approximate time of the shot that probably hit the President and the Governor. If Willis accurately recalled that there were no previous shots, this would be strong evidence

that the first shot did not miss. (Subsequent study of Willis' photo showed that it was taken at frame 202, when a tree blocked a clear view of Kennedy from the sniper's nest. The FBI conclusion that it was taken at frame 210, just as the limousine was emerging from behind this tree, is more than a little suspicious.)

If the first shot did not miss, there must be an explanation for Governor Connally's recollection that he was not hit by it. There was, conceivably, a delayed reaction between the time the bullet struck him and the time he realized that he was hit, despite the fact that the bullet struck a glancing blow to a rib and penetrated his wrist bone. The Governor did not even know that he had been struck in the wrist or in the thigh until he regained consciousness in the hospital the next day. Moreover, he testified that he did not hear what he thought was the second shot, although he did hear a subsequent shot which coincided with the shattering of the President's head. One possibility, therefore, would be a sequence in which the Governor heard the first shot, did not immediately feel the penetration of the bullet, then felt the delayed reaction of the impact on his back, later heard the shot which shattered the President's head, and then lost consciousness without hearing a third shot which might have occurred later.

The Second Shot

The possibility that the second shot missed is consistent with the elapsed time between the two shots that hit their mark. From the timing evidenced by the Zapruder films, there was an interval of from 4.8 to 5.6 seconds between the shot which struck President Kennedy's neck (between frames 210 to 225) and the shot which struck his head at frame 313. Since a minimum of 2.3 seconds must elapse between shots, a bullet could have been fired from the rifle and missed during this interval. This possibility was buttressed by the testimony of witnesses who claimed that the shots were evenly spaced, since a second shot occurring within an interval of approximately 5 seconds would have to be almost exactly midway in this period. If Altgens' recollection is correct that he snapped his picture at the same moment as he heard a shot, then it is possible that he heard a second shot which missed, since a shot fired 2.3 seconds before he took his picture at frame 255 could have hit the President at about frame 213.

(Specter misrepresents the minimum time lapse between the shots. FBI ballistics expert Robert Frazier, who test-fired the gun, testified that 2.3 seconds was the time lapse between shots while firing at a stationary target, and that firing 3 shots at a moving target would add a second to the overall time. This translates to 51 frames between shots; in other words, Oswald would have to have fired as rapidly as possible in order to squeeze 3 shots between frames 210 and 313.)

On the other hand, a substantial majority of the witnesses stated that the shots were not evenly spaced. Most witnesses recalled that the second and third shots were bunched together, although some believed that it was the first and second which were bunched. To the extent that reliance can be placed on recollection of witnesses as to the spacing of the shots, the testimony that the shots were not evenly spaced would militate against a second shot missing. Another factor arguing against the second shot missing is that the gunman would have been shooting at very near the minimum allowable time to have fired the three shots within 4.8 to 5.6 seconds, although it was entirely possible for him to have done so. (See ch. IV, pp. 188-194.) (Here, Specter is admitting that the majority of witnesses heard the last two shots bunched together, and that this suggests that the second shot did not miss, and was therefore most probably the head shot.)

The Third Shot

The last possibility, of course, is that it was the third shot which missed. This conclusion conforms most easily with the probability that the assassin would most likely have missed the farthest shot, particularly since there was an acceleration of the automobile after the shot which struck the President's head. The limousine also changed direction by following the curve to the right, whereas previously it had been proceeding in almost a straight line with a rifle protruding from the sixth-floor

window of the Depository Building.

*One must consider, however, the testimony of the witnesses who described the head shot as the concluding event in the assassination sequence. Illustrative is the testimony of Associated Press photographer Altgens, who had an excellent vantage point near the President's car. He recalled that the shot which hit the President's head "was the last shot that much I will say with a great degree of certainty." On the other hand, Emmett J. Hudson, the grounds-keeper of Dealey Plaza, testified that from his position on Elm Street, midway between Houston Street and the Triple Underpass, he heard a third shot after the shot which hit the President in the head. In addition, Mrs. Kennedy's testimony indicated that neither the first nor the second shot missed. Immediately after the first noise she turned, because of the Governor's yell, and saw her husband raise his hand to his forehead. Then the second shot struck the President's head. **(Here, Specter is confusing the issue unnecessarily. As Mr. Altgens and Mrs. Kennedy could clearly recall but two shots, his attempts at using their testimony to establish which of the three shots missed the car is a bit strange. Why doesn't he use the words of Charles Brehm, Malcolm Summers, or Marilyn Willis? Oh, that's right, they were never called before the Commission...)***

Some evidence suggested that a third shot may have entirely missed and hit the turf or street by the Triple Underpass. Royce G. Skelton, who watched the motorcade from the railroad bridge, testified that after two shots "the car came on down close to the Triple Underpass" and an additional shot "hit in the left front of the President's car on the cement." Skelton thought that there had been a total of four shots, either the third or fourth of which hit in the vicinity of the underpass. Dallas Patrolman J. W. Foster, who was also on the Triple Underpass, testified that a shot hit the turf near a manhole cover in the vicinity of the underpass. Examination of this area, however, disclosed no indication that a bullet struck at the locations indicated by Skelton or Foster.

At a different location in Dealey Plaza, the evidence indicated that a bullet fragment did hit the street. James T. Tague, who got out of his car to watch the motorcade from a position between Commerce and Main Streets near the Triple Underpass, was hit on the cheek by an object during the shooting. Within a few minutes Tague reported this to Deputy Sheriff Eddy R. Walthers, who was examining the area to see if any bullets had struck the turf. Walthers immediately started to search where Tague had been standing and located a place on the south curb of Main Street where it appeared a bullet had hit the cement. According to Tague, "There was a mark quite obviously. that was a bullet, and it was very fresh." In Tague's opinion, it was the second shot which caused the mark, since he thinks he heard the third shot after he was hit in the face. This incident appears to have been recorded in the contemporaneous report of Dallas Patrolman L. L. Hill, who radioed in around 12:40 p.m.: "I have one guy that was possibly hit by a ricochet from the bullet off the concrete." Scientific examination of the mark on the south curb of Main Street by FBI experts disclosed metal smears which, "were spectrographically determined to be essentially lead with a trace of antimony." The mark on the curb could have originated from the lead core of a bullet but the absence of copper precluded "the possibility that the mark on the curbing section was made by an unmutated military full metal-jacketed bullet such as the bullet from Governor Connally's stretcher."

It is true that the noise of a subsequent shot might have been drowned out by the siren on the Secret Service follow-up car immediately after the head shot, or the dramatic effect of the head shot might have caused so much confusion that the memory of subsequent events was blurred. Nevertheless, the preponderance of the eyewitness testimony that the head shot was the final shot must be weighed in any determination as to whether it was the third shot that missed. Even if it were caused by a bullet fragment, the mark on the south curb of Main Street cannot be identified conclusively with any of the three shots fired. Under the circumstances it might have come from the bullet which hit the President's head, or it might have been a product of the fragmentation of the missed shot upon hitting some other

object in the area. Since he did not observe any of the shots striking the President, Tague's testimony that the second shot, rather than the third, caused the scratch on his cheek, does not assist in limiting the possibilities. **(What preponderance of the eyewitness testimony? That members of the Commission and its counsel knew this was nonsense is supported by a December 17, 1991 Washington Post article by Commissioner Gerald Ford and counsel David Belin. While trying to argue that Oswald had more time to fire his shots than proposed by Oliver Stone in his film JFK, they nonsensically argued "the most probable time span of Oswald's three shots was around 10 seconds, in light of the fact that one of Oswald's shots missed--most likely the first or the last." By citing that it was more likely that the third shot missed than the second, they confirmed that the section of their report arguing that a final shot miss was unlikely, was not a unanimous opinion.)**

The wide range of possibilities and the existence of conflicting testimony, when coupled with the impossibility of scientific verification, precludes a conclusive finding by the Commission as to which shot missed. (He is clearly mistaken here. The preponderance of eyewitness statements indicates that the first shot hit. It also indicates the likelihood that the last shot missed. The problem for Specter is that, if he submits that the last shot missed, then he has to butt heads with those absolutely convinced that the last shot hit. If he goes along and states that the last shot hit, however, he can't come to the obvious conclusion that the first shot hit, without committing the Commission to a shooting scenario he knows may not pass the smell test, particularly after Frazier's testimony. So what does Specter do? He pretends there is just no way of knowing what happened.)

Time Span of Shots

Witnesses at the assassination scene said that the shots were fired within a few seconds, with the general estimate being 5 to 6 seconds. That approximation was most probably based on the earlier publicized reports that the first shot struck the President in the neck, the second wounded the Governor and the third shattered the President's head, with the time span from the neck to the head shots on the President being approximately 5 seconds. As previously indicated, the time span between the shot entering the back of the President's neck and the bullet which shattered his skull was 4.8 to 5 seconds. If the second shot missed, then 4.8 to 5.6 seconds was the total time span of the shots. If either the first or third shots missed, then a minimum of 2.3 seconds (necessary to operate the rifle) must be added to the time span of the shots which hit, giving a minimum time of 7.1 to 7.9 seconds for the three shots. If more than 2.3 seconds elapsed between a shot that missed and one that hit, then the time span would be correspondingly increased. (This is Specter at his best/worst. Here he sidesteps the possibility of the missed shot's being too close in time to either the first or second hit to have been fired by Oswald, by arbitrarily adding 2.3 seconds on to either end of his shooting scenario. He almost certainly knows that the expected delay between shots while firing at a moving target is 2.8 seconds, not 2.3, and that this amounts to 51 frames. He almost certainly knows there is no eyewitness support for a shot as early as frame 173 (51 frames before the last possible moment Kennedy could have been hit by the second shot) nor for a shot as late as frame 364 (51 frames after the head shot). The only scenario he can honestly push therefore is that the second shot missed. He doesn't want to do this, however, for two reasons: one, Governor Connally insisted he was hit by the second shot, and two, the shorter elapsed time makes Oswald's purported shooting feat many times more difficult and probably beyond his abilities. So what does Specter do? Once again, he decides not to decide.)

Conclusion

Based on the evidence analyzed in this chapter, the Commission has concluded that the shots which killed President Kennedy and wounded Governor Connally were fired from the sixth-floor window at the southeast corner of the Texas School Book Depository Building. Two bullets probably caused all the wounds suffered by President Kennedy and Governor Connally. Since the preponderance of the evidence indicated that three shots were fired, the Commission concluded that one shot probably

missed the Presidential limousine and its occupants, and that the three shots were fired in a time period ranging from approximately 4.8 to in excess of 7 seconds. (Let's recall the 12-16-63 Executive Session of the Warren Commission, in which Chief Justice Warren and Congressman Boggs discussed the FBI Report's failure to clear up which shots struck the President. Sayeth Warren: "It doesn't do anything" Respondeth Boggs: "It raises a lot of new questions in my mind." Isn't it ironic, don't you think?)

Straight Shooters or Smoke Blowers?

The Warren Report claims that the limousine traveled in "an almost straight line away from the assassin's rifle," a fact borne out by Exhibit 879, left, introduced into evidence as "a view of the scale model looking toward the southwest, in the direction of the triple underpass, from a position on the sixth floor in the southeast corner window."

The problem is that Exhibit 879 was not a view from the sixth floor sniper's nest, but from the roof of the building across the street. An actual view from the sniper's nest, as in Exhibit 724, above, right, shows Elm Street angling to the right.

Warren Commission Exhibits 892, above left, and 902, center, are its re-enactment photos of frames 207 and 313 from the Zapruder film, respectively, taken from the sniper's nest. The limo in 902 is heading almost straight away, but is out of alignment with the street. The 2003 animation of Dale Myers, right, corrects this error, and demonstrates that the limo headed to the right throughout the entire assassination sequence. Was the Warren Commission blowing smoke?

Straight Shooters or Smoke Blowers?

Since the Commission refused to decide how the shots were fired, the possibility that Oswald successfully hit a moving target two of three times in as little as 4.8 seconds had to be supported. This put the writers of the report in a bind. As a result, the section of the report on Oswald's rifle capability is among the least credible parts of the report, filled with errors and (almost certainly) deliberate deceptions. This section, from chapter 4, originally written by Joseph Ball and David Belin, and then re-written by Norman Redlich, with a few final tweaks added by the Warren Commissioners, follows... with my comments in **bold** (of course).

Oswald's Rifle Capability

In deciding whether Lee Harvey Oswald fired the shots which killed President Kennedy and wounded Governor Connally, the Commission considered whether Oswald, using his own rifle, possessed the capability to hit his target with two out of three shots under the conditions described in chapter III. The Commission evaluated (1) the nature of the shots, (2) Oswald's Marine training in marksmanship, (8) his experience and practice after leaving the Marine Corps, and (4) the accuracy of the weapon and the quality of the ammunition.

The Nature of the Shots

For a rifleman situated on the sixth floor of the Texas School Book Depository Building the shots were at a slow-moving target proceeding on a downgrade in virtually a straight line with the alignment of the assassin's rifle, at a range of 177 to 266 feet. An aerial photograph of Dealey Plaza shows that Elm Street runs at an angle so that the President would have been moving in an almost straight line away from the assassin's rifle. (See Commission Exhibit No. 876, p. 33.) In addition, the 3 degree downward slope of Elm Street was of assistance in eliminating at least some of the adjustment which is ordinarily required when a marksman must raise his rifle as a target moves farther away. (As shown on the slide above, the Commission knew full well that the limousine was not proceeding "in virtually a straight line away" from the sixth floor sniper's nest, but was heading to the right. This makes this statement suspicious. That the FBI's Robert Frazier failed to measure the lead to the right necessary to hit the limousine for his March 31 testimony, and that FBI Exhibits Chief Leo Gauthier on June 4 misrepresented a photo taken from across the street of the sniper's nest and directly behind the limo as a photo taken from the sniper's nest, suggests that the FBI was being deliberately deceptive on this issue. That the Warren Commission, which oversaw the May 24, 1964 re-enactment, measured the vertical angle of descent from the sniper's nest, but not the horizontal angle of the bullet into the car (which was subsequently shown to vary from 12 to 8 degrees during the assassination sequence), and that photos of this re-enactment show the limo at frame 313 in line with a shot from the sniper's nest, but out of alignment with the lines in the street, suggests, furthermore, that they were a witting part of this deception. This should make us wonder if some "executive decision" had been made on this point. That Legendary LAPD Chief William Parker called a press conference on 11-27-63, and told the big, fat, Canada goose-honking lie that the lateral movement of the limo during the shooting sequence was so small it would have been "imperceptible" to a shooter in the sniper's nest, should only intensify this suspicion.)

Four marksmanship experts testified before the Commission. Maj. Eugene D. Anderson, assistant head of the Marksmanship Branch of the US. Marine Corps, testified that the shots which struck the President in the neck and in the head were "not ... particularly difficult."

Robert A. Frazier, FBI expert in firearms identification and training, said: "From my own experience in shooting over the years, when you shoot at 175 feet or 260 feet, which is less than 100 yards, with a telescopic sight, you should not have any difficulty in hitting your target. I mean it requires no training at all to shoot a weapon with a telescopic sight once you know that you must put the crosshairs on the target and that is all that is necessary." (This avoids that, according to Frazier's own testimony, the crosshairs of Oswald's rifle were misaligned, and that his rifle, when first tested by the FBI, fired 4 inches high and 1 to the right at only 15 yards.)

Ronald Simmons, chief of the US. Army Infantry Weapons Evaluation Branch of the Ballistics Research Laboratory, said: "Well, in order to achieve three hits, it would not be required that a man be an exceptional shot. A proficient man with this weapon, yes." (This avoids that Simmons actually tested the rifle, using three Master shooters employed by the Army, and that, of the 14 shots rapid-fired by these men, not one of them hit as close to the center of the stationary head and shoulders target as the two hits attributed to Oswald.)

The effect of a four-power telescopic sight on the difficulty of these shots was considered in detail by M. Sgt. James A. Zahm, noncommissioned officer in charge of the Marksmanship Training Unit in the Weapons Training Battalion of the Marine Corps School at Quantico, Va. Referring to a rifle with a four-power telescope, Sergeant Zahm said: "...this is the ideal type of weapon for moving targets... Using the scope, rapidly working a bolt and using the scope to relocate your target quickly and at the same time when you locate that target you identify it and the crosshairs are in close relationship to the point you want to shoot at, it just takes a minor move in aiming to bring the crosshairs to bear, and then it is a quick squeeze. I consider it a real advantage, particularly at the range of 100 yards, in identifying your target. It allows you to see your target clearly, and it is still of a minimum amount of power that it doesn't exaggerate your own body movements. It just is an aid in seeing in the fact that you only have the one element, the crosshair, in relation to the target as opposed to iron sights with aligning the sights and then aligning them on the target."

Characterizing the four-power scope as "a real aid, an extreme aid" in rapid fire shooting, Sergeant Zahm expressed the opinion that the shot which struck President Kennedy in the neck at 176.9 to 190.8 feet was "very easy" and the shot which struck the President in the head at a distance of 265.3 feet was "an easy shot." After viewing photographs depicting the alignment of Elm Street in relation to the Texas School Book Depository Building, Zahm stated further: "This is a definite advantage to the shooter, the vehicle moving directly away from him and the downgrade of the street, and he being in an elevated position made an almost stationary target while he was aiming in, very little movement if any." (It bears repeating that the vehicle was not actually moving directly away from the sniper in the school book depository, but away and to the right. It is also suspicious that Zahm was shown an overhead view of Dealey Plaza to convince him of this alignment, long after photographs of the May 24 re-enactment, and showing the exact angle of the limo to the sniper's nest, were available. It is also intriguing that Zahm was only asked to testify after the report had been completed, and was being re-written. Why was his speculation on the difficulty of the shots considered more significant than the tests performed by Simmons?)

Oswald's Marine Training

In accordance with standard Marine procedures, Oswald received extensive training in marksmanship. During the first week of an intensive 8-week training period he received instruction in sighting, aiming, and manipulation of the trigger. He went through a series of exercises called dry firing where he assumed all positions which would later be used in the qualification course. After familiarization with live ammunition in The .22 rifle and .22 pistol, Oswald, like all Marine recruits, received training on the rifle range at distances up to 500 yards, firing 50 rounds each day for five days.

Following that training, Oswald was tested in December of 1956, and obtained a score of 212, which was 2 points above the minimum for qualifications as a "sharpshooter" in a scale of marksman/sharpshooter/expert. In May of 1959, on another range, Oswald scored 191, which was 1 point over the minimum for ranking as a "marksman." The Marine Corps records maintained on Oswald further show that he had fired and was familiar with the Browning Automatic rifle, .45 caliber pistol, and 12-gage riot gun.

Based on the general Marine Corps ratings, Lt. Col. A. G. Folsom, Jr., head, Records Branch, Personnel Department, Headquarters US. Marine Corps, evaluated the sharpshooter qualification as a "fairly good shot" and a low marksman rating as a "rather poor shot." When asked to explain the different scores achieved by Oswald on the two occasions when he fired for record, Major Anderson said: "...when he fired that [212] he had just completed a very intensive preliminary training period. He had the services of an experienced highly trained coach. He had high motivation. He had presumably a good to excellent rifle and good ammunition. We have nothing here to show under what conditions the B course was fired. It might well have been a bad day for firing the rifle, windy, rainy,

dark. There is little probability that he had a good, expert coach, and he probably didn't have as high a motivation because he was no longer in recruit training and under the care of the drill instructor. There is some possibility that the rifle he was firing might not have been as good a rifle as the rifle that he was firing in his A course firing, because [he] may well have carried this rifle for quite some time, and it got banged around in normal usage." (This is classic obfuscation. The Commission offers speculation by Anderson that Oswald's "poor" shooting could have come as a result of bad weather, but fails to follow through and call the Weather Bureau or check a newspaper archive to see if this was true. Well, for what it's worth, early critic Mark Lane was a little more industrious and found the day in question to have been a warm sunny day with temperatures ranging from 72 to 79 degrees, with only a slight breeze. Anderson's speculation that Oswald's rifle in 1959 may have been inferior to the rifle he'd used earlier is also problematic. Oswald's Marine Corps-issued rifle was without doubt in far better condition and far more accurate than the presumed assassination weapon, a WWII surplus rifle that had not been cleaned for months, and had purportedly been carried to the assassination disassembled in a paper bag.)

Major Anderson concluded: "I would say that as compared to other Marines receiving the same type of training, that Oswald was a good shot, somewhat better than or equal to better than the average let us say. As compared to a civilian who had not received this intensive training, he would be considered as a good to excellent shot."

When Sergeant Zahm was asked whether Oswald's Marine Corps training would have made it easier to operate a rifle with a four-power scope, he replied: "Based on that training, his basic knowledge in sight manipulation and trigger squeeze and what not, I would say that he would be capable of sighting that rifle in well, firing it, with 10 rounds." (This avoids both that there is no evidence Oswald's rifle had ever been sighted in prior to the assassination, and that it could not be properly sighted-in when the FBI tried to do so.)

After reviewing Oswald's marksmanship scores, Sergeant Zahm concluded: "I would say in the Marine Corps he is a good shot, slightly above average, and as compared to the average male of his age throughout the civilian, throughout the United States, that he is an excellent shot." (More obfuscation: Zahm was asked to comment on Oswald's ability based upon his earliest test scores in the Marines, and was not asked to speculate on Oswald's presumed abilities after falling out of practice, and firing a rifle unlike any he'd ever been trained on.)

Oswald's Rifle Practice Outside the Marines

During one of his leaves from the Marines, Oswald hunted with his brother Robert, using a .22 caliber bolt-action rifle belonging either to Robert or Robert's in-laws. After he left the Marines and before departing for Russia, Oswald, his brother, and a third companion went hunting for squirrels and rabbits. On that occasion Oswald again used a bolt-action .22 caliber rifle; and according to Robert, Lee Oswald exhibited an average amount of proficiency with that weapon. While in Russia, Oswald obtained a hunting license, joined a hunting club and went hunting about six times, as discussed more fully in chapter VI. Soon after Oswald returned from the Soviet Union he again went hunting with his brother, Robert, and used a borrowed .22 caliber bolt-action rifle. After Oswald purchased the Mannlicher-Carcano rifle, he told his wife that he practiced with it. Marina Oswald testified that on one occasion she saw him take the rifle, concealed in a raincoat, from the house on Neely Street. Oswald told her he was going to practice with it. According to George De Mohrenschildt, Oswald said that he went target shooting with that rifle. (Notice that the Commission could not find a single witness to Oswald's actually practicing with the rifle. Notice also that it fails to show how practice so many months before could be of any help in the shooting. It also avoids that neither cleaning supplies nor ammunition were found among Oswald's possessions.)

Marina Oswald testified that in New Orleans in May of 1963, she observed Oswald sitting with the rifle on their screened porch at night, sighting with the telescopic lens and operating the bolt. Examination of the cartridge cases found on the sixth floor of the Depository Building established that they had been previously loaded and ejected from the assassination rifle, which would indicate that Oswald practiced operating the bolt.

Accuracy of Weapon

It will be recalled from the discussion in chapter III that the assassin in all probability hit two out of the three shots during the maximum time span of 4.8 to 5.6 seconds if the second shot missed, or, if either the first or third shots missed, the assassin fired the three shots during a minimum time span of 7.1 to 7.9 seconds. A series of tests were performed to determine whether the weapon and ammunition used in the assassination were capable of firing the shots which were fired by the assassin on November 22, 1968. The ammunition used by the assassin was manufactured by Western Cartridge Co. of East Alton, III. In tests with the Mannlicher-Carcano C2766 rifle, over 100 rounds of this ammunition were fired by the FBI and the Infantry Weapons Evaluation Branch of the US. Army. There were no misfires.

In an effort to test the rifle under conditions which simulated those which prevailed during the assassination, the Infantry Weapons Evaluation Branch of the Ballistics Research Laboratory had expert riflemen fire the assassination weapon from a tower at three silhouette targets at distances of 175, 240, and 265 feet. The target at 265 feet was placed to the right of the 240-foot target which was in turn placed to the right of the closest silhouette. Using the assassination rifle mounted with the telescopic sight, three marksmen, rated as master by the National Rifle Association, each fired two series of three shots. In the first series the firers required time spans of 4.6, 6.75, and 8.25 seconds respectively. On the second series they required 5.15, 6.45, and 7 seconds. None of the marksmen had any practice with the assassination weapon except for exercising the bolt for 2 or 3 minutes on a dry run. They had not even pulled the trigger because of concern about breaking the firing pin.

The marksmen took as much time as they wanted for the first target and all hit the target. For the first four attempts, the firers missed the second shot by several inches. The angle from the first to the second shot was greater than from the second to the third shot and required a movement in the basic firing position of the marksmen. This angle was used in the test because the majority of the eyewitnesses to the assassination stated that there was a shorter interval between shots two and three than between shots one and two. As has been shown in chapter III, if the three shots were fired within a period of from 4.8 to 5.6 seconds, the shots would have been evenly spaced and the assassin would not have incurred so sharp an angular movement.

Five of the six shots hit the third target where the angle of movement of the weapon was small. (This avoids that none of these hits landed as close to the center of the head and shoulders target as the final hit on Kennedy, even though the rifle, for this test, had been re-aligned, and was purportedly shooting straight as an arrow.) On the basis of these results, Simmons testified that in his opinion the probability of hitting the targets at the relatively short range at which they were hit was very high. Considering the various probabilities which may have prevailed during the actual assassination, the highest level of firing performance which would have been required of the assassin and the C2766 rifle would have been to fire three times and hit the target twice within a span of 4.8 to 5.6 seconds. In fact, one of the firers in the rapid fire test in firing his two series of three shots, hit the target twice within a span of 4.6 and 5.15 seconds. (Note that they are discussing hitting the target, not hitting the target as close to center as the purported hits on Kennedy.) The others would have been able to reduce their times if they had been given the opportunity to become familiar with the movement of the bolt and the trigger pull. Simmons testified that familiarity with the bolt could be achieved in dry practice and, as has been indicated above, Oswald engaged in such practice. If the assassin missed either the first or

third shot, he had a total of between 4.8 and 5.6 seconds between the two shots which hit and a total minimum time period of from 7.1 to 7.9 seconds for all three shots. All three of the firers in these tests were able to fire the rounds within the time period which would have been available to the assassin under those conditions. Three FBI firearms experts tested the rifle in order to determine the speed with which it could be fired. The purpose of this experiment was not to test the rifle under conditions which prevailed at the time of the assassination but to determine the maximum speed at which it could be fired. The three FBI experts each fired three shots from the weapon at 15 yards in 6, 7, and 9 seconds (Not true: Agent Frazier later corrected his testimony and claimed the correct times were 5.9, 8, and 9 seconds) , and one of these agents, Robert A. Frazier, fired two series of three shots at 25 yards in 4.6 and 4.8 seconds. At 15 yards each man's shots landed within the size of a dime. (Deliberately overlooks that these shots all landed inches high and to the right and that, by Frazier's own testimony, the close grouping of these shots suggested that the scope had not recently been adjusted. This, of course, suggested that the sniper had shot at Kennedy with a severely misaligned scope!) The shots fired by Frazier at the range of 25 yards landed within an area of 2 inches and 5 inches respectively. Frazier later fired four groups of three shots at a distance of 100 yards in 5.9, 6.2, 5.6, and 6.5 seconds. Each series of three shots landed within areas ranging in diameter from 3 to 5 inches. Although all of the shots were a few inches high and to the right of the target., this was because of a defect in the scope which was recognized by the FBI agents and which they could have compensated for if they were aiming to hit a bull's-eye. They were instead firing to determine how rapidly the weapon could be fired and the area within which three shots could be placed. Frazier testified that while he could not tell when the defect occurred, but that a person familiar with the weapon could compensate for it. Moreover, the defect was one which would have assisted the assassin aiming at a target which was moving away. Frazier said, "The fact that the crosshairs are set high would actually compensate for any lead which had to be taken. So that if you aimed with this weapon as it actually was received at the laboratory, it would not be necessary to take any lead whatsoever in order to hit the intended object. The scope would accomplish the lead for you." (While it's true that Frazier said this, it is a completely ridiculous statement that should not have been repeated, let alone cited. FBI Director Hoover's letter to the Commission preceding Frazier's testimony specified that the misalignment as it was in March, AFTER the rifle had been sighted-in, could have been an advantage. Frazier then screwed up, or was pressured into screwing up, and said that the misalignment of the rifle as first received by the FBI in November could have been an advantage. There's a huge difference. If the scope was as misaligned in November as Frazier indicated, the assassin would have to have fired behind Kennedy in order to lead him while he was moving away. This is of no assistance whatsoever to a sniper.) Frazier added that the scope would cause a slight miss to the right. It should be noted, however, that the President's car was curving slightly to the right when the third shot was fired. (This is disingenuous. Yes, the car was curving slightly to the right at the time of the head shot, but earlier, in order to sell the relative ease of the shots, the report has claimed it was driving "virtually in a straight line away" from the sniper's nest. Well, which is it? One can not say that the car started out in a straight line but then curved away, because this simply is not true. It started out curving to the right and continued to curve to the right at a slightly reduced angle.) Based on these tests the experts agreed that the assassination rifle was an accurate weapon. Simmons described it as "quite accurate," in fact, as accurate as current. military rifles. Frazier testified that the rifle was accurate, that it had less recoil than the average military rifle and that one would not have to be an expert marksman to have accomplished the assassination with the weapon which was used. (Both Simmons and Frazier were discussing the relative consistency of the rifle, and were operating under the assumption the misalignment of the scope was either not present on the day of the shooting, or was something well known to the sniper. The problems with the scope were, in fact, so severe that the HSCA ballistics panel concluded that the sniper would not have even used the scope, and would have instead just used the iron sights of the rifle.)

Conclusion

The various tests showed that the Mannlicher-Carcano was an accurate rifle and that the use of a four-power scope was a substantial aid to rapid, accurate firing. Oswald's Marine training in marksmanship, his other rifle experience and his established familiarity with this particular weapon show that he possessed ample capability to commit the assassination. Based on the known facts of the assassination, the Marine marksmanship experts, Major Anderson and Sergeant Zahm, concurred in the opinion that Oswald had the capability to fire three shots, with two hits, within 4.8 and 5.6 seconds. Concerning the shots which struck the President in the back of the neck, Sergeant Zahm testified: "With the equipment he [Oswald] had and with his ability I consider it a very easy shot." Having fired this shot the assassin was then required to hit the target one more time within a space of from 4.8 to 5.6 seconds. On the basis of Oswald's training and the accuracy of the weapon as established by the tests, the Commission concluded that Oswald was capable of accomplishing this second hit even if there was an intervening shot which missed. The probability of hitting the President a second time would have been markedly increased if, in fact, he had missed either the first or third shots thereby leaving a time span of 4.8 to 5.6' seconds between the two shots which struck their mark. The Commission agrees with the testimony of Marine marksmanship expert Zahm that it was easy shot" to hit some part of the President's body, and that the range where the rifleman would be expected to hit would include the President's head. (This is as close to the truth as the Report comes. It was "easy" to hit some part of the President. The head is a part of the President. Therefore, it was "easy" to hit the President in the head. This, of course, presumes that the assassin was not actually all that skilled, and that he JUST GOT LUCKY, a presumption that becomes difficult to swallow once one considers that the previous hit is presumed to have landed but a few inches away and that BOTH of these shots landed closer to the middle of a head and shoulders target than ANY of the 14 shots rapid-fired by the Army's test shooters on STATIONARY head and shoulders targets.)

Oswald's Rifle Capability Conclusion

On the basis of the evidence reviewed in this chapter, the Commission has found that Lee Harvey Oswald (1) owned and possessed the rifle used to kill President Kennedy and wound Governor Connally, (2) brought this rifle into the Depository Building on the morning of the assassination, (3) was present, at the time of the assassination, at the window from which the shots were fired (4) killed Dallas Police Officer J. D. Tippit in an apparent attempt to escape, (5) resisted arrest by drawing a fully loaded pistol and attempting to shoot. another police officer, (6) lied to the police after his arrest concerning important substantive matters, (7) attempted, in April 1963, to kill Maj. Gen. Edwin A. Walker, and (8) possessed the capability with a rifle which would have enabled him to commit the assassination. On the basis of these findings the Commission has concluded that Lee Harvey Oswald was the assassin of President Kennedy. ("Possessing the capability" is, of course, another way of saying "well, it's possible..." Well, OF COURSE, it's possible. But was it likely? The Commission clearly felt the answer to this was "no", but was so committed to their premise that Oswald alone fired the shots that they saw no alternative other than to pull a Chico Marx and say "well, he musta gotta lucky.")

In a Word: Whitewash

Let's recall that the FBI found no evidence that Oswald had been practicing with his rifle in the weeks before the assassination. They found no extra ammunition or cleaning supplies among his possessions. The re-enactments of the shots by the FBI and outside experts, which suggested that Oswald may have been able to fire the shots as rapidly as presumed, were all conducted on stationary targets. The testimony on Oswald's shooting ability was based on test scores from many years before, and not based

on his presumed ability after failing to keep in practice. There was, moreover, no attempt to re-enact the shots using a rifle with the limitations of Oswald's rifle, and shooters of Oswald's presumed ability on 11-22-63, firing cold without any practice shots. It seems clear, moreover, that if such a test had been performed, the results would almost certainly have been negative, and have forced the Commission to explore the possibility Oswald did not fire the shots, and was, indeed, the "patsy" he claimed to be.

And how could they do that when the FBI, the Secret Service, and, gulp, Life Magazine, had already crowned Oswald the assassin?

But maybe I'm being unfair. Maybe, just maybe, the men writing the section of the report on Oswald's rifle capability had no idea how badly they'd distorted the evidence. Maybe they honestly thought the shots they'd assumed Oswald had fired really were easy for someone of Oswald's limited experience...

Leave It to Liebeler

Nope. Not going for it. On 9-4-64, after rapidly devouring a copy of chapter 4 of the report, Warren Commission Counsel Wesley J. Liebeler had nearly had a heart attack. Sensing that critics would see this chapter, which lays out the Commission's reasons for believing Oswald was the assassin, as, in his own words, "*a brief for the prosecution*," he fired off a 26 page long memorandum to Warren Commission General Counsel J. Lee Rankin on 9-6. His comments on the Oswald's Rifle Capability section of chapter 4 follow... (with some of the key parts highlighted).

OSWALD'S RIFLE CAPABILITY

1. The purpose of this section is to determine Oswald's ability to fire a rifle. The third word at the top of page 50 of the galleys, which is apparently meant to describe Oswald, is "marksman." A marksman is one skilled at shooting at mark; one who shoots well. Not only do we beg the question a little, but the sentence is inexact in that the shot, which it describes, would be the same for a marksman as it would for one who was not a marksman. How about: the assassin's shots from the easternmost window of the south side of the Texas School Book Depository were at a slow-moving target proceeding on a downgrade virtually straight away from the assassin, at a range of 177 to 266 feet."

2. The last sentence in the first paragraph on galley page 50 should indicate that the slope of Elm Street is downward.

3. The section on the nature of the shots deals basically with the range and the effect of a telescopic sight. Several experts conclude that the shots were easy. There is, however, no consideration given here to the time allowed for the shots. I do not see how someone can conclude that a shot is easy or hard unless he knows something about how long the firer has to shoot, that is, how much time is allotted for the shots.

*4. On nature of the shots--Frazier testified that one would have no difficulty in hitting a target with a telescopic sight, since all you have to do is put the crosshairs on the target. On page 51 of the galleys, however, he testified that shots fired by FBI agents with the assassination weapon were "a few inches high and to the right of the target * * * because of a defect in the scope." Apparently no one knows when that defect appeared, or if it was in the scope at the time of the assassination. If it was, and in the absence of any evidence to the contrary one may assume that it was, putting the crosshairs on the target would clearly have resulted in a miss, or it very likely would, in any event. I have raised this question before. **There is a great deal of testimony in the record that a telescopic sight is a sensitive proposition. You can't leave a rifle and scope laying around in a garage underfoot for almost 3 months, just having brought it back from New Orleans in the back of a station wagon, and expect to hit anything with it, unless you take the trouble to fire it and sight the scope in. This would have been a problem that should have been dealt with in any event, and now that it turns out that there***

actually was a defect in the scope, it is perfectly clear that the question must be considered. The present draft leaves the Commission open to severe criticism. Furthermore, to the extent that it leaves testimony suggesting that the shots might not have been so easy out of the discussion, thereby giving only a part of the story, it is simply dishonest.

5. *Why do we have a statement concerning the fact that Oswald's Marine records show that he was familiar with the Browning automatic rifle, .45-caliber pistol and 12-gage riot gun? That is completely irrelevant to the question of his ability to fire a rifle, unless there is evidence that the same skills are involved. It is, furthermore, prejudicial to some extent.*

6. *Under the heading "Oswald's Rifle Practice Outside the Marines" we have a statement concerning his hunting activities in Russia. It says that he joined a hunting club, obtained a license and went hunting about six times. It does not say what kind of a weapon he used. While I am not completely familiar with the record on this point, I do know for a fact that there is some indication that he used a shotgun. Under what theory do we include activities concerning a shotgun under a heading relating to rifle practice, and then presume not to advise the reader of the fact?*

7. *The statements concerning Oswald's practice with the assassination weapon are misleading. They tend to give the impression that he did more practicing than the record suggests that he did. My recollection is that there is only one specific time when he might have practiced. We should be more precise in this area, because the Commission is going to have its work in this area examined very closely.*

8. *On the top of galley page 51 we have that statement about Oswald sighting the telescopic sight at night on the porch in New Orleans. I think the support for that proposition is thin indeed. Marina Oswald first testified that she did not know what he was doing out there and then she was clearly led into the only answer that gives any support to this proposition.*

9. *I think the level of reaching that is going on in this whole discussion of rifle capability is merely shown by the fact that under the heading of rifle practice outside the Marine Corps appears the damning statement that "Oswald showed an interest in rifles by discussing that subject with others (in fact only one person as I remember it) and reading gun magazines."*

10. *I do not think the record will support the statement that Oswald did not leave his Beckley Avenue rooming house on one of the weekends that he was supposedly seen at the Sports Drome Rifle Range.*

11. *There is a misstatement in the third paragraph under rapid fire tests when it says "Four of the firers missed the second shot." The preceding paragraph states that there were only three firers.*

12. *There are no footnotes whatsoever in the fifth paragraph under rapid fire tests and some rather important statements are made which require some support from someplace.*

13. *A minor point as to the next paragraph--bullets are better said to strike rather than land.*

14. *As I read through the section on rifle capability it appears that 15 different sets of three shots were fired by supposedly expert riflemen of the FBI and other places. According to my calculations those 15 sets of shots took a total of 93.8 seconds to be fired. The average of all 15 is a little over 6.2 seconds. Assuming that time is calculated commencing with the firing of the first shot, that means the average time it took to fire the two remaining shots was about 6.2 seconds. That comes to about 3.1 seconds for each shot, not counting the time consumed by the actual firing, which would not be very much. I recall that chapter 3 said that the minimum time that had to elapse between shots was 2.25 seconds, which is pretty close to the one set of fast shots fired by Frazier of the FBI. The conclusion indicates that Oswald had the capability to fire three shots with two hits in from 4.8 to 5.6 seconds. **Of the 15 sets of 3 shots described above, only 3 were fired within 4.8 seconds. A total of five sets, including the three just mentioned were fired within a total of 5.6 seconds. The conclusion at its most extreme states that Oswald could fire faster than the Commission experts fired in 12 of their 15 tries and that in any event he could fire faster than the experts did in 10 of their 15 tries. If we are going to set forth material such as this, I think we should set forth some information on how much training and how much shooting the experts had and did as a whole. The readers could then have something on which***

to base their judgments concerning the relative abilities of the apparently slow firing experts used by the Commission and the ability of Lee Harvey Oswald.

15. The problems raised by the above analyses should be met at some point in the text of the report. The figure of 2.25 as a minimum firing time for each shot used throughout chapter 3. The present discussion of rifle capability shows that expert riflemen could not fire the assassination weapon that fast. Only one of the experts managed to do so, and his shots, like those of the other FBI experts, were high and to the right of the target. The fact is that most of the experts were much more proficient with a rifle than Oswald could ever be expected to be, and the record indicates that fact, according to my recollection of the response of one of the experts to a question by Mr. McCloy asking for a comparison of an NRA master marksman to a Marine Corps sharpshooter.

16. The present section on rifle capability fails to set forth material in the record tending to indicate that Oswald was not a good shot and that he was not interested in his rifle while in the Marine Corps. It does not set forth material indicating that a telescopic sight must be tested and sighted in after a period of non-use before it can be expected to be accurate. That problem is emphasized by the fact that the FBI actually found that there was a defect in the scope which caused the rifle to fire high and to the right. In spite of the above the present section takes only part of the material in the record to show that Oswald was a good shot and that he was interested in rifles. I submit that the testimony of Delgado that Oswald was not interested in his rifle while in the Marines is at least as probative as Alba's testimony that Oswald came into his garage to read rifle--and hunting--magazines. To put it bluntly that sort of selection from the record could seriously affect the integrity and credibility of the entire report.

17. It seems to me that the most honest and the most sensible thing to do given the present state of the record on Oswald's rifle capability would be to write a very short section indicating that there is testimony on both sides of several issues. The Commission could then conclude that the best evidence that Oswald could fire his rifle as fast as he did and hit the target is the fact that he did so. It may have been pure luck. It probably was to a very great extent. But it happened. He would have had to have been lucky to hit as he did if he had only 4.8 seconds to fire the shots. Why don't we admit instead of reaching and using only part of the record to support the propositions presently set forth in the galleys. Those conclusions will never be accepted by critical persons anyway.

Note that Liebel's complaints about this section of the report were largely ignored, as the problems he discussed went largely uncorrected. According to writer Edward Epstein, with whom Liebel confided regarding this matter, General Counsel Rankin at first refused to read the memo, declaring "*No more memorandums! The report has to be published!*" Rankin then relented and allowed Liebel to argue his points one by one with Norman Redlich, Rankin's top aide and the man responsible for reviewing and re-writing both the chapters on the shooting and those on Oswald's likely guilt. According to Epstein, Liebel told him that "*Redlich heatedly objected to all Liebel's criticisms*" and that Redlich said the chapter had been written exactly how the commissioners wanted it written, and had even admitted "*The Commissioners judged it an easy shot, and I work for the Commission.*" Rankin then adjudicated the memo point by point, almost always siding with Redlich.

Let's think about this for a second. Liebel, one of the Warren Commission's top lawyers, had told his superiors in the commission that there were deceptive, even dishonest, passages in their report. And they ignored him, by and large, telling him that this was what the commissioners wanted. This makes it clear that by September, if not earlier, they just didn't give a damn. They were there to sell the public what they wanted them to believe, not lay out all the evidence and let the public decide for itself.

Apparently they thought it best that someone else tackle that job...

And they weren't the only ones pushing back against Liebel and his efforts. In 1966, after books

criticizing the Commission, such as Epstein's Inquest, had garnered some attention, Liebeler went on the defensive, and lobbied his fellow Warren Commission counsel for help in fighting the critics. Ironically, however, he also wrote the FBI asking for their help, and was refused. The key reason, as spelled out in a 10-19-66 FBI memo from Assistant FBI Director Alex Rosen (the man tasked with investigating the basic facts of the assassination), was that Liebeler was "*obnoxious*" and that he'd pestered the FBI during the Warren Commission's investigation with "*completely unreasonable*", "*screwball*", and "*idiotic*" requests that they'd failed to respond to unless specifically asked to do so by his boss, Rankin.

That Liebeler would be so offensive to Rosen, moreover, should come as no surprise. Let's recall here that Rosen had 1) failed to acquire and study the autopsy report and note that the doctors' interpretation of the wounds had changed the day after the autopsy, 2) failed to bring the FBI's conclusions in line with the autopsy report once the FBI had received this report, 3) pretended he'd done so on purpose once his failure to adjust the FBI's conclusions had become a public embarrassment, 4) tried to blame his mistakes on the Kennedy family, 5) refused to investigate the rumor there was a bullet hole in the floor of the limousine beyond calling a top Secret Service official and asking if it was true, 6) threatened to refuse the Warren Commission FBI cooperation when it sought the opinions of non-FBI experts, and 7) refused to investigate when it was subsequently brought to his attention that the CIA and Mafia had teamed up to kill Castro and that one of those involved in the operation had claimed it had boomeranged back at Kennedy.

Wow. That's quite the resume. Is it any wonder then that, with a man like Rosen leading its investigation, the FBI had failed to uncover much of anything?

And there's an even more disturbing aspect to Rosen's refusing to help Liebeler. And that's that, by 1966, Liebeler had become every bit as disinterested in uncovering the truth as Rosen had been in 1964. On November 7, 1966, Liebeler, along with fellow Warren Commission counsel Joseph Ball and Albert Jenner, was interviewed on KCBS radio by Harv Morgan. They then took calls from the audience. One of the callers asked about Oswald's rifle capability and the difficulty of the shots. And Liebeler spewed forth the very nonsense he once had found so objectionable...

When asked if firing at stationary targets, as was done in the re-enactments, was easier than firing at moving targets, as was done in Dealey Plaza, he replied: *"It depends which way it's moving. If it's moving straight away from you, there's not much difference, is there? ...If the target is moving slowly and directly away from you on a line, there's little difference."* (Liebeler knew, of course, that the "target" in this instance was not moving directly away from the supposed sniper's nest.)

When asked why the Army's shooters didn't replicate the shots as closely as possible, he replied: *"It was probably too difficult to shoot at a moving target under the circumstances."* He then offered: *"We shot with a camera from the sixth floor of the Texas School Book Depository towards a moving target."*

When the caller pointed out that the sniper in Dealey Plaza wasn't shooting with a camera, Liebeler responded: *"The point is that the Commission did set up a situation that was quite similar to the moving target by using three still targets. Now, as indicated, it might be somewhat easier to hit a still target but when the target was moving slowly away in a direct line, as this one was, very slightly curving to the right, there's not very much difference."* (Note: Liebeler had thereby admitted that he knew full well that the "target" in question was not moving in a "direct line" away from the sniper's nest, as he'd previously suggested.)

But he wasn't done. Even though the caller had by this time been cut off, Liebeler insisted on discussing the question of Oswald's shooting abilities further. In the process, he revealed just how far he'd come from the lone voice of dissent he'd been in 1964. He complained: *"I want to know whether he's asking the question of the accuracy involved or the time sequence involved. The accuracy is a very subjective thing and there may have been a good deal of luck involved in the shot. The time sequence is a different matter. In the time sequence, it was clearly established that there was plenty of time to make these shots. I've always taken the position that the best evidence that you could hit this target in this way from the sixth floor of the building was the fact that it did happen. In fact it was a very easy shot and that's exactly what did happen based on the existence of all kinds of other evidence."* (Note: this comes from the same man who'd previously observed that Oswald *"would have had to have been lucky to hit as he did if he had only 4.8 seconds to fire the shots"* and had similarly observed that the Commission's tests indicated the possibility *"Oswald could fire faster than the Commission experts fired in 12 of their 15 tries and that in any event he could fire faster than the experts did in 10 of their 15 tries."*)

When asked if the shot was truly easy, he then snapped: *"Of course, it's a simple shot. It's less than 200 feet away."* (Note: for the "shot" now in question, presumably the head shot, the presumed target, Kennedy, was 265 feet away, not less than 200 feet away.)

When finally asked why, if the shot was so easy, so many critics had claimed no one had duplicated Oswald's shooting, he spat: *"There are all kinds of people who've duplicated it. All these people ought to go up there and look out that window and see what an easy shot it is. It's like shooting, well--it's a very easy shot."* (Note: Liebeler had thereby pulled an old lawyer's trick, and had avoided answering a problematic question by answering another question entirely. What had started out as a discussion of the Commission's tests and whether Oswald could hit Kennedy two of three times in 4.8 seconds, as claimed by the Commission, had been blurred into whether it was possible for Oswald to hit Kennedy in the head from the sniper's nest when given all the time in the world.)

Ford's Theater

And Liebeler was not the only member of the Warren Commission and its staff spewing nonsense in order to sell the Warren Commission's conclusions to the public. Congressman (later President) Gerald Ford, as it turned out, had agreed to sell a story to Life Magazine on the conclusions and inner workings of the commission. This article was published in the October 2, 1964 issue, and on the stands when the commission's report was released to the public on September 28.

Within this story, moreover, were a number of claims in opposition to the commission's report, the report signed by Ford days earlier. These "mistakes" or mis-statements, if you will, all had one thing in common--they exaggerated the strength of the case against Oswald.

First and foremost, it claimed that assassination witness Howard Brennan *"identified Oswald in a police line-up."* This hid from Life's millions of readers that Brennan claimed in his 11-22 statement that he could identify the shooter he saw in the sixth floor window, but that he refused to identify Oswald in the line-up that evening. It also hid that Brennan only told the police he really could have IDed Oswald weeks later, after receiving a visit from the Secret Service. It also hid from Life's readers the words of the commission's report, which admitted: *"During the evening of November 22, Brennan identified Oswald as the person in the lineup who bore the closest resemblance to the man in the window but he said he was unable to make a positive identification. Prior to the lineup, Brennan had*

seen Oswald's picture on television and he told the Commission that whether this affected his identification "is something I do not know." In an interview with FBI agents on December 17, 1963, Brennan stated that he was sure that the person firing the rifle was Oswald. In another interview with FBI agents on January 7, 1964, Brennan appeared to revert to his earlier inability to make a positive identification, but, in his testimony before the Commission, Brennan stated that his remarks of January 7 were intended by him merely as an accurate report of what he said on November 22."

And this was just the beginning of Ford's trail of nonsense most foul. A paragraph later he claimed that Oswald's absence from the depository was noted a mere half hour after Brennan's initial description of a shooter was broadcast over the police airwaves, and that a bulletin regarding Oswald was then broadcast over the airwaves. He then claimed *"After this second bulletin was issued, Officer J.D. Tippit stopped Oswald on the street and Oswald shot him dead."*

Well, that would be most interesting, as Tippit had been dead for at least ten minutes before such a bulletin could have been issued. According to the Warren Report supposedly studied and signed by Ford: *"Although Oswald probably left the building at about 12:33 p.m., his absence was not noticed until at least one-half hour later. Truly, who had returned with Patrolman Baker from the roof, saw the police questioning the warehouse employees. Approximately 15 men worked in the warehouse and Truly noticed that Oswald was not among those being questioned. Satisfying himself that Oswald was missing, Truly obtained Oswald's address, phone number, and description from his employment application card. The address listed was for the Paine home in Irving. Truly gave this information to Captain Fritz who was on the sixth floor at the time. Truly estimated that he gave this information to Fritz about 15 or 20 minutes after the shots, but it was probably no earlier than 1:22 p.m., the time when the rifle was found. Fritz believed that he learned of Oswald's absence after the rifle was found. The fact that Truly found Fritz in the northwest corner of the floor, near the point where the rifle was found, supports Fritz' recollection."*

So there you have it, the Commission concluded Fritz first heard about Oswald's disappearance around 1:22, seven minutes after 1:15, the time they'd concluded Tippit had been shot. So much for Ford's fabricated scenario whereby Tippit stopped Oswald only after receiving a bulletin about him.

And so much for Ford's credibility. You see, he was not only blowing smoke about the timing of the bulletin regarding Oswald, he was blowing smoke about the existence of such a bulletin. None was ever issued. When asked by the Commission what he did with the information about Oswald given him by Truly, Fritz responded: *"Well, I never did give it to anyone because when I got to the office he (Oswald) was there."*

So why would Ford, who was in a position to know better, push total nonsense, and pretend the information provided Fritz led to the issuance of a bulletin, which in turn led to Tippit's stopping Oswald? Here's one possibility... As Tippit was killed before a bulletin on Oswald could be issued, he would, assuming he stopped Oswald due to his matching a description, be reacting to the earlier bulletin based upon the description given by Brennan; this description read *"white male, approximately 30, slender build, height 5 foot 10 inches, weight 165 pounds."* Well, in 1963, when the U.S. was far thinner than it is now, that could be most anyone. Tippit may well have seen dozens of men matching that description in the 20 minutes following the broadcast of that bulletin. And yet...there is no record of him stopping or pulling over anyone based upon that description. This suggests, then, that either Tippit stopped to talk to Oswald for reasons other than his thinking Oswald was a suspect in the assassination--which would be a heck of a coincidence--or that Tippit was out looking for Oswald specifically, based upon information coming from someone other than Fritz. This last possibility, one

can only assume, was something Ford would not want to share with his readers. He may have felt it better, then, that he simply pretend Tippit had a clear-cut reason for stopping Oswald.

In any event, that wasn't the end of Ford's fabrications surrounding this mythical bulletin about Oswald. After discussing the initial description of the shooter based upon Brennan's description, and the description of Oswald in his imaginary bulletin, Ford wrote: *"The two descriptions differed in some details...and it was this discrepancy which set off the first of the countless rumors concerning the President's assassination: namely, the story that two men were involved. Thus, both here and abroad began the cascade of innuendo, supposition, twisted fact, misunderstanding, faulty analysis, and downright fantasy that surrounded the tragic death of John Fitzgerald Kennedy."*

Well, this was more smoke, of course. The public's suspicion there were multiple shooters came not from divergent descriptions of the shooter and Oswald broadcast on the 22nd, but from the statements of witnesses suggesting shots came from somewhere other than the book depository. This suspicion was then fed by the statements of witnesses describing men other than Oswald running from the building. Ford's failure to note this, and his summing up the commission's investigation with *"there is not a scintilla of credible evidence to suggest a conspiracy"* made his purpose most plain. He was out to discredit conspiracy theories at any cost, even if it meant misrepresenting the facts and inventing incidents from whole cloth--even if in doing so he'd damage the long-term credibility of the commission.

He proved this yet again in the closing paragraphs of the article. He acknowledged there'd been rumors Oswald had been a government agent, but wrote these off as having been started by Oswald's mother, Marguerite, who was confused and in denial. He thereby hid from his readers that these rumors were actually started by a number of prominent journalists, who felt there was something odd about Oswald's actions in the years leading up to the shooting, that could best be explained by his being an American agent. Ford then claimed Marguerite's claims led the commission to conduct *"a massive search...to prove or disprove the secret agent theory"* that led nowhere. Here, he hid from his readers that back in January, when the rumors about Oswald being an agent first bubbled to the surface, Commissioner Allen Dulles, a former CIA Director, told his fellow commissioners that the heads of the CIA and FBI would probably LIE about Oswald's being an agent unless they were directed by President Lyndon Johnson NOT to lie about such things, and that no one from the commission dared ask President Johnson to make such a request. Ford was thus pushing that the question of Oswald's being an agent had been resolved--when he knew for a fact it had not.

In short, he was blowing a whole lotta smoke for a whole lotta bucks...precisely what one looks for in a future president...

(Or is that too cynical?)

The Mysterious Mr. Moore

Should the Warren Commission's refusal to reach a conclusion on the number and timing of the shots, and its deliberate and ongoing efforts to deceive the public regarding Oswald's rifle capability, not cause one to wonder if their entire investigation wasn't a political charade, and should Gerald Ford's misrepresentations of the evidence against Oswald not confirm these suspicions, then one needs to learn more about...Moore. Secret Service Agent Elmer Moore, that is.

After seeing Moore's name pop up numerous times in the most suspicious of circumstances, I asked researcher Gary Murr if he'd ever looked into Moore, and it turned out that he'd shared my curiosity. He sent me some of what he'd compiled on Moore. (Additional information comes from Moore's 1-6-76 testimony before the Senate Select Committee to Study Governmental Operations with Respect to Intelligence Activities.) Here, then, is what we know about Moore...

At the time of the assassination, Elmer Moore was a Secret Service investigator assigned to their San Francisco office. A week after the assassination, **11-29-63**, he was instructed to go to Dallas and assist Inspector Thomas Kelley with his investigation of the assassination. Once there, he conducted the Secret Service's investigation of Jack Ruby, in order to establish the connection or lack thereof between Ruby and Oswald. Not surprisingly, he found no connection. On **12-5-63**, he oversaw the Secret Service Survey of Dealey Plaza. The survey plat of this re-enactment, published by the Warren Commission as CE 585, and Moore's subsequent reports, reveals that he concluded, after studying the Zapruder film, that the fatal head shot at frame 313 occurred when Kennedy was 34 feet further down the street than his fellow Agent Howlett concluded only the week before, and 29 feet further down the street than the Warren Commission would conclude 6 months later. This is a bit suspicious. Is it a coincidence that Kennedy's traveling this extra distance would give the presumed sniper more time to aim, and make Oswald's purported shooting feat less fantastic? The next week, on **12-11**, Moore engaged in more mysterious activity. He visited the doctors at Parkland hospital who'd worked on Kennedy, and showed them the official autopsy report stating that the throat wound was an exit. This came as a surprise to some of these doctors, who'd initially believed and stated that the throat wound was an entrance, and repeated this speculation to reporter Jimmy Breslin, whose article on their treatment of Kennedy was in that week's Saturday Evening Post. Since the doctors were giving interviews and repeating what was believed to be incorrect information, it only makes sense then that someone in the government would want to set them straight. Evidently, it was Moore's job to set them straight.

Now here's where things get weird. Moore's 1976 testimony reflects that on **12-19**, he was ordered to contact Chief Justice Earl Warren and request that he accept Secret Service protection. He had known Warren for over 20 years. But he had never worked in the protective detail of the Secret Service beyond temporary assignments. Nevertheless, he successfully convinced Warren he needed protection, and was Warren's near-constant companion and bodyguard from that day until after the Warren Report was issued the next September. In this role, as bodyguard, he accompanied Warren to Warren's questioning of Jack Ruby. But Moore was more than just a bodyguard. He admitted to the Senate Committee in 1976 that he had "discussions daily" with Warren. The obvious and vital question of whether or not Moore kept anyone informed of these discussions was not asked. The equally obvious question of whether anyone thought it was a conflict of interest to have one of the Secret Service's chief investigators act as Warren's personal security, when Warren was supposed to be reviewing the Secret Service's investigation, also was not asked. (A Church Committee document listing the names of 27 "Secret Service Agents investigating the Assassination of President Kennedy" lists Moore as one of three "supervisors," with 24 subordinates.)

What was discussed was Moore's relationship with James Gochenaur. Gochenaur had come forward with the allegation that he'd met Moore in 1970, and that Moore had told him about some of his experiences investigating the assassination. Gochenaur said that Moore had guiltily admitted that he'd badgered Dr. Malcolm Perry into changing his testimony about the throat wound. Moore admitted meeting Gochenaur, and discussing the assassination with him, but denied Gochenaur's allegation. Moore's testimony, however, reveals he was greatly concerned about Gochenaur's allegation. He'd arrived for questioning with a personal attorney. He expressed the opinion that "to induce any witness

to change his testimony, of course that's a felony."

Where Moore's testimony falls apart, in my opinion, is where he tries to explain what DID happen when he talked to Dr. Perry and the other Parkland doctors. Moore testified "I was given a copy of the Bethesda autopsy. A mimeographed copy. There were numerous copies sent to the Dallas office and it was assigned to attempt to determine the trajectory of the bullets, the missiles, from the wound, and the report I referred to covers this... Well, what happened here, when I received the autopsy reports, there were medical terms and measurements that I was not familiar with one. I recall it was the acromion which is a process of the shoulder blade, I learned through Dr. Perry. And I think the description of the neck strap wound, the first bullet in the President's neck, was determined about 14 centimeters from the acromion process arc, and another arc from the mastoid of 14 centimeters... They're exactly the same measurements. And I was not sure of these in medical terms. The logical thing I thought at the time was to go out to talk to these people and also to let them see for the first time the results of the autopsy because they had not had the opportunity to actually see the fatal wound at all. They had never turned the body over at Parkland. They were engaged in respiratory and circulatory, you know, the trauma actions rather than examining wounds. So I had talked to Dr. Perry and he was, as I recall, 34 years old, a very personable man. He was very disturbed, as he had been quoted, where he had performed the tracheotomy through the exit wound, which is right over the Adam's Apple, it went by part of the tie. He was quite disturbed that he had been quoted in the press as having said that is an entrance wound, and he had denied that consistently, that he ever said that, that what he said was there was a wound there and it could have been an entrance or an exit... And then when he saw the autopsy report, which was the first occasion, they got a copy, I think, the following day or so, was sent down from Bethesda, and they had been in contact with the doctors by phone, I believe... but they were quite interested in the autopsy report. And after reading it I think it was Dr. Perry first and then Dr. Carrico came in. And after they read it they asked if there would be any objection to other staff doctors seeing it who had attended the President in some manner or another and were interested in it. And I saw no objection. So they went into a little conference room—I would say six or seven doctors—and discussed it for possibly ten or fifteen minutes, and I left." (When asked why he went to Parkland) "(To see) If it could be determined from the wounds the trajectory of the bullets. Did they come from the sixth floor of this and could this be proven by the—(When asked what Perry told him) "Well, that was not actually for him to answer, but what he was doing for me was determining where this wound was on the body and what direction it went".

The problem with this is it's just not credible. I mean, really, Moore just so happens to show Perry the autopsy report, telling him the throat wound is officially an exit, to let him "see for the first time the results of the autopsy because they had not had the opportunity to actually see the fatal wound at all... They had never turned the body over at Parkland"? It was all just for Perry's general information, mind you, not to get him to shut up. And really, Moore just so happens to pick Perry, the guy who told the nation in a press conference the throat wound was an entrance, as the guy to teach him a little anatomy? His contention that he consulted with Perry about the relative locations of the wounds, as opposed to his telling Perry the official conclusion about the relative positions of the wounds, is also suspect. The measurements for the back wound on the autopsy report, 14 cm from acromion and 14 cm below the tip of the right mastoid process, as we shall see, place the back wound in the back, at the same level as the throat wound. Moore's 12-11 report, after his meeting with Perry, however, asserts that the missile path of the first bullet to strike the President "is from the upper right posterior thorax to the exit position in the low anterior cervical region and is in slight general downward direction." I doubt a doctor would say such a thing. The upper thorax is, by definition, below the lower cervical region, unless the body is leaning forward. And the Zapruder film studied by Moore demonstrated that Kennedy was not leaning forward before the shots were fired. The probability, then, is that Moore went to Parkland at least in part to bring Perry into line, and let him know that the throat wound was

officially an exit., and below the back wound. As Moore, in his testimony, was dismissive that wound locations could effectively establish a bullet's trajectory, he may honestly have figured an entrance on Kennedy's back was close enough. This doesn't explain, however, his reporting that the back wound was above the throat wound, something the measurements shown to Perry prove false. One should wonder, furthermore, if Moore noticed that the location of the back wound in the drawings created by the autopsy doctors in March was far higher than the wound location he'd mapped out with Perry, and if he told Chief Warren about this problem. Perhaps the apathetic attitude towards the wound locations and trajectories revealed by Moore in his work for the Secret Service infected the Commission's re-enactment in May.

If so, it may have been by design. A 1-7-64 Treasury Department memorandum for the file reflects that Moore, who'd been traveling with Earl Warren since 12-19, was asked by Warren on 12-2 if "he could be available to the Commission for an indefinite period to assist in its work." A 12-8 memo from Secret Service Chief Rowley reflects that Moore was assigned to "furnish any service, assistance, and cooperation the Commission considers necessary." These memos fail to mention Moore's purported role as Warren's bodyguard. This raises the question of whether Moore was protecting Warren or helping him run the investigation. In Professor Gerald McKnight's *Breach of Trust*, he discusses a document found in the voluminous archives of researcher Harold Weisberg, now held at Hood College. Among the documents recovered via Weisberg's numerous Freedom of Information Act cases was a February 7, 1964 letter from Chief Counsel Rankin's Secretary, Julia Eide. This letter reflects that "all the waste material" (that is, notes, carbons, tapes) of the 1-22-64 meeting of the Warren Commission, in which they discussed the possibility Oswald was working for the FBI, was to be turned over to Secret Service Inspector Elmer Moore and burned. Doesn't sound like straight guard duty to me.

That Moore was more than Warren's guard dog is undoubtedly intriguing. In the years following the assassination, it would be revealed that the Secret Service has been used at times by Presidents as a private intelligence unit. Richard Nixon used them to spy on his own brother, and, according to Nixon aide Alexander Butterfield, spy on other political candidates as well. This raises the uncomfortable possibility that Moore was President Johnson's eyes and ears on the Commission, put in place, with Warren's acquiescence, to help keep the commission "in line". This might explain why Moore, a long time Warren acquaintance, was brought into the Secret Service's investigation on the same day that Warren agreed to chair a Presidential Commission reviewing the Secret Service's findings. This might explain as well how Anthony Lewis, writer for the New York Times, while working on a book with Johnson's close associate Abe Fortas, became privy to information that could only have come from within the Commission. It could also explain Moore's seemingly exaggerated concerns about Gochenaur's statements, and his willingness to lie about his visit to Perry. It could also explain why Moore, the only one working with the Commission to admit measuring out 14 cms from the tip of the mastoid process on a body, failed to alert Warren that this put the wound on Kennedy's back, inches below the location on the drawings entered into evidence on March 16, 1964 as the official representations of the President's wounds.

And then there's this... On November 22nd 2003, Senator Arlen Specter addressed a crowd at an assassination conference held at Duquesne University. He told the crowd about his work for the Warren Commission and of being shown an autopsy photo of the President's back wound on May 24, 1964. This autopsy photo, as we shall see, should have convinced Specter that the wound on Kennedy's back was inches below the level depicted in the commission's exhibits, and that it was therefore doubtful the shooting had occurred as purported. Instead, Specter stuck by his belief that the bullet causing this wound, after striking Kennedy's back on a sharply downward trajectory, had somehow exited from his throat. In his 2000 book *Passion for Truth*, and in previous interviews, Specter had said that Secret Service Inspector Thomas Kelley had shown him this photo. On this day, however, he told

the audience it was “Elmer Moore, who was the Chief’s bodyguard.” If it was indeed Moore, it would suggest that Specter was shown the photo with Warren’s blessing. Which in turn suggests that Warren, Moore and Specter all knew the wound was on the back and inches lower on the body than in the commission's exhibits. And that they'd conspired to hide this from the public...

Chapter 4: "The So-Called Evidence"

An exhaustive look at an inadequate look

The Deliberation Dilemma

Above: a bunch of white men chatting. From left to right: Former CIA Director Allen Dulles (a Republican), Congressman Hale Boggs (a Southern Democrat), Senator Sherman Cooper (a Republican), Chief Justice Earl Warren (a Republican), Senator Richard Russell (a Southern Democrat), businessman John McCloy (a Republican), and Congressman Gerald Ford (a Republican). No women, blacks, or northern liberals allowed.

For reasons beyond my grasp, the first image in each chapter sometimes fails to appear. If there's nothing up above, don't despair; you can still see the image [here](#)

The Deliberation Dilemma

As shown in the preceding chapters, the Commission’s conclusion that Oswald fired all the shots on Kennedy was not supported by the evidence. As it turns out, their conclusion that Oswald fired any of these shots is also far from convincing.

Oswald's murder while in the protective custody of the notoriously right-wing, racist, and corrupt

Dallas Police Department had raised reasonable questions on whether he had, in fact, been framed, and that someone or some group had conspired to ensure his silence. If he had been framed, of course, it would explain the most damning piece of evidence against him: that his rifle had fired the shots. To avoid conjecture that their preplanned conclusion of Oswald acting alone was, well, unWarren-~~ted~~, the Warren Commission needed solid evidence that:

1. Oswald was on the sixth floor before the shooting, putting together his rifle and building the sniper's nest.
2. Oswald was in the sniper's nest window, with his rifle.
3. Oswald fired a rifle on 11-22.

Without convincing evidence that these three events took place, there was room to doubt Oswald's involvement in the actual shooting. Without this evidence, all they really had to suggest he shot Kennedy was that his gun was found in the building, his fingerprints were found in the sniper's nest, he fled the scene after the shooting, he soon after shot a police officer, and that he was presumed to have lied to the police in the unrecorded interrogations conducted before he could find an attorney. All this damning evidence, and it is indeed damning evidence should it be accepted without reservation, could be explained, amazingly, by the not-unreasonable proposition that he worked in the building and fled for his life once he realized he'd been set up as the president's assassin.

And so the Warren Commission and its staff had its hands full. Did they dare reveal the holes in their case against Oswald? Or would they prop up some of the weakest aspects of their case, and hide important facts from the public? Would they behave like the prosecutors they had been, or like the truth-seekers they were tasked with becoming?

Sadly, it appears they chose the former.

The Strange Reliance on Charles Givens

First, we look into the question of whether or not Oswald was on the sixth floor in the moments leading up to the shooting.

According to Captain Will Fritz's handwritten notes on his 11-22 interrogation of Oswald, Oswald claimed that in the hour before the shooting, he'd went "to 1st floor had lunch/out with Bill Shelley in front." While this might sound like Oswald was claiming to have had lunch out in front of the building with Bill Shelley, Fritz's typed up notes reflect that Oswald said "he was having his lunch about that time on the first floor." (24H265) This indicates that Oswald told Fritz he saw Shelley at a different point, possibly when he was leaving the building. The next day Oswald clarified this, and said he'd "ate lunch with some of the colored boys who worked with him. One of them was called "Junior" and the other man was a little short man whose name he did not know." (24H267) The report of Secret Service Inspector Thomas Kelley confirms this account, stating "He said he ate his lunch with the colored boys who worked with him. He described one of them as "Junior," a colored boy, and the other was a little short negro boy." The report of FBI agent James Bookhout (WR622), however, gives a slightly different account of Oswald's statements. Bookhout relates: "Oswald stated that on November 22, 1963, he had eaten lunch in the lunch room of the Texas School Book Depository, alone, but recalled possibly two negro employees walking through the room in this period. He stated possibly one of these employees was called "Junior" and the other was a short individual whose name he could not recall, but whom he would be able to recognize." In any event, it now fell on the investigators to see if anyone could confirm that Oswald had been in this first floor lunch room in the moments before the shooting, and, if not, whether anyone could place him on a higher floor during this time.

An 11-23-63 FBI report (CD5 p329) on Oswald co-worker Charles Douglas Givens declares "On November 22, 1963, Givens worked on the sixth floor of the building until about 11:30 A.M. when he used the elevator to travel to the first floor where he used the restroom at about 11:35 A.M. or 11:40 A.M. Givens then walked around on the first floor until 12 o'clock noon, at which time he walked onto the sidewalk and stood for several minutes...Givens recalls observing Lee working on the fifth floor during the morning filling orders. Lee was standing by the elevator in the building at 11:30 A.M when Givens went to the first floor. When he started down in the elevator, Lee yelled at him to close the gates on the elevator door so that he (Lee) could have the elevator returned to the sixth floor...Givens observed Lee reading a newspaper in the domino room where the employees eat lunch about 11:50 A.M." This FBI report expanded on a statement signed by Givens on the day before (24H210). Givens swore "I worked on the sixth floor today until about 11:30 A.M. Then I went downstairs and into the bathroom. At twelve o'clock I took my lunch period. I went to the parking lot at Record and Elm Street." The FBI report on Givens thereby appeared to confirm Oswald's story that he'd come down and had lunch in the domino room, something that seemed unlikely if Oswald had planned on killing the president in 40 minutes and still needed to assemble his rifle.

That Oswald came down for lunch was confirmed by several others.

A 12-7-63 Secret Service Report (CD87 p780) recounting an interview with William Shelley, Oswald's immediate boss, states "Mr. Shelley last saw Oswald at about 11:50 A.M., at which time Oswald was working at his normal duties on the first floor." On 4-7-64 Shelley testified (6H327-334) "I do remember seeing him when I came down to eat lunch about 10 to 12." On 5-14-64, Shelley again testified (7H390-393) and clarified that he last saw Oswald before the shooting at "10 or 15 minutes before 12...On the first floor over near the telephone."

Even more convincing, an 11-23-63 statement to Dallas Sheriff's Dept. signed by Eddie Piper (19H499) states "Yesterday, at 12:00 noon, this fellow Lee says to me 'I'm going up to eat' and I went on to my lunch. I went to a front window on the first floor and ate my lunch. I went to the front window on the first floor and ate my lunch and waited to see the President's parade go by. I saw the President pass and heard some shots and looked at the clock there and saw it was 12:25PM." A 12-7 Secret Service report (CD87 p780) describing an interview with Piper confirms "At about 12:00 noon on November 22, 1963, Piper last saw Oswald on the first floor and at that time Oswald said 'I'm going up to eat lunch.'" Strangely, however, an FBI report (CD206 p13) from 12-20 conceals this event from view, declaring instead that Piper "advised he came to work at his usual time, 10 A.M., November 22, 1963, and during the course of his employment had seen Lee Harvey Oswald, a fellow employee, filling orders on the first floor. He did not recall the specific time he saw Oswald, stating it was shortly after he got to work and stated that this was the only time he saw Oswald on that particular day."

Should one refuse to think the FBI was up to something, and choose instead to believe that Piper changed his story, one should consider that on 2-17-64, when interviewed by the Dallas Police (CD950, p45), Piper repeated "At around 12:00 noon, I told Oswald that I was going to eat my sandwich. Oswald mumbled something that he was going up to eat. This was the last time I saw Oswald." He also told them "During the lunch breaks, Oswald usually made several phone calls, which were usually short in length." One should then consider that on 4-8-64, Piper testified before the Warren Commission (6H382-386), and made no bones about seeing Oswald around 12 noon, telling them once that "at 12 o'clock" and later on that "Just about 12 o'clock", "I said to him—'It's about lunch time. I believe I'll go have lunch.' So he says, 'Yeah'—he mumbled something—I don't know whether he said he was going up or going out..."

Piper's statements are thereby consistent, and indicative Oswald was on the first floor around noon. While Piper's original statement indicates he thought the President was shot around 12:25, when he was actually shot around 12:30, this suggests the clock he was looking at was a bit slow, and that he

actually saw Oswald around 12:05. Under no circumstances can it be taken to suggest he failed to see Oswald at all, or that he actually saw him much earlier in the day.

Only adding to the likelihood Oswald was not on the sixth floor during this period are the statements of Bonnie Ray Williams. An 11-23-63 FBI report on Bonnie Ray Williams (CD5 p330) states "At approximately 12 noon, Williams went back upstairs to the sixth floor with his lunch. He stayed on that floor only about three minutes." A 12-7 Secret Service Report (CD87 p784) on an interview with Williams went into more detail, stating "After Williams picked up his lunch on the first floor (Note: he came down at the same time as Givens) he returned to the sixth floor...Williams said he spent just a few minutes eating his lunch and that during that time he did not see anyone else or hear anything on the sixth floor. As soon as he finished his lunch, Williams went to the fifth floor of the building and he estimated the time to be prior to 12:15 P.M." An FBI report on a 1-8-64 interview (CD329, p13) cut Williams' time on the sixth floor back down again. It states that Williams "recalled that he ate lunch about noon on November 22, 1963 on the sixth floor of the TSBD Building and about that time he heard James Earl Jarman Jr. also known as "Junior" and Harold "Hank" Norman on the fifth floor and he joined them there by going down on the west elevator about 12:05 P.M." This time of 12:05 is a bit curious, and is quite possibly the approximation of Special agents Carter and Griffin, the writers of the report, and not Williams. Williams made it clear, after all, that he only came down to the fifth floor after hearing Jarman and Norman on the floor below. On 1-8-64, agents Carter and Griffin spoke to both Jarman and Norman. Jarman said he thought he went up to the fifth floor around 12:25 (CD329, p12) and Norman said he went up to the fifth floor "about 12:10 to 12:20" (CD329, p14).

From this one can gather that Williams was on the sixth floor until just a few minutes before the shooting at 12:30. Perhaps this explains why Williams' signed statement from the afternoon of the shooting (24H229) suggests he was at first too scared to say he'd been on the sixth floor at all. There, Williams declares that, after he came downstairs to get his lunch, "I went back on the fifth floor with a fellow called Hank and Junior, I don't know his last name. Just after we got on the fifth floor we saw the President coming around the corner on Houston from Main Street." Just after?

In any event, on 3-19-64, Williams, who'd originally stated he heard but two shots, signed a statement to the FBI (22H681) asserting he'd heard three shots. He also asserted that "The last time I saw Lee Harvey Oswald on November 22, 1963 was at about 11:40 A.M. At that time Oswald was on the sixth floor on the east side of the building. I did not pay particular attention to what he was doing." This directly contradicted his signed statement to Dallas County from the afternoon of the shooting, in which he claimed "I didn't see Oswald anymore, that I remember, after I saw him at 8 A.M." If the FBI and Warren Commission thought this signaled a new and improved Williams, one who would help them make their case that Oswald stayed on the sixth floor when everyone else came down for lunch, however, they had another think coming. When Williams testified on 3-24-64 (3H161-184) he stated that the sixth floor crew had quit working at 5 to 12 (his statement on the afternoon of the shooting said 10 to 12) and that he had went back up to the sixth floor looking for others after grabbing his lunch. He testified further that he ate lunch by himself for "5, 10, 12 minutes...no longer than it took me to finish my chicken sandwich" before heading back down to the fifth floor. When pressed further on what time he came down to the fifth floor, he responded "I finished the chicken sandwich maybe 10 or 15 minutes after 12. I could say approximately what time it was." He then told them something no one could expect: "Approximately 12:20, maybe." Later, when asked by Commissioner Dulles if he had heard anything on the sixth floor while he was eating, he responded "I felt like I was all alone. That is one of the reasons I left--because it was so quiet."

As Williams sat but a few yards from the sniper's nest and did not see or hear anyone else at this time, it suggests that, upon leaving Piper, Oswald went up to the second floor break room (where he was discovered within 90 seconds of the shooting) or to the domino room, and did not immediately head

back up to the sixth floor, if at all. An 11-26-63 FBI report on Mrs. Caroline Arnold (CD5 p41) relates "As she was standing in front of the building, she stated she thought she caught a fleeting glimpse of Lee Harvey Oswald standing in the doorway between the front door and the double doors leading to the warehouse, located on the first floor. She could not be sure that this was Oswald, but said she felt it was and believed the time to be a few minutes before 12:15 pm." Mrs. Arnold was never called to testify.

Since the only man identifying Oswald as the shooter in the sixth floor window, Howard Brennan, failed to do so while Oswald was still alive, and only did so after prodding by the Secret Service, the statements placing Oswald downstairs in the forty-five minutes before the shooting created a major problem for those seeking to blame him for the shooting. There was no hard evidence suggesting Oswald was the man seen in the window minutes before the shooting. If Oswald had been downstairs, moreover, there was no evidence he went back up. The Commission needed to explain how Oswald was able to build the sniper's nest and re-construct his dismantled rifle in the short time between Williams' departure and the arrival of the motorcade.

Incredibly, they decided to argue that Oswald had never come down for lunch.

They didn't get much help from James "Junior" Jarman, the man Oswald purportedly claimed to have seen in the domino room. In his 11-22 Affidavit to Dallas County, Jarman remembered last seeing Oswald "between 11:30 A.M. and 12:00 noon when he was taking the elevator upstairs to go get boxes. At about 11:45 A.M. all of the employees who were working on the sixth floor came downstairs and we were all out on the street about 12:00 noon." (24H213) Hmm... The vagueness of this statement leaves open the possibility that Jarman had seen Oswald take the elevator back up after the others had come down for lunch. In his testimony, however, Jarman made it clear that, although he'd been in the domino room after quitting for lunch at 5 to 12, he didn't remember seeing Oswald at this time. This suggests he last saw Oswald before 5 to 12. As he identified Shelley as one of those coming downstairs around 11:45, moreover, and as Shelley repeatedly claimed to have seen Oswald downstairs around 11:50, and Piper had repeatedly claimed to have seen Oswald at 12:00, the combined statements and testimony of the credible witnesses to Oswald's whereabouts before the shooting suggested Oswald went upstairs between 11:30 and 11:45, and then followed the sixth floor crew downstairs.

The statements and testimony of Harold "Hank" Norman, were even less helpful to the commission. In his 3-24-64 testimony, Norman admitted "I ate my lunch in the domino room." When asked if anyone had been in there with him, moreover, he answered in a strange manner: "I think there was someone else in there because we usually played dominoes in there but that particular day we didn't play that morning." Well, what does this mean? How would his normally playing dominoes but not on that day make him think someone else was in there? Well, I suspect this is explained in a 12-7 Secret Service Report on the depository employees, in which Billy Lovelady is quoted as stating "The other employees usually play dominoes during their lunch period after they have eaten, but Oswald never showed any interest in taking part in the games." (CD87 p780) This undoubtedly suggests that the "someone else" Norman thought was in the domino room was specifically one Lee Harvey Oswald. In either case, Norman next told the commission that he got together with Jarman after finishing his lunch and that the two of them went outside around "12 or 12:10." (3H186-197). As Norman was of small stature and was almost certainly the short man Oswald claimed to have seen, either Oswald had actually seen Norman and Jarman together during this lunch period or had made an incredibly lucky guess.

(FWIW, Vincent Bugliosi, in his monster tome *Reclaiming History*, tries to dismiss the possibility that Oswald was in the break room with Norman by claiming "But Danny Arce told the Warren Commission that he and Jack Dougherty ate their lunch in the domino room during the period Norman described. In fact, Arce was one of those who joined Norman and Jarman when they walked outside a

moment later. Obviously, Arce and Dougherty were the 'someone else' Norman had referred to." Uhhh...not so fast. Arce in fact testified that he went outside "With Billy Lovelady and Mr. Shelley and I was out there with Junior;" this indicates that he did not leave the break room with Jarman, as suggested by Bugliosi, but that he only saw Jarman outside. Even worse, Arce specified that he did not see Norman in the break room, telling the Commission, when asked if he had seen Bonnie Ray Williams downstairs "No, he stayed upstairs with Hank." Hank is Norman. If Arce thought Williams was upstairs with Hank, it follows then that he did not see Hank in the domino room. Bugliosi's dismissal is therefore so much moonshine, and the point he claims is "obvious" is obvious BS.)

So...was Oswald's description of Jarman and Norman just a lucky guess? I think not. Let's go back for a second. Agent Bookhout's report on Oswald's interrogation, let's recall, did not claim Oswald had said he'd eaten lunch with Jarman and Norman, as presented by Capt. Fritz. It said: "Oswald stated that on November 22, 1963, he had eaten lunch in the lunch room of the Texas School Book Depository, alone, but recalled possibly two negro employees walking through the room in this period. He stated possibly one of these employees was called "Junior" and the other was a short individual whose name he could not recall, but whom he would be able to recognize." Perhaps, then, Oswald had seen Jarman and Norman not when most assume he claimed he'd seen them--when he first came down for lunch--but later, when they came back in the building and went back upstairs.

Indeed, it seems a bit of a coincidence that, according to Jarman's testimony, there were "too many people standing on the stairway" in front of the building when he and Norman decided to go back inside and view the motorcade from an upstairs window, and that he and Norman had thereupon re-entered the building by its north entrance. In doing so, they would have passed in front of the open door to the domino room, where Oswald claimed to have been sitting. They were the only two to admit coming in that entrance when Oswald claimed to have been sitting there, and they were the only two Oswald recalled seeing while he was sitting there. (One can view the layout of the first floor of the building [here](#). Note in particular the relationship of the domino room to the north entrance, bathroom, and elevator.)

This brings us to the **4-8-64** testimony of Charles Givens (6H345-356). Here, Givens suddenly remembered "it was about a quarter till 12, we were on our way downstairs, and we passed him, and he (Oswald) was standing at the gate on the fifth floor. I came downstairs, and I discovered I left my cigarettes in my jacket pocket upstairs, and I took the elevator back upstairs to get my jacket with my cigarettes in it. When I got back upstairs, he was on the sixth floor in that vicinity, coming from that way...Toward the window up front where the shots were fired from....he had his clipboard in his hand...He was coming towards the elevators...He said..."When you get downstairs, close the gate to the elevator." When asked the time of his return to the first floor, Givens responded "Well, I would say it was about 5 minutes to 12, then because it was---" But Givens would never get to explain his reasoning. Counsel David Belin interrupted him with a question about what he did next. Givens testified "When I got down to the first floor Harold Norman, James Jarman and myself, we stood over by the window, and then we said we was going outside and watch the parade, so we walked out and we stood there a while, and then I said, "I believe I will walk up to the parking lot." Belin then asked Givens if he had ever told anyone he saw Oswald reading a newspaper in the domino room around 11:50 on November 22nd and Givens replied "No, sir."

While I, and I dare say most, researchers long assumed Givens to be lying on this last point, seeing as the FBI's initial report on Givens claimed "Givens observed Lee reading a newspaper in the domino room where the employees eat lunch about 11:50 A.M." I now see this as a mistake. In February 2012, I stumbled across the FBI's first teletype regarding Givens. (This teletype can be found in FBI file 62-109060 sec 9 p54 on the Mary Ferrell Foundation website.) Here, only hours after he'd been interviewed, it was claimed "Charles Douglas Givens, Employee, TSBD, worked on sixth floor until

about eleven thirty A.M. Left at this time going down on elevator. Saw Oswald on fifth floor as left going down. Oswald told him to close the gates when he got to first floor so Oswald could signal for elevator later. Givens stayed on first floor until twelve o'clock and then walked out of the building to watch the parade pass. Oswald was reading paper in the first floor domino room *seven-fifty A.M.* November twenty two last when Givens came to work."

Well, hell. What's this? Here in this summary of its interview with Givens it is claimed Givens told the FBI he saw Oswald at 7:50 A.M., not 11:50 A.M.

This led me to re-read the FBI's report on this interview. I then realized that the sentences I cut out of Givens' statement at the beginning of this chapter were far more important than I thought, and helped provide the proper context for Givens' statement about seeing Oswald in the domino room. Here is the oft-quoted statement in its proper context: "*Givens said that during the past few days Lee had commented that he rode to work with a boy named Wesley. Givens said all employees enter the back door of the building when Jack Dougherty, the foreman opens the door about 7 A.M. On the morning of November 22, 1963, Givens observed Lee reading a newspaper in the domino room where the employees eat lunch about 11:50 A.M.*" Within this context, the "about 11:50 A.M." represents the time the employees eat lunch, not the time Givens saw Oswald. Givens had thereby claimed he saw Oswald in the domino room EARLY in the morning. Before starting work. And not during lunch, as claimed by just about everyone.

That Givens told the FBI he saw Oswald before work, it should be noted, only adds to the suspicion he lied in his subsequent testimony. After establishing that Givens got to work at 7:45 on the day of the shooting, Warren Commission counsel David Belin asked a series of questions about Givens' seeing Oswald in the domino room at that time. He is clearly aware of the FBI report. And is anxious to have Givens refute it.

Mr. BELIN. Did you see him come into the domino room at all?

Mr. GIVENS. Not that morning, no, sir; I didn't.

Mr. BELIN. When did you leave the domino room to go up to the sixth floor?

Mr. GIVENS. 8 o'clock.

Mr. BELIN.. At 8 o'clock?

Mr. GIVENS. Yes, sir.

Mr. BELIN. So you don't feel he came in the domino room before 8 o'clock?

Mr. GIVENS. No, sir; not that morning he didn't.

So why didn't Belin read Givens the FBI report, and ask Givens for an explanation?

A few minutes later, they returned, so to speak, to the domino room.

Mr. BELIN. Did you see Lee Oswald anywhere else in the building between 11:55 and the time you left the building?

Mr. GIVENS. No, sir.

Mr. BELIN. On November 22d?

Mr. GIVENS. No, sir.

Mr. BELIN. Did you see him in the domino room at all around anywhere between 11:30 and 12 or 12:30?

Mr. GIVENS. No, sir.

Mr. BELIN. Did you see him reading the newspaper?

Mr. GIVENS. No; not that day. I did--he generally sit in there every morning. He would come to work and sit in there and read the paper, the next day paper, like if the day was Tuesday, he would read Monday's paper in the morning when he would come to work, but he didn't that morning because he didn't go in the domino room that morning. I didn't see him in the domino room that morning.

Belin asked Givens about seeing Oswald around lunchtime, and Givens went out of his way to say he didn't see Oswald in the domino room that morning. Hmmm...

A few minutes later, Belin asked the magic question. He obviously understood that the FBI's report could be interpreted as claiming Givens saw Oswald at 11:50, and wanted to clear this up.

Mr. BELIN. Did you ever tell anyone that you saw Lee Oswald reading a newspaper in the domino room around 11:50, 10 minutes to 12 on that morning on November 22d?

Mr. GIVENS. No, sir.

Well, yucch. These questions raise even more questions. If Belin had avoided the subject of Givens' seeing Oswald in the domino room, one might believe he was simply asking questions and letting Givens tell his story. But he asked numerous questions about the subject. And had clearly read the FBI's report on its interview with Givens. And had allowed Givens to contradict the FBI report. And had failed to note this contradiction on the record.

Well, this, when coupled with Belin's similar failure to expose Givens' changing his story from his seeing Oswald as he went down for lunch to his seeing Oswald when he went back up for cigarettes, suggests Belin was complicit in Givens' lies. He, as the public's representative, either had reason to believe Givens was lying, and had refused to put it on the record, or had actually helped arrange the lies.

That Belin was himself a liar, moreover, is supported by his behavior when the inconsistencies of Givens' testimony came to light. In 1973, Belin published *November 22, 1963: You are the Jury!*, a defense of the Warren Commission. Here, he presented Givens as credible, never mentioning the inconsistencies he had previously acknowledged. Here, on at least three separate occasions, he claimed Givens was the last to see Oswald in the building before the shooting. Here, he never once mentioned Eddie Piper, the janitor who had consistently and from the beginning claimed to see Oswald on the ground floor around noon, five minutes *after* the time Givens had claimed to see Oswald. Piper's claim he saw Oswald at noon had been discussed, moreover, in a February 24, 1964 memo authored by Belin. This memo had in turn been discussed by Sylvia Meagher in an August 1971 article in the *Texas Observer*, upon which Belin had negatively commented. Piper's April 8, 1964 testimony had been taken, for that matter, by Joseph Ball, Belin's partner in the investigation. There is simply no way Belin was unaware of Piper's testimony, and his failure to acknowledge it in his book was inexcusable.

And that's but one example of Belin's slipperiness. In February 1976, in an extended article in the *National Review*, Belin once again defended his behavior regarding Givens. Here, he claimed Givens had first said he saw Oswald on the sixth floor with a clipboard months before his testimony, when he spoke to the Secret Service in December. Belin thereby suggested that Givens' testimony about seeing Oswald on the sixth floor was just a clarification of an earlier story, and not a brand new concoction worthy of cross-examination.

Let's take a look at the Secret Service's report on Givens: *"On November 22, 1963, Givens, along with other employees working on the sixth floor, was laying the new plywood floor. Givens stated that he saw Oswald on the sixth floor at about 11:45 A.M. on that date, and that Oswald was carrying a clipboard that appeared to have some orders on it. Givens felt that Oswald was looking for some books to fill an order, which is his job, and did not give the matter further thought. Shortly, thereafter, Givens and the other employees working on the floor-laying project quit for lunch and they took both elevators. They were racing the elevators to the first floor and Givens heard Oswald call to them to send one of the elevators back up. It is Givens' recollection that Oswald was wearing a brown shirt, when he last saw him."* (CD 87, p780).

Yikes! Belin had failed to tell his readers that Givens had told the Secret Service he saw Oswald on the

sixth floor BEFORE he--Givens--went down for lunch, and not after he returned to get his cigarettes, as he would later testify. As a number of witnesses, including Givens, claimed they saw or heard Oswald on the fifth floor as they went down for lunch, there is a world of difference in the stories, as one places Oswald on the fifth floor about 11:45 and one places Oswald on the sixth floor just before noon. It's hard to believe, moreover, that Belin would fail to appreciate the significance of this change in the story, and think it of such little importance he would fail to tell it to his readers. It follows, then, that he was being willfully deceptive.

But enough about Belin. Let's get back to Givens. Subsequent to his testimony, the FBI decided to interview Givens yet again. The 6-4-64 FBI report (CD1245 p182) on this meeting reflects that Givens stood by his Warren Commission testimony and that "he now recalls he returned to the sixth floor at about 11:45 p.m." Strangely, it fails to even address the question of whether or not Givens saw Oswald in the domino room on the morning of the shooting, and Givens' contradicting the FBI's initial report on this question.

So Givens, nearly five months after the shooting, "now recalled" seeing Oswald both before lunch, as he headed down from the sixth floor in an elevator, and a few minutes later, after going back up to get his cigarettes. Well, what is one to think of this? Maybe Givens had a bad memory. Was his new and improved recollection really all that important?

There are reasons to believe not. Givens' assertion that he went back upstairs and encountered Oswald shortly after 11:45, when taken with Shelley's and Piper's statements, after all, suggests only that Oswald followed Givens back downstairs and made a phone call, and then went back up to the second floor. Certainly, one can not take Givens' delayed recollection that he returned to the first floor "about 5 to 12" as evidence that Shelley failed to see Oswald at 10 to 12 or that Piper was wrong about seeing him at 12.

Well, at least no one reasonable--in Reclaiming History Vincent Bugliosi argues that we should believe that Shelley and Piper--who saw Oswald on the first floor at "10 to 12" and "12", respectively, had in fact seen Oswald several minutes before Givens--whose sense of time he inexplicably trusts--saw him on the fifth floor "about a quarter to 12". It seems much more likely that Givens was off by a few minutes and had returned to the first floor before 5 to 12, and/or that Shelley was off by a few minutes and saw Oswald after 10 to 12, than that Piper was off by more than 15 minutes in a statement signed the day after the shooting, and had completely mis-remembered the circumstances under which he saw Oswald. Piper, after all, knew when he went to lunch, and felt certain he saw Oswald as he went to lunch. This is the kind of thing that a janitor would be likely to know.

Of course, there is the already referenced possibility, first explored by researcher Sylvia Meagher, that Givens flat out lied when he said he'd went back up to the sixth floor after he came down for lunch. The 11-23-63 FBI teletype reporting on its interview of Givens, after all, claimed "Givens *stayed* on first floor until twelve o'clock and then walked out of the building to watch the parade pass." The 12-7-63 Secret Service Report (CD87 p780) summarizing an interview with Givens, moreover, not only failed to mention that he'd went back upstairs and encountered Oswald, it actually had him stating that he saw Oswald with the clipboard and heard him yell out *before* he came down for lunch. There's also this. The last line of the Secret Service report claims: "*It is Givens' recollection that Oswald was wearing a brown shirt, when he last saw him.*" This is most intriguing.

What with Givens' changing his story from seeing Oswald on the sixth floor with a clipboard before he came down for lunch to his seeing Oswald on the sixth floor with a clipboard after he came down for lunch between 12-7-63 and 4-8-64, and his being the only employee to say he thought he'd seen Oswald wearing a brown shirt after the FBI had discovered threads consistent with Oswald's brown shirt on the rifle, one might reasonably suspect that someone was pressuring or paying Givens to

change his story.

A 2-9-64 article in the Fort Worth Star Telegram gives us even greater reason to suspect Givens had deliberately changed his story. According to the article, written by Thayer Waldo, a Secret Service agent had boasted that a negro witness, who "had been arrested in the past by the Special Services office of the Dallas Police for gambling" had come forward, and had claimed to have seen Oswald actually fire the shots that killed Kennedy. According to Waldo, who claimed to have sat in on a conversation between this agent and another man, the agent said "*Wait till that old black boy gets up in front of the Warren Commission and tells his story. That will settle everything. Yes, sir. He was right there on the same floor; looking out the next window; and, after the first shot, he looked and saw Oswald, and then he ran. I saw him in the Dallas Police station. He was still the scariest nigger I ever seen. I heard him tell the officer, 'Man you don't know how fast fast is, because you didn't see me run that day.' He said he ran and hid behind the boxes because he was afraid that Oswald would shoot him.*" As Givens was the only school book depository employee with a notable police record, and was also one of the very few to have seen Oswald in the hour before the shooting, the "negro witness" described in the article is most certainly Givens.

Since Givens never signed a statement or offered testimony describing these events, however, it suggests that either Givens had lied to the police, the agent was lying to Waldo, or that Waldo himself had embellished his story. Perhaps the agent, who Waldo would later reveal to be Mike Howard, had merely indicated that Givens' story was damaging to Oswald, and Waldo had filled in the blanks.

On 2-13-64 the FBI looked into this story. They contacted Jack Revill, a Lieutenant in the Dallas PD's Special Service Bureau. Revill told them the man described in the article was most logically Charles Givens. Revill told them that Givens had a history of drug use and "would change his story for money". Revill told them, furthermore, that although he thought the character in the story was Givens, "that when Givens was interviewed immediately after the assassination, he stated he was not in the building at the time of the assassination." The FBI report then recounts Givens' earlier story that he came down for lunch around 11:30, and that, as he came down, he heard Oswald yell out and ask to have the elevator sent back up. (CD735, p295-296).

Months later, after Waldo's story was dredged up by Mark Lane as an indication the Secret Service had been planting false stories in the press, the FBI re-investigated. On May 28, 1964, the FBI wrote a report after talking with agent Mike Howard. (25H844-845). While Howard admitted that he and his brother, Deputy Sheriff Pat Howard, had had a conversation with Waldo, he claimed they did not know he was a reporter, and that they'd never discussed a negro witness to the shooting. On this same day Waldo signed a sworn statement backing his published version of the story. (25H846-848). A few days later, the Bureau contacted Pat Howard, and he admitted that he and his brother had told Waldo about a negro employee with a criminal record who had fled the building after the shots, for fear he would be implicated. (25H849-850) This is clearly a reference to Givens. If the Howards were telling the truth, and they just mentioned Givens because they thought his flight was an "amusing incident," it seems an incredible coincidence that Givens would shortly thereafter change his story and help the Warren Commission put the rifle in Oswald's hand.

Yes, you read that right...I wrote *shortly thereafter*. You see there is evidence that, although Givens first officially told his tale on 4-08-64, that he actually changed his story within days of Howard's talking to Waldo. The February 21, 1964 cover story of Life Magazine, which treated Oswald's sole guilt as a given fact, revealed "A few minutes *after noon*, as the President and his wife were pulling away from the airport in the open presidential limousine, an employee in the school book building, Charles Givens, saw Oswald on the sixth floor and said 'Let's go down and watch the President go by.' 'Not now,' Oswald responded. 'Just send the elevator back up.'" Hmmm...a story sneaks out that a black man with a criminal record is gonna implicate Oswald; a report is written indicating that this man is Charles

Givens, that he will change his story for money, and that he really doesn't know anything; a thoroughly-biased article then appears in a prominent magazine citing Givens as the source of previously undisclosed information, information that is extremely damaging to Oswald; this info, furthermore, is inconsistent with Givens' sworn testimony months later. From this one might gather Life paid Givens for his story, and that he lied to them, or that someone paid or pressured Givens to lie to them. One can not reasonably assert or assume his cloudy memory suddenly became clear.

Adding to the mystery surrounding Givens' sudden change of mind is the fact that only a few hours after Givens testified Dallas Police inspector J. Herbert Sawyer testified about the events leading up to his putting out an APB for someone matching Oswald's description (4H315-325)...and that his words appeared to confirm Givens' story. When asked if he'd put out an APB for anyone besides the white male observed in the sniper's nest, he replied "There is another broadcast in there somewhere, though. I put out another description on the colored boy that worked in that department...He is one that had a previous record in the narcotics, and he was supposed to have been a witness to the man being on that floor. He was supposed to have been a witness to Oswald being there." He was then asked if this man was Charles Givens, and replied "Yes, I think that is the name, and I put out a description on him." When asked the vital question of how he found out Givens had seen Oswald, he replied: "Somebody told me that. Somebody came to me with the information. And again, that particular party, whoever it was, I don't know. I remember that a deputy sheriff came up to me who had been over taking these affidavits, that I sent them over there, and he came over from the sheriff's office with a picture and a description of this colored boy and he said that he was supposed to have worked at the Texas Book Depository, and he was the one employee who was missing, or he was missing from the building. He wasn't accounted for, and that he was suppose to have some information about the man that did the shooting."

Well, this is peculiar. Who was this "somebody" who knew that Givens had seen Oswald? Givens had not come back in the building and talked to anyone after the shooting. Therefore, it must have been someone who'd talked to him after he'd come down from the sixth floor, but before he left the building...someone who'd spoken to the Dallas police on 11-22, or who'd spoken to someone who'd spoken to the police. This person could very well be James Jarman. While Jarman did not sign an affidavit until 11-23, he undoubtedly spoke to his boss Roy Truly (who spent a considerable amount of time with the police on 11-22) about the line-up of depository employees, in which it was discovered that both Oswald and Givens were missing. Jarman had also spoken to Givens after Givens had come down for lunch. It seems reasonable then to suspect that the two spoke about Oswald sometime around noon, before Givens walked up the street, and that Jarman had told this to Truly when both Oswald and Givens went missing. (When Jarman testified on 3-24-64, he was not asked about any conversations with Givens.) Perhaps Givens had told Jarman that Oswald had asked for someone to send the elevator back up for him when the sixth floor crew came down for lunch. And that no one had done so. Perhaps Givens had mentioned going back up to the sixth floor to get his cigarettes, and his seeing Oswald still up there.

But I doubt it. It seems highly unlikely that the Warren Commission, desperate to prove that Oswald had stayed up on the sixth floor during his lunch period, would fail to provide a corroborating witness for Givens' latter-day story that he saw Oswald at 5 to 12, should there have been one. It appears, therefore, that Jarman--or whomever--remembered Givens saying that he saw Oswald just before he came down with the others, and not that he saw him after going back up for cigarettes. Sawyer's testimony then suggests 3 possibilities: 1) that Sawyers' memory was accurate and that Givens had told someone he saw Oswald on the sixth floor when he went back up for cigarettes, but that the Warren Commission had failed to identify and interview this person; 2) that Sawyers lied to bolster Givens' testimony by pretending that the DPD was aware that Givens' had had important information on

Oswald all along; and 3) that Sawyers incorrectly remembered why they were looking for Givens. As Givens was the only convicted felon working in the building and as he just so happened to disappear after the shooting, it only makes sense that they'd be looking for him. The Dallas Police tapes of Sawyers' conversation about Givens, in fact, reflect that he explained why he wanted Givens to be located, and had said simply "*He is a porter that worked on this floor up here. He has a police record and he left.*"

At this point, I'm leaning toward option number three. On his website, single-assassin theorist Dale Myers makes what is at least for me a convincing argument that Sawyers was just clutching at straws, and had no real recollection of why they were looking for Givens.

But there's also reasons to suspect option two--that Sawyers deliberately lied in order to help prop up Givens' newfound story. On 5-13-64, Detective Jack Revill, who on 2-13-64 had warned the FBI that Givens would "change his story for money," testified before the Warren Commission. In his testimony, Revill discussed his actions in the hours just after the shooting. Strangely, he testified, that within hours of the shots, "I talked to a negro by the name of Givens...I asked him if he had been on the sixth floor, and as well as I recall, and Detective Brian was present at this same time, he said yes, that he had observed Mr. Lee over by this window. Well, I asked him who Mr. Lee was, he said, a "It is a white boy." He didn't know his full name. So I turned this Givens individual over to one of our negro detectives and told him to take him to Captain Fritz for interrogation." (5H33-47). Detective Brian testified just after Revill. He was not asked about Givens. When Captain Fritz testified he was also not asked about Givens. Even stranger, there is no record that Givens--who Revill, in his testimony, would have us believe was an important witness--was extensively interrogated on 11-22-63, or that he said he saw Oswald by the window. Givens' signed statement from 11-22, in fact, never even mentions Oswald. We should recall as well that Revill, when interviewed by the FBI on 2-13-64, failed to say anything about Givens' seeing Oswald by the window. He had, in fact, been dismissive that Givens knew anything about the shooting.

Ultimately, however, whether or not Givens or Sawyers or Revill lied is not as important as the fact that the Commission accepted Givens' inconsistent and not entirely credible testimony as evidence Oswald never came down for lunch. By doing so, the commission blatantly disregarded the consistent statements of the far more credible Shelley, Piper and Arnold. Even worse, the commission's report asserted that Givens saw Oswald at 11:55 and "was the last known employee to see Oswald inside the building prior to the assassination." Now this *is* a flat-out lie. Piper, of course, repeatedly claimed he saw Oswald at 12:00.

While I tend to give people the benefit of the doubt, this lie was most likely deliberate. When an official report, re-written numerous times by men supposedly versed in the facts, makes an almost certainly false claim, based on the statements of someone who has repeatedly changed his story, and then supports the relevance of this claim by making a demonstrably false claim, it seems reasonable to assume that a decision has been made to deceive the public and obstruct its search for truth.

Particularly when there's other false claims supporting this same almost certainly false claim... In its report, the Commission supports Givens' story by claiming: "The significance of Givens' observation that Oswald was carrying his clipboard became apparent on December 2, 1963, when an employee, Frankie Kaiser, found a clipboard hidden by book cartons in the northwest corner of the sixth floor at the west wall a few feet from where the rifle had been found. This clipboard had been made by Kaiser and had his name on it. Kaiser identified it as the clipboard which Oswald had appropriated from him when Oswald came to work at the Depository. Three invoices on this clipboard, each dated November 22, were for Scott Foresman books, located on the first and sixth floors. Oswald had not filled any of the three orders." This passage is incredibly deceptive.

The first of these deceptions is a subtle one. The significance of Givens' story about the clipboard did not become apparent when Kaiser found the clipboard, as contended in the report. Kaiser found the clipboard on 12-2; none of the statements by Givens or memos on Givens mentioned Oswald's having a clipboard until 12-7, when Givens was reported to have said he saw Oswald with the clipboard as he (Givens) first came down for lunch. By implying Givens' story about the clipboard preceded Kaiser's finding of the clipboard, of course, the Commission gives the impression Givens had told the story he first told more than four months after the shooting--about going back up to get his cigarettes and running into Oswald on the sixth floor--from the beginning. They knew this wasn't true.

The second deception is more concrete, and is another flat out lie. The clipboard was not hidden by book cartons, as contended. The discoverer of the clipboard, Frankie Kaiser, testified that the clipboard was "just laying there in the plain open...you see, we've got a pretty good space back there and I just noticed it laying over there...it was laying on the floor." When asked further if there were "any boxes between the wall and the clipboard?" he answered directly "No, not between the wall and the clipboard--there wasn't." When asked the more concrete question if there were any "boxes between the stairway and the clipboard?" he answered "No, you see, here's---let me see just a second---here's the stairs right here, and we went down this way and here's the stairs this way going up and here's the--and it was laying right in here by the cards--there are about four or five cards, I guess, running in front of it--just laying between the part you go down and the part you go up....right there in the corner" (6H341-345). Neither Kaiser nor his boss, William Shelley, nor the FBI's Nat Pinkston, who also saw the clipboard in this location, ever described it as being "hidden". The photo of the boxes by which the clipboard was found, moreover, marked by Kaiser and submitted into evidence as Kaiser exhibit A, shows that this clipboard would have been laying between two short rows of books with an open end, whereby anyone standing at the end of these rows, or even passing by, could see the clipboard laying right there on the floor. It was not hidden.

The third deception is also significant. The clipboard was found more than "a few feet" from the rifle. It was more like 10-12 feet, across an aisle and a row of boxes. By saying "a few feet" the report implies that Oswald most probably stashed the clipboard at the same time he was stashing the rifle. This is simply not true. The clipboard location was in fact past the entrance to the down staircase from the rifle location. It makes no sense whatsoever that Oswald would walk out of his way to hide a clipboard containing orders that gave him a legitimate excuse to be on the sixth floor, while in flight for his life. It makes a lot more sense that Oswald would leave these unfilled orders when he came down for lunch. The clipboard location was, after all, close to both the elevator and the staircase. (The relative locations of the rifle and clipboard are best demonstrated in the Commission's own exhibit, [Commission Exhibit 2707](#).)

This brings us to a fourth deception... While the report implies that there is something suspicious about the orders on the clipboard all being unfilled, the reverse is true--it is exactly as one should expect should Oswald have been innocent. An order-puller, after all, would take his completed orders downstairs to the shipping and billing department when he came down for lunch. As all three orders found on the clipboard were for books found on the sixth floor, moreover, there is no reason to believe Oswald wasn't intending to come back and fill those orders after lunch. These books, moreover, could very well have been found within a few feet of the clipboard location; the Commission doesn't say. As no real effort was made to determine what orders Oswald HAD filled on the 22nd, furthermore, there is no reason to believe Oswald hadn't filled an order for a book stored nearby the clipboard location, quit for lunch, lay down his clipboard, and transported the order downstairs. The Commission's implying the clipboard's being found in this location supported Givens' story, when it quite possibly had an innocent explanation, and may have actually supported Oswald's innocence, was unreasonable and unfair.

There was just no reason to trust Givens. The line in the 11-23 FBI report about Givens seeing Oswald in the break room on the morning of the shooting is quite clear, once read in the proper context. And it's not as if the FBI agent taking the notes was thinking of somebody else. At the very least, the Commission counsel tasked with this line of inquiry, David Belin and Joe Ball, should have called the FBI and Secret Service agents who'd interviewed Givens in the weeks after the shooting to see if they had notes on their meetings with Givens, and would vouch that Givens had made the statements attributed to him in their early reports. That the Commission's counsel did not, and lustily accepted Givens' sudden recollection 4 months later that "Oh yeah, I saw Oswald on the sixth floor about 5 to 12," is to their everlasting shame.

But their shame was destined to be shared. On June 25, 1967, CBS News debuted part 1 of a 4 part investigation of the Warren Commission's findings. As to whether or not Oswald was on the sixth floor at the time of the shooting CBS relied on the statements of one man: Charles Givens. Eddie Barker of CBS introduced Givens as the "last man known to have seen Lee Harvey Oswald before the assassination." Givens then repeated his story of seeing Oswald standing in the middle of the sixth floor with orders in his hand, and of Oswald asking him to close the door on the elevator when he got to the bottom, so that Oswald could call it when needed. When Barker asked Givens "This would be about what time?" however, Givens' gave a new response, indicating that someone, somewhere, had alerted Givens to Piper's testimony. Givens told Barker "Well, about one or two minutes after twelve." Not surprisingly, CBS failed to alert their viewers that Givens had thereby changed his story, yet AGAIN, and that Bonnie Ray Williams, cited elsewhere on their program, had testified he was on the sixth floor from about noon to 12:20 and had seen neither Givens nor Oswald.

(Although Edward Shields, Givens' lunch partner on 11-22-63, was interviewed by the FBI on 3-23-64, and signed a statement saying he'd left the building where he worked *"about twelve o'clock noon"* in order to watch the parade with Givens, he was more specific when talking to the HSCA on 10-23-77. Instead of lending credence to Givens' story--the story that only emerged after Shields had been interviewed--Shields told his interviewer that he'd met up with Givens on the street around 10 to 12. Just as damaging, on 9-25-77 James Jarman, told the HSCA that he believed he'd sent Oswald upstairs to correct a mistake around 11:25, or 11:30, and that Oswald had returned with the proper book shortly thereafter. These statements both erode Givens' credibility, and give Oswald a legitimate reason to be on the upper floors when last observed on the upper floors. From the sum of the evidence, then, the HSCA refused to accept Givens' story about seeing Oswald on the sixth floor at 5 to 12, and concluded instead that Oswald's whereabouts at 12:00--a half an hour before the shots were fired--were irrelevant as to his guilt.)

Threads of Evidence

The early reports all described the shirt Oswald was wearing when arrested as brown or "rust brown." Later, it was described as "multi-colored." Why? Was it because there were no brown fibers found on the rifle? Or was it because those who saw the sniper on the sixth floor all believed he'd been wearing light colored clothing? Or both?

Above: CE 150, the shirt Oswald was wearing when arrested.

Threads of Evidence

Now, let's look at the more pertinent question of whether Oswald had been in the sniper's nest window with the assassination rifle, or had even recently handled the assassination rifle.

At 12:45, 15 minutes after the shooting, Dallas Police Channel One broadcast a description of the shooter seen in the sniper's nest window. The presumed source of this information was Howard Brennan. The description was: "The suspect in the shooting is approximately thirty, slender build, height five feet ten inches, weight one hundred sixty-five pounds, reported to be armed with what is thought to be .30 caliber rifle. Attention all squads. The suspect from Elm and Houston is reported to be an unknown white male about thirty, slender build, five feet ten inches tall, one hundred sixty-five pounds, armed with what is thought to be a 30-30 rifle."

Here is how this suspect was described in that day's eyewitness statements..

Howard Brennan (11-22-63 statement to the Sheriff's Department, 19H470): "He was a white man in his early 30's, slender, nice looking, slender and would weigh about 165 to 175 pounds. He had on light colored clothing but definitely not a suit."

Amos Euins (11-22-63 statement to the Sheriff's Department, 19H474): "This was a white man, he did not have on a hat. I just saw this man for a few seconds."

Robert Edwards (11-22-63 statement to the Sheriff's Department, 19H473): "I noticed that he had on a sport shirt, it was light colored, it was yellow or white, something to that effect, and his hair was rather short. I thought he might be something around twenty-six, as near as I could tell."

Ronald Fischer (11-22-63 statement to the Sheriff's Department, 19H475): "all I could see was his head. I noticed that he was light-headed and that he had on an open-necked shirt, and that was before the motorcade rounded the corner. I noticed his complexion seemed to be clear, and that he was in his twenty's, appeared to be in his twenty's."

Arnold Rowland (11-22-63 statement to the Sheriff's Department, 24H224): "This man appeared to be a white man and appeared to have a light colored shirt on, open at the neck. He appeared to be of slender build and appeared to have dark hair." (11-22-63 interview reported in an 11-23-63 FBI report, 26H126) "He advised this person was a white male of slender build and appeared to have dark hair. He appeared to have on a light colored shirt, open at the neck." On the 24th, in a second interview with the FBI, Rowland confirmed (16H954): "He appeared to be slender in proportion to his height, was wearing a white or light colored shirt, either collarless or open at the neck. He appeared to have dark hair."

So far they all seem to be talking about the same man. Fischer says the man was light-headed and Rowland says he had dark hair, but they're almost unanimous that the man was slender and wore a light-colored shirt.

A problem was brewing. Motorcycle Officer Marrion Baker, who'd encountered Oswald in a stairway within a minute and a half of the shooting, described Oswald's dress as different than the man seen in the window (11-22-63 Affidavit, 24H199): "The man I saw was a white man approximately 30 years old, 5'9", 165 pounds, dark hair and wearing a light brown jacket." Had Oswald put a jacket on as he ran downstairs?

An 11-22 FBI interview with Mrs. Earlene Roberts, the housekeeper at Oswald's rooming house, suggests he did not. It reports "While she was watching the TV, Lee came in, went to his room, got a coat, and left again...he proceeded to a bus stop which is near the house." (CD5 p353). So maybe Baker had got it wrong. Perhaps Oswald had been wearing a light brown shirt, not a jacket.

This possibility is supported by the 11-22 statement of Linnie Mae Randle, who'd spotted Oswald as he left for work. She swore "Lee was bareheaded, wearing a light brown or tan shirt. I don't remember what kind of trousers he had on." (CD87 p277)

Still another signed statement from 11-22 suggests Baker was wrong entirely. Mrs. Robert A. Reid, who saw Oswald just after his encounter with Baker, asserted "When I saw him he was dressed in a white T-shirt and I don't recall what his trousers were like." (24H223)

That afternoon, Oswald was arrested while wearing a dark brown, long-sleeved shirt. No coat or jacket. A gray jacket had been found near the Tippit killing. Dallas Chief of Detectives Captain Will Fritz interrogates Oswald at 3:15. Fritz's notes on this meeting reflect that Oswald told him at this time that he went "home by bus changed britches." No mention of taking a cab part of the way home nor of changing his shirt.

An itemized list with an 11-22-63 date in the Dallas Police Archives (Box 5, folder 5, document 88) reflects that among the items confiscated by officers Moore, Potts, Turner, and Senkel from Oswald's rooming house on this date are "1 brown shirt with button-down collar" and "1 pair gray trousers and other *miscellaneous men's clothing*."

Throughout that day and evening, Oswald was dragged repeatedly before the television cameras. The available footage shows he was still wearing the brown shirt he was wearing when arrested, torn from

his fight with the Dallas Police. Later that night, the shirt, along with the purported assassination weapon and much of the other first day evidence, was flown to Washington for testing by the FBI's crime lab (CD5 p159).

The next morning, the FBI Laboratory provided the Dallas police with the following information: "A small tuft of textile fibers was found adhering to a jagged area on the left side of the metal butt plate on the K1 gun. Included in this tuft of fibers were gray-black, dark blue and orange-yellow cotton fibers which match in microscopic characteristics the gray-black, dark blue and orange-yellow cotton fibers composing the Q11 shirt of the suspect. These fibers could have originated from this shirt. (CD5, p164)" As the gray-black, dark blue and orange-yellow fibers of the brown shirt could now be linked, if not conclusively, with the rifle found on the sixth floor linked to the bullets, it now behooved the FBI and Dallas police to establish that Oswald was in fact wearing this shirt at the time of the shooting.

But cracks in the facade were already starting to appear. At the end of the lab report on the shirt and fibers sent the Dallas FBI, an Addendum reads "You should attempt to obtain the remaining items of clothing suspect is believed to have worn during the shooting for comparisons with the *other* fibers found on the K1 gun." (FBI file 62-109060 Sec 21, p193). As we will see, although the FBI will eventually obtain the rest of Oswald's clothing, there is no record of further tests of Oswald's clothing against these "other" fibers. Just as telling, there is no record of comparison tests between the clothing of Dallas crime lab chief J.C. Day, who'd handled the rifle almost exclusively after the shooting, and these fibers. In short, there was either no effort to find out where these "other" fibers came from, or the efforts were unsuccessful, and made to disappear from the record. Either of these scenarios suggest that, once a few of the fibers found on the rifle were found to be similar to the fibers of Oswald's rust brown shirt, someone made the decision to use these fibers to suggest Oswald's guilt, and to conceal the simultaneous fact that someone who'd been wearing clothing with fibers similar to the "other" fibers found on the rifle...could still be at large.

But, in this charade they'd get no cooperation from Oswald. The 11-23-63 notes of Dallas Police Captain Will Fritz, who was leading the interrogation of Oswald, reflect that Oswald "Says 11-22-63 rode bus/got trans same out of pocket...Changed shirts + tr. Put in dirty clothes—long sleeve red sh + gray tr." Fritz's typed-up report on this interrogation states more clearly that "During this conversation he told me he reached his home by cab and changed both his shirt and trousers before going to the show" (WR605). This account is confirmed by a report on this interrogation by Secret Service Inspector Thomas Kelley (WR626). Kelley writes "He said he went home, changed his trousers and shirt, put his shirt in a drawer. This was a red shirt, and he put it in his dirty clothes. He described the shirt as having a button down collar and of reddish color. The trousers were grey colored." The FBI report on this interrogation confirms this as well, with Agent Bookhout relating that Oswald "stated that after arriving at his apartment he changed his shirt and trousers, because they were dirty. He described his dirty clothes as being a reddish colored, long sleeved shirt with a button-down collar and gray colored trousers" (WR622). It certainly seems possible from this that the "reddish" shirt with the button down collar described by Oswald was one-in-the-same as the "brown" shirt with a button down collar confiscated by the Dallas police the night before, and that Oswald's perception of red was slightly different than the policeman inventorying his clothes. In any event, there is no record whatsoever reflecting that they showed him this shirt or any of his other shirts to see which one he'd been wearing.

The FBI had bigger fish to fry. Having discovered fibers on the rifle that matched fibers from the shirt Oswald had been wearing when arrested, they sought to prove he was lying about having changed his shirt. An 11-24 FBI report (CD5 p340-341) reflects that on 11-23 they spoke to Mary Bledsoe, Oswald's former landlady, who'd claimed in an 11-22 affidavit to have seen Oswald on a bus after the shooting. While she didn't describe Oswald's clothes in her affidavit, the FBI report reflects she recalled

that Oswald was “wearing dirty clothes” and that “as best as she recalled, Oswald was dressed as follows: wearing ragged gray work pants, wearing a brown shirt with holes in the elbows.” The FBI has found itself a witness.

William Whaley, a cab driver, recognized Oswald from his picture in the paper, and came in to make a statement regarding his driving Oswald from a point near the assassination site to a point near Oswald's rooming house, shortly after the assassination. In his 11-23 sworn affidavit, (CD87, p275) Whaley describes Oswald as having on a "dark shirt with white spots of something on it." An 11-23 FBI report on Whaley (CD5 p349-350), however, reflects that he “recalled that the young man he drove in his cab that day was wearing a heavy identification bracelet on his left wrist, he appeared to need a haircut and was dressed in gray khaki pants which looked as if they had been slept in. *He had on a dark color shirt with some light color in it.* The shirt had long sleeves and the top two or three buttons were unbuttoned. The color of the shirt nearly matched the pants, but was somewhat darker. The man wore no hat. He appeared to be about 25 years of age, 5’7” to 8” tall, about 135 pounds, with brown hair thick on top. He had a long thin face and a high forehead.” Is it a coincidence that Whaley's own description of the shirt precludes the shirt being the brown shirt Oswald was wearing when arrested, while the description in the FBI report on Whaley does not?

With the FBI's reports on Bledsoe and Whaley it appeared the FBI was gonna make its case that Oswald was wearing the shirt at work before the assassination, and that therefore the fibers on the rifle most logically came from his shirt. But had Bledsoe and Whaley really remembered Oswald wearing a dark unbuttoned shirt, or were they merely describing the shirt they'd seen Oswald wearing on TV the day before? As Oswald had scuffled with a number of police upon arrest, it certainly seems possible, if not likely, that his shirt buttons were torn off during this scuffle. Officer Baker, after all, had failed to notice any missing buttons or tears in Oswald's clothing when he encountered him in the lunchroom. Furthermore, while the news footage of Oswald from 11-22, when he was wearing his shirt, was black and white footage, it seems likely that at least one of the newsmen present at Oswald's press conference had described the color of Oswald's shirt to his viewers or readers. As a result, it's hard to give Mrs. Bledsoe's statement that Oswald was wearing a brown shirt much weight. Not unless stronger witnesses, such as eyewitnesses to the shooting or co-workers, can be found to corroborate her impression.

And then along came the statement of James Worrell. (11-23-63 affidavit to Dallas County, 16H959) “I was standing on the sidewalk against a building on the corner of Elm and Houston Streets watching the motorcade of the President. I heard a loud noise like a fire cracker or gun shots. I looked around to see where the noise came from. I looked up and saw the barrel of a rifle sticking out of a window... While I was looking at the gun it was fired again. I looked back at Mr. Kennedy and he was slumping over. I got scared and ran from that location. While I was running I heard the gun fire two more times. I ran from Elm Street to Pacific Street on Houston. When I was about 100 yards from the building I stopped to get my breath and looked back at the building. I saw a w/m, 5’8” to 5’10”, dark hair, average weight for height, dark shirt or jacket open down front, no hat, didn't have anything in his hands, come out of the building and run in the opposite direction.”

Worrell's running man is a match for the shooter described by others with the singular exception that the man he saw was wearing a dark shirt or jacket. Oswald had been wearing a dark shirt when seen on TV. Did Worrell suspect his running man was Oswald, and subconsciously dress him in accordance with Oswald's appearance? Or had the shooter added layers as he ran down the stairs?

A Lighter Shade of Brown?

Oswald was killed the next day. The shirt he was wearing at the time of his death had been pulled from the Dallas Police Department's collection of clothes removed from his rooming house. Archive photos of this shirt (CE164) suggest that it could have been a light brown shirt. A document in the Dallas Police Archives (found in Box 9, folder 4, document 9) itemizing the clothes removed from Oswald's body describes it as merely a "shirt." Another list in the Archives from 2-2-64, when the clothes were loaned out to the FBI, however, describes it as a "gray flannel shirt." (This list can be found in Box 9, folder 4, document 10). As this previously unmentioned gray flannel shirt was presumably one of the items of "miscellaneous clothing" brought over from Oswald's rooming house on 11-22, it resurrects the question of whether or not a red shirt had been confiscated at this time.

Intriguingly, the reports and testimony of those watching Oswald dress before he was shot discuss in detail Oswald's putting on a black sweater, but say almost nothing of the shirt. Most of their statements, in fact, make it sound like Oswald took the shirt off in order to put on the sweater, and that he therefore was responsible for delaying his departure, a delay which gave Jack Ruby the time to get into the basement and kill him. Beyond the obvious purpose of these statements--blaming Oswald's death on his own vanity--this distracts from the central question of what other clothing had been confiscated from Oswald's rooming house.

On the odd chance you're interested here are the reports about the clothing change...

From Captain Fritz's typed-up notes on the interrogation of Oswald (24H270): "Oswald said he would like to have a shirt from his clothing that had been brought to the office to wear over the T-shirt that he was wearing at the time. We selected the best-looking shirt from his things, but he said he would prefer wearing a black Ivy-League Type shirt, indicating that it might be a little warmer. We made this change..."

From the 3-24-64 testimony of L.C. Graves (13H5): "when we got these clothes off the rack and started to give him a light-colored jacket or shirt, (he) said, 'if it is all the same to you'... 'I'd rather wear that black sweater.'"

From the 3-24-64 testimony of L.D. Montgomery (13H27): "Well, he put on a black sweater. I think he changed shirts, changed shirts, and put on a black sweater."

From the 5-7-64 testimony of Forrest Sorrels (7H357): "he requested that he be permitted to get a shirt out of his—the clothes that had been brought in, that belonged to him... And so Captain Fritz sent and got his clothes and, as I recall it, he selected a dark colored kind of sweater type shirt, as I recall it."

After Oswald's death the FBI attempted to solidify its case that he'd been wearing the dark brown shirt while at work.

An 11-25-63 FBI report (CD5 p142) reflects that Dallas Detective R.M. Sims "stated he had personally searched Oswald at the City Hall after his arrest and, while searching the person of Oswald just prior to the 'show-up,' Detective Sims stated he found a Dallas Transit Company transfer in the left shirt pocket of Oswald." This suggests the FBI was trying to use the transfer to show he hadn't changed shirts. This whole line of investigation, however, should never have come up, as Oswald had told Fritz on the 23rd that he'd swapped the transfer out of his other shirt. Hadn't Fritz told this to the FBI? Apparently not. Fritz's typed-up notes about Oswald and the bus transfer report simply that "He admitted this was given to him by the bus driver when he rode the bus after leaving the building." (WR604).

Was Something Up Their Sleeve?

Form 128-70-01

POLICE DEPARTMENT

CITY OF DALLAS

PROPERTY CLERK'S INVOICE OR RECEIPT

26 Nov 1963 10

Received of Roone, Petta, Turner, Benkel the following described articles,

§ recovered stolen property:

Evidence in Offense No. Arrest No. Charge MURDER

QUANTITY	ARTICLE	SIN NO.	DISPOSITION
1	tan sleeveless sweater	rel	
1	green long sleeve sweater w/white stripes		
5	sport shirts: 1 gray knit 1 red & gray short sleeve 2 blue short sleeve 1 white short sleeve		
1	brown leather belt		
1	brown necktie		

RECEIVED OF B. A. Smith

OF THE PROPERTY ROOM ON NOV 26 1963

ARTICLES AS CHECKED (✓) ON INVOICE # NUMBER

Property Clerk

If neither evidence nor recovered stolen property, write on face of this form in detail reason for police possession.

ARTICLE	SIN NO.
1 tan sleeveless sweater	rel
1 green long sleeve sweater w/white stripes	
5 sport shirts: 1 gray knit 1 red & gray short sleeve 2 blue short sleeve 1 white short sleeve	
1 brown leather belt	
1 brown necktie	

RECEIVED OF B. A. Smith

OF THE PROPERTY ROOM ON

ARTICLES AS CHECKED (✓)

- 1 - Brown tie
- 1 - Man's sleeveless, sweater - beige
- 1 - brown belt - Size 32
- 1 - pullover bulky sweater - Size small, 36-38 olive green color, with white & black stripes
- 1 - short sleeve gray & black pullover knit shirt (small size)
- 1 - Maroon & gray cotton long sleeve sport shirt (no size shown)
- 2 - light blue cotton short sleeve sport shirts (one small size - 14-16) (one large size 16-18)

- 1 - white cotton short sleeve sport shirt.

On the Dallas Police invoice for Oswald's clothes at left and at top, there is a "red and gray short sleeve" shirt. In the next day's Secret Service inventory, above, there is a "maroon and grey cotton long sleeve sport shirt." Was the DPD trying to hide something?

Was Something Up Their Sleeve?

Over the next few days, some other strange occurrences take place. An invoice in the Dallas Police Archives (Box 9, folder 5, document 21) reflects that on 11-26-63, some clothes removed from Oswald's rooming house, including a "red and gray short sleeve" sport shirt were released to Secret Service Agent John Joe Howlett by Captain George Doughty. Another notation by DB? on 9-22-66 says simply "gone." What did the Secret Service do with these items? An 11-27-63 Secret Service report (CD87 p252-253) lists the clothes and states "There is forwarded herewith a quantity of clean clothes taken from the apartment of Lee Harvey Oswald after the arrest. They are being forwarded as requested by the Chief, presumably for examination by the Alcohol and Tobacco Tax Lab. The remaining clothes taken from Oswald are in custody of FBI." Included in this list, in place of the "red and gray short sleeve" sport shirt is a "maroon and grey cotton long sleeve sport shirt."

Well, this is mighty curious, isn't it? Oswald claims to have been wearing a reddish long sleeve shirt on 11-22, and here is a reddish long sleeve shirt. And yet no one seems interested in finding out if this is the shirt he'd been wearing. Instead, we have the Dallas PD identifying it simply as a "shirt" on the inventory, and then typing over "shirt" with "short" and adding "sleeve." Is this a coincidence? Or is the Dallas PD trying to hide that they had a shirt that matched Oswald's description of the shirt he'd been wearing? If this is more than a coincidence then is it also more than a coincidence that Fritz left

out of his type-written notes--the only ones the FBI would ever see--that Oswald claimed to have taken the transfer out of the pocket of his reddish shirt and put it in the pocket of the rust brown shirt he was wearing when arrested?

And what about the Secret Service's statement that the clothes were being forwarded "presumably for examination by the Alcohol and Tobacco Tax Lab?" What kind of examination was this? Well, while researching another aspect of the case, I suspect I stumbled upon the answer. At the September 1966 First International Conference on Forensic Activation Analysis, three scientists from the Laboratory of the Alcohol and Tobacco Tax Division of the Internal Revenue Service (the forerunners to today's department of Alcohol, Tobacco, and Firearms) discussed their use of neutron activation analysis on clothing, in order to determine whether an individual had fired a weapon. They reported: "Test firings were made with foreign rifles, and paraffin lifts of hair and shoulders were examined for the presence of antimony and barium. The data presented in Table V show that it is possible to detect the presence of these elements on the areas examined. This work indicates there is a distinct possibility that the method can be applied to the detection of rifle firings."

That this test was performed using "foreign rifles" makes me suspect they used one foreign rifle in particular--the Mannlicher-Carcano rifle purportedly used by Oswald. And since they found this method could be used to detect whether an individual had fired a rifle, and yet never testified about this before the Warren Commission, it seems clear their tests revealed no presence of antimony or barium on Oswald's clothes, including his red shirt.

Of course, the results of these tests were never revealed, so this is just speculation. Another indication that tests were performed on Oswald's clothes, however, can be found in the 2-6-64 testimony of Marina Oswald. While inspecting her husband's clothes, and confirming that they belonged to him, she came to Exhibit 155, a shirt not knowingly related to the assassination or its aftermath, and asked "Why is it all torn?" Intriguingly, her questioner, J. Lee Rankin, responded "We are advised it was when he was hurt, they cut into some of these." This didn't exactly satisfy her, however. Moments later, when she came to two pairs of pants, exhibits 157 and 158, she asked "Why were both of those cut? I don't understand." She was right not to understand. The shirt worn by Oswald when he was "hurt" was CE 164. Exhibit 157 was a pair of gray slacks matching the description of the pants Oswald wore on the 22nd. Exhibit 158 was indeed the pants worn by Oswald when "hurt". In any event, Rankin answered her question by admitting: "I have not been informed, but I will try to find out for you." While Marina told Rankin that this wouldn't be necessary, it certainly sounds possible that the shirt and pants had been cut so that some undisclosed tests could be performed.

(If anyone knows any other references to these tests, or is cognizant of their results, please let me know.)

The Cat's Pajamas?

The eventual whereabouts of the red shirt are even more curious. In January, the FBI provides the Warren Commission with a complete list of the physical evidence. At this point, a "red and gray sport shirt" re-emerges as C-144 (CD345, p3). On March 10, it provides another list. Here, the "red and gray sport shirt" again disappears. The report lists it as part of an assortment of Oswald's clean clothes. And leaves it off the list. It details: "C139-147: OSWALD'S clean clothes--belt, tie, tan sweater, olive sweater, blue-gray shirt, blue sport shirt, white shirt (Q179-187 respectively)." It thereby lists seven items for nine numbers (CD735, p74). Curious. Even more curious, the "red and gray sport shirt" was one of the two items missing, along with C-145, a blue shirt. On October 14, the FBI sends an updated list of exhibits over to the Warren Commission to be used in the twenty-six volumes of supporting evidence. By this point a re-emerged "red and gray sport shirt" has been re-dubbed CE 152 (CD1554, p10). The next month, when the Warren Commission's twenty-six volumes are published, a photo of this "red and gray sport shirt" is published on page 516 of Volume 16. Its caption reads simply "Commission Exhibit 152." At the beginning of the volume, on page viii, however, is a description of this exhibit. It reads simply "Top Portion of Man's Pajamas." This is almost in keeping with Marina Oswald's testimony of February 6, when she verified Counsel Rankin's suggestion that CE 152 was "a pair of pajamas" by stating "Yes. Lee's pajamas." The black and white photo may very well show a striped pajama top, quite possibly even a red and gray striped pajama top, but there is no bottom half to

this pajama top. So why did Rankin describe it as "a pair of pajamas?" And why, if it was only a pajama top, did Marina say it was "Lee's pajamas" and not "Lee's pajama top"? I've heard of men keeping the bottoms of their pajamas when they've lost the tops, but never the reverse. This feeds the possibility that Rankin and Marina were indeed describing a pair of pajamas. As a result, I think we should wonder how this pair of pajamas could have been mistakenly and repeatedly identified as a red sport shirt. Is it really just a coincidence that the pajama top was originally described as a pair of pajamas, and that substituting a red shirt for a *pair of* pajamas would have raised a, gulp, red flag that Oswald had indeed had a red shirt that he could have worn to work on 11-22, precisely as he'd told his inquisitors? And is it a coincidence that this shirt/pajama top was the only article of clothing whose Warren Commission description was less specific than its FBI description, whereby its color was removed from its description? Could it be that the pajama top formerly described as a red and gray sport shirt isn't even red and gray? (My search for a color photo of CE 152 continues.)

On 11-27 Mrs. Bledsoe received another visit from the FBI. This time she described Oswald's appearance when he got on the bus as "ragged and dirty...he was wearing a shirt which had a hole in one elbow and she remembers something "ragged" around his belt line. As she recalls he was wearing a brown shirt and gray pants and no jacket." (CD5 p342).

Okay. Okay. I know this is getting boring. But I'm trying to show how this case was built. Here, the FBI has found fibers on the rifle that match the fibers found in Oswald's shirt, and the only witness stating she saw Oswald wearing this shirt before he went home and changed clothes has been interviewed twice. Where are all the corroborating witnesses? Why haven't they routinely asked Oswald's co-workers what shirt he wore on the 22nd? They certainly can't be planning to use the fiber evidence against Oswald on the say-so of one witness? Can they?

On 11-29, the FBI's crime lab identifies a palm print purportedly lifted from the rifle on 11-22 as belonging to Oswald. When the FBI inspected the rifle on the morning on 11-23, they found no trace of this palm print. A Dallas Police officer, Lt. J.C. Day, however, insists he lifted this print before lending the rifle to the FBI. As Day would later admit this was an old dry print, it only serves to demonstrate that Oswald had handled the rifle in the past, and not that he'd handled it or fired it on November 22nd.

On 12-1, there's another brief red-shirt sighting. While writing a report on Buell Wesley Frazier and the brown paper bag he saw in Oswald's possession, agents Odum and McNeeley re-tell Frazier's story. When discussing his giving Oswald a ride to Irving, Texas on the 21st, so that Oswald could visit his wife and kids, they casually mention: "As Frazier recalls, Oswald was wearing a reddish shirt and a gray jacket, waist length." (CD7, p294) As no "reddish" shirt, as far as we can tell, was found at the Paine residence, where Oswald's wife Marina was staying, this suggests the possibility that Oswald wore this shirt back to work. Could this have been the red shirt found at the rooming house, before it morphed into a pair of pajamas?

No matter. Even though there's almost no evidence to support that Oswald wore the brown shirt to work on the 22nd, the FBI is determined to use the fibers found on the rifle, which may have come from that shirt, to hang him in the public eye. A 12-1 article in the Washington Star by Jerry O'Leary, a writer more than friendly with the FBI's Deke DeLoach, and someone upon whom the FBI regularly relies to get their stories before the public, declares: "PIECE OF OSWALD'S SHIRT FOUND SNAGGED IN RIFLE." It then goes on to claim "A fragment of Lee Harvey Oswald's shirt was snagged in the rifle that killed President John F. Kennedy, the FBI report of the assassination states. Disclosure of this evidence against the 24 year-old Oswald, himself slain two days after Mr. Kennedy's death, is regarded as one of the most solid pieces of evidence of his guilt. Officials said wisps of brown shirt material were caught in metal parts of the 6.5 mm Italian-made carbine found on the fifth floor of the Texas School Book Depository Building a few minutes after the fatal shots were fired on November

22. When Oswald was arrested two hours later, he was wearing a brown shirt of the same material. Oswald claimed he had changed his shirt in his rooming house after leaving the assassination area, but this *proved* to be untrue. FBI Crime Lab technicians determined by microscopic and other scientific means that the fragment of shirt material came from the shirt the ex-Marine was wearing."

Wow, talk of your circular reasoning. Not only does O'Leary grossly overstate the specificity of fiber analysis, but he, apparently at the FBI's bidding, has told the public that we *know* Oswald handled the rifle because the fibers on the rifle matched the fibers of the shirt he was wearing two hours later, and that we *know* he was wearing this shirt two hours earlier because its fibers matched the fibers found on the rifle. Mind-boggling. This is like lashing two boats together in a harbor and wondering why they still drift out to sea. It completely ignores the fact that, if no one saw Oswald wearing the brown shirt while at work, the matching of the fibers found on the rifle and the fibers of his shirt is more indicative of a frame-up than of Oswald having worn the shirt to work. After all, if the police find bloodstains in the house of a suspect, and it turns out that there is real reason to doubt the suspect even visited his house after the crime had been committed, we don't just assume that, huh, he must have sneaked in the house when no one was looking, now do we? We assume that the detectives are up to something. Oswald deserves that same benefit.

On 12-2, the FBI Laboratory released the results of some more of its tests. "The K42 gray jacket is a size medium light gray cotton jacket...Dark blue, gray-black and orange-yellow cotton fibers, which match in microscopic characteristics the dark-blue, gray-black and orange-yellow cotton fibers composing the Q11 shirt, were found in the debris removed from the inside areas of the sleeves of the K42 jacket. These fibers could have originated from the Q11 shirt." (CD7, p352). As the K42 gray jacket was the jacket discarded by the presumed killer of Officer Tippit, the fibers now linked Oswald's shirt to both the murder of Kennedy and the murder of Tippit.

On 12-4 another witness comes forward. She claims to have seen a man on the fourth or fifth floors with a rifle before the shooting. The FBI report (24H522) of an interview with Mrs. Carolyn Walther reflects that "a man in the crowd across the street to the west of where she was standing apparently had an epileptic seizure, and an ambulance came by and took the man away. Shortly after the ambulance left, she looked back toward the TSBD Building and saw a man standing on either the fourth or fifth floor in the southeast corner window...In his hands this man was holding a rifle with the barrel pointed downward." The man she saw "was wearing a white shirt and had blond or light brown hair." She also offered that "the rifle was different from any she had ever seen. This man was standing in about the middle of the window. In the same window, to the left of this man, she could see a portion of another man standing by the side of this man with a rifle. This other man was standing erect, and his head was above the opened portion of the window. As the window was very dirty, she could not see the head of this second man. She is positive this window was not as high as the sixth floor. This second man was apparently wearing a brown suit coat, and the only thing she could see was the right side of the man, from about the waist to the shoulders."

Mrs. Walther thereby becomes the 6th witness claiming to have seen a man in either the sniper's nest, or with a rifle, within minutes of the shooting. None of them have described a man wearing a shirt like the shirt Oswald was wearing when arrested. On the other hand, the man Mrs. Walther claims to have seen standing to the left of the shooter is dressed like the man James Worrell saw run from the building.

On 12-4, the FBI decides to show the brown shirt worn by Oswald to Mary Bledsoe, to see if she could positively identify it as the shirt he'd been wearing on his bus ride home from work. After describing the shirt as "a dark rust colored shirt," the FBI's report on this interview tells us that: "Mrs. Bledsoe at first said, "No, no. That is not the shirt." She then inquired as to whether the shirt had a ragged elbow. Upon further examination of the shirt, she observed a hole in the right elbow of the shirt, at which time

she quickly stated, "Yes, yes. This is the shirt." Mrs. Bledsoe qualified her answer that this was not the shirt by stating that she seemed to recall the shirt she observed Oswald wearing on November 22, 1963 was more dirty in appearance. She said when she observed the ragged elbow on the shirt, she was positive this was the shirt Oswald was wearing when she saw him on the bus. She stated she is positive he was wearing a long sleeve shirt of the same dark appearance as the shirt she observed at her residence on December 4, 1963. She stated Oswald was not wearing a jacket or coat when she saw him on the bus on November 22, 1963. She stated the shirt she saw him wearing was of a brown or dark brown color...She stated her first impression was that the left sleeve on Oswald's shirt was the sleeve that had the ragged elbow; however, she was not positive...Mrs. Bledsoe said she did note Oswald had his shirttail tucked into his pants and that his pants were ragged around the top." (CD7, p302-303).

With Mrs. Bledsoe's raggedy identification of Oswald's raggedy shirt as the shirt he wore from work, the FBI's drive to use this shirt as evidence against Oswald had neared its destination.

On 12-4 FBI agent Vince Drain tries to shore up the chain of evidence of Oswald's shirt. He gets Patrolman Ray Hawkins, Captain W.R. Westbrook, Lieutenant Paul Bentley, Officer Bob Carroll, Captain Will Fritz, and Detective James Leavelle of the Dallas Police to verify that the "brown shirt" in FBI custody was in fact the shirt Oswald was wearing upon arrest. (CD7, p312-317).

Another report raises more questions. A report written by Agent Warren De Brueys on this day states "Detective Fay M. Turner, Dallas Police Department, was shown a faded brown long-sleeve shirt... Detective Turner identified this shirt as being the shirt he personally seized by search warrant from Lee Harvey Oswald's room...on November 22, 1963." (CD7, p318). As virtually no one can recall Oswald wearing a dark shirt at work on the 22nd, was this "faded brown" shirt, in fact, the shirt he'd been wearing? Or is this the shirt he was wearing when killed? Or both? And why write a report on this shirt if it was an unrelated article of Oswald's clothing?

After their success with Bledsoe, the FBI on 12-5 decides to see if anyone will confirm that Oswald had been wearing the dark brown shirt around the time of the shooting. Their results were less than spectacular.

Buell Wesley Frazier, who gave Oswald a ride to work on 11-22: "Frazier advised that he did not pay any attention as to what type of clothing Oswald was wearing; however, he felt certain that Oswald was wearing a jacket on this date...Frazier was shown a rust brown sport shirt...Frazier was unable to identify this shirt as having been worn by Oswald on November 22, 1963." (CD7, p304) A signed statement by Frazier to the Secret Service in this period confirms "All I recall about Oswald's clothing on the morning of the assassination was a gray wool jacket. I don't remember what kind of shirt or pants he was wearing." (CD87 p796).

Linnie Mae Randle, Frazier's sister, who'd seen Oswald walk up to her brother's car on 11-22: "to the best of her recollection Oswald was wearing a tan shirt and grey jacket...Mrs. Randle was shown a rust brown sport shirt...Mrs. Randle stated that the above-described shirt does not look familiar to her, that Oswald could have been wearing this shirt, but she believes that the shirt Oswald was wearing on the morning of November 22, 1963, was a solid color and light." (CD7, p308)

Roy S. Truly, Oswald's boss, who saw Oswald on the second floor after the shooting: "to the best of his recollection, on November 22, 1963, Lee Harvey Oswald was wearing either a white tee-shirt or a light colored shirt and light trousers. He stated that most of the employees usually worked in their tee shirts, and there was a small room on the first floor of the TSBD where the employees could smoke, play dominoes and hang up their shirts and coats. Mr. Truly was shown a rust brown sport shirt...Truly stated that the shirt looked familiar to him but as previously stated he believes that Oswald was wearing light clothing and had on a white tee-shirt or a light colored sport shirt." (CD7, p305). In confirmation, a Secret Service report from this period tells us "It is Mr. Truly's recollection that, at the time, he and the

patrolman met Oswald at the lunch room door, shortly after the shooting, Oswald was dressed in light colored clothing and probably a T-shirt.”(CD87, p778).

Charles Givens, a co-worker: “to the best of his recollection Oswald was wearing a long sleeve sport shirt, brown in color. He stated that on occasions, he had seen Oswald wearing a tee-shirt. Givens was shown a rust brown sport shirt...Givens stated that the above described sport shirt appeared to be similar to the one Oswald was wearing on November 22, 1963, but that he could not state definitely that this was the shirt.” (CD7, p306). The Secret Service report from this period confirms: "It is Givens' recollection that Oswald was wearing a brown shirt, when he last saw him." (CD87 p780).

James Jarman, a co-worker: “Jarman advised that he could not recall what type of clothing Oswald was wearing on November 22, 1963, but that Oswald usually worked in a white tee-shirt. He stated that there was a “dressing room” on the first floor of the TSBD where the employees could change their clothing or leave their shirts when they commenced work or during work hours. He said that when Oswald worked in a tee-shirt, Oswald usually had a regular shirt in the dressing room. Jarman was shown a rust brown sport shirt...Jarman stated that the above-described shirt was vaguely familiar, but he could not recall if this shirt was worn by Oswald on November 22, 1963.” (CD7, p307)

Bonnie Ray Williams, a co-worker: “to the best of his recollection, Lee Harvey Oswald was wearing a grey corduroy pair of pants and a grayish looking sport shirt with long sleeves on November 22, 1963. Williams was shown a rust brown sport shirt...Williams was unable to identify this shirt and could not recall ever seeing Oswald either wearing this shirt or a shirt similar in appearance.”(CD7, p310)

Mrs. Robert A. Reid, who saw Oswald just before he left the building: “to the best of her recollection, Oswald was wearing a white tee-shirt and a pair of pants, color unknown. She stated that she had never seen Oswald wear a regular shirt...Mrs. Reid was shown a rust brown sport shirt...She said that she could not recall ever seeing this shirt before and was certain that Oswald did not have this shirt on at the time she saw him on November 22, 1963.” (CD7, p309). The Secret Service report from this period confirms that “to the best of (Mrs. Reid's) memory, Oswald was wearing a white T-shirt at that time and was carrying a coke bottle in his hand.” (CD87 p786). She signed a statement for the Secret Service on 12-4-63 stating “At the time Oswald came through the office he had a coke in his hand. All I recall about Oswald’s appearance is that he had a white T-shirt on.” (CD87 p798).

This Secret Service report, based on interviews conducted between 12/2 and 12/6, also tells us that William Shelley, Oswald’s direct boss, had “last saw Oswald at about 11:50 A.M...It is Mr. Shelley’s recollection that Oswald was wearing khaki trousers and a T-shirt.” (CD87, p780)

If Oswald had worn a dark brown shirt with a torn sleeve to work on the 22nd, as suggested by the statements of Mrs. Bledsoe, how come no one from his work, outside Charles Givens, who would dramatically change his story and call his credibility into question, remembered it? And why was the FBI so determined to shore up that Oswald was wearing this shirt, when NO ONE who saw the shooter saw him wearing this shirt? Why don't they just make the reverse claim, that Oswald had been wearing a T-shirt when he'd fired the shots? I think we know. They have a report saying that fibers from the brown shirt were found on the rifle. Well, couldn't these fibers have landed on the rifle at an earlier point, like the night before the assassination, when Oswald was purportedly in the garage with the rifle? Sure, but this scenario entails that Oswald went back to the domino room to get his shirt before leaving the building after the shooting, and that doesn't quite jive with the picture that Oswald fled the building in fear for his life. It also introduces the new problem that, of the four witnesses to say the shooter was wearing a light shirt, none so far have hinted that it could have been a T-shirt.

On 12-5, the effort to connect Oswald’s shirt to the killings suffered another setback. Mrs. Earlene Roberts, the housekeeper at Oswald’s rooming house who saw Oswald when he came home, signed an affidavit stating “Oswald did not have a jacket when he came in the house and I don’t recall what type

of clothing he was wearing. Oswald went to his room and was only there a few minutes before coming out. I noticed he had a jacket he was putting on. I recall the jacket was a dark color and it was the type that zips up the front. He was zipping the jacket up as he left.” (7H439) The jacket found near the Tippit killing, with Oswald's shirt fibers inside, was, of course, a light jacket.

Despite the myriad problems affiliated with the fiber evidence, the FBI Summary Report of 12-9 (CD1, p17), presents its fiber analysis of the gun and shirt as evidence of Oswald's guilt. This is precisely as predicted by Jerry O'Leary in his 12-1 article. The report further hides the dubious nature of the fiber comparison by describing the shirt as multi-colored, failing to note that the shirt was primarily brown and that no brown fibers had been found on the rifle. It also uses Mrs. Bledsoe to support that Oswald had in fact been wearing this shirt at work that day. It fails to note that none of the eyewitnesses to the man in the sniper's nest saw him wearing a dark brown shirt, and that a number of Oswald's co-workers refused to ID the shirt as a shirt Oswald had ever wore to work. The report declares:

“When apprehended, Oswald was wearing a long-sleeved, multi-colored sport shirt. A small tuft of textile fibers was found adhering to a jagged area on the left side of the metal butt plate of the rifle owned by Oswald. Included in this tuft were gray-black, dark blue, and orange-yellow fibers which the FBI laboratory determined matched in microscopic characteristics the fibers in the shirt worn by Lee Harvey Oswald.

According Mrs. Bledsoe, Oswald's former landlady, Oswald was wearing this sport shirt on the bus shortly after the assassination.”

The report, of course was rapidly leaked to the media. That the leaker of the report (the FBI itself) was not entirely convinced by this thread of evidence is revealed, however, through a comparison of what was leaked against what was actually shown by the evidence. Articles mentioning the threads found on the rifle--such as the 12-1 article in the Washington Star and a 12-11 AP article (found in the San Francisco Chronicle)--invariably claimed the threads found on the rifle were brown, when, as admitted in the report, NONE of them were brown. This, then, would appear to be a lie orchestrated by either the FBI or the press to convince the public these threads came from the brown shirt Oswald wore on television. The AP article includes another lie as well. There it was claimed that the threads "identified as from Oswald's shirt, were found snagged in the mechanism of the Italian-made bolt-action rifle which also bore his palm print." This, of course, was nonsense. Oswald's palm print was reportedly found on the barrel of the rifle, and was believed to have been an old print. The threads--which were NOT identified as having come from Oswald's shirt, but were found to be consistent with having come from his shirt--were found wrapped around the butt plate. While both pieces of evidence suggested Oswald had handled the rifle at one time or another, neither of these pieces of evidence proved Oswald had fired the shots. By claiming the threads were snagged in a "mechanism," however, an image was created of Oswald firing the rifle. Pretty sneaky.

A Darker Shade of Brown

The Warren Commission would have even more problems with the shirt evidence.

On 12-23, they received a 12-18 FBI report on cab driver William Whaley. The FBI's Bardwell Odum had shown him the brown shirt in an attempt to find a second positive identification. No such luck. Odum relates: "He stated that this may well be the shirt since, as he recalls, Oswald was wearing grey work pants and a grey work jacket and had on a darker shirt which had a gold streak in it. He also recalled that this shirt was opened down the front to about the fourth button, and he does not recall Oswald's wearing an undershirt. He also recalled that the shirt, as well as the rest of Oswald's attire, was unpressed and wrinkled, as though it had not been ironed after washing or as though he had slept in the clothes." (CD205, p150) Oswald, of course, had been wearing a white undershirt, and had left his jacket at work. It's also problematic that Whaley remembered his passenger having a "gold streak" in

his shirt. The shirt in which Oswald was arrested had no "gold streak."

On 1-22-64 they received a number of upsetting reports. A 1-8-64 FBI interview with Mrs. Lillian Mooneyham (CD329 p17-18) reflects that she watched the shooting from the courthouse at Houston and Main and that "about 4 1/2 to 5 minutes following the shots fired by the assassin, that she looked up towards the sixth floor of the TSBD and observed the figure of a man standing in a sixth floor window behind some cardboard boxes. This man appeared to Mrs. Mooneyham to be looking out the window, however, the man was not close up to the window but was standing slightly back from it, so that Mrs. Mooneyham could not make out his features. She stated that she could give no description of this individual except to say that she is sure it was a man she observed, because the figure had on trousers. She could not recall the color of the trousers." This report is troublesome for a number of reasons. For one, Oswald had been observed downstairs and had already left the building by 4 1/2 to 5 minutes after the shooting; the figure seen by Mooneyham, therefore, could not have been him. For two, by strange circumstance, Officer Baker, the first policeman in the building, had taken an elevator from the fifth to the seventh floor, before proceeding on up to the roof. As a result, there was no police presence on the sixth floor 4 1/2 to 5 minutes after the shooting and someone could have indeed been in the sixth floor window as claimed. For three, she said there were boxes in the window, which cuts into the possibility she was looking at the wrong floor. For four, she said this man was wearing trousers, suggesting he was not one of the police officers rushing into the building. So who was this man? Mrs. Mooneyham was never called before the Warren Commission.

Yet another report gives the commission yet another reason to believe the sniper's nest shooter wore light-colored clothing. The FBI report of a 1-9-64 interview with James Crawford (CD329, p22) explains "By the time the sound of the third shot had passed, Mr. Crawford looked around and in looking up at the sixth floor of the Texas School Book Depository, he observed a movement which he described as a movement such as something being withdrawn quickly...Mr. Crawford stated he could describe the movement he observed as light colored, possibly white, and it might have been the reflection of sunlight upon a light colored object...Mr. Crawford stated that he believes that the motion he observed in the window was a person, but he could not determine if it was the figure of a man or a woman because of the short glimpse he got. He stated he could therefore, not give a description of what he had observed except that it was a quick white movement made by a figure which he had immediately concluded to be a person."

Things got a little smoother from there. For awhile.

On 2-6-64, when asked what shirt Oswald had worn on the morning of the 22nd, Marina Oswald testified "I don't remember" When shown a number of shirts, including Exhibit 150, the rust brown shirt, and 151, a "light brown, cotton, long sleeved sport shirt", and asked if they were Lee's shirts, she replied "Yes." When asked if Lee wore Exhibit 150, the rust brown shirt, on the morning of the 22nd, she said "It was a dark shirt." When asked again if she thought exhibit 150, the rust brown shirt, was the one, she picked up the hint and replied "Yes." Her awareness of his clothing on that morning is perhaps better demonstrated by her response to other questions, however. At one point she volunteered "The thing is that I saw Lee in the room, and I didn't see him getting dressed in the room. That is why it is difficult for me to say." As if to prove this point, when asked what shirt Lee had worn to her place on Thursday night, she stated "I think he wore this shirt." Well, "this shirt" as pointed out by chief counsel Rankin, was Exhibit 150, the rust brown shirt she had just said he'd worn to work on Friday morning. Would Lee really wear the same shirt to work two days in a row? (As he was in the habit of spending his weekends with Marina, a change of clothes was certainly available.) Marina then volunteered "It seems he had that jacket, also." Rankin then clarifies "Exhibit 162?" and she says "Yes." The problem with this, of course, is that Exhibit 162 was the gray zippered jacket found near the Tippit killing, and Oswald was believed to have been jacket-less on his way home from work, and have

picked up this jacket at his rooming house.

After Marina's self-discrediting statement regarding CE 162, Rankin moved on to other topics. In his haste, he neglected to ask Marina the highly pertinent question of whether or not she remembered seeing a torn sleeve on Oswald's rust brown shirt prior to his going to work on the 22nd. If she knew it had not been torn, of course, it would indicate that the shirt had been torn during Oswald's scuffle with the police and that Mary Bledsoe, who'd identified the shirt by the fact it was torn, was simply thinking of the shirt she'd seen on television the night before when she identified the shirt as the shirt Oswald was wearing on the bus. (1H93-126) (Intriguingly, in 1969, Marina would testify in the trial of Clay Shaw that Oswald wore "fresh" shirts whenever he went downtown, and that she had no recollection of his ever wearing "sloppy" or "dirty" clothes. In 1977, Priscilla Johnson McMillan would publish her book on the Oswalds, Marina and Lee, based upon interviews with Marina in the aftermath of the shooting. McMillan reports that, when Lee came to visit Marina on Thursday evening after work, Marina pointed to a "clean shirt and socks and pants" and told him to wash up. This undoubtedly suggests that Oswald wore clean clothes to work on Friday, and that Bledsoe was mistaken.)

On 3-4, Rankin writes J. Edgar Hoover and asks that some items of evidence be brought to the commission for use in upcoming testimony. Among the items listed is "the so-called rust colored sport shirt with a hole in the right sleeve." He then asks "In addition, we would like to have the shirt and trousers worn by Oswald at the time of his arrest." Apparently, Rankin was so overwhelmed that he failed to realize that the "rust colored sport shirt" WAS the shirt worn by Oswald at the time of his arrest. If this is so, however, we can only wonder where he thought it came from. Did he think the FBI picked it out of Oswald's clothes, and showed it to Mrs. Bledsoe, to see if it had been the shirt he'd been wearing on the bus? Did he really not realize that she saw Oswald wearing this shirt on TV before she ever described this shirt as the shirt that he'd been wearing?

On 3-10, the road to nailing Oswald got a wee bit muddier. Arnold Rowland, one of the earliest witnesses to say he saw a man on the sixth floor with a rifle, dropped a big rock in an unforeseen puddle. He testified "This was 12:15...at that time I noticed on the sixth floor of the building that there was a man back from the window, not hanging out the window. He was standing and holding a rifle. This appeared to me to be a fairly high powered rifle...this was on the west corner of the building, the sixth floor...this was the only pair of windows where both windows were completely open and no one was hanging out the windows, or next to the window...He was rather slender in proportion to his size. I couldn't tell for sure whether he was tall and maybe, you know heavy, say 200 pounds, but tall whether he would be and slender or whether he was medium and slender, but in proportion to his size his build was slender...I can't state what height he would be. He was just slender in build in proportion to his width...he appeared to be fair complexioned, not fair, but light complexioned but dark hair...I would say either a light Latin or Caucasian...(about his hair) it was dark, probably black...It didn't appear as if he had a receding hairline but I know he didn't have it hanging on his shoulders. Probably a close cut from—you know it appeared to me it was either well-combed or close cut...(when asked about his clothes) He had on a light shirt, a very light colored shirt, white or a light blue, or a color such as that. This was open at the collar. I think it was unbuttoned about halfway, and then he had a regular T-shirt, a polo shirt under this, at least this is what it appeared to be. He had on dark slacks or blue jeans. I couldn't tell from that. I couldn't see but a small portion...I think I remember telling my wife that he appeared in his early thirties...I would say about 140 to 150 pounds"

Rowland then explained that he'd told his wife about this man but that their attention was distracted when another parade-watcher had an epileptic seizure. He said this discussion took place around 12:22. He then dropped the bomb: "Something I would like to note is that the window that I have been told the shots were actually fired from, I did not see that, there was someone hanging out that window at that time...At the time I saw the man in the other window, I saw this man hanging out the window

first. It was a colored man, I think...this was the one on the east end of the building, the one that they said that the shots were fired from...(when asked where he saw the man with the rifle) The west, southwest corner. (when asked where he saw a man hanging out the window) The east, southeast corner...On the same floor...This was before I noticed the other man with the rifle...My wife and I were both looking and making remarks that the people were hanging out the windows. I think the majority of them were colored people...then she started watching the colored boy, and I continued to look, and then I saw the man with the rifle...(when discussing the colored man) he was there before I noticed the man with the rifle and approximately at 12:30 or when the motorcade was at Main and Ervay he was gone when I looked back and I had looked up there about 30 seconds before or a minute before.” (Later, when asked to describe the man he saw in the sniper’s nest window) “He was very thin, an elderly gentleman, bald or practically bald, very thin hair if he wasn’t bald. Had on a plaid shirt. I think it was red and green, very bright color, that is why I remember it.” (when asked the man’s age) “Fifty; possibly 55 or 60.” (Height?) “5’8”. 5’10”, in that neighborhood. He was very slender, very thin. (skin color?) “Very dark or fairly dark, not real dark compared to some negroes, but fairly dark. Seems like his face was either—I can’t recall detail but it was either very wrinkled or marked in some way.” (2H165-190)

After Rowland, James Worrell testified. Worrell repeated his claim of seeing a man run from the back of the school book depository after the shots. Through a series of questions he described the man as “5’7” to 5’10”...155 to 165 (pounds)...in his late twenties or middle—I mean early thirties. Because he was fast moving on.” He said the man was “White but with “black” hair, and that he’d “just saw the back of his head and it was full in the back.” And that he was dressed in a dark sports jacket...”I don’t know whether it was blue, black, or brown, but it was dark, and he had light pants. And that is all I can say on his clothes, except his coat was open and kind of flapping back in the breeze when he was running.” This man was definitely not Oswald.

Later that day, another witness to the shooting, Amos Euins, testified. He had little to say about the appearance of the man in the window. “All I got to see was the man with a spot in his head, because he had his head something like this” (indicating his face down)...I could see the spot on his head...I wouldn’t know how to describe him, because all I could see was the spot and his head.” (When asked if he could tell the man’s race) “I couldn’t tell because these boxes were throwing a reflection, shaded. (When asked “But you could tell he had a bald--”) “Spot on his head. Yes, sir; I could see the bald spot on his head.” (2H201-210). While Oswald had a receding hairline, he had no bald spot on his head. Why didn’t the commission have Euins work with a sketch artist to depict what he was trying to describe?

Buell Wesley Frazier testified on 3-11-64. When asked if he recognized Exhibit 163, the gray blue jacket which the Commission believed Oswald had worn to work on 11-22-63: “No sir, I don’t.” When asked if he’d seen Oswald wear Exhibit 162, the gray zippered jacket found near the Tippit killing: “No sir, I haven’t.” When shown exhibit 150, the rust brown shirt worn by Oswald at the time of his arrest: “No sir, I don’t believe I have because most time I noticed when Lee had it, I say he put off his shirt and just wear a T-shirt the biggest part of the time so really what shirt he wore that day I really didn’t see it or didn’t pay attention to it whether he did have a shirt on.” When asked if he remembered anything about Lee’s clothing in the morning: “It was a gray, more or less flannel, wool-looking type of jacket that I had seen him wear and that is the type of jacket he had on that morning.” After he told them he wouldn’t remember what type of pants Oswald wore, and was asked if he remembered Oswald wearing gray pants: “yes, to be frank with you, I had seen something more or less of that order, that type of material, but so far as that, being sure that, was his pants or some kind of his clothes, I couldn’t be sure.” (2H210-245)

They then asked Frazier’s sister, Linnie Mae Randle, if she could recall what Oswald was wearing on

the morning of 11-22: "He had on a white T-shirt. I just saw him from the waist up. I didn't pay any attention to his pants or anything... But he had on a white T-shirt and I remember some sort of brown or tan shirt and he had a gray jacket, I believe." (When shown Exhibit 163, the gray blue jacket later found at Oswald's work) "Similar to that. I didn't pay an awful lot of attention to it." (Later, after being shown the gray jacket found near the Tippit killing (162) and the blue-gray one found at Oswald's work (163)) "I would choose the darker one." (Exhibit 163) "I remember his T-shirt and the shirt more so than I do the jacket." (When shown Exhibit 150, the rust brown shirt) "Well now, I don't remember it being that shade of brown. It could have been but I was looking through the screen and out the window but I don't remember it being exactly that. I thought it was a solid color."

The next day, 3-12, William Whaley, the cab driver who gave Oswald the lift home, testified. He described Oswald's clothing in a unique manner: "I didn't pay much attention to it right then. But it all came back when I really found out who I had. He was dressed in just ordinary work clothes. It wasn't khaki pants but they were khaki material, blue faded blue color, like a blue uniform made in khaki. Then he had on a brown shirt with a little silverlike stripe on it and he had on some kind of jacket, I didn't notice very close but I think it was a work jacket that almost matched the pants. He, his shirt was open three buttons down here. He had on a T-shirt. You know, the shirt was open three buttons down." (When shown Exhibit 150, the rust brown shirt) "That is the shirt, it has my initials on it... Yes, sir; that is the same one the FBI man had me identify." (When asked if this is the shirt that Oswald was wearing) "as near as I can recollect as I told him. I said that is the shirt he had on because it had a kind of little stripe in it, light colored stripe. I noticed that." (After being shown the pants) "I am not sure about the pants. I wouldn't be sure of the shirt if it hadn't had that light stripe in it." "That jacket now it might have been clean, but the jacket he had on looked more the color, you know like a uniform set, but he had this coat here on over that other jacket, I am sure, sir." (When asked if he meant the "blue-gray jacket", probably Exhibit 163) "Yes, sir." (2H253-262). Well, Whaley was giving them pretty much what they wanted until he said that Oswald had been wearing a jacket. As the jacket he was "sure" he saw Oswald wearing had been found in the school book depository days or weeks after the shooting, Whaley's credibility re Oswald's clothing was non-existent.

On 3-24, the commission brought in their star witness, Howard Brennan. Brennan had told the Dallas Police on 11-22 that he'd seen a sniper in the sixth floor window and could identify him; he then refused to identify Oswald as this man. Then, weeks later, after Oswald's murder, and after the media had started pushing that he'd acted alone, the Secret Service talked to Brennan and, presumably, convinced him it was now safe to say that, of the men he saw in the police line-up, Oswald most resembled the man he saw in the window. He repeated this to the FBI. In his testimony, he improved his position. He told the Commission that he could have identified Oswald all along, and had been less than straightforward with the DPD, Secret Service, and FBI when he'd indicated that Oswald only "most resembled" the man he saw in the window. When asked to clarify his position, once and for all, and explain why he'd been holding back his positive ID, Brennan testified *"Well, as I previously have said, I had saw the man in the window and I had saw him on television. He looked much younger on television than he did from my picture of him in the window--not much younger, but a few years younger--say 5 years younger. And then I felt that my family could be in danger, and I, myself, might be in danger. And since they already had the man for murder, that he wasn't going to be set free to escape and get out of the country immediately, and I could very easily sooner than the FBI or the Secret Service wanted me, my testimony in, I could very easily get in touch with them, if they didn't get in touch with me, and to see that the man didn't get loose."* Note that Brennan admitted, in the very testimony the Warren Commission would use to push it was Oswald in the window, that the man in the window looked five years older than Oswald. This is not a convincing ID. I mean, it's not as if Oswald had a hair cut and a facial after the shooting in preparation for his appearance on TV. If anything, the events of Oswald's day--his scuffle with the police, his being charged with murder--would have aged

Oswald's appearance by five years.

But if Brennan's ID of Oswald was problematic for the commission, his description of the shirt worn by the shooter was a disaster. When asked to describe the color of the shirt worn by the shooter. "No, other than light, and a khaki color—maybe in khaki. I mean other than light color—not a real white shirt, in other words. If it was a white shirt, it was on the dingy side." (When shown Exhibit 150) "I would have expected it to be a little lighter—a shade or so lighter." (When asked about the shooter's trousers) "I remember them at that time as being similar to the same color of the shirt or a little lighter. And that was another thing that I called their attention to at the lineup... That he was not dressed in the same clothes that I saw on the man in the window... he just didn't have the same clothes on." (3H140-161) As Brennan is purported to have seen Oswald in a lineup early Friday evening, before Oswald's rust brown shirt was sent to Washington, and as Oswald is known to have complained about being made to stand in Saturday's lineup in just a T-shirt, it follows that Oswald was wearing the rust brown shirt in the lineup, and that Brennan was thereby testifying that the shirt Oswald was wearing when arrested was not worn by the shooter in the sniper's nest. This draws into question the value of the fiber evidence, and demonstrates the Commission's bias. They found Brennan credible only when he told them what they were dying to hear. He'd ID'd the shooter as Oswald, even though the shooter looked five years older and was wearing a different shirt. Far from being the decisive witness for the prosecution many have claimed him to be, he may very well have been a star witness for Oswald's defense...should he have been allowed one.

James Jarman, Oswald's co-worker, also testified on 3-24. Counsel Ball asked him how Oswald was dressed on the 22nd: "I don't exactly recall how he was dressed. I think he had on some dress pants. But I didn't notice the color. (When asked what kind of shirt) "Ivy leagues, I believe. (When asked again) "he never hardly worked in a shirt. He worked in a T-shirt... Yes, he had on a T-shirt that morning."

The next day officer Marrion Baker testified. When asked to describe Oswald's appearance when confronted in the second floor break room, Baker replied: "At that particular time I was looking at his face, and it seemed to me like he had a light brown jacket on and maybe some kind of white-looking shirt. Anyway, as I noticed him walking away from me, it was kind of dim in there that particular day, and it was hanging out his side." (When shown Exhibit 150, the rust brown shirt) "Yes, sir; I believe that is the shirt that he had on when he came—I wouldn't be sure of that. It seemed to me like that other shirt was a little bit darker than that whenever I saw him in the homicide office there. (When asked by Belin "What about when you saw him in the School Book Depository?) "I couldn't say whether that was—it seemed to me it was a light-colored brown but I couldn't say it was that or not...all I can remember it was in my recollection of it was a light brown jacket." (When asked to clarify if what he thought was a jacket was the same color as Oswald's shirt, Exhibit 150) "Well, it would be similar in color to it—I assume it was a jacket, it was hanging out." (When asked how Oswald was dressed at the police station) "He did have a brown-type shirt on that was out." (When asked if it looked similar to the jacket) "I could have mistaken it for a jacket, but to my recollection it was a little colored jacket, that is all I can say." (When later asked specifically if he thought Oswald had changed clothes between the time he saw him in the break room and the time he saw him at the police station) "He looked like he did not have the same on." (3H241-270).

Brennan and Baker's testimony that Oswald was not wearing the shirt linked to the rifle when they saw him is a significant problem for the Commission. After Baker testified, they brought Mrs. Robert Reid, who'd talked to Oswald just before he left the building, to the stand. (When asked how he was dressed) "he had on a white T-shirt and some kind of wash trousers. What color I couldn't tell you." (After repeating that she couldn't identify the trousers, and being asked about a jacket.) "He did not. He did not have any jacket on." (When asked by Belin "Have you ever seen anyone working at the

book depository wearing any kind of a shirt or jacket similar to Commission Exhibit 150, or do you know?" (THIS IS QUITE INTERESTING--IF SHE HAD SEEN SOMEONE WEARING A SHIRT, WOULD THAT PERSON HAVE BECOME A SUSPECT BASED UPON THE FIBER EVIDENCE?) "No, I do not. I have never, so far as I know ever seen that shirt. I have been asked about that shirt before, I have seen it once before, but not since all this happened." (I believe she means "when all this happened") (3H270-281)

On 4-1-64, the Commission called in two more witnesses who may have seen the shooter. First they talked to James Crawford. Crawford told them: "If I were asked to describe it, I would say that it was a profile, somewhat from the waist up, but it was a very quick movement and rather indistinct and it was very light colored. It was either light colored or it was reflection from the sun" (6H 171-174). Later, they talked to Ronald Fischer. He described the shooter as follows: "he had on an open-neck shirt, but it—uh—could have been a sport shirt or a T-shirt. It was light in color; probably white. I couldn't tell whether it had long sleeves or whether it was a short-sleeved shirt, but it was open-neck and light in color. Uh—he had a slender face and neck—uh—and he had a light complexion—he was a white man. And he looked to be 22 or 24 years old...His hair seemed to be—uh—neither light nor dark; possibly a light—well, possibly—a, well, it was a brown was what it was, but as to whether it was light or dark, I can't say." (When asked about his hair) "He couldn't have had very long hair, because his hair didn't seem to take up much space—of what I could see of his head. His hair must have been short and not long...I believe I could see the tip of his right cheek as he looked to my left...like he was looking straight at the triple underpass." (6H191-200) (Note: Fischer would later discuss his testimony with the Dallas Morning News. A 12-19-78 article reflects that Fischer claimed that Warren Commission counsel David Belin and he had "had a fight almost in the interview room over the color of the man's hair...He wanted me to tell him that the man was dark-haired and I wouldn't do it." The article goes on to quote Fischer's 15-years-on description of the man he saw in the window. It was nearly identical to his earlier statements. He said that the man he saw was wearing "some kind of a light-colored shirt, like maybe a T-shirt.")

Now desperate to provide some corroboration that Oswald was wearing the shirt linked to the rifle, on 4-2 the Commission finally dragged in good ole Mary Bledsoe, who'd seen Oswald on the bus for all of a few seconds. Now relishing her role as the Oswald buster, she described his appearance on the bus in a dramatic fashion: "He looks like a maniac. His sleeve was out here (indicating). His shirt was undone...Was a hole in it, hole, and he was very dirty, and I didn't look at him. I didn't want (him) to know I even seen him, and I just looked off..." (When asked if she looked at him as he passed by) "I don't know. I didn't look at him. That is—I was just—he looked so bad in his face, and his face was so distorted. (When asked if he had a hat on) "No." (When asked about his shirt) "He had a brown shirt...Hole in his sleeve right here (indicating). (When asked if this hole was on the right elbow or left elbow) "Right." (When asked if his shirt were opened) "Yes, all the buttons torn off." (When asked if he had anything on underneath the torn shirt) "I don't know." (When a surprised Ball clarifies "Do you know the color of any undershirt he had on?) "No." (When asked about his pants) "they were gray, and they were all ragged in here (indicating)...At the seam...At the waist, uh huh...(When asked if his shirt was tucked in) "it was tucked in." Later when asked if she thought she got enough of a glimpse of Oswald to recognize him, she responded "Oh, yes." Ball then asked her if she'd looked very carefully at Oswald, she replied "No, I just glanced at him, and then looked the other way and I hoped he didn't see me." (When finally shown Exhibit 150, the rust brown shirt) "That is it." (When asked to clarify what she means) "Because they brought it out to the house and showed it...because I can recognize it...I recognize—first thing I notice the elbow is out and then I saw—when the man brought it out and let me see it?" (When Ball asks her again what she means by "That is it.") "That is the one he had out there that day?" (When asked who) "Some Secret Service man." (When asked if she'd seen it before the Secret Service showed it to her) "No, he had it on, though...Oswald...Oswald had it on." (When asked

what about the shirt makes her think Oswald had it on) “See all this (indicating)? I remember that...I saw the—no: not so much of that. *It was done after*—that is the part I recognize more than anything.”

Well hold it right there! It sure sounds like she was about to point to something about the shirt, perhaps the buttons she'd already said were "torn off", and say that that was what led her to recognize the shirt. Only she stopped herself, saying “That was done after.” Had someone “preparing” her testimony informed her that Oswald’s shirt had received most of its damage in his struggle with the police, after she’d seen him?

Now back to Bledsoe...(When asked if she were pointing to the hole in the elbow) “Yes.” (When asked about the color) “Well, I—What do you mean?...When he had it on?...Before he was shot? Yes, I remember it being brown... Yes, it was that color...”

Okay, now what's she mean by "Before he was shot?" Does she think he was wearing the rust brown shirt when he was shot? Does she think its dark color comes from his blood?

More Bledsoe... (When an unconvinced Ball challenges her to convince him that she really thinks the shirt was worn by Oswald on the bus) “Well, I would say it was. That hole...(When asked again about the color) “Yes, I remember the color...(When asked if the color was similar) “No; same color.” (When asked if she thinks it is the shirt) “Yes, it is the shirt.” She was then shown two pairs of Oswald’s pants, and says Exhibit 156 may have been the pants he was wearing. (6H400-427).

Fabrics, Fibers, Fibs and Fabrications

The next day the FBI’s fiber expert, Paul Stombaugh, testified before the commission. Much of his testimony was taken up with discussion of the blanket found in the Paines’ garage, and whether it could be linked to Oswald or the rifle. This led to a discussion of Oswald’s pubic hairs. This enabled Stombaugh to connect the blanket to Oswald but not the rifle. This led to a discussion of Oswald’s shirt and the fibers found on the rifle butt.

There are several minor revelations in his testimony. On page 74 he discusses his inspection of the rust brown shirt and states “I noted in my notes the two buttons from the top were forcibly removed, the right elbow was worn through, the bottom front inside the shirt was ripped forcibly...” Stombaugh was thereby suggesting that most of the damage to the shirt had occurred during Oswald's struggle with the police, and not before. Had someone discussed his notes with Mary Bledsoe? Is that why she stopped herself when identifying the characteristics of the shirt, stating "No, that was done after".

(FWIW, Vincent Bugliosi, in his 2500 page plus defense of the Warren Commission, Reclaiming History, shares a similar distrust of Bledsoe. On page 549 of his end notes, he relates "I am not including Bledsoe’s observations as evidence of Oswald’s guilt. Apart from her probable bias against him, her observations of Oswald’s physical condition were such that if they were accurate, at least one of them would have been noticeable to Roy Truly or Dallas police officer Marrion Baker. But they apparently saw no such thing, and I can’t reasonably envision anything that Oswald would have done between the time he saw Truly and Baker and was in Bledsoe’s presence that would have caused him to get in such a bedraggled condition.")

Back to Stombaugh's discussion of the rust brown shirt. After prompting by WC counsel Melvin Eisenberg, he then added "down the face of the shirt I did find some wax adhering to it." Now this is interesting, as it suggests he took a good look at the shirt. Which makes what he doesn't say remarkable. He doesn't mention finding any grease on the shirt, or anything indicating it had been used to wipe down the rifle. (The proposition that Oswald wore his t-shirt during the shooting, and used the brown shirt to wipe down the rifle, is hereby reduced to the level of unsupported speculation, at odds with the available evidence.)

Stombaugh then discussed his inspection of the rifle: "Latent fingerprint powder was all over the gun: it was pretty well dusted off, and at the time I noted to myself that I doubted very much if there would be any fibers adhering to the outside of the gun—I possibly might find some in a crevice some place—because when the latent fingerprint man dusted this gun, apparently in Dallas, they use a little brush to dust with, they would have dusted any fibers off the gun at the same time; so this I noted before I ever started to really examine the gun." He explained further: "ordinarily a fiber would adhere pretty well, unless you take a brush and brush it off on the floor and it is lost." He then described his inspection of the rifle on the morning of the 23rd: "I noted it had been dusted for latent prints. So I proceeded to pick off what fibers were left from the small crevices and small grease deposits which were left on the gun. At the point of the butt plate, the end of the stock...I found a tiny tuft of fibers which had caught on that jagged edge, and then when the individual who dusted this dusted them, *he just folded them down very neatly* into the little crevice there, and they stayed."

This duster would be Lt. J.C. Day, the same Dallas Crime Lab Detective who "found" Oswald's palm print on the rifle after giving it to the FBI and having them find no identifiable prints on the rifle. Day explained later that he'd lifted this palm print off the rifle on the night of the assassination before sending it to the FBI crime lab in Washington. He said he was surprised they'd found no trace of this print upon inspection. He admitted further that he had not protected this print, or marked its location, in any way. Nor had he sent a note along with the rifle explaining the work he had performed, and that he'd lifted a palm print from the underside of the barrel on a part of the barrel only accessible when the rifle is disassembled. He'd also failed to photograph the print while it was on the rifle (which is pretty much standard procedure). From such mistakes reasonable doubts arise.

Stombaugh, continued: "These I removed and put on a glass microscope slide...because this little group of fibers—little tuft of fibers, appeared to be fresh. The fibers on the rest of the gun were either adhering to a greasy, oily deposit or jammed into a crevice and were very dirty and apparently very old...the other fibers I cleaned up, removed the grease and examined them but they were of no value. They were pretty well fragmented...They all appeared old...in excess of a month or two months." Returning to the "tuft," Stombaugh explained: "this was just a small tuft. They were adhering to the gun on a small jagged edge. In other words the gun had caught on a piece of fabric and pulled the fibers loose. *They were clean, they had good color to them, there was no grease on them and they were not fragmented. They looked as if they had just been picked up. They were folded very neatly down in the crevice...*they were adhering to the edge rather tightly...it had the jagged edge sticking up and *the fibers were folded around it* and resting in the crevice...I believe when the fingerprint man dusted it he probably ran his brush along the metal portion here...Of the butt plate, and *at the time the brush folded these down into the crevice...Because of the presence of fingerprint powder being down in and through the crevice here.* It looked as if it had been dusted with a brush. You could make out the bristlemarks of the brush itself." Stombaugh had thereby testified that the fibers found in the butt plate crevice did not end up there on their own, and were apparently folded down in there only AFTER Day had dusted the butt plate.

When asked what it would take for someone to loosen the threads from the jagged edge, he responded "Well, I would imagine if one took a brush and started brushing pretty hard these would have worked loose and come out...They were adhering to the jagged edge...they were adhering pretty tightly to the gun. I believe through ordinary handling of the gun eventually they would have worked loose and fallen off...I had to take a pair of tweezers and work them out...And after I had the fibers lifted up which could have been the original position they were in, then I had to pull them off. They were wrapped around rather snugly to the sharp edge." Later, when asked if the rifle should have had fibers from the blanket, he replied "No, because the gun was dusted for fingerprints and any fibers that were loosely adhering to it could have been dusted off. The only reason, I feel, that these fibers remained on

the butt plate is because they were pulled from the fabric by the jagged edge and adhered to the gun and then the fingerprint examiner with his brush, I feel, when brushing and dusting this plate, stroked them down into that crevice where they couldn't be knocked off. In time these fibers would undoubtedly have become dislodged and fallen off the gun" (4H56-88).

If Oswald had been allowed an attorney, he (or she) would have just loved Stombaugh. Stombaugh pretty much admitted it's possible the fiber evidence was planted. He also gave an indication who did it, or at least knew about it. When asked if he was "unhappy" about being handed a rifle that had already been dusted for fingerprints, and asked to inspect it for trace evidence, Stombaugh replied: "I was; however, it is not uncommon for fingerprint processing to be given priority consideration. They wanted to know whether or not the gun contained any fibers to show that it had been stored in this blanket." He then explained who this "they" was: "Well, this is our Dallas office. They sent the gun in wanting to know this fact."

So let's get this straight. The Dallas office wanted to know if there were any fibers on the rifle that could link it to the blanket found in the Paine's garage and Surprise! Surprise! Stombaugh found fibers from Oswald's shirt on the rifle instead. This is most interesting. Fiber evidence is most commonly found on clothing, linking a suspect to a victim, or a victim to a suspect, or at the crime scene, linking a suspect to a crime scene. Sometimes it can be used to suggest a victim had been at the suspect's house, or in the suspect's car. And yet there is no record of either the Dallas Police or the FBI examining the sniper's nest for fiber evidence. None. The Dallas Police searched for fingerprint evidence only. They picked the paper bag up almost as an afterthought. They failed to photograph it in place. They carried it an upright position with the opening at the bottom, allowing fibers to fall freely from the bag. They didn't even inspect the inside of the bag before handing it over the FBI. And yet, we are to believe that, despite all the carelessness and lack of concern for the fiber evidence in Dallas, the Dallas FBI asked the FBI Crime Lab in Washington to inspect the rifle for fibers and lo and behold! it strikes the mother load and finds fibers from Oswald's shirt on a weapon that had already been dusted for fingerprints? Simply incredible! When one reads books and articles on firearms evidence and fiber evidence, one can find references to fibers from the clothing of a victim who had been shot at close range being found on the outside or even on the inside of the barrel of a revolver connected to a suspect, but I have not found a reference to one case, outside this one, where fibers from a suspect's shirt were found on an abandoned weapon, let alone a weapon that had already been dusted.

What's Up With That?

While Oswald wore his brown shirt to the midnight press conference (as shown at upper left) and his subsequent fingerprinting (as shown at left), he was not wearing it in his mug shot, taken just after (as shown above). It follows then that it was taken at this time. So why did both the Dallas Police and FBI claim it had been boxed up about 11:45, an hour earlier?

What's Up With That?

If Oswald had lived, and had found himself a smart attorney, the attorney would have hired someone to wear a shirt like Oswald's, and handle a rifle like Oswald's, and may even have had him fire a few shots. He'd then have the rifle dusted for fingerprints and inspected for fibers, in that order. If they found fingerprints, he'd ask why no legible fingerprints from Oswald were found on the gun. If they found no fibers, he'd ask how Oswald's shirt fibers came to be on the gun. If they claimed that Oswald had used the shirt to wipe down the gun, he'd ask why no grease from the gun was found on the shirt. The lawyer would then ask if it was possible the fibers came from the shirt of J.C. Day, who'd dusted the rifle for fingerprints, or Vincent Drain, who'd delivered the shirt to Washington. He'd also ask if Day and Drain had kept Oswald's shirt separate from the rifle at all times. He'd show the jury an FBI photograph (published in Ian Griggs' No Case to Answer) of the brown paper bag purportedly used by Oswald to carry the rifle into the building astride the blanket purported to have held the rifle when it was in the Paine family's garage, and ask if its possible the fiber found within the bag matching the fibers from the blanket had been transferred during the posing of the evidence photo.

And then, after softening up the jury to consider that the fiber evidence against Oswald was not evidence for his guilt, but for someone else's, he'd hit them with a zinger...He'd show them the press photos of Oswald's midnight press conference and subsequent fingerprinting...He'd then wonder aloud

how it came to be that Oswald was still wearing his "brown" shirt at the time of his late night fingerprinting--about 12:45 in the morning of 11-23--when, according to the reports and testimony of both the Dallas PD's Crime Lab Chief, Lt. Day, and the FBI agent tasked with shipping "all" the first day evidence to FBI headquarters, Vincent Drain, it had been boxed up along with all the other key evidence for an hour.

This, one can only guess, would have blasted a hole in the official story, and have fed speculation that the evidence, far from being boxed up at 11:45 for its 3:10 departure from Carswell Air Force base, was actually fiddled with and added to up until Drain's departure for the Airport around 2:00 or so...

I mean, something is just strange here. Why, when for all the DPD or FBI knew the killers of Kennedy were still on the loose, would they pack up the evidence found in the sniper's nest--most of it not yet photographed or studied by the primary investigating agency, the DPD--and then have it sit around for hours before shipping it to Washington? Does this make much sense? Secret Service Agent Win Lawson, in his report on the assassination (17H633) notes that he "went to the FBI Dallas office, met FBI Agent Drain again, and proceeded with him and the packaged evidence to Carswell AFB. I departed Carswell AFB aboard USAF Plane #276 at 3:10 A.M. CST, November 23, 1963, and arrived at Andrews AFB 6:30 A.M., E.S.T." Note that he went to the Dallas FBI office, and proceeded from there with the evidence. Well, why was this evidence at the FBI office to begin with?

From this, it's clear that not only was there ample opportunity for the Dallas Police to switch or tamper with the evidence before it was handed off to the FBI, but ample opportunity for the Dallas FBI to switch or tamper with the evidence afterward. As Drain's report makes no note of his stopping by the office for an hour or more while waiting to head to the airport, and as he was never questioned by the Warren Commission and asked to account for this time, it's just impossible to piece together why he collected the evidence from a crime lab and then whisked it off to an office.

Fortunately, however, Drain was interviewed by Larry Sneed many years later, and offered an explanation, of sorts. According to Sneed, Drain claimed he was ordered to pick up the evidence around 8:00, but didn't get around to doing so until after 11:30. He claimed it was then and only then that he realized there were no commercial flights to Washington. He claimed that he, on his own, arranged for the flight out of Carswell. If so, well, then Drain may have taken the evidence to his office while he figured this all out.

But this still doesn't explain why both Day and Drain insisted the evidence was boxed up well before midnight, and how Oswald was still wearing his supposedly boxed-up shirt an hour later...

Of course, Oswald never had the chance to hire such an attorney, and the President of the United States and the Chief Justice of the U.S. Supreme Court made sure no such attorney was allowed to work on Oswald's behalf, and get to the bottom of this mess.

Which brings us back to the 4-3-64 testimony of the FBI's fiber expert, Stombaugh...

He eventually discussed the fibers: "I tried to match these fibers with the fibers to the blanket, and found that they had not originated from the blanket, because the cotton fibers were of entirely different colors. So I happened to think of the shirt and I made a known sample of the shirt fibers...I removed fibers from the shirt to determine the composition of it and also the colors. I found that the shirt was composed of dark-blue, grayish black, and orangish-yellow cotton fibers, and that these were the same shades of fibers I had found on the butt of the gun..."

He then presented some photographs to prove his point: "Color photographs are very difficult to make microscopically because the color isn't always identical to what you see in the microscope. So these colors are slightly off." "These are the orangish fibers. The color is not exactly the same as what one would see under the microscope. However, you can see that the fibers on both sides, namely the fiber

from the rifle, here... And the fibers from the shirt, which are on the left hand side of Exhibit 674, do match. The colors are the same and also, we find the same twist in the fiber." He then moved on to the grayish-black fibers: "These are the gray-black cotton fibers and the color didn't come out well on these in this instance because of time and color process limitations... The same would apply to Exhibit 675 as to 674, with the exception of the color. The color on these is much darker and we tried up to last night to duplicate the exact color and this is the best I could come up with under the time and color process limitations. It took us about four hours to make a photograph such as this."

Well, this is a bit of a surprise. Stombaugh was unable to get his photographs to match and expected the commission to take his word for it that the fibers really did match, when seen under his super spiffy microscope. Of course, they did just that. Not surprisingly, a detailed report by Stombaugh, explaining how and why he came to his conclusions, when his photographs didn't even match, never surfaced. A defense attorney could get fat on this stuff.

Stombaugh then moved on to the dark blue cotton fibers: "the color match of the dark blue cotton fibers shows rather well in this photograph, Exhibit 676..." (When asked about a violet fiber in the picture) "I asked the photographer about this when he developed this and I said "Why did we get this; this is not in the slide at all," and he said that is one of the orange fibers. They use different techniques in bringing out the blue and yellow-orange in a photomicrograph... this shade in the photograph is different from what that fiber actually is. It is in the development process. I am not too familiar with color photography. There is an art to it. However, I do know that there are times and technical limitations on the accuracy of color reproductions... I believe (I recovered) a total of six or seven fibers from the butt plate, and three of them are blue fibers and all matched... Two shades."

When asked his conclusions, Stombaugh declared: "it was my opinion that these fibers could easily have come from the shirt... Mainly because the fibers or the shirt is composed of point one, cotton, and point two, three basic colors. I found all three colors on the gun. Now if the shirt had been composed of 10 or 15 different colors and types of fibers and I only had found 3 of them, then I would feel that I had not found enough, but I found fibers on the gun which I could match with the fibers composing the shirt, so I feel the fibers could easily have come from the shirt."

Could Stombaugh really have stated that a rust brown shirt was made up entirely of dark blue, grayish-black, and orange-ish yellow fibers? I must admit I'm skeptical. Since when is there no brown in brown? His assurance that the fibers found on the rifle "could easily" have come from Oswald's shirt is also questionable, and notable for its lack of precision.

Stombaugh Humbug

Years later, Stombaugh's integrity would come under direct fire. As detailed in the 1998 book *Tainting Evidence*, Stombaugh was the prosecution's chief forensic expert in the 1979 trial of Jeffrey MacDonald. Here, once again, he found fibers that had eluded others. After CID lab technician Dillard Browning had inventoried a vial of fibers, Stombaugh inspected the vial, and found that two of the fibers were in fact a hair from one of the victims, Colette MacDonald, magically wrapped around a fiber from Jeffrey MacDonald's pajama top, thereby suggesting that a struggle had occurred. The authors of *Tainting Evidence*, not to mention MacDonald's defense team, found this highly suspicious. Perhaps even more suspicious, and damaging to MacDonald, was that Stombaugh testified that his examination of MacDonald's blood-stained pajama top revealed that some of the blood stains were made before the top was cut and torn in his supposed struggle with his wife's killers. This suggested that MacDonald had murdered his wife, and then staged the attack on himself. According to the CourtTV Crime Library, "When Segal (MacDonald's defense attorney) asked for the photographic evidence to support this dangerous new theory, Stombaugh was not able to prove it in court, but maintained that it was so. Thus, the jury heard very damaging new testimony, even though there was no

way to refute it or disprove it during the trial. Years later, when the defense team finally got its hands on the Army's lab notes through the Freedom of Information Act, they found that the Army's "CID lab tech Janice Glisson years earlier had explored the same bloodstain theory and had come to a different conclusion. She had determined that the stain edges on either side of the rips did not intersect, that the pajama tops was therefore, stained [after] it was ripped, not before."

After reading Stombaugh's testimony in the MacDonald trial, and noting his comments on his Warren Commission experience, it is hard not to share the suspicions of the authors of Tainting Evidence and the CourtTV Crime Library. When asked "In what subject did you testify or about what matter did you testify for the Warren Commission?" he replied "In that case I testified to hairs, fibers, and if I recall correctly, there was a blanket involved in that one which was used to cover the gun." As we've just seen, Stombaugh's testimony did not positively link the blanket to the gun, but was much more conclusive in linking the gun to the shirt purportedly worn by Oswald. Can Stombaugh's "failure" to mention the true significance of his testimony, and that he had previously found fibers overlooked by others in a prominent murder investigation, have been entirely innocent? Sure. But there's certainly room for doubt.

Buying Into Bledsoe

On 4-7-64, in an effort to undo the damage done by Arnold Rowland the month before, the commission called his wife, Barbara Rowland, to testify. To their likely dismay, Mrs. Rowland partially verified her husband's story and confirmed that he had told her about seeing a man with a rifle in the far west window of the building, 15 minutes before the shooting. (A 12-23-63 FBI report confirms that this part of Rowland's story had not changed, noting "Arnold Louis Rowland states he saw man with a rifle in the southwest corner (shots fired from southeast corner) of TSBD at about 12:15 PM 11/22/63." CD205 p.i) Mrs. Rowland contradicted her husband, however, on another central point and said that the colored men she saw hanging out windows were not by the sixth floor sniper's nest window, but "On a lower floor, about the fourth floor, I think, and nearer the center window. The windows nearer the center." When taken as a whole then it seems likely the colored men noticed by the Rowlands were James Jarman, Bonnie Ray Williams, and Harold Norman, who'd actually been on the fifth floor. (6H177-191).

On 4-8-64, Frankie Kaiser testified that he found Oswald's blue-gray jacket, Exhibit 163, in the domino room of the school book depository sometime after the shooting. (6H344-345)

Charles Givens testified after Kaiser. As discussed previously, Givens now claimed he'd seen Oswald on the sixth floor shortly before the shooting. He also claimed Oswald was wearing "a greenish looking shirt and pants was about the same color as his shirt, practically the same thing he wore all the time he worked there. He never changed clothes the whole time he worked there, and he would wear a grey looking jacket." As he'd previously stated Oswald had been wearing a brown shirt on the day of the shooting, Givens' testimony is remarkable in that, since he'd first talked with the FBI in the days after the shooting, ALMOST EVERY SINGLE DETAIL IN HIS STORY HAD CHANGED!!! (6H345-356)

Mrs. Earlene Roberts, the housekeeper at Oswald's rooming house, was next in line. When asked what Oswald did when he got home on the 22nd, she testified "He went to his room and he was in his shirt sleeves but I couldn't tell you whether it was a long-sleeved shirt or what color it was or nothing, and he got a jacket and he put it on—it was kind of a zipper jacket." (When asked if she'd seen the jacket before) "I can't say I did—if I did, I don't remember it." (When asked about the shirt he'd been wearing) "He was in his shirt sleeves." (When asked the color of the shirt) "I don't remember." (When

shown Exhibit 162, the jacket found near the Tippit killing, and asked if she's seen it before) "Well, maybe I have, but I don't remember it. It seems like the one he put on was darker than that. Now I won't be sure, because I really don't know, but is that a zipper jacket?" (When told it was, and asked if he was wearing a zipper jacket) "Yes, it was a zipper jacket. How come me to remember it, he was zipping it up as he went out the door." (When shown Exhibit 150, the rust brown shirt, and asked if she'd seen it) "Well, maybe I have. Now that looks kind of like the dark shirt that he had on." (When asked if it looks like the shirt Oswald was wearing when he came in) "It was a dark shirt he had on—I think it was a dark one, but whether it was long sleeve or short sleeve or what—I don't know." (When asked again if the color of Exhibit 150 looks anything like the shirt Oswald wore when he came in) "I'm sorry, I just don't know." (6H434-444)

On 4-9, Robert Edwards, one of the first witnesses to say he saw the shooter, was finally called to testify. When asked to describe the culprit, he replied: "White man" (When asked if he was tall or short) "I couldn't say." (When asked what the shooter was wearing) "Light colored shirt, short sleeve and open neck." (When asked how much of him he could see) "From the waist on." (When asked the man's build) "Oh, about average. Possibly thin." (When asked if he could tell if he was light skinned or medium) "No." (When asked the man's hair color) "Light brown." (When asked about his earlier affidavit saying the shooter was on the fifth floor) "That is incorrect. That has been straightened out since."

On 4-22, the Commission finally called Lt. J.C. Day of the Dallas crime lab as a witness. Despite the fact that Agent Stombaugh of the FBI had testified less than 3 weeks earlier that a fingerprint man, presumably Day, had brushed the fibers purportedly matching Oswald's shirt into the small crevice by the butt plate, Day was never asked about dusting the butt plate. In fact, Day never mentioned dusting any area of the rifle butt. Instead, he described his handling of the rifle as follows: "Captain Fritz was present. After we got the photographs I asked him if he was ready for me to pick it up, and he said, yes. I picked the gun up by the wooden stock. *I noted that the stock was too rough apparently to take fingerprints*, so I picked it up, and Captain Fritz opened the bolt as I held the gun. A live round fell to the floor." He then described taking the rifle to the station and locking it up, and then returning later to dust it for prints. He claimed he found an old palm print on the bottom of the barrel, and lifted it without photographing it or informing the FBI of its existence. By midnight, he'd handed the rifle over to Agent Vincent Drain of the FBI.

In Larry Sneed's book, *No More Silence*, Day goes into far more detail on his handling of the rifle. He explains that, when he began his inspection, he "applied powder to it; there was nothing on the stock. Around the trigger guard there was a trace of a print which showed. It wasn't very legible, just traces there...Then, when I was adjusting the thing, down under the bottom of the barrel, there was a print." After dismantling the rifle and lifting this print, Day continues that he "got word from one of my captains, which came directly from the chief's office, not to do anything else...So I slipped the barrel back on the stock and put it back in the lock box...Somewhere in the course of time, Captain Fritz came in...He said that he had Marina down in his office and wanted her to look at the gun and see if she could identify it...So I just picked up the gun by the strap again and went on the elevator with him down to the third floor. When we opened the door there was a mob out there!...If I had known how many people were there, I would have done something besides show that gun. It was definitely a poor way to handle evidence!" Day says that after showing the gun to Marina, he once again went to work trying to photograph the print on the bottom of the barrel--which he claimed was still there even after he'd performed his lift--but that he was once again ordered to stop and turn the rifle over to the FBI. He never mentions dusting the butt plate.

At left is a photo taken by one of the members of the mob encountered by Day on the evening of 11-22-63, apparently around 6:15. It shows that Day handled the rifle by its butt when he held it for the press. This raises a few questions...1) If Day had just dusted the butt plate looking for prints, as described by Stombaugh, would he hold the rifle in such a cavalier manner? He had to have known the FBI was gonna double-check his work. Which leads to 2) When they inspected the rifle the next morning in Washington, why didn't the FBI find Day's palm print on the butt plate? When one considers that just about every book on fingerprinting in existence mentions that the carbon powder used by Day needs to be brushed "lightly" (according to 1964's Crime Lab, 1968's Invisible Witness, and 1995's Crime Scene, among many) for fear of damaging whatever fingerprints may be revealed, and that Stombaugh had testified that the fibers on the rifle had been "wrapped around rather snugly to the sharp edge" it seems doubtful that Day actually dusted the butt plate in the aggressive manner described by Stombaugh, and that his brushing led to the fibers appearing on the butt plate. It seems more likely, sadly, that someone planted the fibers from Oswald's shirt on the rifle and made it appear they'd been folded into the crevice by Day during his dusting. Perhaps Day did this himself. Perhaps the FBI, on the other hand, planted the fibers, and tried to make it look like the fibers pre-dated their inspection. Something sure smells bad but we can't be sure who dealt it.

But I know how we might find out. Lt. Day testified he used black fingerprint powder on the rifle. Sebastian Latona, who dusted the rifle for fingerprints at FBI headquarters the next day, testified on April 3rd, 1964, that he "completely covered the rifle" with gray fingerprint powder, and that the palm print received from Lt. Day had indeed been made with black powder. One can presume the fibers have been well-preserved. If they are tested and show traces of black powder the official story that Stombaugh inspected the rifle for fibers before the FBI dusted it for prints is supported, and it remains unclear who planted the fibers, and even if they were planted. If they show traces of gray powder, on the other hand, it suggests that Latona inspected the rifle BEFORE Stombaugh, and, that, after he failed to find any fingerprints on the rifle, someone decided to plant some fibers from Oswald's shirt on the

rifle, and have Stombaugh "find" them. While this might sound outrageous, a desperate act of this nature only makes sense when one considers that, at this point of its investigation, the FBI was not yet aware of the palm print recovered by Day in Dallas, and had no way of linking Oswald physically to the rifle that killed the President. They were also unaware that Oswald hadn't worn his shirt to work.

The Warren Report was published on 9-24-64. The sections on the shirt and fiber evidence are copied below. The most outrageous section has been highlighted. It's truly hard to believe they believed this stuff.

The Assassin (WR136-137)

Fibers on Rifle

*In a crevice between the butt plate of the rifle and the wooden stock was a tuft of several cotton fibers of dark blue, gray-black, and orange-yellow shades. On November 23, 1963, these fibers were examined by Paul M. Stombaugh, a special agent assigned to the Hair and Fiber Unit of the FBI Laboratory. He compared them with the fibers found in the shirt which Oswald was wearing when arrested in the Texas Theatre. This shirt was also composed of dark blue, gray-black and orange-yellow cotton fibers. Stombaugh testified that the colors, shades, and twist of the fibers found in the tuft on the rifle matched those in Oswald's shirt. (See app. X, p. 592.) Stombaugh explained in his testimony that in fiber analysis, as distinct from fingerprint or firearms identification, it is not possible to state with scientific certainty that a particular small group of fibers come from a certain piece of clothing to the exclusion of all others because there are not enough microscopic characteristics present in fibers. Judgments as to probability will depend on the number and types of matches. He concluded, "There is no doubt in my mind that these fibers could have come from this shirt. There is no way, however, to eliminate the possibility of the fibers having come from another identical shirt." **Having considered the probabilities as explained in Stombaugh's testimony, the Commission has concluded that the fibers in the tuft on the rifle most probably came from the shirt worn by Oswald when he was arrested, and that this was the same shirt which Oswald wore on the morning of the assassination. Marina Oswald testified that she thought her husband wore this shirt to work on that day. The testimony of those who saw him after the assassination was inconclusive about the color of Oswald's shirt, but Mary Bledsoe, a former landlady of Oswald, saw him on a bus approximately 10 minutes after the assassination and identified the shirt as being the one worn by Oswald primarily because of a distinctive hole in the shirt's right elbow. Moreover, the bus transfer which he obtained as he left the bus was still in the pocket when he was arrested. Although Oswald returned to his rooming house after the assassination and when questioned by the police, claimed to have changed his shirt, the evidence indicates that he continued wearing the same shirt which he was wearing all morning and which he was still wearing when arrested. In light of these findings the Commission evaluated the additional testimony of Stombaugh that the fibers were caught in the crevice of the rifle's butt plate "in the recent past." Although Stombaugh was unable to estimate the period of time the fibers were on the rifle he said that the fibers "were clean, they had good color to them, there was no grease on them and they were not fragmented. They looked as if they had just been picked up." The relative freshness of the fibers is strong evidence that they were caught on the rifle on the morning of the assassination or during the preceding evening. For 10 days prior to the eve of the assassination Oswald had not been present at Ruth Paine's house in Irving, Tex., where the rifle was kept. Moreover, the Commission found no reliable evidence that Oswald used the rifle at any time between September 23, when it was transported from New Orleans, and November 22, the day of the assassination. The fact that on the morning of the assassination Oswald was wearing the shirt from which these relatively fresh fibers most probably originated, provides some evidence that they were placed on the rifle that day since there was limited, if any, opportunity for Oswald to handle the weapon during the 2 months prior to November 22. On the other hand Stombaugh pointed out that fibers might retain their***

freshness if the rifle had been "put aside" after catching the fibers. The rifle used in the assassination probably had been wrapped in a blanket for about 8 weeks prior to November 22. Because the relative freshness of these fibers might be explained by the continuous storage of the rifle in the blanket, the Commission was unable to reach any firm conclusion as to when the fibers were caught in the rifle. The Commission was able to conclude, however, that the fibers most probably came from Oswald's shirt. This adds to the conviction of the Commission that Oswald owned and handled the weapon used in the assassination.

Appendix X: Expert testimony (WR591-592)

The shirt. Stombaugh received the shirt, Commission Exhibit No. 150, at 7:30 a. m. on November 23, 1963. Examination showed that it was composed of gray-black, dark blue, and orange-yellow cotton fibers. The orange- yellow and gray-black cotton fibers were of a uniform shade, and the dark-blue fibers were of three different shades. All the fibers were mercerized and of substantially uniform degree of twist.

The C2766 rifle. The rifle, Commission Exhibit No. 139, was received in the FBI Laboratory on the morning of November 1963, and examined for foreign material at that time. Stombaugh noticed immediately that the rifle had been dusted for fingerprints, "and at the time I noted to myself that I doubted very much if there would be any fibers adhering to the outside of this gun, I possibly might find some in a crevice some place because when the latent fingerprint man dusted this gun, apparently in Dallas, they use a little brush to dust with they would have dusted any fibers off the gun at the same time..." In fact, most of the fibers Stombaugh found were either adhering to greasy, oily deposits or were jammed down into crevices, and were so dirty, old, and fragmented that he could not even determine what type of fibers they were. However, Stombaugh found that a tiny tuft of fibers had caught on a jagged edge on the rifle's metal butt plate where it met the end of the wooden stock, and had adhered to this edge, so that when the rifle had been dusted for fingerprints the brush had folded the tuft into a crevice between the butt plate and the stock, where it remained.

Stombaugh described these fibers as "fresh," by which he meant that "they were clean, they had good color to them, there was no grease on them and they were not fragmented." However, it was not possible to determine how long the fibers had been on the rifle, in the absence of information as to how frequently the rifle had been used. Examination showed that the tuft was composed of six or seven orange-yellow, gray-black, and dark-blue cotton fibers. These fibers were compared with fibers from the shirt, Commission Exhibit No. 150, which was also composed of orange-yellow, gray- black, and dark-blue cotton fibers. The orange-yellow and gray-black tuft fibers matched the comparable shirt fibers in all observable characteristics, i. e., shade and twist. The three dark-blue fibers matched two of the three shades of the dark-blue shirt fibers, and also matched the dark-blue shirt fibers in degree of twist. Based on these facts, Stombaugh concluded that the tuft of fibers found on the rifle "could easily" have come from the shirt, and that "there is no doubt in my mind that these fibers could have come from this shirt. There is no way, however, to eliminate the possibility of the fibers having come from another identical shirt."

The commission's proposal that Oswald was wearing the brown shirt at work that day is remarkably ill-founded. Their use of the bus transfer to support this claim is particularly disingenuous. They willfully ignored that Earlene Roberts said Oswald originally went to the bus stop after leaving the rooming house, and that it would only make sense for Oswald to have moved the transfer from one shirt to another in anticipation of such a ride. They also gave Mary Bledsoe's testimony far more credence than it deserved. After all, in her original statement she failed to describe Oswald's shirt. Then, the next day, after Oswald had been seen on TV by half the world wearing the brown shirt, she said the shirt she'd seen had had holes in both elbows. Then, four days later, she was once again interviewed, and only then did she say it had a hole in ONE elbow. Then, a week later, she was shown the actual shirt,

and claimed it was NOT the shirt, only to change her mind after being shown the hole in the right elbow. Then, in her testimony, she identified the shirt as the shirt she'd been shown by the FBI, and only under repeat questioning did she relate that it was the shirt she saw Oswald wearing on the bus. She is simply not credible, and there is no reason to believe she had an independent recollection of the shirt's appearance prior to seeing Oswald on TV and every reason to believe her testimony was deliberately or accidentally coached by the FBI, from asking her the same questions over and over, asking her if she didn't recognize the hole in the elbow, etc, until she got it "right."

By relying on the easily-discredited Givens to make the case Oswald never came down for lunch, and the ridiculous Bledsoe to support their case that Oswald never changed his shirt, the commission revealed their single-mindedness, and lack of objectivity. There is simply NO WAY they'd have found these witnesses remotely credible if they'd have said anything suggesting Oswald's innocence.

Still, even though the commission accepted the words of an almost certain liar to conclude Oswald was on the sixth floor before the shots, and the words of an easily-manipulated fool to conclude his shirt fibers were found on the rifle, their conclusion of Oswald's guilt was well-founded, as the Dallas Police and FBI had compelling evidence he'd been in the sniper's nest and had recently fired a rifle. Right?

Wrong.

Chapter 4b: Sack of Lies

A search for a smoking gun in the bottom of an old paper sack

Most Definitely Not in the Bag

At left: a Dallas Times-Herald photo of the paper bag purportedly used by Oswald to smuggle his rifle into the depository, as it was removed from the depository on 11-22-63.

At right: a simulation of the photo at left using a piece of cardboard 8" wide. A sheet of white printer paper, 8 1/2 x 11, has been added for ease of comparison

At left: Warren Commission Exhibit CE 142, purported to be the bag in the photo at left above. The bag has most definitely changed proportions, if it's even the same bag.

Red lines in all photos are 12" wide. Blue lines in all photos are 8" wide.

Most Definitely Not in the Bag

Should one think the commission's failure to clear up how the shots were fired--and whether or not Oswald was even on the sixth floor at the time of the shooting--was an isolated failure, one should be reminded that, as the Dallas Police, the Secret Service, and the FBI before them, the Warren Commission was unable to figure out how Oswald (or anyone) got the assassination rifle into the building. The only two people to see Oswald with a bag on 11-22, Buell Wesley Frazier and his sister Linnie Mae Randle, after all, both testified that the bag they saw in his possession was far smaller than the bag put into evidence. The Warren Commission, not surprisingly, assumed they were mistaken.

But the problem with Frazier and his sister's failure to ID the bag, when compounded by other factors, elevates the case to what many believe is a reasonable doubt. Consider that Jack Dougherty, the only one to see Oswald come into the building, didn't even recall his carrying a small package, let alone a large package, when he came inside. Consider that no one else saw Oswald with a package in the building. Consider that the paper bag purportedly used by Oswald to transport the rifle to work was made from materials found within the school book depository, and was apparently, due to the nature of the tape's being all torn from one piece and its being automatically moistened as it was pulled from the machine, made on the premises. Consider that, as the paper from which the bag was made was purported to match the paper roll in use in the depository on 11-22, and the paper rolls used lasted but a

few days, the bag must have been made within a few days of the assassination. Consider that the only day Oswald went to Irving, where he reportedly picked up his rifle and sealed it in the bag, during the whole time the paper roll was in use, was the day before the assassination, 11-21. Consider that the company's shipper, Troy West, testified that Oswald had never worked at his shipping table, and that people didn't just come up and use his shipping paper and tape, and that, besides, he was always at his shipping table, even during lunch. Consider that nobody else saw Oswald take paper or tape from the table on 11-21, or at any other time. Consider that Buell Wesley Frazier, who gave Oswald a ride home on 11-21, didn't notice a large paper package in Oswald's possession, or any stiffness in Oswald's movements to suggest he was hiding such a package under his shirt. Consider as well that Marina Oswald and Ruth Paine, two grown women living in a tiny house, failed to notice such a stiffness in Oswald's behavior when he came home from work, and failed to see the bag in the house or in the garage, after he arrived. Consider that there is no photograph of the bag where it was purportedly found near the sniper's nest...

And now consider that the bag removed from the building, and as photographed by the Dallas Morning News, Dallas Times-Herald, and Fort Worth Star-Telegram, appears to be far wider than the bag placed into evidence by the FBI (as shown on the slide above).

We interrupt this discussion to bring you a quick response to some annoying criticism.

First, yes, of course I know that the comparison above is not 100% precise. But that does not mean it is automatically suspect, or would be prohibited from being introduced into a court of law. Hard Evidence, a book written in 1995 with the cooperation of the FBI Crime Lab, notes that "Sometimes a bank robber's height can be established simply by putting a height marker precisely where he stood then photographing it with the same camera and doing an overlay." This is the methodology attempted in the comparison above, which opens my comparison to four legitimate criticisms: 1) that the photos are improperly sized, with both the "bag" and model in my re-enactment photo under-sized, in comparison to the press photo; 2) that the photos are properly sized, but that the angle and/or distance of the bag from the model in my re-enactment photo was inaccurately re-created, causing the bag to appear far smaller in my re-enactment; 3) that my choice of camera and camera lens was incorrect, and that this caused the "bag" to appear far smaller in my re-enactment; and 4) that the bag in the press photos was much closer to the camera than the "bag" in the re-enactment photo, to the extent that the apparent relationship between camera-bag-person holding the bag was altered.

Now, initially, no one even attempted a criticism along the last two lines. While Marquette Political Science Professor and avowed single-assassin theorist John McAdams claimed my comparisons were of no value unless I used the exact same camera and lens used to create the press photos, he refused to back this up by explaining why we should believe certain cameras using the same type lens could distort the apparent size of specific sections of an image by 25% or so in comparison to other cameras. No, the dozen or so single-assassin theorists to initially criticize this comparison did so along the first two lines, essentially sharing the same argument. They all claimed the difference in size between the bag in the press photo and the piece of cardboard in my hand on the slide above came either as a result of my improperly sizing the two photos or the bag in the press photo's slightly leaning toward the camera.

Well, this could be tested...by taking the opposite approach and making the bag in the news photo and the piece of cardboard in the re-enactment photo the exact same width...

The Opposite Approach

Well, this looks pretty silly, doesn't it? While I'm 6'4" tall, I'm no giant. And Detective Montgomery was most certainly not a midget. This not only proves that the difference in bag width in my comparison did not come as a result of my simply mismatching the photos, but suggests that, in order for the piece of cardboard in the re-enactment photo to be the same width as the bag in the news photo, it would have to have been YARDS closer to the camera. This, then, also squelches the argument that the difference in width in my comparison came as a result of the bag's tilting a few inches to the camera in the news photo.

$10 \frac{3}{4}$, Not $8 \frac{1}{2}$

Brown paper bag assassin used to conceal rifle is carried from the building by homicide detective L. D. Montgomery. — Dallas Morning News photograph by Jack Beers.

At left: a photo by Jack Beers of the paper bag as it was removed from the book depository on 11-22-63.

At right: a photo of me holding some standard 8.5" printer paper, taped end to end, for comparison purposes.

(Horizontal lines and measurements added.)

Since we know the width of the printer paper in the photo at right—8.5 inches—we can estimate the width of the paper bag in the photo at left by matching the size of the heads and hands in the photos, and then measuring. It's 10.75 inches.

$10 \frac{3}{4}$, Not $8 \frac{1}{2}$

That the bag's leaning to the camera caused its apparent width to be distorted in the press photo was further undermined, moreover, by my re-enactment of a second photo, in which the apparent lean was more closely replicated. When I approximated the apparent width of the paper bag in this press photo,

moreover, it matched the apparent width of the bag in the first photo I'd re-enacted. The bag in the press photos appeared to be close to 11" wide, while the bag currently in the archives is less than 9.

Still not convinced? Convinced that this re-enactment is improperly sized and/or that the bag in this photo is leaning slightly to the camera, causing a distortion in its appearance?

Okay, you asked for it.

The Opposite Approach 2

At left: a photo taken by Jack Beers on 11-22-63.

At right: my re-enactment of the photo

(Identical black lines added.)

Since I am not a giant, it should be clear that the bag in the Beers photo was much wider than the 8 1/2 " wide piece of printer paper used in my re-enactment.

The Opposite Approach 2

When one makes the width of the bag in this second photo match the width of the 8 1/2 inch piece of paper in my re-enactment shot, it becomes startlingly clear this bag was not 8 1/2 inches wide as purported. I am certainly not a giant in comparison to Detective Montgomery, so it follows that the width of the bag in the photo with him was far wider than an 8 1/2 inch wide piece of paper. Or does it?

Thank You, Craig!

- 1: three photos taken as a camera grew closer to a yardstick
- 2: the three photos when sized to make the yardsticks match at the top.
- 3: identical blue lines show that the closer you get to the yardstick, the wider it appears in the middle.
- 4: these lines reveal further, that, in the first photo, the width was almost uniform.

In 2010, photographer Craig Lamson tried to counter my “bag” analysis by pointing me to a series of photos he’d taken of a yardstick, which showed that as one got closer to a yardstick, its proportions seemed to change. He had inadvertently proved my point!

Thank You, Craig!

In February, 2010, photographer Craig Lamson sent me a series of insulting emails, telling me the bag seen in the press photos was clearly the bag now in the archives, and that I couldn't photo-analyze my way out of a paper bag, etc. Not surprisingly, he claimed the different proportions of the bag in the press photos and my simulated bag were readily explained not by my inaccurately sizing the photos, as others had proposed, but by the photos having been taken from vastly different distances. He pointed out--not that it needed pointing--that as a camera gets closer to an object it distorts its appearance, both in relation to itself, with the part closest to the camera getting bigger and the part furthest from the camera smaller in comparison, and to other objects around it. While he refused to actually test the veracity of this explanation by recreating the press photos using an object the purported size of the paper bag in the archives, and a full-sized human being, Lamson did nevertheless send me links to photos he'd created demonstrating this distortion.

Well, this proved most surprising....seeing as the photos Lamson had taken to demonstrate this concept supported my position. The ruler in the photo he'd taken from across the room had nearly uniform proportions; its width varied little from its one inch mark to its twenty inch mark. As one section of the ruler was almost certainly inches closer to the camera than the other, this suggested that the lean of the ruler, and by extension, the lean of the bag in the press photos, a few inches one way or the other would have little effect on its apparent size.

As the camera grew closer to the ruler, however, the section closest to the camera grew wider in comparison to the rest of the ruler.

But not enough... Even with the camera at its closest to the ruler, the closest section of the ruler was nowhere near 25% or so wider than the parts of the ruler furthest from the camera.

This demonstrated beyond any doubt that the bag in the press photos leaning a bit this way or that would have little effect on its relative proportions in a photo taken from as far away as the press photos were taken, and would not distort the width of the bag in the press photos to near the amount necessary to explain the overly-wide appearance of the bag...

While Lamson and others might claim "But look at the monitor! The computer monitor shrinks about 20% in comparison to the ruler as you get closer to the ruler!" and think this explains the problem with the bag in the press photos, they ignore that this shrinkage is in height as well as width, and that the bag in the press photos appears to be the same height as the bag in the archives. They would also be ignoring that the closest of Lamson's photos showing such distortion was quite clearly taken from much closer to the ruler than the camera was to Montgomery in the first photo we studied, and that the ruler is almost certainly further from the monitor than the bag was from Montgomery.

I'm sorry. I just don't buy Lamson's sorry excuse. When re-enacting the first photo, above, the camera was approximately 14 feet away from the simulated bag, and I was at most a half a foot behind that. This means that the bag was about 1 and 1/28 its actual size in comparison to me. In order for the bag in the press photos to appear 25% wider than this bag, then, it means that the bag in the press photos would have to be about 1 and 8/28 its actual size in comparison to Det. Montgomery. (This, of course, assumes both that Montgomery was roughly my size, and that I matched our sizes on my comparison.) Since the bag held by Montgomery was at most 1 foot in front of him, moreover, it suggests (at least to me) that the camera would have to be around 3 and 1/2 feet from the bag before the bag could appear so distorted in comparison to Montgomery.

And that still wouldn't explain why only the width of the bag was distorted...

Thank You, Craig! 2

21mm lens

In late 2010, Craig Lamson struck again, and posted the image at left, purportedly proving that the 25% too wide appearance of the bag in the press photos could be explained by the camera being closer to the subject than in my re-enactment, or by the use of a different lens. While making the ruler in his photos 32% wider, his experiments also made it longer, and drastically changed the appearance of the background. He'd once again proved my point.

Below: Lamson's photos at left, re-sized to match up the head of his model.

Thank You, Craig! 2

But this didn't stop Lamson from unleashing another assault on yours truly in October 2010. In his usual friendly manner, he now accused me of being "even more ignorant than a blockhead" and "a moron of the first order." To accompany this rant, he posted some photos he'd taken of a woman holding a ruler on the Education Forum, our usual field of battle. These photos are depicted above. As shown in Lamson's original image, at upper left, he has indeed shown that photos taken from different subject to camera distances, and with different lenses, may show a radically different physical relationship between the object closest to the camera, and those beyond.

This was never in dispute. What Lamson missed, once again, was that I never questioned whether or not the extra-wide appearance of the bag when compared to my re-enactment photos could be explained by the camera's being closer to the bag in the press photos than in my re-enactment. I questioned whether such a distortion of the image would affect the appearance of the width of the bag, and *no other aspect of the photo*. In Lamson's experiments he used radically different subject to camera distances, and radically different lenses, and was able to make the ruler appear 32% wider in comparison to his model, more than the 25% wider appearance of the bag in the press photo when compared to my re-enactment. But he also made the ruler appear far longer in comparison to his model, and distorted the appearance of the photo so that it was obvious different lenses had been used.

He had thereby failed to demonstrate that the extra-wide appearance of the bag in the press photo could

be explained by the press photographers' using something other than the 50 mm lens used in my re-enactment photo, or by my being too far from the camera in the photo.

Thanks, But No Thanks

Pat and Jim are SHOCKED to find they have it wrong...again!

A 16" photo light is photographed from 10 feet away with a 50mm lens, per Pats instructions. The light is moved towards the camera 6 inches in the right hand photo. Notice it "grows" wider by 25% but does not get any taller. Pat loses again.

At left: another attempt by Craig Lamson to discredit my observation that the bag in the press photos is too wide to be the bag in the archives. Note that he has taken to attacking researcher Jim DiEugenio—who supports my analysis of the bag—as well as myself. Note also that he has stopped demonstrating photographic principles—such as the acknowledged fact that the proportions of an object change as it gets closer to the camera—and has taken to deliberate deception. He knows that the "bag" in my original re-enactment photo (the one shown on The Most Definitely Not in the Bag slide) faces the camera, and yet here, in order to create the illusion the bag would appear 25% wider if moved 6 inches closer to the camera, he has turned the photo light from the camera in the first photo and then turned it to face the camera in the second.

There was a time I thought he was sincere, and his photography "lessons" helpful, but that time is long past.

Thanks, But No Thanks

After reading my response to this last batch of photos, Lamson sent me another supportive email, in which he claimed: 1) that "my stupidity knows no bounds," 2) that I have once again "buried" my head up my "ass," 3) that I suffer from a "total lack of intellectual honesty," 4) that I am an "idiot," 5) that I am a "major league dumbass," and 6) that I am "stupid beyond belief." At the heart of his complaint is his strange belief that I think his use of different lenses in the photos above made the ruler actually get wider, and not just appear wider in comparison to his model, and that one can not measure something in a photo without knowing everything about the photo--the lens used, the camera to subject distance, etc--*even to make an estimate on how things appear*. To his thinking, it would be unscientific to claim that Shaquille O'Neill appears to be six or more inches taller than Charles Barkley simply because one saw a photo of the two of them standing side by side, because how do we know they were really side by side, etc. Fine. If that's what being scientific means, let him be scientific.

Meanwhile, I'll be right. The bag in the press photos is wider than the bag in the archives. If it was remotely conceivable that there was a logical explanation for the bag's appearing so much wider than the bag in the archives, after all, wouldn't some "expert" as full of piss and vinegar as Lamson have

found it, and rubbed my face in it? I would think so. But no, instead of posting photos of people holding 8 1/2" wide bags that appear to be as wide as the bag in the press photos he has taken to posting 1) trick photos of inanimate objects taken from inches away, in which the rulers on each side of the object give different measurements (One of the rulers was slightly further from the camera than the other); 2) trick photos of photo lights in which the light in one photo appears to be much more narrow than the other even though they are the same light (It also appeared to be much more elliptical than the other, which proves the illusion was created in part by turning the light sharply from the camera...He'd also moved it 6 inches closer to the camera); and 3) photos of myself in which my face gets bigger in comparison to another picture of my face when the first one is moved closer to the camera and shot with a different lens (It gets both taller and wider; this once again supports my position that it would not simply get wider).

But that's just my layman's analysis, and my layman's response to his "expert" analysis.

Martin Lends a Hand

In November 2010, Martin Hinrichs, a 3D animator intrigued by my analysis of the paper bag, performed an analysis of his own. He assumed the bag was indeed 8 1/2 inches wide, as presented in Warren Commission Exhibit 142 below, and then superimposed a 7 1/2 inch DVD case and hand onto the top end of the bag in the press photos. The result, as shown at left, was comical, and confirmed my analysis that the bag removed from the building in the press photos was far wider than the bag placed into evidence.

It occurred to me, however, that those claiming the overly wide appearance of the bag was caused by its leaning toward the camera in the press photos would continue to do so. And so I added a second hand to the bag by Det. Montgomery's hand, and made it proportionate to the width of the bag at that point. It was still far too large... The bag removed from the building was much wider than the 8 1/2 inch width of the bag in the archives. Believe it.

Martin Lends a Hand

In November 2010, however, Martin Hinrichs, a 3D animator, entered the fray, and came down on my side of the dispute. He performed his own analysis of the bag, and confirmed that the bag in the press photos was wider than the 8 1/2 inch wide bag in the FBI photos. He did this by inserting objects he knew to be 7 1/2 inches or 19 cm in length--a DVD case and his hand--onto the bag in a second press photo taken by William Allen, under the presumption the bag was 8 1/2 inches wide. These proved to be grossly disproportionate in comparison to Montgomery's body.

Believe It or Not

Above: the Allen photo set between two of Craig Lamson's "proof of concept" photos.

In December 2010, Craig Lamson created a series of photos of an object the size and shape of the bag in the archives, which he claimed matched the proportions of the bag in the Allen photo. The specs he provided for these photos, however, raised many questions. (A side-view of his photo shoot, as reconstructed by Martin Hinrichs from Lamson's specs, is at left.) More troublesome for Lamson still was my realization that the man walking at the far right of the photo was, according to Lamson's analysis, but 9 feet from Allen's camera. (He admits this in the image above.) This places the man but a foot or so behind the newsman clearly yards in front of him. Lamson was wrong. Believe it or not.

Believe It or Not

It wasn't but a few days after Martin came down on my side, however, that Craig Lamson returned in a fury. He suddenly claimed he'd created a "proof of concept" photo in which his 8.5 inch simulated bag matched precisely the proportions of the bag in the Allen photo. He posted this photo on several different forums, along with the claim he'd "buried" mine and Martin's claims the bag in the press photos was wider than the bag in the archives.

Well, this, on the surface, was bizarre. You see, he'd taken his photo in a hallway with a stick figure, and a photo of my face on top. Although the "bags" matched, there was no indication the photos actually matched, as no human figures were shown in his photo. This, then led him to perform another re-enactment, in which he stood in the photo. This second photo, to some, appeared convincing. Some viewing our feud from a distance, including single-assassin theorist ringleader John McAdams, moreover, jumped in and declared Craig the winner. (Craig's "proof of concept" photos are shown on the slide above.)

But they were guilty of a rush to judgment.

If they'd really have thought about Craig's "proof of concept" photo, they'd have realized that it actually proved I was correct, and not Craig.

You see, in Craig's analysis, the bag in the Allen photo did not appear to be 8.5 inches wide when compared to Montgomery because, and only because, it was much closer to the camera than Montgomery. It appeared wider but not longer than the 8.5 inch-wide bag in the archives, moreover, because it was leaning toward the camera. In the specs provided by Craig, to be precise, Allen's camera was 5' 8" from Montgomery, and the bag leaned forward 25 degrees, starting out 8 inches from Montgomery at his waste and ending up 20 inches from him at the level of his eyes.

Well, I knew this was nonsense. It is readily apparent to anyone that the bag in the Allen photo is fairly vertical and not leaning 25 degrees forward to the camera. It is also apparent that the top of the bag, which, in Craig's analysis is only at the level of Montgomery's hat, is actually well above his hat. It is also quite clear that the top of the bag in the Allen photo is far more than the 44 inches away from Allen that Craig was now claiming. 44 inches is, after all, a mere lean and a reach away. When you look at the Allen photo do you believe the photographer could lean out and touch the bag? I don't. Not remotely.

When one looks at the other Allen photo (the one shown on the Most Definitely Not in the Bag slide above) this is even more clear. In this photo, taken from almost certainly the same location, and from the same distance from Montgomery, the bag is folded forward. This means it was, in Lamson's strange analysis, less than 44 inches from the camera, approximately three feet. Well, there is a man on the left side of this photo looking at the bag. This man is Lt. J.C. Day of the Dallas Police. He certainly appears to be in front of the bag, that is, between the bag and the camera. Scroll back up and look at this gentleman. Ask yourself...could William Allen, the man taking this photograph, reach out with his left hand and slap Lt. Day in the face? If your answer is no, then it's clear you agree that Lamson's recreation of the Allen photo is nonsense.

(For those still not so sure, Martin Hinrichs created a schematic view of Lamson's "proof of concept" photo shoot. It is presented on the slide above.)

Anyhow, I wasn't sure how to prove this. Craig was claiming that what seemed obvious was not, and that he had "proved" the bag was actually taken from less than 6 feet from Montgomery, and that the bag in the photo was actually the same size as the bag in the archives.

It then hit me that, IF the bag appeared to be wider than it was due to its proximity to the camera, as Craig had claimed, and that this had nothing to do with the lens beyond that the 24mm lens Craig claimed was used would allow Allen to take a wide angle shot from so close to Montgomery, that Montgomery would then also appear distorted in size when compared to objects in the background of the photo.

I looked back at the photo. To Montgomery's left is his partner, Marvin Johnson. He is clearly three feet or so further from the camera than Montgomery. Far to Johnson's left, moreover, there is a man coming down the steps with a cigarette in his mouth. This man, to my estimation, would have to be 9 feet or so away from Montgomery. And yet he is approximately 2/3 his size. Well, if Montgomery is 6 feet from the camera, and this man 15 (or even 13 if one is to grant that he is not directly behind Montgomery, but a bit forward and closer to the camera) then he SHOULD appear to be less than half Montgomery's size, and not 2/3 his size. For the man to appear 2/3 Montgomery's size, moreover, he would have to be about 9 feet from the camera, and not 13.

I pointed this out to Lamson, half-expecting him to claim I knew nothing of perspective. But no, to no doubt the utter horror of those thinking he'd proved me wrong, he AGREED with me, and claimed that the man REALLY IS only 9 feet from the camera.

To be precise, on 12-16-10, on the Education Forum, to my assertion the smoker would have to be about 9 feet from the camera for Lamson's claims to have merit, he responded:

Actually, for a 6 foot person to be shown 1/3 less tall than a 6 foot person 6 feet from the camera, he WOULD be 9 feet away from the camera. That's HOW perspective works and it's exactly what we see in Allen. if we are talking about the guy smoking a cig. 6 feet from the camera is PERFECT fit for this guy. Amazing how it ALL fits, except for Pat Speers silly theory. (btw, it plots perfectly at 9 feet! LOL!) (Lamson's image claiming as much is on the slide above).

Yes, this would be laughable, if it was not so positively bizarre. I mean, look at the photo yourself.

There is a newsman at the right edge of the photo who is clearly further from the camera than Montgomery, but closer than Johnson. This makes him, quite obviously, in Lamson's analysis, at least 8 feet from the camera, and a mere foot in front of the smoker behind him. Well, the newsman's right shoulder stretches almost a foot in the smoker's direction. If Lamson is to be believed, these two men are about to collide.

HOGWASH! Look down at the smoker's feet. They are much higher on the sidewalk than where the newsman's feet would have to be, should they be shown. If they were but a foot apart, as Lamson claims, they would be near the same level.

The Shadow Knows

Above: the Allen photo as presented by Craig Lamson.

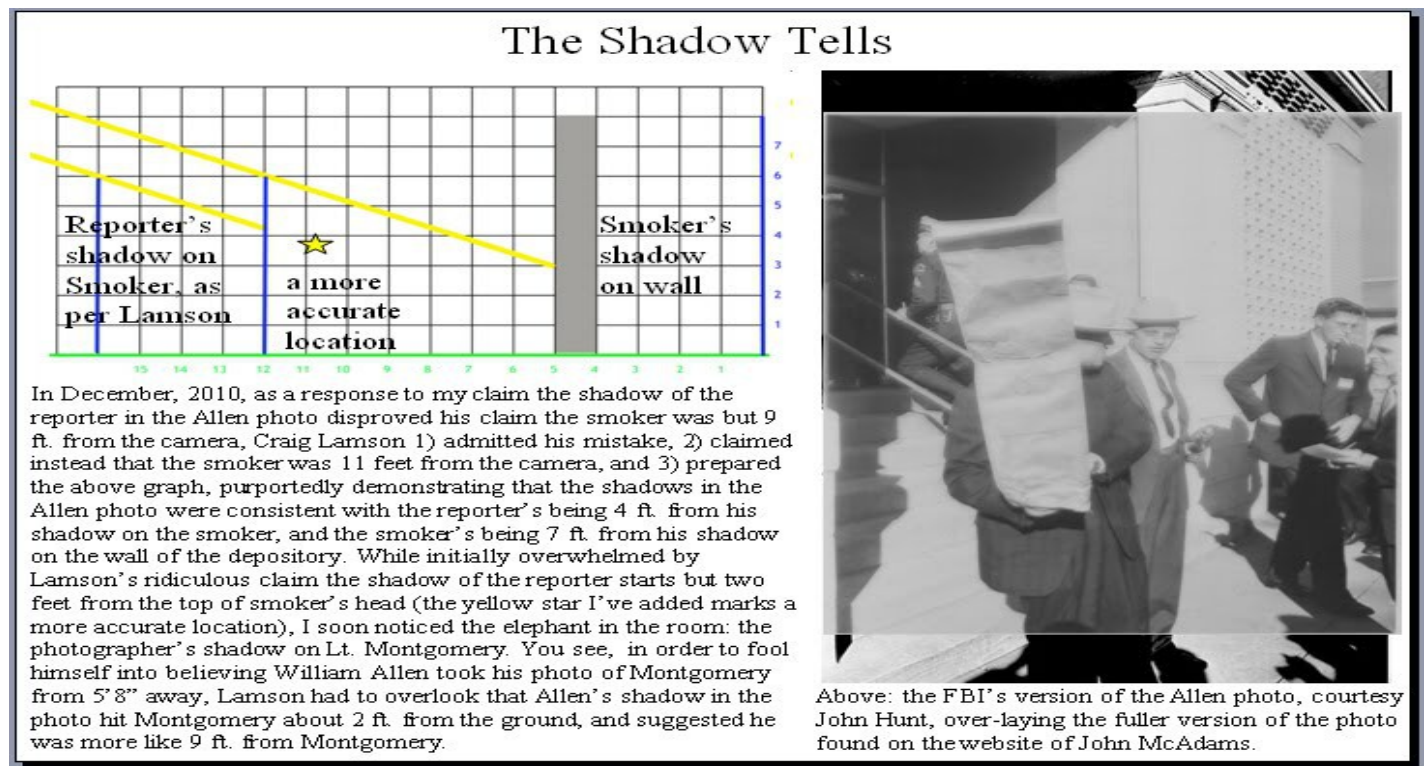

Above: the Allen photo on John McAdams' webpage.

The Shadow KnowsT

AND MORE HOGWASH! While the Allen photo presented by Lamson at this point of our debate was mysteriously and conveniently dark, the shadow of the newsman's profile can be seen on the stomach of the smoker in better and lighter versions of the photo (such as the one found on the website of single-assassin theorist guru and key Lamson supporter, John McAdams). The Allen photo was presumably taken around 3:00 PM in the northern hemisphere in late November. (Although Montgomery claimed he left the depository around 2:30, a press photo discovered by John Hunt in the FBI files shows Montgomery's watch, and it reads 3:00.) In any event, the sun was undoubtedly getting low in the sky. There is no way the newsman's shadow would be that low on the smoker's body should he be but a foot or two away. This is further and perhaps better demonstrated, should one still have doubts, by the appearance of the smoker's shadow on the front wall of the school book depository

building several yards away. If the shadow of the newsmen's head should appear on the stomach of the smoking man a foot or two away, as claimed by Lamson, it makes no sense whatsoever that the shadow of the smoking man's head should appear at about the same level on a wall, several yards behind him. The sun is, after all, in but one place at a time.

Lamson's assertion the smoker was nine feet from the camera is wrong, and the two things he most loves to write about--perspective and shadow--PROVE IT BEYOND ANY DOUBT.

The Shadow Tells

Get ready for a surprise. In what was an unprecedented about-face, Lamson actually saw the error of his claim the smoker was 9 feet from Allen's camera, and admitted his mistake. He then posted an overhead view of the scene in which he now claimed the smoker was 11 feet from the camera.

When I pointed out that I thought this still placed the smoker too close to the reporter to explain the shadow of the reporter on the smoker's belly, and asked Lamson to post a side-view of the two, showing their respective shadows, Lamson posted the image on the slide above. Well, this was a bit baffling. While, on the overhead view, he'd placed the smoker 3 feet from the reporter, here, he not only placed him 4 feet from the reporter, he had the reporter's shadow landing on the smoker's chest instead of his belly. (Lamson explained this by claiming the dot on his overhead view represented the part of the smoker closest to the reporter and the camera--his right toe--and that the extra 12 inches reflected the distance to his torso. He failed to acknowledge that this meant the smoker was really, for comparison purposes, 12 feet from the camera, and not 11, and that this would make the smoker over 7 ft. tall.)

This led me to perform my own analysis of the shadow on the smoker. Using what Lamson and I both now accepted as the correct angle of the sun at 3:00 PM on 11-22-63--24 degrees below the

horizontal--and actually studying the smoker to see where the shadow lay on his body, I was able to approximate the smoker as being over 5 ft. from the reporter, not the 4 ft. purported by Lamson in his clearly inaccurate analysis. This, of course, suggested as well that the smoker was yet another foot further from Allen's camera than acknowledged by Lamson. (One quick analysis at this point indicated that, should Allen have really been but 6 feet from Montgomery while taking the photo, as Lamson insisted must be true for the bag in the photo to be the size of the bag in the archives, that the smoker in the background of the photo would have to be nearly 8 ft. tall.)

It was then that I thought of the obvious. By the angle of the sun, Allen's shadow should be readily apparent on Montgomery. If Lamson was correct, it would be apparent on Montgomery's belly, around the same level as the reporter's shadow on the smoker. If it was any lower, well, then, Lamson was wrong. If it was far lower, well, then, Lamson was not only wrong, but we had absolute proof the photo was NOT taken from particularly close to Montgomery, and that the bag in the Allen photo's lack of similarity to the bag in the archives had nothing to do with the camera to subject distance of the photo, and can be taken as an indication that the bag had been altered, or switched altogether.

Well, no surprise, when I looked at the lightest version of the photo I could find (the FBI copy scanned and provided by John Hunt), it was clear Allen's shadow hit Montgomery around the level of his kneecap, approximately two feet lower than where it needed to be to support Lamson's analysis. While there was a certain amount of fudge in this analysis, seeing as neither Lamson nor myself knew Allen's exact height, his exact posture when he took his photo, and the exact distance to Montgomery's knee, the distance between where Lamson needed the shadow to be and where it actually was was more than sufficient to kill his argument dead, and demonstrate to all those with an interest that the extra-wide appearance of the bag in the press photos has no simple explanation. Allen's shadow, to be clear, showed the distance between himself and Montgomery to be about 9 feet, should they both be about 6 feet tall. This is more than 50% more than the 5 feet 8 inches pushed by Lamson as the only explanation for the bag's inconsistent appearance.

While Lamson subsequently argued that he had long noted the shadow on Montgomery's "pant leg" and had found it not the least bit of trouble, seeing as for all we knew Allen was a midget, etc, he'd have been much better off pulling back, IMO. For Allen to have been but 5 feet 8 inches from Montgomery and have his shadow barely reach the level of Montgomery's knee, as should seem obvious, he would have to have been about 5 feet tall at the moment of the shot. The average White American male was around 5 feet 9 inches tall in 1963. Less than 1 percent were less than five feet tall. Even if one should grant that Allen's shadow was higher than 24 inches up Montgomery's leg, or that Allen was bending over a bit, and that he could have been as tall as 5' 4", moreover, one still ends up in desperation land. You see, only 2 percent or so of white American males measured 5'4" or less in 1963.

Thank You, Robin

In 2011, not long after Craig Lamson claimed that the shadow of William Allen could not be used to approximate his distance from L.D. Montgomery in the "paper bag" photo, as we didn't know Allen's height, researcher Robin Unger posted a few Dealey Plaza images on an online Forum, in which Allen had been identified .

Allen, as one might have guessed, appeared to be of average height.

When one studies the Skaggs slide of Allen (above), Lamson's argument runs further aground. This slide was the 15th of Jay Skaggs's 20 slides, with the 13th slide being taken just before 1:00 PM, and the 20th slide being taken around 2:00 PM. One can approximate, then, that this slide was taken between 1:00 and 1:30 PM on 11-22-63. The sun in Dallas during this time period was about 35 degrees above the horizon. Assuming the men on the slide are average height, the man at Allen's right appears to be about 8 feet away from him. And yet Allen's shadow stretches past his foot. This supports that William Allen was roughly 6 feet tall, and not the much-smaller man proposed by Lamson.

Thank You, Robin

Of course, it wasn't long after Lamson made his claims about William Allen being, for all we knew, a midget, that someone--in this instance JFK assassination photo archivist Robin Unger--posted a few photos of Allen online. These revealed him to be...to no one's real surprise...average height.

At this point, I stopped writing about the bag. While battling with Lamson had forced me to refine and improve my arguments regarding the paper bag, and make it more than the usual "Well, this is what it looks like" kind of argument, his abusive and insulting behavior had become a total distraction, as I spent as much time wondering if he was just screwing with me as I did actually researching the case...

It was with some hesitation then that I finally decided, in 2012, to return to this topic and add another slide to this chapter.

Here it is...

Proof-of-Concept

Although Lamson has proposed that the paper bag in the Allen photo was tilted sharply to the camera, creating the illusion it was wider at the top than at the bottom, the folds on the bag prove he was mistaken. As demonstrated on Martin Hinrich's schematic, at above left, the closest sections of the bag, if tilted to the camera, would appear to be taller, as well as wider, than the sections further away. This is demonstrated again on the photo of the train track (above), in which the railroad ties appear to get closer together as the railroad lines narrow. And yet the segment of the bag closest to the bottom in the Allen photo at far left is both taller than the other segments and far taller than the corresponding segment in the FBI evidence photo at near left, in which four equally sized segments are depicted. The bags are clearly of different proportions. And no amount of Lamson smoke can disguise it.

Proof-of-Concept

Now I honestly think this slide proves my point beyond all discussion, etc. The folds on the bag in the archives are evenly spaced. It has been folded into four sections of almost identical size. The three unfolded sections of the bag in the Allen photo, however, represent two sections of almost identical size, and a much longer section at the bottom. If the bag was tilted to the camera as per Lamson, however, this bottom section should appear to be MUCH shorter than these sections.

The bag photographed outside the depository on 11-22-63 is of different proportions than the bag later photographed in the archives, and is quite possibly a different bag entirely.

I mean, really, it's not as if there's just one photo of the bag, which *may* show a bag wider than the bag in the archives.

Paper Thin?

The 5 photos from left to right below were taken just seconds apart. Numbers 1 and 3 have been credited to Jack Beers of the Dallas Morning News. Numbers 2 and 5 have been credited to William Allen of the Dallas Times-Herald. Number 4 was found in the FBI's files by researcher John Hunt. But the photographer is unknown.

The photo at left has been credited to George Smith; Ft. Worth Star-Telegram

The blow-up at right is from photo number 4. It shows the time to be 3:00.

Paper Thin?

Nope, there are actually six such photos...that I know of. In none of these photos does the bag appear to be 8 1/2 inches wide--the width of a standard piece of typing paper...the width of the bag in the archives.

When one looks at these photos as a group, moreover, one finds yet another reason to reject Lamson's claim the bag's appearance was distorted by a 25 degree forward lean in the Allen photo.

The first photo taken would appear to be one taken by Jack Beers, with the bag tilted slightly forward at the top but with no shadow on the front of the bag. The next photo would then be the Allen photo, with the bag stretched upward over Montgomery's head, but a slight shadow under the top fold of the bag. The next photo would then be a photo brought to my attention by Richard Gilbride. This photo appeared in an early book on the assassination, *Destiny in Dallas*, and is credited to Jack Beers. It is similar to the Allen photo, but it shows more shadow along this top fold, and on the bag in general. The next photo was brought to my attention by John Hunt, who found it in the FBI files. It shows the top of the bag still above Montgomery's head but in full crumple, with the shadow of the top of the bag stretching down the face of the bag to a point below the bottom fold. The next photo then would be a second photo taken by Allen (which I mistakenly long claimed was by Beers). This shows the bag fully folded over, but the shadow of the folded over part of the bag higher than the first fold on the face.

This then leaves us a final photo, one taken by George Smith of the Ft. Worth Star-Telegram. In this photo, Det. Montgomery is holding a folded-over bag with a strong forward tilt. Lamson presented this photo several times in our online debates as evidence supporting his claim the bag in the Allen photo was also tilted forward. What he missed, however, is what he should have noticed. The shadow on the face of the bag in this photo stretches much further down the bag than it does in the previous two

photos. Well, this suggests in turn that the sharply forward lean of the bag demonstrated in this photo only came to be *after* the bag crumpled forward.

If you follow this line of thinking, well, then, this supports what we suspected all along--that the bag in the Allen photo is not leaning forward to any large degree...

If someone out there, however, still believes Lamson is correct and that the bags in the press and FBI photos were the same width then by all means go where he refuses to dwell and re-create the Allen photo with stand-ins for Montgomery, Johnson, the newsman, and the smoker, and an 8 1/2 inch wide, 38 inch long piece of paper or cardboard as a stand-in for the bag. Please prove myself, Martin Hinrichs, Jim DiEugenio, Richard Gilbride, and all the other researchers and writers supporting my analysis wrong.

As I'm incredibly tired of men such as Lamson and his fellow defender of all things "official" John McAdams ignoring the bulk of my research and referring to me as a "crackpot" photo analyst, I'd be glad to remove these paper bag comparisons from my website.

I mean, really, it's not as if the problem with the width is the only evidence the bags are not the same...

The Tell-Tale Tape

You see, there's also the FBI photo of the bag before they coated it with silver nitrate (a chemical used to bring out fingerprints, which forever stains paper). This photograph is Exhibit 14 in Warren Commission Document CD 1, the FBI's 12-9-63 Summary Report on the assassination. Although the proportions of the bag in this photograph have been distorted by the photographer's taking this picture while the bag was laying flat on the floor before him, it is still suggestive that the bag in evidence is not the bag pulled from the building. The bag in the photograph has numerous pieces of paper tape along its right side. NO paper tape is visible anywhere on the front side of the bag in the news photos. There is also a piece of tape in the middle of the open end of the bag. No such piece of tape is visible in the

news photos. The press photos do, on the other hand, show the paper by the open end of the bag to be badly crinkled. No such crinkling is apparent on the bag in the FBI exhibit. The bags in the photos, in fact, bear little resemblance to one another.

Unless the side of the bag seen in Exhibit 14 is the opposite side of the bag seen in the news photos, then, we have conclusive evidence the bags are not the same.

The Dark Side of The Bag

Well, scratch that. Exhibit 4 in the FBI's report of 12-9-63 is a photo of the bag when split. It shows both sides of the bag. One side which matches the side of the bag shown in Exhibit 14 (which most definitely does not match the side of the bag shown in the press photos) and one side which, although absent tape a la the bag in the press photos, also fails to match this bag. The proportions and characteristics are clearly not the same.

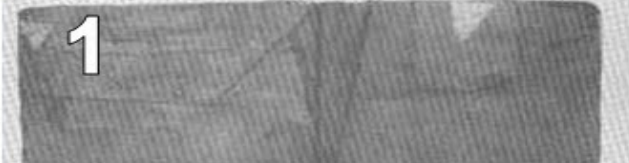

Well, this leaves us with the possible argument that the bags really share proportions and characteristics but that I have either pulled some sort of computer trick to alter the appearance of the bag in the news photos.

If you believe this, then, by all means, step up to the plate and show us where I'm wrong.

Chapter 4c: Shining a Light on Day

Holding a mirror up to a house of mirrors

What's Goin' On?

1. The closed end of the bag in Evidence Photo 4 of the FBI's 12-9-63 report to President Johnson. It has been split open. No writing is visible.

2. Warren Commission Exhibit 632. This purports to show Oswald's right palm print on the bag. While unacknowledged, it also shows what appears to be the initials of the Dallas Police Dept's Robert Lee Studebaker, L.D. Montgomery, and Marvin Johnson, who were reported to have found the bag.

3. Warren Commission Exhibit 626. The white square at the closed end is purportedly adjacent to the palm print.

4. And yet the area to the side of the tape on the closed end of the bag outside the building shows no sign of the initials visible in Exhibit 632.

5. And yet the area below the tape on the bag outside the building shows no sign of the initials visible in Exhibit 632.

SO... WHERE ARE THESE INITIALS???
WHAT'S GOIN' ON?

What's Goin' On?

No, scratch that, too. Before anyone convinced I am mistaken about the bag in the press photos' not looking like the one in the archives spends one precious second trying to prove me wrong, they should help straighten out some of the basic facts about the bag. Basic facts like...the actual location of the initials on the bag visible in Warren Commission Exhibit 632.

You see, I've studied both the bag in the press photos and the bag in the archives photos, and I can't figure out where these initials could be on the bag. Although the palm print depicted in the exhibit was purportedly near the closed end of the bag, none of the press photos showing the closed end of the bag, and none of the archives photos showing the closed end of the bag, show these initials.

My inability to figure out where these initials are on the bag, or even where the section of bag depicted in Exhibit 632 is on the bag, makes me suspect that the palm print depicted in Exhibit 632 was not on either of these bags.

Let's see how this can be...

Perhaps the bag seen in the press photos was a bag found in the school book depository...that couldn't be linked to Oswald.

Perhaps a second piece of paper was found, which could be linked to Oswald...perhaps this was a piece

of paper pulled from one of the orders he'd pulled on 11-22. Or perhaps it was a piece of paper Oswald touched at the police station.

Perhaps then Exhibit 632 is a close-up shot of this second piece of paper, and not of a bag.

If so, well, then the bag currently in the archives was a bag created after the shooting, most probably from paper removed from the building on 11-22. Such a bag would not only be smaller than the bag shown Buell Frazier on 11-22, and therefore easier to pass off as the bag Oswald brought to work, but it would match the characteristics of the paper used in the depository, and thereby make its use by anyone other than Oswald seem unlikely.

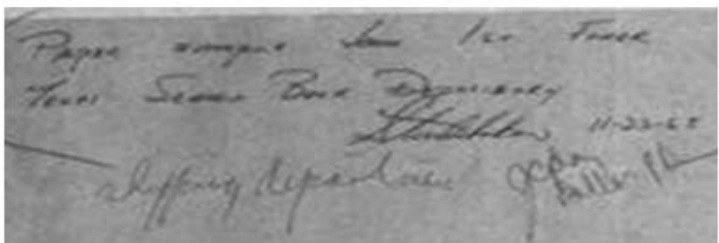

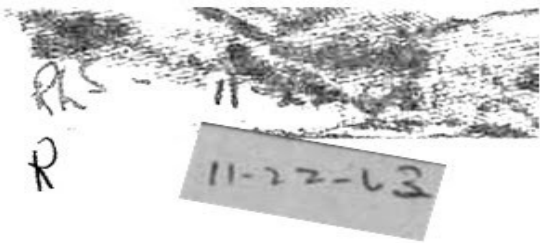

Or not. While I could be making a mountain out of a molehill, there's definitely some dirt here...

I mean, just look at this mess...

According to the report of the Dallas Detective who found the bag, L.D. Montgomery, the bag was initialed by Detectives Robert Studebaker, Marvin Johnson, and himself upon its discovery in the sniper's nest (24H314). All three of these men testified before the Warren Commission in Dallas on 4-6-64. So why weren't they shown the bag, and asked to verify their initials? Was it because the bag they'd signed had been switched with another bag?

And that their initials had been forged onto a different piece of paper entirely?

The Tell-Tale R?

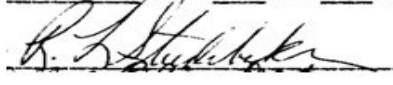

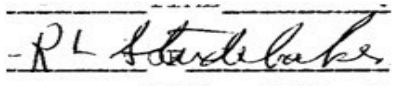

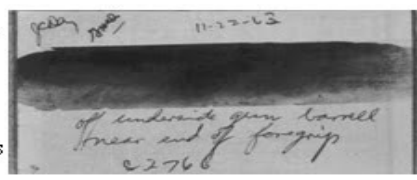

When one looks through the reports and exhibits signed by Robert Studebaker, in an effort to determine if the initials RLS on Exhibit 632 (as seen at top left) are his, one is in for a big surprise. The initials bear no resemblance to Studebaker's writing on any other exhibit (as shown in Exhibit 677, at above right).

09-04-31

When one looks through the Dallas JFK archives, however, one can find the memo signed by Studebaker at left. This has a letter "R" very similar to the "R" in Exhibit 632. The problem is that this memo was not written by Studebaker, but by his boss, Lt. Day (as shown by a comparison between Studebaker's name in the memo, and his signature at the bottom of the memo, at right.) When one looks through other examples of Day's writing, moreover, one can see that the date in Exhibit 637, at right, is nearly identical to the date in Exhibit 632. Look at the "R" and "11-22-63" comparisons at above left. Is the writing on 632 Day's?

The Tell-Tale R?

It's certainly possible. When I looked at samples of Robert Studebaker's writing among the Warren Commission's exhibits, I was unable to find any samples in which his "R's" looked anything like the "R" in the initials apparent on Exhibit 632. I then started looking through the reports and memos signed by Studebaker in the Dallas JFK archives. This took awhile. In Box 9 Folder 4 File 31, however, I discovered one of the earliest memos on the evidence pulled from the school book depository. This was

signed by Studebaker. It had an "R" quite similar to the "R" in Exhibit 632.

This "R" was not in Studebaker's signature, however, but in the body of the memo which was written by Studebaker's boss, Lt. J.C. Day.

I then looked through all the memos, reports, and evidence photos signed by Day. And hit what might just be a bullseye. The "11-22-63" on Exhibit 637 bears a striking resemblance to the "11-22-63" on Exhibit 632. Now, admittedly, this is not proof Day forged the initials of those actually finding the bag on a second bag made from paper removed from the school book depository, in order to better implicate Oswald. If the date on the bag was written by Day, it could mean only that Studebaker had failed to write the date on the bag upon its discovery in the sniper's nest, and that Day had placed the date by Studebaker's initials later that night.

Perhaps then the bag's not being shown to Montgomery, Johnson, and Studebaker was just an oversight.

Perhaps there's an innocent explanation.

Perhaps the Warren Commission counsel tasked with taking their testimony had simply left the bag behind in Washington...

Shining a Light on Day

Although no writing is visible on the paper bag in the photo above (evidence photo 14 of the FBI's 12-9-63 report, taken on 11-23-63, BEFORE the bag was doused with silver nitrate), writing is apparent in a photo of the bag taken by the Dallas Police on 11-26-63, after the bag was doused (as shown in the blow-up from the photo below). Is photo 14 just not clear enough to show the 39 words Lt. Day claimed he'd written on the bag on 11-22-63? Or were his words added later? .

Shining a Light on Day

Perhaps. The bag was indeed shown to the FBI's fingerprint analyst, Sebastian Latona, during his 4-2-64 testimony in Washington.

And it reappeared on 4-22-64, in Washington, during the testimony of Dallas Crime Lab Chief Lt. J.C. Day.

Mr. BELIN. Where was the sack found with relation to the pipes and that box?

Mr. DAY. Between the sack and the south wall, which would be the wall at the top of the picture as shown here.

Mr. BELIN. You mean between--you said the sack.

Mr. DAY. I mean the pipe. The sack was between the pipe and the wall at the top of the picture.

Mr. BELIN. That wall at the top of the picture would be the east wall, would it not?

Mr. DAY. Yes, sir; laying parallel to the south wall.

Mr. BELIN. Did the sack--was it folded over in any way or just lying flat, if you remember?

Mr. DAY. It was folded over with the fold next to the pipe, to the best of my knowledge.

(Note: this suggests that Day was not present when the bag or sack was discovered.)

Mr. BELIN. I will now hand you what has been marked as Commission Exhibit 626 and ask you to state if you know what this is, and also appears to be marked as Commission Exhibit 142.

Mr. DAY. This is the sack found on the sixth floor in the southeast corner of the building on November 22, 1963.

Mr. BELIN. Do you have any identification on that to so indicate?

Mr. DAY. It has my name on it, and it also has other writing that I put on there for the information of the FBI.

Mr. BELIN. Could you read what you wrote on there?

Mr. DAY. "Found next to the sixth floor window gun fired from. May have been used to carry gun. Lieutenant J. C. Day."

Mr. BELIN. When did you write that?

Mr. DAY. I wrote that at the time the sack was found before it left our possession.

(Note: by writing "May have been used to carry gun", Day confirms that he did not write this when he first arrived at the crime scene, as believed by many single-assassin theorists. It would have made no sense for him to write this, after all, unless he had reason to believe the gun was not carried in and out of the building in a gun case. It follows, then, that he wrote this sometime after the discovery of the rifle, which came about ten minutes or so after he'd arrived at the sniper's nest. This leads to more confusion. Both Day and his assistant Studebaker testified that they photographed the shells in the sniper's nest before photographing the gun. The bag was within a foot or so of Day and/or Studebaker's position when they photographed these shells. So how could they not have noticed the bag, and photographed it in place? Perhaps, then, Montgomery and Johnson showed Studebaker the bag while Day was photographing the shells from the other side. If so, then perhaps they all signed the bag in the building and Day signed it later. It also seems possible, since the bag was reportedly folded in half, and possibly in half again, that no one paid it much attention until after Day and Studebaker were pulled away to photograph the rifle. After taking these pictures, Day walked the rifle over to the crime lab. This would leave the inexperienced Studebaker alone to deal with the sniper's nest and the bag. This might explain why the bag wasn't photographed in place. And this might explain why Day would later claim he signed the bag before it left "our possession" --as opposed to "my possession". In either case, the question remains as to when Day actually signed the bag, and why the Commission never showed the bag to Montgomery, Johnson, or Studebaker.)

Mr. BELIN. All right, anything else that you wrote on there?

Mr. DAY. When the sack was released on November 22 to the FBI about 11:45 p.m., I put further information to the FBI reading as follows: "FBI: Has been dusted with metallic magnetic powder on outside only. Inside has not been processed. Lieut J. C. Day."

Well, why is there no mention of the other men's initials on this sack?

Now consider the next bit of Day's testimony...

Mr. BELIN. Did you find anything, any print of any kind, in connection with the processing of this?

Mr. DAY. No legible prints were found with the powder, no.

Mr. BELIN. Do you know whether any legible prints were found by any other means or any other place?

Mr. DAY. There is a legible print on it now. They were on there when it was returned to me from the FBI on November 24.

Mr. BELIN. Do you know by what means they found these?

Mr. DAY. It is apparently silver nitrate. It could be another compound they have used. The sack had an orange color indicating it was silver nitrate.

Mr. BELIN. You mean the sack when it came back from the FBI had a----

Mr. DAY. Orange color. It is another method of processing paper for fingerprints.

Mr. BELIN. Was there anything inside the bag, if you know, when you found it?

Mr. DAY. I did not open the bag. I did not look inside of the bag at all.

Mr. BELIN. What did you do with the bag after you found it and you put this writing on after you dusted it?

Mr. DAY. I released it to the FBI agent.

Mr. BELIN. Did you take it down to the station with you?

Mr. DAY. I didn't take it with me. I left it with the men when I left. I left Detectives Hicks and Studebaker to bring this in with them when they brought other equipment in.

Mr. BELIN. By this you are referring to the bag itself?

Mr. DAY. Yes, sir.

Well, hold on there. Let's refresh. According to the reports of the Dallas Police (24H260) and the officers involved (24H314, 24H307) the paper bag by the sniper's nest was both discovered and brought in to the Dallas Police Crime Lab by Detectives L.D. Montgomery and Marvin Johnson. So why does Day, who has already IDed his initials on the bag, and failed to mention that they initialed it before him, fail to mention that they brought the bag into the Crime Lab, and instead mention Hicks and Studebaker? Is he really that forgetful? Or is he trying to hide something?

In his 3:45 PM April 6 testimony, in which he discussed picking up and dusting the bag, Detective Studebaker never mentioned Detectives Johnson and Montgomery. He also failed to mention Lt. Day in connection with the bag. (7H137-149) This echoes a 3-11-64 FBI report on an interview with Studebaker, in which he similarly took full credit for the "discovery" of the bag. (FBI file 105-82555, sec 142, p9) In his 4:00 PM April 6 testimony, just after Studebaker, moreover, Detective Johnson mentioned Montgomery's finding the bag and the bag's being dusted for fingerprints at the scene, but failed to mention who dusted the bag. (7H100-105) In his 4:50 PM April 6 testimony, Detective Montgomery mentioned his finding the bag and the bag's being dusted by Studebaker. Strangely, however, he was less sure than the others that the bag was laying on the floor in the corner. He testified: "Let's see--the paper sack--I don't recall for sure if it was on the floor or on the box, but I know it was just there----one of those pictures might show exactly where it was...I can't recall for sure if it was on one of the boxes or on the floor there." (Even stranger, years later, he told Larry Sneed "I don't

remember exactly where I found the brown paper that Oswald had wrapped the rifle in...I recall that it was stuffed between the boxes, not lying out open on the floor as were the shell casings.")

Montgomery's testimony was vague on other points as well. When asked if he picked the bag up off the ground upon discovery, as claimed by Johnson, he at first said "Yes" but then changed his answer to "Wait just a minute no; I didn't pick it up. I believe Mr. Studebaker did." (7H96-100) For his part, in his April 7 testimony, Detective Hicks not only expressed that he had no recollection of seeing the bag in the building, but seemed to know nothing of it at all, as if its existence had been kept a secret. (7H286-289). So why did Day think he left him holding the bag?

The testimony of another Dallas detective, Richard N. Sims, on the morning of April 6, 1964, only adds to the confusion. When asked if he'd seen the paper bag found in the depository, Sims testified:

Mr. SIMS. Well, we saw some wrappings--a brown wrapping there.

Mr. BALL. Where did you see it?

Mr. SIMS. It was there by the hulls.

Mr. BALL. Was it right there near the hulls?

Mr. SIMS. As well as I remember--of course, I didn't pay too much attention at that time, but it was, I believe, by the east side of where the boxes were piled up---that would be a guess--I believe that's where it was.

Mr. BALL. On the east side of where the boxes were would that be the east?

Mr. SIMS. Yes, sir; it was right near the stack of boxes there. I know there was some loose paper there.

Mr. BALL. Was Johnson there?

Mr. SIMS. Yes, sir; when the wrapper was found Captain Fritz stationed Montgomery to observe the scene there where the hulls were found.

Mr. BALL. To stay there?

Mr. SIMS. Yes, sir.

Mr. BALL. That was Marvin Johnson and L. D. Montgomery who stayed by the hulls?

Mr. SIMS. Yes, sir; they did. I was going back and forth, from the wrapper to the hulls. (Note: Sims either mis-spoke or was misquoted by the stenographer. He almost certainly meant to say "when the rifle was found", and not "when the wrapper was found," and that he "was going back and forth, from the rifle to the hulls" and not "from the wrapper to the hulls.") (7H158-186).

My, what a mess! Sims acknowledged that Johnson and Montgomery were stationed by the hulls (which were found by the sniper's nest) and seemed to be aware that they "found" the bag, but never mentioned witnessing the "discovery" of the bag, nor of Day or Studebaker's dusting the bag upon its discovery. Sims also described the "bag" as "loose paper," and not as a carefully folded and taped piece of wrapping paper in the shape of a gun case. He also "guessed" the location where the bag was found.

This suggests then that Sims had but a vague recollection that some paper was found, but had no real recollection of its appearance or of its discovery, even though he had stood but a few feet from the bag's purported location when picking up the hulls from the sniper's nest, and had accompanied Lt. Day from this location after the discovery of the rifle on the other side of the building. This, in turn, reinforces that either no one placed much importance on the "bag" when it was first observed in the depository, and that its possible importance only became apparent later on, or that Sims was trying to support that a bag was found in the sniper's nest without actually having seen it. In support of this second, more disturbing, possibility, Detective Sims' report on his activities on the day of the assassination makes no mention whatsoever of the bag or its discovery. (24H319-322).

Now, if one should wish to believe Sims' testimony is authoritative, and clear evidence the bag was found in the sniper's nest as claimed, then one should be informed that Sims initially testified that he

didn't know who took custody of the shells found in the sniper's nest, even though it was, according to others...HIM, and that, as a result, he was forced to return to the stand and claim he'd since been reminded that he'd carried the shells around in his pocket all day on 11-22, and that he now remembered his doing so.

What a witness!

The Blind Detective?

There are a number of other reasons to doubt Sims saw the bag in the building.

Capt. Will Fritz, Sims' boss, not only testified that Sims was with him when he left the Depository, but that he (Fritz, who was only in charge of the investigation) had no knowledge of the paper bag before they departed. (4H202-248) Yep, not only did Fritz claim that he "wasn't there" when the bag was "recovered," he said it was "recovered a little later," and that he "wasn't down there when that was found." Found. He said "found." Well, seeing as Fritz spent some time inspecting the sniper's nest before Lt. Day arrived, and was captured on film by newsman Tom Alyea standing mere feet from the open floor where Day and his assistant Studebaker would later claim the bag was found, Fritz's failure to recall seeing the bag pretty much rules out that it was just sitting there and that everyone had seen it but that no one had thought to pick it up before Montgomery did so.

Fritz's words then should make us suspect that the bag wasn't "found" where it was later claimed to have been found at all, but was in fact "found" somewhere else, sometime after the rifle was found.

This possibility is supported, moreover, by the cameraman, Tom Alyea, who arrived on the sixth floor well before the rifle was found. He filmed Fritz and others standing around the sniper's nest, the search for the rifle, the discovery of the rifle, the dusting of the rifle, the lunch sack found two windows over from the sniper's nest, and the dusting of the Dr. Pepper bottle found beside the lunch sack, and yet neither saw the paper bag supposedly found in the sniper's nest, nor heard mention of its existence, prior to his departure after 2 o'clock.

The possibility the bag was not found as claimed is further supported by the statements and testimony of Deputy Sheriff Luke Mooney, who discovered the sniper's nest, Deputy Sheriff Ralph Walters, who was "approximately 8 feet" from Mooney when he made his discovery, Sgt. Gerald Hill, who joined Mooney and Walters moments later, Deputy Sheriff A. D. McCurley who rushed over after he heard Mooney yell, Deputy Sheriff Roger Craig, who arrived around the same time, and Detective Elmer Boyd, Sims' partner, who arrived on the scene with Detectives Fritz and Sims. It is also supported by the subsequent words of Deputy Sheriff Jack Faulkner, another of those first upon the sniper's nest, to researcher Larry Sneed. Neither Mooney, Walters, Hill, McCurley, Craig, Boyd, nor Faulkner had any recollection of seeing a large paper bag on the floor, even though they'd have to have been standing within a few feet of its location to see the shells they claimed to have seen, and would have been on the lookout for anything suspicious.

Now, it's not as if none of those viewing the sniper's nest shortly after its discovery recalled seeing a bag or sack, it's just that there's reason to believe it was a different bag or sack. The report of Harry Weatherford notes "I came down to the 6th floor, and while searching this floor, Deputy Luke Mooney said 'here are some shells.' I went over to where he was and saw 3 expended rifle shells, a sack on the floor and a partially eaten piece of chicken on top of one of the cartons which was used as a sort of barricade." This piece of chicken is believed to be the remnants of Bonnie Ray Williams' lunch, which was purportedly found several windows over from the sniper's nest window. It was found beside a Dr. Pepper bottle and a lunch sack filled with chicken bones. This lunch sack was captured on film by both news cameraman Tom Alyea and crime scene photographer Robert Studebaker. It is almost certainly the "sack" noted by Weatherford.

Now, this possibility the bag was not found as claimed runs into another minor roadblock with Kent Biffle, the only newsmen besides Alyea to get inside the building before the bulk of the police and to witness the subsequent search of the building. In an account written in May 1964, and subsequently published by his paper, the Dallas Morning News, on a CD-Rom commemorating the 40th anniversary of the assassination, Biffle claimed that after the rifle shells were found by the "ambush window", "We all stood around staring at the brown wrapping paper found nearby. It was a reasonable conclusion that it held the rifle." Note that he says it was found "nearby," and not right by the window, as later purported by Studebaker. Note also that he says "we all stood around staring" at the wrapping paper, an impossibility if the wrapping paper was sitting folded on the far side of the box purportedly used as a seat by the assassin, in the southeast corner of the building. As shown on the slide above, this was an incredibly confined space behind stacks of boxes. The "wrapping paper," should it actually have been found in this location, would not have been visible to more than a few people at a time. Perhaps, then, Biffle saw the bag sometime after it had originally been "found." Perhaps, after its initial "discovery" by Montgomery, wherever it was "discovered," Studebaker placed the bag on the floor in a more accessible location, where it was subsequently viewed by Biffle.

But there's a problem with this scenario as well. In his account, Biffle presents his observation of the bag before he presents the discovery of the rifle. Well, if this was so, why didn't Mooney, Walters, Hill, Craig, Faulkner, Boyd, Fritz or Alyea remember seeing the bag? Was it found after they left the area but

before the rifle was found?

Well, if so, then, why didn't Day and Sims--who remained in the sniper's nest until the rifle was found--mention Montgomery's "discovery" of the bag? Studebaker was supposedly near Montgomery when the bag was found. Studebaker arrived with Day. Was the bag found somewhere other than the sniper's nest, while Day was busy in the sniper's nest?

Or was Biffle simply mistaken about the bag being found before the rifle?

It sure seems so. Biffle's published account does not begin with his entering the school book depository. Before that, he discusses his racing over to the grassy knoll after the shots. He then relates *"The other side of the fence held no gunman. There was just a maze of railroad tracks and three dazed winos. 'What happened?' one asked me."* Well, this is just not credible. None of the police officers claiming to have raced back behind the fence after the shots saw these "winos." If Biffle had talked to one of them, and had not bothered to point this man out to a police officer as a possible witness, then he was not much of a citizen, let alone a reporter. The so-called "Three tramps" found in a railroad car passing through town, it should be noted, were not discovered till almost 2:00, an hour and a half after the shooting, and were not arrested until a few minutes later. It only follows then that Biffle had used "artistic license" to incorporate them into his story, and that he may have used this same "license" to add the bag into his story. One certainly can't accept his account as credible when he says "we all" stood around staring at the bag, when none of those to first observe the sniper's nest, including his fellow newsman Tom Alyea, had ANY recollection of the bag. Perhaps the bag Biffle was thinking of, then, was not the bag supposedly used to carry Oswald's rifle, but the other bag reportedly found in the building, the lunch bag, which most all the sniper's nest witnesses remembered, which was also filmed by Alyea, and photographed by Studebaker.

Undoubtedly aware of the problems with the paper bag and its discovery, on April 9, 1964, Warren Commission counsel David Belin took the testimony of Dallas Motorcycle officers Clyde Haygood and E.D. Brewer, who claimed to have been on the sixth floor during the search of the depository, and to have seen an "approximately rifle length" and "relatively long" paper sack, respectively, in the southeast corner of the building. Unfortunately, however, their stories just further muddled the waters...

Mr. BELIN. See any long bags which would be a foot or foot and a half or more long?

Mr. HAYGOOD. Yes; just a plain brown paper bag with tape in the corner.

Mr. BELIN. What tape?

Mr. HAYGOOD. Yes; there was just brown paper tape on it. Just a brown paper bag with paper tape. It had been taped up.

Mr. BELIN. How long was that, if you can remember?

Mr. HAYGOOD. The exact length, I couldn't say. It was approximately rifle length. (6H296-302).

Yes, you got it. Belin pressed Haygood to see if he remembered seeing a bag a foot and a half or so long--the approximate length of the bag when folded over--and Haygood remembered the bag as being "approximately rifle length." This suggests, then, that Haygood, as Biffle, only saw the bag after it had been "discovered" and picked up by Montgomery, if at all...which does little to suggest it was actually on the floor of the sniper's nest as claimed.

Brewer was even less help.

Mr. BELIN. Did you see anything else in the southeast corner?

Mr. BREWER. There was a paper, relatively long paper sack there.

Mr. BELIN. Where was that?

Mr. BREWER. It was there In the southeast corner.

Mr. BELIN. Under the window?

Mr. BREWER. No, sir. To the left of it. To the east of it.

Mr. BELIN. To the left as you faced the window?

Mr. BREWER. Yes, sir.

Mr. BELIN. Did the window come right up next to the corner there, do you remember?

Mr. BREWER. No, sir; it didn't come up next to the corner. It was offset.

Mr. BELIN. Can you remember how far at all, or not?

Mr. BREWER. No, sir; I don't remember the exact distance of it.

Mr. BELIN. Was any part of the paper sack under the window, If you remember or not? That long paper sack?

Mr. BREWER. No, sir.

Mr. BELIN. Do you remember anything about what the sack looked like?

Mr. BREWER. Well, it was assumed at the time that it was the sack that the rifle was wrapped up in when it was brought into the building, and it appeared that it could have been used for that.

Mr. BELIN. Well, you mean you assumed that before you found the rifle?

Mr. BREWER. Yes, sir; I suppose. That was discussed.(6H302-308).

Notice that Brewer does not describe the bag, but "supposes" that people immediately assumed it had been used to carry the rifle. Well, where does he get that? If the bag was folded over, as claimed by Studebaker, or folded twice, as claimed by Johnson, people would not immediately associate it with having been used to carry a rifle, particularly in that the rifle had supposedly not yet been discovered, and could very well have been stashed in a gun case. It only makes sense, then, for us to believe the bag was found *after* the rifle was found on the north side of the building, when people would know the rifle was out of its case. As we've seen, Captain Fritz testified that the bag was not "found" or discussed while he was in the southeast corner of the building. He also indicated he was not aware of it at any time before leaving the building. His testimony, moreover, was supported by Detective Boyd, who arrived and left with Fritz, and who also had no recollection of the bag. If the bag had been discovered, dusted, and discussed before the discovery of the rifle, or even before Fritz left the building shortly thereafter, certainly someone more involved in the investigation than common motorcycle officers like Haygood and Brewer would have remembered this fact, and have remembered it long before 4 1/2 months after the assassination.

The sum of all this testimony then is that none of these men mention Day's initialing or dusting the bag in the depository, and that Montgomery and Studebaker specifically recall that Studebaker was the one who did the dusting. This, then, suggests either that Day was not present when the bag was discovered, which in turn suggests that the bag was "found" only after Day was called away to look at the rifle, OR that the bag was found elsewhere in the building.

Width, Not Length

At right: a photo taken by William Allen, showing the paper bag on 11-22-63. Could a bag this size fit into the outline at left? Even if folded over? So why did the Warren Commission pretend as much?

Warren Commission Exhibit 1302 (above left) is a Dallas Police Department photo marked by Robert Lee Studebaker to show the location of the paper bag when "found." While the length of his outline is fairly close to the length of the outline of the bag in the archives—should it have been folded-over when found, as claimed--the width is far too small. As shown in the version of the photo at left, in which the size of the box in the photo has been added, the outline on 1302 (the red rectangle) is not only much smaller than the outline of the bag in the press photos when folded (the light blue rectangle), it is far smaller than the 8.5" x 38" bag in the archives (the dark blue rectangle). Something smells.

Width, Not Length

No, scratch that. There's a third extremely teeny weenie possibility--the one the Warren Commission ultimately asked us to believe--the one blindly accepting that Fritz et al somehow overlooked the large brown bag on the floor by their feet, and that few outside a few motorcycle officers noticed the bag before it was discovered by Montgomery, and that, as recounted in the Warren Report, "At the time the bag was found, Lieutenant Day of the Dallas police wrote on it, "Found next to the sixth floor window gun fired from. May have been used to carry gun. Lt. J. C. Day."

That the Warren Commission had reason to disbelieve this scenario, but sadly failed to do so, moreover, is further demonstrated by Commission Exhibit 1302. This exhibit is a photo of the southeast corner of the sniper's nest, with a dotted line added in by Studebaker purportedly representing the location of the bag when "found." Well, no surprise, Studebaker's outline presents the bag as far too small. While his outline for the bag is around 18 inches long, very close to the length of the bag in the archives when doubled over (which is consistent with Studebaker's testimony), it is only about 5 inches wide. Hmmm... $5 \times 18 = 90$ square inches. The bag in the archives would be approx. $8.5 \times 19 = 161.5$ square inches. The bag in the press photos would be approx. $10.75 \times 19 = 204.25$ square inches. The box on which Oswald supposedly took a seat was $12 \times 18 = 216$ square inches. In other words, the outline drawn by Studebaker was barely half the size of the bag in the archives, and less than half the size of the bag in the press photos, and completely concealed that the bag, should it have been in the corner as claimed, would be nearly the size of the box so dominating the corner, and would be readily apparent...FREAKIN' OBVIOUS--to anyone even glimpsing at the corner.

That Studebaker failed to demonstrate this is presumably no coincidence. That the Warren Commission failed to double-check his outline for accuracy, and question those not seeing a bag in the corner how they could have missed something so obvious, is presumably no coincidence.

That they published Studebaker's exhibit in their report, and failed to note its inaccuracy, is presumably

no coincidence.

There are just too many problems with the testimony regarding the bag for the Commission not to have known something was wrong, er, wrong.

For example...Studebaker also claimed to have found a "partial print" on the bag, and to have put a piece of 1 inch clear tape over it to "preserve" the print. (7H137-149) The FBI's Sebastian Latona, who examined the bag the next morning, however, testified that he could tell the bag had been previously examined by the "black fingerprint powder" on its surface, and made no mention of the tape described by Studebaker. Latona noted further that "There was nothing visible in the way of any latent prints on there at that particular time". (4H1-48) Well, what happened to the partial print described by Studebaker? Why didn't the Warren Commission follow up on this?

Could the bag or sack removed from the sniper's nest (or wherever it was found) have been smudged with someone other than Oswald's fingerprints? The Dallas PD's Case Report claims Day lifted a print from the "paper rifle was wrapped in" (24H249). As we've seen Day testified "no legible print was found". Well, it follows then that an "illegible" print was found. If this is so, then what happened to it? Why are there no photos of it in the Dallas archives?

More to the point, could the sack found in the building by Montgomery, and dusted by Studebaker, be a different sack entirely than the one initialed by Day and placed into evidence by the FBI?

Amazingly, yes. Consider the next section of Lt. Day's testimony:

Mr. BELIN. Did you ever get the kind of sample used at the School Book Depository?

Mr. DAY. Yes, sir; on the afternoon of November 22, 1963, I had the bag listed as----

Mr. BELIN. Commission Exhibit 626 or 142.

Mr. DAY. On the first floor of the Texas School Book Depository, and I noticed from their wrapping bench there was paper and tape of a similar--the tape was of the same width as this. I took the bag over and tried it, and I noticed that the tape was the same width as on the bag.

Mr. BELIN. Did it appear to have the same color?

Mr. DAY. Yes, sir.

Mr. BELIN. All right. Then what did you do?

Mr. DAY. Sir?

Mr. BELIN. Then what did you do?

Mr. DAY. I directed one of the officers standing by me, I don't know which, to get a piece of the tape and a piece of the paper from the wrapping bench.

Mr. BELIN. Handing you what has been marked as Commission Exhibit 677, I will ask you to state if you know what this is.

Mr. DAY. This is the tape and paper collected from the first floor in the shipping department of the Texas School Book Depository on November 22, 1963.

Mr. BELIN. Does this have any identification marks on it?

Mr. DAY. It has my name, "J. C. Day, Dallas Police Department," and also in my writing, "Shipping Department."

Mr. BELIN. Any other writing on there that you recognize?

Mr. DAY. Yes, sir; Detective Studebaker, who was with me, and in his writing it says, "Paper sample from first floor, Texas School Book Depository, Studebaker, 11-22-63." The tape also has Studebaker's writing on it, "Tape sample from first floor." (4H 249-278)

There is no mention of the size of this sample. As it was not considered evidence, furthermore, it was

not even photographed by the Dallas Police in its original state. An 11-26-63 report by the FBI's Vincent Drain on his flights from and to Dallas with the primary evidence, moreover, notes that "sample of brown paper used by Texas School Book Depository and brown tape used by Texas School Book Depository were not returned since Chief Curry stated these were not evidence and had only been sent to the FBI Laboratory for comparison purposes." (CD5 p161). As this decision was made before the FBI gained jurisdiction over the case it suggests that the Dallas Police were not particularly concerned about the samples at this time. Perhaps they'd felt they could have the FBI testify that the sample paper and sample tape matched the bag and tape placed into evidence without having the samples placed into evidence as well. Or perhaps this indicates that the FBI, having helped the Dallas Police with the creation of a new and improved bag complete with Oswald's fingerprints, thought it a waste of time and an unnecessary risk to send back to Dallas a sample far smaller than the sample originally obtained by Day, and as seen by other Dallas detectives not in on their scam.

Shining a Light On Drain

Adding to this admittedly disturbing possibility is that, on June 9, 1964, as a response to a May 20th Warren Commission request, the FBI took the paper bag back to Dallas, and inadequately traced back its chain of custody. While the chain of custody on the other items brought back to Dallas--the various bullets, cartridges, and bullet fragments related to the assassination, and even the blanket used by Oswald to store his rifle in the Paine family's garage--were traced back to the first ones to discover them, the brown paper bag was never shown to Montgomery, Johnson, or Studebaker, the three men who first saw the bag in the depository, and who reportedly initialed it on the premises. It was shown to just one man: Lt. J.C. Day. The words to this report are as follows:

"On June 9, 1964, Lieutenant J.C. Day of the Crime Laboratory of the Dallas Police Department, Dallas, Texas, was exhibited the wrapping-paper bag, C10, by Special Agent Vincent E. Drain, Federal Bureau of Investigation. After examining this bag, Lieutenant Day advised he could positively identify this bag as the one he and Detective R.L. Studebaker found on the Sixth Floor of the Texas School Book Depository Building immediately after the assassination of President Kennedy on November 22, 1963. Lieutenant Day stated this paper bag was marked on November 22, 1963 by him. This bag was subsequently delivered on November 22, 1963 to Special Agent Vincent E. Drain for transmittal to the Laboratory of the Federal Bureau of Investigation, Washington D.C., for examination." (24H418).

Notice that there's no mention of Montgomery and Johnson, the detectives who, according to the Dallas Police Department's own records, found the bag and took it over to the crime lab. (24H260). Notice also that Day says only that he marked the bag on the 22nd, not that he marked it on the scene. Consider also that the agent tracing the chain of evidence, Vincent Drain, was the one who first took the bag to Washington, and the one who later claimed returning the paper sample to Dallas was unnecessary. Day's claim that he found the bag, and Drain's failure to track down Montgomery and Johnson, and even Studebaker--who'd previously testified that they'd found the bag--is undoubtedly suspicious to those even slightly prone to suspicion.

But, wait, it gets even more suspicious. Drain had discussed the bag with Day at an earlier time as well. An 11-30-63 report by Drain on an 11-29-63 interview of Day reveals:

"Lt. Carl Day, Dallas Police Department, stated he found the brown paper bag shaped like a gun case near the scene of the shooting on the sixth floor of the Texas School Book Depository Building. He stated the manager, Mr. Truly, saw this bag at the time it was taken into possession by Lt. Day. Truly, according to Day, had not seen this bag before. No one else viewed it. Truly furnished similar brown paper from the roll that was used in packing books by the Texas School Book Depository. This paper

was examined by the FBI Laboratory and found to have the same observable characteristics as the brown paper bag shaped like a gun case which was found near the scene of the shooting of the sixth floor of the Texas School Book Depository Building. The Dallas Police have not exhibited this to anyone else. It was immediately locked up by Day, kept in his possession until it was turned over to FBI agent Drain for transmittal to the Laboratory. It was examined by the Laboratory, returned to the Dallas Police Department November 24, 1963, locked up in the Crime Laboratory. This bag was returned to Agent Drain on November 26, 1963, and taken back to the FBI Laboratory.

Lt. Day stated no one has identified this bag to the Dallas Police Department." (CD5, p129).

Beyond offering us yet another witness purported to have seen the bag in the depository not shown the bag at a later date by either the Warren Commission or FBI (Roy Truly) this report has numerous, undoubtedly suspicious, errors. The report makes out that Day himself found the bag. There's no mention at all of Montgomery, Johnson, and Studebaker, nor of Studebaker's claim in an 11-22 FBI report that he was the one to find the bag. (CD5, p128) The report also errs in that it says the bag was "immediately locked up by Day", and that it was not exhibited to anyone else. This conceals that on this same day, 11-29-63, Drain interviewed Dallas detective R.D. Lewis who acknowledged giving Buell Wesley Frazier a polygraph on 11-22 during which Frazier was shown the bag and refused to identify it as the bag he saw that morning. (CD7, p291). An 11-29 FBI memo never shown the Warren Commission, and found only in the FBI's HQ files, moreover, reinforces this point, and confirms that Alex Rosen, the assistant director tasked with establishing the basic facts of the crime, knew all about Frazier's failure to identify the bag, and that Drain's report was either grossly in error...or a lie. It states:

"Lieutenant Carl Day, Dallas, Texas, Police Department Crime Laboratory, advised that on November 22, 1963, he recovered a heavy brown sack appearing to be homemade and appearing to have been folded together at one time. This sack when laid out was about four feet long but when doubled was about two feet long. Lt. Day recalls that on the evening of 11-22-63, about 11:30 p.m., one of Capt. Fritz's officers requested that he show this thick, brown sack to a man named Frazier. Lt. Day stated that Frazier was unable to identify this sack and told him that a sack he observed in possession of Oswald early that morning was definitely a thin flimsy sack like one purchased in a dime store." (FBI file 62-109060, sec 14, p123.)

Is it just a coincidence then that Drain's report on Day, containing false information, was written up on 11-30, and included in the FBI report of 11-30, and that Drain's report on Lewis, conducted on the same day, wasn't written up till 12-1 and forwarded to Washington till 12-10, after the completion of the FBI's 12-9 summary report given to the President and Warren Commission, and leaked to the press? Maybe. Maybe not.

If not, however, then we have sufficient reason to believe Drain's deception was orchestrated from above. On 12-06, FBI HQ sent an airtel to Drain's direct superior, Gordon Shanklin, asking him to correct an "inaccurate statement" in a report. (FBI file 62-109060, sec 17, p213) On 12-18, Shanklin, in turn, sent a message back to the Bureau's headquarters telling them that, as a response to the Bureau's 12-06 airtel, he was sending headquarters and New Orleans "10 copies and 1 copy respectively of FD-302 reflecting interview by Vincent Drain with Lt. Carl Day, Dallas Police Department, on 11/29/63. It is requested that the Bureau and New Orleans insert the enclosed pages to replace page 129 of reference report. Appropriate changes are being made in the Dallas files." (FBI file 105-82555, sec 39, p7). The reference report is the Gemberling Report of 11/30. Page 129 is Drain's report on Day. Well, what was all this about, you might ask? Had someone caught the obvious error in Drain's report...that the bag was not shown to anyone?

Nope. An uncorrected version of this report was later discovered in the archives by researcher Gary

Shaw. It revealed that the original version of Drain's report said the paper bag found in the depository was "found not to be identical" to the paper sample taken from the depository. Now this is mighty strange. Drain, who escorted the paper bag and sample from Dallas to the FBI's crime lab in Washington on 11-23, and then returned with the bag on 11-24, wrote a report saying the paper bag did not match the sample? And his report was then re-written to hide this "mistake"? While, at the same time, the equally obvious "mistake" (that being that the DPD failed to show the bag to anyone) was allowed to stand uncorrected? (The changing of this document is discussed in much greater detail, [here](#).)

But if the FBI was lying about Day and the bag, they were certainly not alone.

Bad Hair Day

When one studies the face, glasses, bow tie, and HAIR of Lt. J.C. Day in 2 shots from the Alyea film, at top L, taken around 1:30 PM on 11-22-63, the Skaggs photo at top M, taken around 2:00 PM, the Dillard photo, at bottom L, taken around 4:00 PM, and the 2 shots of Day with the rifle, at bottom M and R, taken around 6:15 PM, it seems clear Day is also the man on the far left of the Allen photo, at top R, taken around 3:00 PM. So why did he never acknowledge seeing the bag at this time?

Bad Hair Day

Perhaps they'd been lied to themselves...

In Lieutenant Day's official report on his activities on the day of the assassination, written up on 1-08-64, he completely fails to mention his "discovery" of the bag. Instead, he says he was pulled from the sniper's nest, where he'd been photographing the hulls, at 1:25 PM, to photograph and inspect the rifle found on the other side of the building. He then left the building at 2:00 PM in order to transport the rifle to the crime lab. According to this report he did not return to the building until 2:45 PM. (26H829-831) Big problem. The reports of detectives L.D. Montgomery and Marvin Johnson reflect that they transported the bag over to the crime lab about 2:30. (24H314, 24H307). This suggests that Day never even saw the bag in the depository. As there is a photograph of these men leaving the building, with Montgomery's watch reading 3:00, however, the possibility exists that Day saw the bag briefly upon his

return to the building, but had not seen it or paid much attention to it before this time. Adding to this probability is that the 4-1-64 FBI report on Roy Truly's recollections of the bag reflects only that Truly remembered giving paper samples to Lt. Day "on the afternoon of November 22, 1963," but makes no mention of his being shown the paper bag found in the sniper's nest, as purported in Drain's 11-29 report. (FBI file 105-82555, sec 142, p15). From this one might gather Day was told of the bag or briefly shown the bag upon his return, and that he'd spoken to Truly and collected the paper samples only after the bag had left the building.

So why does Day not only fail to say as much in his testimony, but suggest another scenario entirely, one in which he not only finds the bag, but carries it around inside the depository?

Let's recall here that Day, while discussing the paper sample, told the Commission: *"I had the bag...On the first floor of the Texas School Book Depository, and I noticed from their wrapping bench there was paper and tape of a similar--the tape was of the same width as this. I took the bag over and tried it, and I noticed that the tape was the same width as on the bag. I noticed from their wrapping bench there was paper and tape of a similar--the tape was of the same width as this. **I took the bag over and tried it, and I noticed that the tape was the same width as on the bag.**"* He was thereby claiming the bag was in his possession in the building.

That Day saw the bag upon his return to the building, just as it was leaving the building, however, is more than just conjecture. In one of the photos of Montgomery and Johnson outside the building holding, among other things, the bag, Lt. Day (or his doppelganger) can be seen standing next to the bag, staring in its general direction. (He appears to be looking past the bag, but it would have been impossible for him not to have noticed it under the circumstances.) In his subsequent reports, testimony, and statements, however, he never acknowledged this encounter. He never acknowledged seeing Montgomery and Johnson leave with the bag as he returned. In fact, as we've seen, in his testimony he acted as though Montgomery and Johnson had never even touched the bag, and insinuated instead that he'd found and signed the bag in the sniper's nest and that he'd left the bag with Detectives Hicks and Studebaker to bring in after he'd left the depository for the night. This reeks of an orchestrated lie. If so, what was he trying to hide? Was he afraid to admit that he didn't "discover" the bag, and that he, in fact, had never even seen it in the building?

Day's post-1964 statements on the bag, moreover, confirm that he was not actually present when the bag was "discovered". In 1992, when asked by researcher Denis Morissette if he knew who found the bag, Day responded: "I don't know. It was on the floor next to and north of the box Oswald was sitting on when I arrived at the 6th floor. My men and I collected the bag at this place. As far as I know it had not been moved by any officers." Note that he never describes his spotting or inspecting the bag, only that there was a bag, that it was collected by his men, and that it was found by...someone...north of the sniper's seat. (His testimony had been that it was south of the sniper's seat, directly in the corner.) In 1996, in an oral history recorded for The Sixth Floor Museum, moreover, Day had the chance to finally set the record straight and instead offered smoke. When asked why the bag hadn't been photographed, he responded "There should be a picture of it somewhere." When then asked by interviewer Bob Porter where the bag had been found, he replied "To the best of my knowledge, it was to the right on the floor of where he was sitting, on the box that I showed you a minute ago. It may have been the right, it may have been the left, but there was a bag there." When Porter pointed out that "left" would mean the corner (where Day had testified the bag was discovered), moreover, Day surprised him, and once again asserted that the bag had been found north of the sniper's seat. He responded "Yes, in the corner out back towards the north side of the building, where you headed up to it." He then admitted "I didn't know anything about a bag at that time. There was a bag laying there...Later examination indicated that

it was a bag had been made out of wrapping paper. It appeared to be shipping paper...Of course at that time, we didn't know anything about Oswald, didn't know anything about what happened. There was a bag there and it was collected." This, of course, supports that Day hadn't actually seen the bag where he claims it was found, and that others were, in fact, responsible for its collection in the depository. This likelihood is further supported by Day's recollection to Larry Sneed, published in 1998, that "Also found on the sixth floor, as I recall, near the shell area, was a paper bag. It should have been photographed, but for some reason, apparently wasn't."

In fact, in what was to become his final word on the subject, in a 7-11-06 interview with The Sixth Floor Museum, Day came as close to admitting perjury as one can come. In opposition to his Warren Commission testimony that he'd signed the paper bag or sack "at the time the sack was found," Day ultimately admitted that when he and Studebaker left the sniper's nest to go photograph the rifle found on the other side of the building *"They had posted guards or something around it and they didn't have the sense to leave things alone. And they'd got in there and picked up a sack that was in this corner. And we didn't get a picture of it. But there was a sack right in that corner...the brown paper bag. It was the one he was supposed to have brought curtain rods in. Well, they picked it up while I was gone, and I didn't get a picture of it while it was sitting there."* Hmmm...as Studebaker returned to the sniper's nest after photographing the gun, but Day did not, and as Montgomery, Johnson, and Studebaker were all present or nearby when the bag was "discovered," and made no mention of Day, it seems clear that the bag was "discovered" while Day was busy dusting the rifle or transporting the rifle over to the crime lab, and that he'd therefore never signed the paper bag or sack *"at the time the sack was found,"* and hadn't in fact *"left"* the bag with others when he transported the rifle to the crime lab.

There are still other reasons to doubt the story recounted by Drain in his 11-30-63 report, repeated by Day in his testimony, and pushed by Warren Commission Counsel David Belin in his book November 22, 1963: *You Are The Jury*. It seems highly unlikely that Day could photograph, dust and study the rifle as purported, return to the sniper's nest, discover the bag, show the bag to Roy Truly, transport the bag downstairs, and get paper and tape samples from the shipping table--all in less than 35 minutes, mind you--and then decide to take the rifle over to the crime lab and leave the bag behind. It seems much more likely that he worked on the rifle exclusively before taking it to the crime lab, and that the story of his finding the bag and comparing the paper of the bag to the paper at the shipping table is an orchestrated lie.

I don't think this is a reckless charge. Let's recall that Day, in his testimony regarding the paper sample, claimed *"I directed one of the officers standing by me, I don't know which, to get a piece of the tape and a piece of the paper from the wrapping bench"* and that he was then asked if there was any other writing on the sample, and that he then, and only then, acknowledged that Detective Studebaker was with him at the time, and that he'd also signed the sample. Well, what's the problem with that, you might ask? Well, let's think about it. Day is in a photo of the bag as it was taken out the front of the building around 3 PM. This is just as Day is returning from his quick trip to the crime lab. So, for Day to have handled the bag in the building as claimed, he would have to have done so before he left for the crime lab around 2:00. Well, there's a problem with this. When asked during his testimony what he did "next" after photographing and inspecting the rifle on the sixth floor, Day said *"I took the gun...to the office and locked it up in a box..."* Now, this means that his journey to the first floor with the bag--if it actually took place--must have preceded the discovery of the rifle, right? Well, Day pretty much rules this out as well, as he testified that he arrived at the depository at "1:12," was directed to the sniper's nest upon reaching the sixth floor, photographed the sniper's nest, collected the three shells at "1:23," and was then "summonsed" to the northwest corner of the building to work on the newly discovered rifle. There simply was no time for him to be carrying the bag around. And the idea that both he and

Studebaker--the only crime scene investigators on the premises--would wander away from the largely unexamined sixth floor crime scene down to the first floor in search of paper samples to match up to a bag that, according to Day, had no readily apparent prints upon its surface, and which might have nothing to do with the shooting--when the president's assassin was for all they knew still on the loose--is beyond belief. Pure moonshine.

That Day was pulling a fast one, moreover, is supported by his testimony that he "directed one of the officers standing by me, I don't know which" to get the tape and paper samples. This conveniently conceals that the person actually retrieving these samples was his assistant Studebaker--among the persons in the building least likely to be on the first floor when the bag was still in the building. It's hard to believe this was merely a coincidence, particularly in that Day acknowledged this person to be Studebaker when interviewed by the FBI on 4-2-64, less than three weeks before. (The report on this interview can be found in FBI file 102-82555 sec 142, p18. Studebaker's acknowledgment on 4-2 that he retrieved the samples at Day's direction can be found in a related FBI report. FBI file 102-82555 sec 142 p19.)

Perhaps, then, Day's story about having the bag with him when he obtained the sample was created to hide that Day took the paper sample later that afternoon, or that evening, after the paper bag found in the school book depository had already left the building. Perhaps he found this embarrassing. Perhaps he'd suspected that the bag taken from the building had been made there, for whatever purpose, and had decided that having some "samples" for reference might help him prove this point. Perhaps Day was simply of the mind that simplifying the chain of evidence--and pretending that he'd found the bag, and had kept it in the possession of his crime scene team at all times--was the right thing to do. Or perhaps he was part of a conspiracy to fabricate evidence implicating the commie, Oswald, in the president's murder. We may never know.

There is an additional reason to believe the bag holds secrets, however. The only photo of the paper bag in the Dallas Police Archives is a photo in box 12 folder 7 file 1. It is shown on the Shining a Light on Day slide above.

The description for this photo in the DPD Archives reads "Photograph of the evidence sent to the FBI. Date unknown." The bag in this photo appears to be about 8 inches wide and could quite possibly be the bag in the FBI and Warren Commission photos. The bag appears to be discolored, however, which suggests that this is a photo of the bag after its return from the FBI Crime Laboratory, where it had been discolored by silver nitrate. Sure enough, this photo can also be found in the FBI files (62-109060 Sec EBF, Serial 1866, p73). Here, however, on the page just before, the back of the photo is presented, and bears the date 11-26-63.

Should one find that unconvincing, one should know that this photo also makes an appearance in Dallas Police Chief Jesse Curry's 1969 book JFK Assassination File. Here it is listed as "Evidence released to the FBI Laboratory for tests." No date is provided. Fortunately, however, Curry lists all the items in the photograph, and this tells us what we need to know. Item #5 is listed as "Textile fibers found on the left side of the butt plate of the recovered rifle." These fibers were officially undetected in Dallas, and only discovered during an examination in the FBI Crime Lab on 11-23. This proves that this photograph was taken after the return of the evidence to Dallas. More telling, Item #2 is "Oswald's right palm print found on a book carton which was part of the sniper's perch in the book depository." This palm print wasn't provided the FBI till the 26th. A close look at the piece of cardboard holding this palm print, moreover, reveals that it has the signature of Lt. J.C. Day along the bottom. Photos taken on the 25th of the sniper's nest, with this piece of cardboard re-attached to its box, reveal that Day had not

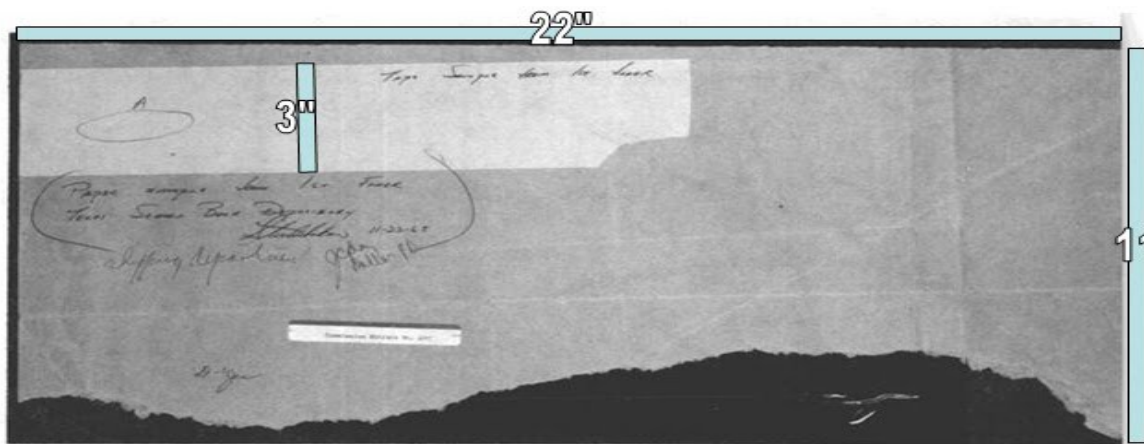

yet signed the cardboard. This proves it then, several times over--the only photo of the paper bag in the Dallas Archives is a photo of evidence shipped out on the 26th.

Should one still have doubts, however, one should consider the Warren Commission testimony of Lt. Day. When presenting this photo as exhibit CE 738, Day readily admitted he'd taken the photo on the 26th. The Warren Commission, in turn, entitled this exhibit "Photograph of property released by the Dallas Police Department to the FBI on November 26, 1963." So why did the Dallas crime scene investigators not only fail to photograph the paper bag when found on the scene in the school book depository, but at any time prior to Oswald's death?

Something's undoubtedly wrong here.

The mind-numbing level of this "wrongness" only gets stronger, however, when one reads the captions to the photos in Curry's book. Here, after confidently presenting evidence such as "the 6.5 Mannlicher-Carcano rifle, C2766, with a four power scope which was recovered from the sixth floor of the Texas School Book Depository", and captioning the fibers in the evidence photo mentioned above as "Textile fibers found on the left side of the butt plate of the recovered rifle," Curry equivocates on the status of the bag in the photo. He writes "A paper bag probably constructed from wrapping paper and tape at the Texas School Book Depository...This is probably the same bag which was found on the sixth floor by investigators." Yes, you read that right. He says "probably." If Dallas Police Chief Jesse Curry doubted that the bag returned from Washington was the bag found in the building, then why the heck shouldn't we?

Sizing Up the Sample

COMMISSION EXHIBIT 677

Since the tape sample on Exhibit 677 was reportedly 3 inches wide, we can estimate that the paper sample was about 22 inches by 11 inches. The paper roll from which it was pulled was reportedly 24 inches wide. This suggests that this is not the entire sample taken from the roll. What happened to the rest of it? Could it have been used to create the paper bag placed into evidence as CE 142?

Sizing Up the Sample

There are still other suggestions the bag in the archives is not the bag found in the building.

When one looks at the early morning 11-23-63 FBI memo describing the evidence sent to Washington,

and compares it to the FBI crime lab report on this evidence written later that day, one notices some subtle changes that may very well have meaning.

On the memo (found in FBI file 62-109060, Sec 1, p54) the bag is described as follows: "Brown paper which was found at what was believed to be the point of the firing of the fatal bullets used in the assassination. This paper possibly may have been used to carry above rifle to the scene of the building from which it was fired." Note that it is not described as a bag. Now look at how it's described later that day in the crime lab report (found in file 62-109060, Sec 21, p188): "Wrapping paper in shape of a large bag." Hmmm... Was it originally described as "brown paper" because it was not yet a "bag?"

There's also this to consider... On the memo, item 6 is listed as "Sample of brown paper used by Texas School Book Depository **and** sample of paper tape used by Texas School Book Depository." Although listed as one item, it seems clear this is really two items: a sample of paper and a sample of tape. Now look at how they're listed in the crime lab report: "K2--Paper and tape sample from shipping department, Texas Public School Book Depository." Sample. Singular.

The Warren Commission, perhaps unaware of its significance, published a photo of this paper and tape sample. As seen on the slide above, this photo shows a fairly small piece of paper, not even 11 inches x 22 inches, with a piece of paper tape across the top. Since the FBI's earlier reports revealed that the paper rolls at the depository were 24 inches wide, this indicates that someone had done some cutting. Did Lt. Day and/or the FBI make the paper bag placed into evidence--which appears to be far too narrow to be the bag removed from the depository--from the paper and tape samples he took on 11-22-63?

Was the paper and tape sample shown in Commission Exhibit 677 but a scrap left over from the newly-created "bag?"

Possibly. It certainly seems a bit of a coincidence that a paper bag in the shape of a gun case that was not photographed upon discovery, and whose exact measurements were not given in testimony: 1) was never shown to the three detectives who initialed it upon its discovery; 2) was not smeared with the fingerprints of one of these detectives, who'd left 18 finger and palm prints on the four boxes purportedly next to the bag; and 3) appears far different in the photographs taken by the press than in the subsequent photos taken by the FBI. Something is just funky about Day's brown bag. And I'm not talking 'bout Morris Day or James Brown.

Only adding to the craziness... Lt. Day talked about the paper sample one last time when he was interviewed by Larry Sneed for his 1998 book No More Silence. He said: "In the shipping room on the first floor, there were one or two rolls of that paper. We took the end pieces off those rolls for possible comparison with the bag that was found." He said "rolls"...as in more than one. Even worse, he also told Sneed that, beyond the palm print lift he'd failed to send the FBI on 11-22, "We had a few other items around such as some of his clothes and paper off the roll at the Book Depository that we didn't do anything else with." Well, I'll be. What happened to this "paper off the roll" never submitted to the FBI? And why was Day now admitting they'd taken multiple samples? Was his memory in error?

Or had he simply forgotten the "official story"? The 11-29 FBI report on the paper bag and paper sample declares that Oswald's boss Roy Truly furnished Day "similar brown paper from the roll that was used in packing books by the Texas School Book Depository." (CD5 p129). A 4-1-64 FBI Airtel from Dallas to Washington, however, reveals that Day was interviewed the day before, and claimed that he "obtained samples wrapping paper...from four opened rolls mounted in Shipping Room." (FBI file 102-82555 sec 125 p62). When testifying before the Warren Commission on 4-22-64, moreover, Day was shown Exhibit 730 and asked if the roll of paper in the photo looked like the one from which he removed Exhibit 677. He replied: "Yes, sir. To the best of my knowledge that is the roll we tore the paper off of." The number of samples removed by Day had thus morphed from one on 11-29-63 to four

on 3-31-64, back to one on 4-22-64, and then to two in his later years. If the "official" story is confusing and hard to believe it's due in part to men like Day, who just couldn't keep their stories straight.

In an effort to keep our story straight, however, it should be noted that the FBI caught Day's 4-1-64 reference to four samples and sprang into action. The next day, Washington wired Dallas and requested that since the paper sample in their possession was "only one piece of paper and one piece of tape advise if samples actually obtained from all four opened rolls...If additional paper and tape samples secured on November Twenty Two last...are available forward them to Bureau immediately." (FBI file 102-82555 sec 125 p64). This, in turn, led to an interview with Dallas Detective Robert Studebaker, whose statements appeared to answer the FBI's questions. The report in this interview notes that Studebaker "recalls obtaining a paper sample and a gummed tape sample at the instruction of Lt. Day from the wrapping table located on the main floor of the Depository Building... Studebaker noted that he recalled observing four rolls of the paper, one at each corner, and that he obtained the sample from the northeast corner as it was the most convenient. Studebaker advised he turned over these samples to the custody of Lt. Day. Studebaker advised he recalled he obtained only one sample of paper and one sample of tape at this time, and to the best of his recollection, these are the only samples obtained by his Department." (FBI file 102-82555 sec 142 p19).

Well, what's the matter with this, you might ask? Day has a vague recollection there were four samples, but Studebaker has a stronger recollection there was but one. Case closed, you might say. Well, there is a little problem. On the day Day told the FBI there'd been four samples, the FBI also had a talk with Roy Truly, who'd purportedly provided Day with the samples. The report of this interview reflects that Truly "recalls Day obtained *samples* of wrapping paper from the *rolls* of Kraft wrapping paper mounted on *racks* in the shipping room." (FBI file 105-82555 sec 142 p15) *Samples. Rolls. Racks.* Plural. It's intriguing that Day and Truly separately recall there being more than one sample, and that the FBI then contacts Studebaker, Day's underling, who tells them there was but one, and that Day then testifies there was but one. It's as if someone was comparing notes.

Which brings us back to the FBI's interview of Studebaker. The report reads: "He advised to the best of his recollection this paper sample was obtained from a roll of Kraft wrapping paper, 24" in width, located at the northeast corner of the wrapping table." So here we have confirmation from a Dallas Detective of the FBI's previous claim that the paper in the depository was 24" wide. The bag placed into evidence, as we've seen, is about 17" wide when split open. This means that, for the bag to have been made by Oswald from the paper found at the depository, he would have to have cut it along its length. Well, why would he have done this? Why wouldn't he have just folded it in third? And if he did this in the garage of the home where he'd spent the night before the shooting, as presumed, where oh where were the "scraps"? (Evidently, this same question occurred to Warren Commission counsel Wesley Liebeler, for he asked Michael Paine, in whose garage the rifle had been stored "Did anyone notice any scraps of paper or tape similar to the ones of which these sacks were constructed that we previously identified, particularly Commission 142?"...only to receive the unhelpful response "Not that I remember.") This cutting of the bag, then, suggests that whoever made the bag was concerned about its apparent size. This makes me suspect that whoever made the bag was trying to make it match Frazier's impression of the bag he saw in Oswald's possession.

This, of course, supports our earlier conclusion that the bag in the archives is either not the bag found in the building, or is a modified version of the bag.

There is more. At 10:01 on 11-23-63, but a few hours after the bag arrived at FBI headquarters, J. Edgar Hoover called President Johnson and gave him an update on the evidence against Oswald. Transcripts provided by the LBJ Library reflect that Hoover detailed:

"On the morning that this incident ---yesterday---the man who drove him to the building where they work, the building from where the shots came, said that he had a package wrapped up in paper ---not a blanket. The blanket we found in the garage at home. But the paper in which the gun was wrapped that has also has been sent up to us and accommodation will be made of that. He did carry some kind of package down there, which could have been the gun yesterday morning in the car. None of us can swear to that."

Now, what do you think he meant by "accommodation will be made of that"? Might he not have meant "We're gonna make a bag out of this paper, and present it as evidence if necessary"? I don't know. That might be stretching it. But it sure is curious. So curious, apparently, that Max Holland, an ardent defender of the Warren Commission and the Oswald-did-it scenario, substituted the word "accommodation" with the words "(an inspection)" in the transcript to this phone call published in his book, *The Kennedy Assassination Tapes*. Now, perhaps Hoover really said, or meant to say, "an inspection," or perhaps even "an examination," which sounds more like "accommodation" than "an inspection." But Holland had no reason to think so, as he had admittedly never heard the tape.

You see, when this tape was to be duplicated for the National Archives in 1999, just prior to its being made more widely available to researchers, including Holland, Cutting Corporation, which was to have done the duplication, found it to have been, in the words of a memo made available to researcher Rex Bradford, and posted on his history matters website, "most likely...intentionally erased." So...did the FBI make the bag currently in the archives out of materials supplied by the DPD? I don't know, but there is certainly reason to suspect as much.

There is one last point which I would be remiss not to mention... Now, at first this might seem irrelevant, but consider this... The bag was roughly 38 inches in length. The rifle was, according to the testimony of the FBI's Robert Frazier, 40.2 inches in length. If the rifle was disassembled, so that its longest piece was the 34.8 inch rifle stock, however, it could be made to fit the bag. And so the FBI pushed that Oswald brought the rifle into the building disassembled, and put it together with a dime just before the shooting...

But there's a problem with this. Any shooter worth his salt knows it takes a few shots for a rifle to settle in after being re-assembled. Dismantling the rifle might very well have ruined Oswald's one chance at "success."

This should make us suspect, then, that the bag was supposed to conceal the rifle when fully assembled, and that it's being too small was an accident. This then leads to the possibility the bag was made without the rifle's being present. Perhaps Oswald made the bag at work, and nobody noticed, and then smuggled it home in his clothing, and nobody noticed. If this, in fact, occurred, the bag's being too small to conceal the fully-assembled rifle can be explained in two-ways: 1) Oswald didn't have the rifle in front of him when he made the bag, and had to rely on his memory; and 2) the rifle ordered by Oswald was 36" in length, but he was shipped the 40" model.

Let's think about this last point. If *Oswald* had simply brought home an insufficient amount of paper and tape, or a completed bag too small to conceal the rifle, as many theorize, one would think he would improvise and tape another piece of paper over the end, or some such thing. Anything to avoid dis-assembling the rifle... But if someone *other than Oswald*, after being told Klein's had found an order for a 36" rifle on the night of the shooting, had used the available paper and tape samples to make a bag to fit *that* rifle, not realizing the rifle in evidence was 40", well, he might not have had the opportunity to improvise. By the time he realized *his* mistake, the bag might already have been in the hands of

someone not privy to his plan, or on its way to Washington.

And yes, I've looked into this. And yes, it appears that the FBI knew by 10 o'clock on the 22nd that the rifle found in the depository had been purchased by Klein's Sporting Goods of Chicago from a New York importer named Crescent Firearms, as part of a shipment of 36 inch rifles. Klein's confirmed the receipt of this rifle, moreover, around midnight, shortly before the evidence held by Lt. Day, apparently including the paper sample, was transferred to the FBI. While Klein's was reportedly unable to confirm Oswald's purchase of a 36 inch rifle--through his already discovered alias, Hidell--until approximately 4 o'clock in the morning, the 38 inch bag bearing Oswald's palm and fingerprint may already have been created, under the assumption such confirmation was forthcoming.

Or perhaps that's just too complicated. Perhaps Oswald's ordering a 36 inch rifle, which would have fit inside the bag, is just a coincidence. Perhaps the under-sized nature of the bag came as a result of something as simple as Day's grabbing too small a sample, and his or the FBI's reluctance to use materials not traceable to the book depository while creating the bag placed in evidence. We may never know.

But if one should make it through the paper bag minefield and come out convinced that all was on the up and up with the evidence presented to the commission, one should also consider that neither the FBI on its own or at the Warren Commission's request inspected the inside of a similar paper bag after it had carried the rifle around, if just, y'know, to see if there should have been marks inside the bag. The suggestion by the FBI's expert Cadigan that the rifle may have been wrapped in cloth inside the bag shouldn't have cut off such an inquiry, seeing as no cloth was found with the bag or in the sniper's nest.

Something happened there and we don't know what it was, now do we?

Chapter 4d: Casts of Contention

What we're not supposed to know

For reasons beyond my grasp, the first image in each chapter sometimes fails to appear. If there's nothing up above, don't despair; you can still see the image [here](#)

The Paraffin Tests

Let's now look at the central question of whether Oswald fired a rifle on 11-22-1963. This discussion centers largely around the paraffin tests performed on Oswald's hands and cheek. A paraffin test, to explain, is a test where a suspect's hands are coated in paraffin. This creates a cast. The cast is then tested for the presence of nitrates. The presence of nitrates can be taken as an indication the suspect handled or fired a weapon. A similar test performed on a cheek could indicate the suspect fired a rifle. According to the standard text *Scientific Evidence in Criminal Cases* these tests were first performed in the 1930's and were performed almost routinely in the 1950's. By 1963, however, they were beginning to fall in disfavor.

At approximately 8:55 PM CST on **11-22-63**--a bit more than 8 hours after President Kennedy had been slain on a Dallas street--Dallas crime lab detective W. E. Barnes coats Oswald's hands and cheek with paraffin. He then cuts the casts off for testing. Although studies have suggested that gunshot residue tests should be performed within six hours of a shooting, that Oswald has been in police custody all but 1 1/4 hours of the time since the shooting, and has been prevented from washing his hands or his face, and is suspected of firing his rifle 3 times and his pistol 5 times, gives us reason to believe these tests will prove helpful.

(Note: a subsequent study by Vincent Guinn will come to demonstrate that, under laboratory conditions, gunshot residue can be found on suspects as long as 24 hours after a shooting. A similar study by S.S. Krishnan published in 1974 will go further and claim "residue can remain for up to 17h during normal activity, but can be quickly removed by vigorous scrubbing with soap and water." A subsequent study by Krishnan published in 1977 would support this further by listing a homicide where gunshot residue was found on the hands of a suspect 24 hours after the shooting. While Oswald's odyssey after the shooting was far from what one would expect to find in a laboratory, it was also far less taxing than 17h of normal activity. As a consequence there is nothing in his saga to make one think the residue on his hands, face, and clothes that would be apparent should he have fired a rifle, would have vanished. From May 31 to June 3, 2005, the FBI crime lab held a symposium on gunshot residue

analysis. One of the issues discussed was time limits, a time after which the various crime labs present at the symposium would refuse to conduct a test for gunshot residue. According to a summary of this symposium, found on the FBI's website, *"Many participants stated that an acceptable cutoff time is 4 to 6 hours after the shooting event, whereas some felt that up to 8 hours was appropriate. Still others were comfortable accepting lifts taken more than 12 hours after the shooting."* It was also noted that the FBI's cut-off was 5 hours. A 2006 article on Scienceevidence.com similarly notes that in *Saunders v the State of Texas*, Aug. 12 2006, *"The State's expert...testified that the time guideline for gunshot residue tests is four hours because of the diminished likelihood of finding the elements necessary for a positive result. The expert testified that it was possible, however, for the test to produce a positive finding even after six or eight hours, but such findings are described as inconclusive. They are not referred to as 'unreliable,' however, because the problem is the likelihood of the evidence disappearing, not the presence of a false positive."* This suggests that, by today's standards, the test on Oswald was performed too late to be considered conclusive, but that a positive result would nevertheless suggest his guilt.)

The next morning, on **11-23-63**, Dr. M.S. Mason and Louie Anderson analyze the paraffin casts of Oswald's cheek (Exhibit #1), left hand (Exhibit #2), and right hand (Exhibit #3) created by Detective Barnes. The request form for this test, found in the Dallas Archives, records the time of the request as 11:05 A.M. The results read as follows: "No nitrates are found on Exhibit #1. Nitrate patterns consistent with the suspect having discharged a firearm were present on Exhibits #2 and 3. The pattern on Exhibit #3 is typical of the patterns produced in firing a revolver." As Oswald is reported to have handled his revolver in the movie theater these results do little to establish that he'd fired a rifle at the President. More clearly, the positive result on Oswald's hands suggests that the elapsed time since the shooting was not the cause of the negative result on Oswald's cheek, and that one might reasonably suspect he did not fire the shots that killed the President. But does the Dallas Police Department admit to itself or the media that there may be suspects still at large?

Shortly thereafter, Dallas Police Chief Jesse Curry is asked about the tests. He responds, on camera, "I understand that it was positive." When asked what that means, he explains "It only means that he fired a gun." When asked by a reporter if there were powder marks on Oswald's cheek, he replies "I don't know that. I don't know that." A cigarette-chomping reporter then asks "That a gun was fired, Chief, not the rifle, or a pistol?" to which Curry responds "That's right." The reporter then says aloud, for his fellow reporters to hear, "We just say a gun."

Within an hour, Frank McGee of NBC News reports "Oswald still insists he did not kill the president. The paraffin tests proved positive—Oswald did fire a gun during the last twenty-four hours." The juxtaposition of these statements undoubtedly confuses many into thinking that the paraffin tests proved Oswald had fired a rifle.

A UPI article published shortly thereafter tells millions of readers "Pro-Communist Lee Harvey Oswald was charged today with the assassination of President Kennedy. Police said paraffin results on both of Oswald's hands were "positive." This article similarly suggests the paraffin tests proved Oswald had fired a rifle.

And from there what was merely misleading information turns into misinformation... In a **1:07 PM** recap of the evidence, McGee now tells his viewers "Paraffin tests of the side of *Oswald's face* proved that he had indeed fired a rifle." At **2:07 PM** his colleague Bill Ryan adds to the confusion: "Tests showed that Oswald had gunpowder traces on both his hands, indicating that he did use a rifle."

And amazingly, this end-run around Curry's words becomes the accepted story... Despite the fact that, after first interviewing Curry that morning, CBS' man in Dallas Nelson Benton had repeated Curry's words and explained that the paraffin tests did not prove Oswald fired a rifle, CBS anchorman Walter

Cronkite, in an afternoon broadcast, jumps on NBC's bandwagon, and actually outdoes them, telling his viewers: "Paraffin tests taken on his hands indicate he did fire a rifle, as well as a revolver."

Meanwhile, the FBI joins the circus. An 11-23-63 memo from Assistant Director Alex Rosen--heading the FBI's investigation of the shooting--to Assistant Director Alan Belmont, his superior, reads: *"At 1:25 PM this date, Assistant SAC Kyle Clark, Dallas, advised just received word of the paraffin test...The results show Punctate traces of nitrate found on the left and right hands consistent with that of a person who had handled or fired a firearm. The paraffin of right cheek showed no traces of nitrate...Clark advised that he now understood that the actual results of the paraffin were between 12 and 1 AM this morning, but were not taken to the Criminal Investigative Laboratory until 10:45 AM this morning."* Now, this is a bit strange. Why did the DPD wait so long to tell the FBI the test results? And why did Agent Clark think they'd applied the paraffin after midnight, as opposed to hours before?

Elsewhere, Dr. Vincent Guinn, Technical Director of the Activation Analysis Program of General Atomic Division of General Dynamics Corporation, calls the FBI Laboratory and offers his assistance in studying the paraffin casts. Guinn believes that neutron activation analysis, if performed on the casts, will better determine if there was gunshot residue on Oswald's hand and cheek than the tests performed in Dallas. He is thanked for his spirit of cooperation, but is never called.

And he's not the only one being rebuffed. Later this evening the Special Agent in Charge of the Houston FBI office sends an urgent message to FBI headquarters. He tells them that Dr. Richard Wainerdi of Texas A & M has spoken to Dr. Paul Aebersold, an employee of the Atomic Energy Commission, and that Aebersold claims neutron activation analysis of Oswald's tee-shirt might help them determine whether or not Oswald had fired a rifle. The memo then notes that the Texas Director of Public Safety, Homer Garrison, has told the Dallas Police of Aebersold's remarks but has been rebuffed by Chief Detective Captain Will Fritz, who's told him the case was wrapped up without this evidence.

The next day, **11-24**, The Washington Post, in an article on the evidence against Oswald, echoes NBC's and CBS' bad reporting and asserts that a positive paraffin test on both of Oswald's hands indicates he'd fired a rifle. The L.A. Times on this day, in its rundown of evidence against Oswald, similarly details: "Police reported, however, that paraffin tests had disclosed that both of Oswald's hands had fired a gun. They said it was not likely that both hands would have shown powder marks if Oswald had fired only the 38-caliber snub-nosed revolver which was used to kill Tippit." This, of course, is not true. Finding nitrates on both hands of a suspect has never been considered evidence the suspect had fired a rifle. Instead, the finding of nitrates on both hands suggests either that Oswald had handled his revolver with both hands, or that his hands had been contaminated by an outside source.

An article in the Fort Worth Star Telegram is even more off base, and misrepresents not just the conclusions to be reached from the paraffin tests, but their results. It asserts "A paraffin test showed positive results on both the hands and *cheek* of the 24 year-old ex-Marine. This, officers said, showed that the man had fired a gun, *probably a rifle*." Later that day, after Oswald has been killed, Dallas District Attorney Henry Wade tells reporters "I would say without any doubt (Oswald) was the killer of the President... There's no doubt in my mind we would have convicted him. I've sent people to the electric chair on less." When asked about the paraffin tests, he says "Yes, I've got paraffin tests that showed he had recently fired a gun." When asked by an alert reporter if this meant a rifle, he repeats "A gun." This last statement indicates he knew full well that there was nothing about these tests to suggest Oswald had fired a rifle. And yet, the transcript to this taped press conference (as published by NBC in 1967) indicates he said just the opposite, and had instead proclaimed "Paraffin tests showed that he (Oswald) had fired a rifle recently."

If NBC had simply gotten it wrong, repeatedly, they weren't alone. The **11-25** Washington Post article

on Wade's press conference once again runs down the evidence against Oswald, and reports: "Paraffin tests for gunpowder on both hands were "positive," indicating he recently had shot a rifle."

Amazingly, on 11-25, the New York Times presents its own list of the evidence against Oswald, and gets it equally wrong. It inaccurately reports that paraffin tests showed "particles of gunpowder from a weapon, *probably a rifle, on Oswald's cheek and hands.*" Unlike NBC, and The Washington Post, however, the Times has someone to blame for their mistake. They cite a source for this misinformation; disturbingly, it's J. Gordon Shanklin, Special Agent in Charge of the Dallas FBI.

On **11-26**, moreover, with the case now wrapped up (much as Capt. Will Fritz had predicted on the 23rd), the FBI contacts Dr. Paul Aebersold to see if he can really tell if Oswald had fired a rifle simply by performing neutron activation analysis on his tee-shirt, as purported. A hand-written note in the margins of the 11-23 airtel (in which these test were first discussed), however, reports that Aebersold denied claiming such a test would give definitive results, and that he'd claimed instead that such testing was only "possibly helpful." Presumably as a result, he was never asked to perform these tests.

The NAA Tests on the Paraffin Casts

Apparently, other tests were on his mind. On **11-27**, Dr. Glenn Seaborg, Chairman of the Atomic Energy Commission (AEC) advises the FBI that (according to a memo from Seaborg's contact at the FBI to assistant director William Sullivan) "the AEC has at the present time a very sensitive detection process which might augment the paraffin tests already run on Oswald." The memo goes on to state that the AEC's expert in this field--the field of neutron activation analysis--is Dr. Paul Aebersold. Seaborg even gives them Aebersold's phone number.

Later this day, Roy Jevons, Section Chief of the Physics and Chemistry Department of the FBI laboratory, sends a memo to Ivan Conrad - Assistant to the Director in Charge of the FBI laboratory, and suggests they make arrangements with the AEC to perform the tests proposed by Seaborg, using NAA (neutron activation analysis) on the paraffin casts. While such a test could better establish whether or not there was gunshot residue on Oswald's hands and cheek (the memo asserts that the standard paraffin test is "unreliable") there are limitations to the tests. Jevons writes: "it is noted that the detection of such residues...would not necessarily establish the exact kind of weapon fired by him, the time at which he fired the weapon, or the number of times the weapon was fired. Accordingly, in view of the nonspecific nature of these results and in view of the massive evidence already available indicating Oswald's guilt, it was not felt that this type of examination would contribute essentially to the investigation and trial of Oswald. *However, Oswald is now dead and there will be no trial. In view of this development, it is felt that this examination should now receive further consideration in order to protect the Bureau against any possible future allegations, however unfounded, that if neutron activation analyses type of analyses had been conducted, one might have obtained extremely significant data.*"

Yes, you read that right: the FBI's crime lab had NO plans to perform these tests when they could be used to help Oswald, but, now that he was dead, they thought it a good idea to perform these tests to protect the Bureau. The possibility that Oswald hadn't shot Kennedy, and that performing these tests could have helped them discover his innocence, and have led them to pursue the actual killers, was never even considered. Even more disturbing, the 6 line paragraph in Jevons' memo after the paragraph cited above was redacted in its entirety when released to Harold Weisberg in one of his Freedom of Information Act lawsuits.

(In 2009, I found this memo on the Mary Ferrell website. The paragraph was no longer redacted. It now read: "*Such allegations, for example, might originate from relatively high placed individuals in the*

Atomic Energy Commission (AEC) charged with developing neutron activation analyses and who will recognize the publicity potential of such allegations." (FBI file 62-109060, Sec 5, p140) This proves, as if we ever had any doubt, that the FBI's main interest in performing these tests was political and to cut off speculation that they hadn't thoroughly tested the evidence. The redaction of this paragraph--which had nothing to do with National Security, and only concealed that the FBI was distrustful of Dr. Aebersold--furthermore, demonstrates the problem inherent with letting agencies redact their own documents, as they are as likely to redact items for political reasons as security reasons.)

In any event, with Jevons' memo, the FBI springs into action. On 11-27 Special Agent C. Ray Hall retrieves the paraffin casts from Louie Anderson of the Dallas City Crime Lab, and arranges for their delivery to FBI Spectrography expert John Gallagher. The memo regarding this transfer notes that the paraffin casts are now in seven pieces: the back, palm, and thumb of each hand, and one "thin slab from right cheek." Another memo on this transfer notes further that paraffin casts were normally thrown out by the Dallas Police Department after testing, and that Louie Anderson, who'd analyzed the casts for the DPD, had washed them and taken them home, apparently as a souvenir.

Disturbingly, even though the FBI knows more reliable tests are available, and will soon be performed, it continues to trumpet that the paraffin tests performed in Dallas support that Oswald killed the President. On page 19 of its 12-9 Summary report (written prior to **12-5**), it declares: "Following Oswald's apprehension on November 22, 1963, Dr. W.F. Mason of Dallas concluded, after tests, that paraffin casts made of Oswald's hands contained traces of nitrate consistent with the residue on the hands of a person who had recently handled or fired a firearm." As the report is on the assassination of President Kennedy, and not on the shooting of Officer Tippit, the inclusion of this information without admitting that, 1) per the FBI's own laboratory, these tests are unreliable, and 2) the test on Oswald's cheek was negative, is undoubtedly misleading and indicative of the FBI's desire to close the case without really investigating.

On **12-6**, agent J.J. O'Connor of the FBI's Domestic Intelligence Division meets with the AEC's chairman, Glenn Seaborg, and further discusses the matter. Seaborg offers the "complete and confidential cooperation" of his agency. Also on this day, O'Connor and the FBI's Spectrography expert, John Gallagher, meet with Dr. Spofford G. English, Assistant General Manager of Research and Development for the AEC. English advises that Dr. Paul Aebersold, Director of the AEC's Division of Isotopes Development, has a "propensity for publicity" that "makes him difficult to control," and that he will not be informed of the tests. This meeting concludes with the decision to "arrange a conference at the earliest possible date with operational personnel of the Oak Ridge National Laboratory..."

On **12-11**, Dr. Paul Aebersold of the Atomic Energy Commission writes a letter to Assistant Attorney General Herbert Miller, offering his services. He writes "We would hope soon to have more details on whether the method (neutron activation analyses) will give useful information to distinguish between smoke deposits from revolvers and those from rifles--by means of their distribution on the body of the person firing them and by the levels of antimony and barium (and perhaps other elements) deposited...Should you wish us to be of assistance, our research contractor in the criminalistics work, General Atomic in San Diego, would carry out the measurements--working directly with the appropriate government investigators and with proper safeguards regarding the physical evidence and information. The scientist in charge of this work at General Atomic is Dr. Vincent P. Guinn." As Guinn has already offered his services to the FBI, and been rebuffed, it could very well be that this letter is his attempt to get around that roadblock.

That same day, unknown to Aebersold and probably Guinn, the FBI's O'Connor and Gallagher meet with Dr.s English, Vandarryn, Swarthout of the AEC, along with Mr. William S. Lyon, in charge of Oak Ridge's neutron activation analysis unit. During this meeting it is decided that Oak Ridge will be "adequate to accomplish the necessary activation analysis..." and that "The work can be performed in a

relatively isolated laboratory to insure the proper security and control of the data." It is further decided that the AEC will "endeavor to bring Dr. Vincent P. Guinn, who has been in charge of all research efforts in powder residue studies at General Atomic Division of General Dynamics Corporation, to Oak Ridge, Tennessee, to act as a technical consultant on the matter. It is pointed out that the confidential agreement reached with AEC will be binding on Dr. Guinn and will include the few other technicians necessarily involved. Mr. William Lyons will notify the Bureau when consulting arrangements have been finished and the facilities at Oak Ridge are ready for the required analysis."

Attached to the 12-12 Jevons to Conrad memo describing O'Connor's and Gallagher's meeting is a list of 18 tests to be performed at Oak Ridge. Four of these are tests to be performed on the materials used by the Dallas PD (Gulfwax, Cheesecloth, Distilled water, and Diphenylbenzidine) in order to make sure these materials themselves have little barium or antimony. Four more are tests related to the cartridge cases of Oswald's revolver and rifle, to see if the gunshot residue of each weapon is readily identifiable. The other ten are controls. Test 1 is a test of a freshly washed left hand. Test 2 is a test of a previously clean right hand, after it has fired a .38 Smith and Wesson revolver four times. Test 3 is a test of a right hand after firing four times and reloading. Test 4 is a test of a left hand after firing four times with the right hand, and reloading using only the right hand. Test 5 is a test of a right hand after firing four times, and reloading, after which the paraffin cast is washed with distilled water. Test 6 is a test of the left hand after firing four times with the right hand, and reloading, after which the paraffin cast is washed with distilled water. Test 7 is a test of a left cheek before firing a revolver. Test 8 is a test of the "Cast of right cheek after the rifle was fired from the right shoulder (rifle was wiped clean with cheesecloth prior to shooting)." Test 9 is a test of the right hand after firing the rifle. Test 10 is a test of the left hand after firing the rifle.

On **12-12**, Special Agent C. Ray Hall contacts the Dallas crime lab and retrieves the paraffin and water samples needed to perform the tests outlined in Jevons' memo.

A letter written on **12-16**, from Defense Department General Counsel John T. McNaughton to Acting Attorney General Nicholas Katzenbach, indicates that at least someone is watching the FBI. McNaughton indicates that Katzenbach has submitted the FBI's 12-9 report for his inspection, and solicited his comments. Among McNaughton's numerous criticisms is one bearing directly on this issue: "There is no reference to a paraffin test on Oswald's face."

On **12-17**, the FBI's John Gallagher personally delivers the paraffin casts to the AEC's William Lyon, who is in charge of the neutron activation analysis at Oak Ridge National Laboratory.

On **12-19**, Roy Jevons writes his boss Conrad and relates Gallagher's activities. He also notes that Mr. Lyons "feels that it will not be until early in January, 1964, that all procedures, consulting work and facilities will be finalized so that the actual analysis of the casts from Lee Harvey Oswald can proceed." The reference to "consulting work" is most certainly a reference to the work to be performed by Dr. Guinn.

On **12-23**, Jevons again writes Conrad, this time reporting that Dr. English's office has called Gallagher to tell him about Aebersold's letter to the Justice Department, and that, as a response to this letter, English had informed Aebersold of the preparations already underway. He said further that Dr. Aebersold had been "briefed concerning the confidential nature of the examinations by AEC." At this point, Oswald had been dead and buried and proclaimed Kennedy's killer for nearly a month. From this one might ask, why all the secrecy? If the tests showed that Oswald had fired the rifle were they planning on keeping the results to themselves? Of course not. Consequently, one can only look at this concern for secrecy as a concern that the results will suggest that Oswald *had not fired the rifle*, and their feeling that such a revelation should be carefully controlled or, more likely, suppressed.

(This, apparently, was the beginning of the end for Aebersold. He wanted to run some tests to help

determine who'd killed his President, was repeatedly rebuffed, found out they were running tests without him, and was told to keep his mouth shut. A bit sad. A bit tragic. But not as sad and tragic, one might assume, as the next chapter in his life. A February 5, 1965 Associated Press article found in the L.A. Times reports that Dr. Aebersold, a veteran of the Manhattan Project and "one of the world's leading nuclear physicists," has tried to commit suicide by jumping "90 feet from a bridge into the ice-covered Potomac River." It notes further that Aebersold, still only 54, was on medical leave from his post with the AEC. A May 30, 1967 article in the New York Times brings even sadder news. The now-retired Aebersold has jumped from the top floor of a 17-story apartment building near his home, and was successful in ending his life. His name lives on, however. In 1973 the Society of Nuclear Medicine names its annual award in his honor.)

Now back to '63... A scratch sheet received by researcher Harold Weisberg from the AEC in response to a Freedom of Information Act lawsuit in 1975 shows that tests 2, 5, and 6, which test the levels of gunshot residue likely to be found on Oswald's hands, are performed on **12-26, 12-27, and 12-30**.

The insidious nature of the FBI's secrecy comes to light over the next few weeks. On **1-2-64** the Warren Commission's Howard Willens writes a letter over Chief Justice Warren's signature to AEC chairman Glenn Seaborg, asking him for information about "Lee Harvey Oswald...and Jack Ruby...as well as other information which you may believe to be relevant to our investigation."

On **1-6-64** the AEC's Dr. English calls the FBI's Gallagher to tell him of this development. He assures Gallagher that Seaborg agrees that "the FBI should have complete control of the examinations and the results" and that "any data obtained from these tests would be reported by the FBI." A memo from Jevons to Conrad on this date relates that "Dr. English was advised that the Bureau has no objection" to Seaborg's telling Warren about the tests. The real question, of course, is why hadn't Warren already been told about these tests?

On **1-7**, Warren Commission General Counsel Lee Rankin writes FBI Director Hoover. Rankin's been forwarded Aebersold's 12-11 letter to the Justice Department, and is "requesting advice concerning the feasibility and desirability of applying nuclear activation techniques to specimens of evidence."

On this same day Seaborg responds to Warren and lets the cat out of the bag. He admits they are cooperating on a "confidential basis" with the FBI and "are investigating the possibility of whether a very sensitive method of trace element analysis (the so-called 'activation analysis technique') may be of any value in further corroborating evidence already in hand..."

On **1-10**, Hoover responds to Rankin's letter. Paraphrasing a Jevons to Conrad memo from the day before, he advises that "work is already in progress applying this technique to certain phases of the current investigation." He tells Rankin that Seaborg has already written Warren and "reported the existence of this joint effort." He doesn't attempt to explain why they kept this "joint effort" secret from the commission for the first month of its existence, and why they only told them about it after being asked directly.

(While it might seem "big" of Seaborg and Hoover to finally come clean with Warren and admit they are conducting these tests, they may simply have realized that it was bound to come out eventually. The January, 1964, Journal of the Forensic Sciences includes an article by Dr. Guinn and others entitled "Neutron Activation Analysis in Scientific Crime Detection," with a subheading "Detection of Gunshot Residues," and a footnote admitting that their tests are "supported by the Division of Isotopes Development of the U.S. Atomic Energy Commission.")

On **1-11**, Chairman Warren has General Counsel J. Lee Rankin send a memo to the other commissioners with a "Tentative Outline of the Work of the Commission" attached. Under the heading "Evidence Identifying Oswald as the Assassin of President Kennedy" it includes the subheading "other

physical evidence” and the item “paraffin tests”. No mention of the negative result for Oswald's cheek. No mention of the NAA tests to be performed on the paraffin casts, as described in the letter from Aebersold.

The papers provided researcher Harold Weisberg in 1975 indicate that on **1-15**, **1-16**, **1-18**, **1-20**, and **1-21**, tests are conducted at Oak Ridge on the paraffin casts of Oswald's hands and cheek. On **1-16**, **1-17**, and **1-20**, similar tests are conducted on the materials used by the Dallas Police, in order to determine if they would have any effect on levels of barium and antimony found on the paraffin casts. These same papers indicate that on **1-22** and **1-23** the control tests outlined in December are performed.

During the **1-27** Executive Session, Rankin decides to tell the full commission that the AEC is performing tests on behalf of the FBI and Commission. Curiously, he tells them only of the tests to be performed on the bullet fragments, in order to ascertain how many bullets are represented, and nothing of the tests on the paraffin casts, which might actually demonstrate whether or not Oswald had fired a rifle.

On **2-18**, Mark Lane, who has been acting as a defense lawyer for Oswald, tells The Guardian that he has received a copy of the DPD's paraffin test results from the files of Dallas District Attorney Henry Wade, and that these results showed that the test for Oswald's cheek was negative. Over the next few days, this is reported nation-wide in newspaper articles, including one written by columnist Jack Smith. This, one can only assume, puts a halt to any plans harbored by the Commission to use the tests against Oswald (as was suggested by Warren's 1-11 outline of the evidence).

A **2-21** memo from J. Lee Rankin spells out that Warren Commission Counsel Norman Redlich and Melvin Eisenberg have been tasked with “Developing expert knowledge in certain areas of criminal investigation.” He lists “These areas, in the following order of priority, are: weapon identification; ballistics; *paraffin tests*; fingerprint and palm print evidence; handwriting identifications.”

On **2-27**, Dr. Vincent Guinn of General Atomic, whose early offers of help had been rebuffed by the FBI, but who'd later been contacted by the AEC, returns to center stage. A Jevons to Conrad memo relates: "Today, Dr. Vincent P. Guinn called the FBI Laboratory and spoke to SA John F. Gallagher. He advised that since the assassination a large part of their efforts have been directed to the determination of powder residues taken from the hands and cheeks of individuals who have shot a rifle similar to the one reportedly owned by Lee Harvey Oswald. He advised that there appears that triple firing of this rifle will leave unambiguous positive tests every time on the paraffin casts. It further appears that washing the casts with diphenylbenzidine does remove one of the characteristic elements (barium) but such washings do not remove all of the other characteristic element in powder residues (antimony). Further be advised that the tests to date indicate that powder residues are deposited on both cheeks of the shooter after the rifle is fired either one time or three times. It appears, he added, that these results can be obtained even if the paraffin casts are made 2 1/2 hours after shooting the rifle providing that the skin of the shooter has not been washed in the meantime. He inquired if any information could be furnished him relating to the actual casts from Oswald. He stated he read about those casts in the newspapers but has no way to confirm the stories. SA Gallagher advised he was not at liberty to discuss this matter. Dr. Guinn asked who in Dallas might be knowledgeable on this subject. He was advised that he could not be given any information relative to these casts at this time."

Guinn's memo is incredibly revealing. First, it tells us that, as proposed in the 12-11 FBI/AEC meeting, Guinn was indeed brought on board as an AEC consultant. Second, it tells us that he was tasked with unveiling whether or not Oswald *should* have had gun shot residue on his cheek, had he been the shooter. Third, it tells us he'd concluded that yes, indeed, he should have. And finally, it tells us that these tests were compartmentalized, and that Guinn was not allowed to know the test results on Oswald's cheek cast, and thus his possible innocence. (One can only assume they'd have no problem

with people finding out his possible *guilt*.) In any event, Gallagher and the FBI are now aware that Guinn is curious, and that they need to release their results before it looks like they're hiding something.

On 3-6, the FBI Laboratory advises Hoover that neutron activation analysis has been performed on the paraffin casts of Oswald's hands and face. Their report states that these casts were analyzed to determine if the casts "bore any deposits which could be specifically associated with the rifle cartridge cases found in the Texas School Book Depository." Their results indicate "No characteristic elements were found by neutron activation analyses which could be used to distinguish the rifle from the revolver cartridges." The report concludes that "Elements (barium and antimony) were found on the casts" but that "no significance could be attached to the residues found on the casts other than the conclusion that barium and antimony are present in amounts greater than would be expected to be found on the *hands* of an individual who has not recently fired a weapon." Note that there's no mention of their studying the "distribution on the body of the person firing" a rifle, as originally outlined by Aebersold. Note also that they fail to mention their comparing the cheek cast to the cheek of someone who'd recently fired a weapon.

On 3-6, the FBI's Dallas office is also told of these tests. The memo reflecting as much reveals that "The Union Carbide Corporation personnel at this site who worked on the actual analyses of these specimens with the FBI Laboratory examiners were Dr. Frank F. Dyer and Mr. Joel F. Emery." Yes, that's correct. After initially conspiring with some AEC employees to hide the existence of these tests from other AEC employees and the Warren Commission, the FBI had relied upon some members of the private sector to actually run the tests.

A 3-10 letter from J. Edgar Hoover to Warren Commission General Counsel Rankin recites, almost word for word, the FBI Laboratory report from a few days prior (words taken from the report are in italics): "*The paraffin casts from Lee Harvey Oswald were examined by neutron activation analyses at the Oak Ridge National Laboratories Research Reactor Site, Oak Ridge, Tennessee. These analyses were made to determine if the paraffin casts from Oswald which were made, chemically treated and washed by the Dallas law enforcement authorities, bear any primer deposits from the rifle cartridge cases found in the Texas School Book Depository following the President's assassination. As a result of these examinations, the deposits on the paraffin casts from the hands and cheek of Oswald could not be specifically associated with the rifle cartridges. Elements (barium and antimony) were found on the casts; however, these same elements were found in residues both from the above rifle cartridge cases and from the revolver cartridge cases which were fired from Oswald's revolver reportedly between the time of the assassination and the time of apprehension. No characteristic elements were found by neutron activation analyses which could be used to distinguish the rifle from the revolver cartridges. In view of the fact that the paraffin casts were not made until after the reported firing and handling of that revolver, no significance could be attached to the residues found on the casts other than the conclusion that barium and antimony in these residues are present in amounts greater than would be expected to be found on the hands of an individual who has not recently fired a weapon or handled a fired weapon.*" The letter fails to comment on the results of the test of Oswald's cheek, and if the residue levels were suggestive he'd fired a pistol, a rifle, or neither.

Also on 3-10, Jevons writes Conrad another memo regarding Guinn's 2-27 phone call to Gallagher. This memo re-presents Guinn's info in the context of the FBI's own findings (words from his 2-27 memo italicized): "Dr. Vincent P. Guinn has now informally advised us *that since the assassination a large part of their efforts have been directed to the determination of powder residues on paraffin casts taken from the hands and cheeks of individuals who have shot a rifle similar to the one reportedly owned by Lee Harvey Oswald. He advised that it appears that triple firing of this rifle will leave unambiguous positive tests every time on the paraffin casts. It further appears that washing the casts*

with diphenylbenzidine does remove one of the characteristic elements (barium) but such washings do not remove all of the other characteristic element in powder residues (antimony). Further, he advised that the tests to date indicate that powder residues are deposited on both cheeks of the shooter after the rifle is fired either one time or three times. It appears, he added, that these results can be obtained even if the paraffin casts are made 2 1/2 hours after shooting the rifle providing that the skin of the shooter had not been washed in the meantime." (Note that Jevons now holds that Guinn "informally advised" the FBI of his findings. This implies that they are not to discuss these findings with anyone else, or put them down in any official report.) Jevons continues (words from the 3-6 FBI Lab report italicized): "Examination of the actual casts from Oswald by the FBI Laboratory examiners and personnel at the Oakridge Research Reactor, Oakridge, Tennessee, revealed that the *elements (barium and antimony)* were present on these casts. However, these same elements were found in powder residues in both the rifle cartridge cases and from the revolver cartridge cases which were fired from Oswald's revolver; reportedly between the time of the assassination and the time of apprehension. In view of the fact that the paraffin casts were not made until after the reported firing and handling of the fired revolver, no significance could be attached to the residues found on the casts other than the conclusion that barium and antimony in these residues are present in amounts greater than would be expected to be found on the hands of an individual who has not recently fired a weapon or handled a fired weapon." The memo goes on to repeat the closing of the 2-27 memo on Guinn: "During the course of Dr. Guinn's conversation with Dr. Gallagher of the FBI Laboratory, *he inquired if any information could be furnished him relating to the actual casts from Oswald. He stated he read about those casts in the newspapers but has no way to confirm the stories. SA Gallagher advised he was not at liberty to discuss this matter. Dr. Guinn asked who in Dallas might be knowledgeable on this subject. He was advised that he could not be given any information relative to these casts at this time."*

Well, this is a bit mysterious, isn't it? Guinn tells the FBI that gunshot residue probably should have been found on Oswald's cheek, and the FBI dismisses this by repeating the words of its Lab report--that they couldn't tell by looking at the residues whether they came from the rifle or the revolver, and that the tests revealed residues greater than one would expect to find on the *hands* of someone who hadn't handled a weapon. THIS IS A NON-SEQUITUR. This point is only relevant if the test of Oswald's cheek was positive. Only then does their inability to identify this residue come into play. Was the test performed on Oswald's cheek cast positive? If so, why not say so in this internal memorandum? And why do they keep discussing Oswald's hands, even when the memo is about his cheek? What is the FBI hiding?

On 3-16, Melvin Eisenberg from the Commission meets with the FBI's Gallagher, in order to learn more about neutron activation analysis. The Jevons to Conrad memo on this meeting reflects "As you were previously advised, it was not possible to distinguish the powder residues of the rifle cartridges from the powder residues of the revolver cartridges." Once again, there is no mention of the residue levels found on Oswald's cheek cast, and whether this is pertinent to the question of his having fired a rifle.

On 3-18 Hoover sends the Commission a memo answering some of Eisenberg's questions.

On 3-23, Agent Gallagher receives a phone call from Louise Campbell of Science Magazine. She asks if NAA is being used in the "Oswald case." She is told "there would be no comment on this subject."

On 3-27, Roy Jevons sends another memo to Conrad, this one discussing the FBI Lab's contacts with Eisenberg. The memo notes that on 3-16 Eisenberg brought up Aebersold's letter from 12-11, and its suggestion that NAA could be used to demonstrate that Oswald had fired a rifle, and was told by agent Gallagher that "no elements were found during (the FBI's recent) tests to distinguish between rifle and revolver deposits" and that "nothing has been done subsequent to these examinations which would assist further in the interpretation of the data obtained." As Aebersold had suggested that, in addition to

the possibility one could differentiate between revolver residue and rifle residue, the distribution of antimony and barium on the body of a suspect might also indicate whether or not Oswald had fired a rifle, the answer purportedly given to Eisenberg is non-responsive. Is Jevons hiding that tests have been performed along these lines, and that they can be used to suggest Oswald's innocence?

Speak No Evil

A **3-30** Jevons to Conrad memo reveals that Eisenberg has just conducted a pre-testimony conference with the FBI's Cortlandt Cunningham, and has asked him to perform some quick tests using Oswald's rifle, paraffin, and diphenylbenzidine.

A **3-31** Jevons to Conrad memo reveals that these tests had been performed, and that they "once again confirmed the unreliability of the paraffin test." This is ironic. There was no mention of this "unreliability" in the FBI's 12-9 summary report given to President Johnson, when they used these tests to suggest Oswald's guilt.

On **4-1** FBI ballistics expert Cortlandt Cunningham testifies before the Warren Commission. Eisenberg takes his testimony. Even though the Commission initially intended to use the paraffin tests to demonstrate Oswald's guilt, they have now decided to trash the evidentiary value of these tests. Cunningham states: "We were interested in running a control to find out just what the possibility was of getting a positive reaction after a person has thoroughly washed their hands. Mr. Killion used green soap and washed his hands, and we ran a control, both of the right cheek and of both hands. We got many reactions on both the right hand and the left hand, and he had not fired a gun that day.... That was before firing the rifle. We got no reaction on the cheek... We fired the rifle. Mr. Killion fired it three times rapidly, using similar ammunition to that used in the assassination. We reran the tests both on the cheek and both hands. This time we got a negative reaction on all casts... there were none on the hands. We cleaned off the rifle again with dilute HCl. I loaded it for him. He held it in one of the cleaned areas and I pushed the clip in so he would not have to get his hands near the chamber--in other words, so he wouldn't pick up residues, from it, or from the action, or from the receiver. When we ran the casts, we got no reaction on either hand or on his cheek. On the controls, when he hadn't fired a gun all day, we got numerous reactions." Cunningham fails to state that these tests were performed just a day before, and at Eisenberg's request.

When asked if residues would normally be found on a man's cheek after firing a rifle, Cunningham offers his personal analysis: "No, sir; I personally wouldn't expect to find any residues on a person's right cheek after firing a rifle due to the fact that by the very principles and the manufacture and the action, the cartridge itself is sealed into the chamber by the bolt being closed behind it, and upon firing the case, the cartridge case expands into the chamber filling it up and sealing it off from the gases, so none will come back in your face, and so by its very nature, I would not expect to find residue on the right cheek of a shooter... You can see when you close the cylinder, and each chamber lines up, there is a few thousandths space between. When the bullet is fired, the bullet jumps across this space and enters the ramp and then into the rifling. The gases always escape through this small space. The loss is negligible, but the gases are escaping on every shot. After you fire this revolver, you can see residues, smoke deposits and other residues around the entrance to the rear portion of the barrel which is next to the cylinder, as well as on the cylinder itself... So you would expect to find gunpowder residues on a person's hands after he fired a revolver."

He then discusses a test he performed confirming this analysis, and supports the possible relevance of the test on Oswald's hands: "The tests were run on me. I was the one who washed my hands thoroughly. I did not use a brush, I just washed them with green soap and rinsed them in distilled water... To remove possible dirt from my hands. I washed my hands. The gun was then wiped off with dilute HCl to get rid of any deposits already on the gun, and I fired it in our bullet-recovery room, four

times--and then after firing I opened it up and ejected the cartridge cases into my hand, as I showed you earlier today. The amount of residue that you pick up on your hands from ejection of the cartridge cases was in my hand at the time. I then, under ideal conditions naturally, went back and had paraffin casts made of my hands and these were treated with a solution of diphenylbenzidine. The results of this examination were that we got a positive result on both casts, front and back. Many reactions in this area where I had ejected the cartridge cases in my hand were noted."

Eisenberg then steers Cunningham back on course—the goal is to trash the test, not hold up revolver tests while trashing rifle tests. Eisenberg reminds Cunningham "By the way, you testified this morning that many common substances will produce a positive reaction to the nitrate test, so-called paraffin test. Will the handling of an unclean weapon also produce a positive reaction?" Cunningham responds: "Just as much as firing it will. That is what makes this test so unreliable. Handling a recently-fired weapon that is covered with residues--you would get just as many oxidizing agents in the form of nitrates and nitrites on your hands as you would from firing it and in some cases more especially up here and around here you would." When asked if the FBI tests revealed any false negatives after someone had fired a revolver, Cunningham admits: "None of those were negative results, but they were not run under the same conditions... The only negative results were on the 20 people who were run as a control and who had never fired a gun, and even for those people they all got positive reactions at least on one hand." When asked why the FBI continues to perform paraffin tests if they have so many false positives, Cunningham confides: "Many local law-enforcement agencies do conduct these tests, and at their request the FBI will process them. They take the cast and we will process them. However, in reporting, we give them qualified results, since we frequently will get some reaction. Numerous reactions or a few reactions will be found on the casts. However, in no way does this indicate that a person has recently fired a weapon. Then we list a few of the oxidizing agents, the common ones, such as in urine and tobacco and cosmetics and a few other things that one may come in contact with. Even Clorox would give you a positive reaction.... There may be some law-enforcement agencies which use the test for psychological reasons Yes, sir; what they do is they ask, say, "We are going to run a paraffin test on you, you might as well confess now," and they will."

The irony of this last statement is apparently lost on Cunningham. While he claims the tests are used to pressure suspects, and have little scientific value, he has apparently forgotten that both the Dallas Police Department and the FBI, in the hours and days after Oswald's death, presented the nitrate tests on Oswald's hands as compelling evidence he'd fired a rifle and killed the President. A dead man can't be pressured to confess.

On 4-2, Hoover sends J. Lee Rankin a memo regarding the standard paraffin tests for nitrates. He reports that, as Cunningham has just testified, an FBI agent was tested after washing his hands and received positive results, and that this agent then fired Oswald's rifle three times, and received negative results. Hoover notes that "In prior experiments conducted at the FBI Laboratory, it has been found that the paraffin test is unreliable as to whether a person recently fired a weapon." It's funny how Hoover and his FBI said nothing about this in their 12-9-63 Summary Report, which presented the tests on Oswald's hands as evidence of his guilt.

On 4-7, detective W.E. Barnes, the man who administered the paraffin tests on Oswald for the Dallas Police Department, testifies before the commission. When asked by Counsel David Belin "If I were firing a pistol, would this pistol leave a nitrate on my hands that would be detectable by the paraffin test?" he responds "It should, unless it (the chamber) is awfully tight." This, of course, contradicts what Cunningham has just told the commission. Barnes then explains that the residue could show up on both hands if the non-shooting hand was near the pistol, and that washing one's hands can throw off the test. When asked if one would expect residue to show up on one's cheek after firing a rifle, however, Barnes responds "Chances are smaller on a rifle than it would be for a revolver...Because your chamber

is closed." When asked if finding nitrates on a suspect's hands would be more indicative of the suspect firing a revolver or a rifle, he confirms "The revolver would be more likely." He then acknowledges that he'd been asked to take the cast of Oswald's cheek by Captain Fritz and had never even tested a cheek before, and that the actual results of his tests are determined by doctors at Parkland Hospital. Nevertheless, Belin continues to prod him on the merits of the cheek test. Barnes asserts "Firing a rifle, you get your chamber enclosed with steel metal all around it, and the chances of powder residue would be very remote" and that "In my own mind, I didn't expect any positive report from the cheek to start with." He then explains that in his opinion they only conducted the test "to cut down criticism and to satisfy the public and to show the world that we tried to cover it..." When asked again if he'd expected any results from the cheek test, Barnes reiterates "I didn't personally, and I'm the one who made it. From my experience with paraffin casts and from my experience in shooting rifles, common sense will tell you that a man firing a rifle has got very little chance of getting residue on his cheek." He then readily admits that he's never read a periodical on paraffin casts, and that his ideas on the relative merits of the tests are strictly his opinion.

While Barnes' testimony about the meaninglessness of the cheek tests support Cunningham's testimony, his comments on the paraffin tests of the hands indicate he considers them worthwhile and of far more scientific value than suggested by Cunningham. It seems clear from his testimony that, should Oswald have been tried in Texas, the Dallas Police planned on dismissing the value of the paraffin tests of the cheek whilst simultaneously using the paraffin tests of Oswald's hands as evidence of his guilt.

On 4-15, a Jevons to Conrad memo reveals that Melvin Eisenberg is getting a little curious, and has decided to get a better understanding of neutron activation analysis. He has requested that the FBI's expert Gallagher obtain certain information for him. This information is contained primarily within Atomic Energy Commission quarterly reports prepared by Dr. Guinn. The final paragraph of this memo is a bit strange, and reveals that the FBI and AEC still refuse to trust the Warren Commission. Jevons writes: "although the above documents are public source information, Dr. Spofford G. English...(AEC) was telephonically contacted. He advised AEC has absolutely no objection to the dissemination of these items..."

On 4-22, Lt. J.C. Day of the Dallas PD testifies before the Commission. His testimony is taken by David Belin, and is supportive of detective Barnes' testimony of a few weeks prior. Day states: "Under my direction they made paraffin casts of the hand of Lee Harvey Oswald in Captain Fritz' office...I directed them to make it, and also paraffin casts or just of a piece of paraffin on the left side of the face to see if there were any nitrates there...(correcting himself) Right side...The test on the face was negative...It was just something that was done to actually keep from someone saying later on, 'Why didn't you do it?' Actually, in my experience there, shooting a rifle with a telescopic sight there would be no chance for nitrates to get way back or on the side of the face from a rifle...A rifle such as that one we are talking about here from the sixth floor of the Texas School Book Depository, in my opinion, would not throw nitrates back to where a man's face was when he is looking through a telescopic sight...I would expect more with a revolver with an open cylinder than I would from a rifle. Actually, for most practical purposes, I would not be surprised if there would be no nitrates from a man firing a rifle." Here, once again, the Commission relies upon the personal feeling of a witness in place of actual tests. How hard would it have been to have twenty men fire the rifle three times, wait a few hours, and then see how many tested positive for nitrates on their cheek?

Months pass. A 7-2 Jevons to Conrad memo reflects that Warren Commission Counsel Norman Redlich called the FBI on this date and "advised that he had before him a draft of an article to be published by the Reader's Digest in the near future which included the use of neutron activation analyses on the paraffin casts taken of Oswald's cheek and hand for gunpowder residues." The memo continues that Redlich knew the FBI had conducted these tests, and that the FBI Laboratory had sent a letter to the

Commission explaining their results, but that he couldn't find the letter, and was requesting a copy. Jevons then recites the basic findings in the letter he sent Redlich, including the by-now all-too-familiar mantra "In view of the fact that the paraffin casts were not made until after the reported firing and handling of the revolver, no significance could be attached to the residues found on the casts other than the conclusion that barium and antimony (the elements found in the residues) are present in amounts greater than would be expected to be found on the hands of an individual who has not recently handled a fired weapon." The final paragraph of Jevons' memo warns "Mr. Redlich advised that the Commission may want a deposition concerning these findings but he would consider it further and advise the Bureau."

Well, this raises several questions. For one, how did Redlich get a copy of this "draft"? Were prominent publications sending the Commission assassination-related articles as a matter of "courtesy," or did Redlich come by this on his own?

A 7-2 memo from Norman Redlich to Commissioner Allen Dulles, apparently written just after Redlich spoke with the FBI, gives a possible answer. Here, Redlich discusses the Reader's Digest article with Dulles without first explaining its subject matter. This suggests that Dulles, the former head of the CIA, had already known its subject matter and had in fact obtained the article himself--perhaps through "friends" at the Digest-- and had provided it to Redlich. The content of the memo is also intriguing. Redlich makes four basic statements: 1) "At best the analysis shows that Oswald may have fired a pistol, although this is by no means certain;" 2) "There is no basis for concluding that he also fired a rifle;" 3) "The presence of barium and antimony in the cheek cast is of no significance because Oswald might have touched his face with his hands after firing a pistol;" and 4) "barium and antimony are found on a variety of common substances." In other words, these tests are of no help in proving Oswald killed Kennedy.

This memo is nevertheless helpful to our understanding. In explaining why the cheek residue had little significance, Redlich writes: "I have been advised by the FBI lab that there had been insufficient experience with this technique to enable conclusions as to what would be the normal amounts of these elements on a person's cheek whether or not he had fired a weapon." This suggests that Gallagher had failed to tell Redlich of Guinn's tests, which showed that the levels on the cheek of one who'd fired a rifle were inevitably higher than the levels on one who had not, and gave numerical values to back this up.

On 7-29 proto-conspiracy theorist Mark Lane is interviewed on radio station WMCA. He tells its audience: "perhaps the most shocking piece of evidence is the statement by the Federal Bureau of Investigation's chief in Dallas J. Gordon Shanklin, quoted in the New York Times and he said "I have seen the paraffin test" It showed that Oswald had nitrates, gun powder on his hand and on his face, it is proof that he fired the rifle." The Chief of Dallas Police, Mr. Curry, was not so factual. He merely said "We have the paraffin test, boys" this is on November 23rd, "it's just come in. It proves that Oswald was the assassin." A series of FBI memorandums over the next three weeks culminates in Shanklin's stating that Lane's "allegation is completely unfounded." If the New York Times was asked to print a retraction, however, it was news they found not fit to print.

An 8-21 letter by Hoover to J. Lee Rankin accompanying a transcript of Lane's radio interview makes sure the Commission knows that the FBI is completely innocent in this matter. Hoover assures Rankin: "The alleged announcements made by representatives of the Bureau, which are discussed on pages three and four of the enclosed transcription, are completely without foundation as no such announcements were made."

The Return of Vincent Guinn

On **8-27**, however, a wheel comes off the Warren Express. A UPI international news service release from Glasgow, Scotland announces "The use of radioactivity in criminology may determine once and for all whether Lee Harvey Oswald killed the late President John F. Kennedy, a San Diego, Calif. chemist said today. Dr. Vincent P. Guinn, 46, head of the activation analysis (A.A.) program of the General Atomic Division of General Dynamics Corporation, has been working on the problem with the Federal Bureau of Investigation. "I cannot say what we found out about Oswald because it is secret until the publication of the Warren Commission Report. But I can tell you about activation analysis and crime," the scientist said here." The next day, an article in the **8-28** New York World Sun & Telegram written in Glasgow goes even further, reporting "In the case of murder of any crime involving a gun," Dr. Guinn said, "there is a paraffin test where a wax impression is taken of the hand and cheeks. There is a need for a better procedure and about three years ago we began working on activation analysis. We bought a similar rifle from the same shop as Oswald and conducted two parallel tests. One person fired the rifle on eight occasions...it was positive in all eight cases and showed a primer on both hands and both cheeks. Then we took the casts of Oswald's cheek and put them in a nuclear reactor."

An **8-28** memo from Jevons to Conrad reflects the FBI's concerns about this development. Hoover himself has asked Jevons "What about this?". Jevons responds by reciting that the FBI and AEC had worked out an arrangement "to have our Laboratory experts work with the AEC contractor" to conduct NAA tests on the paraffin casts "on a highly confidential basis." Jevons reminds Conrad (and the director) that the results delivered to the President's Commission "added little to the investigation" and that "Guinn did not participate in the actual examinations nor have the results of these studies been discussed with him by FBI Laboratory personnel. It is not known whether the AEC or the President's Commission may have conferred or consulted with Guinn; however, Guinn is known to be a publicity seeker." This memo is disingenuous. Jevons wrote Conrad on 2-27 and told him of Guinn's phone call to Gallagher. Guinn discussed the use of NAA on paraffin casts in this phone call. On 12-12-63, moreover, Jevons wrote Conrad and told him the AEC was gonna bring Guinn on as a consultant. Either Jevons' memory regarding Guinn's role was MIA, or he was practicing CYA.

On **8-31** the Dallas Morning News runs their own article on Guinn's statements in Scotland about the use of NAA, entitled "New Test May Tell if Oswald Shot a Gun." The FBI's Special Agent in Charge for Dallas, J. Gordon Shanklin, who'd previously told the New York Times that the paraffin tests performed in Dallas proved Oswald's guilt, calls Laboratory Director Conrad and warns him about the article, written by Hugh Aynesworth. Beyond the statements by Guinn already cited, Aynesworth relates that Guinn "said when it was concluded that Oswald's guilt could not be proved or disproved from paraffin tests made by the Dallas Police, he asked the FBI to try the neutron activation analysis technique. Guinn described the experiment in this manner: A rifle similar to the one that killed the president was used. One person fired the rifle on eight different occasions and each time was given the paraffin test. 'Only one out of the eight experiments gave a positive identification,' Guinn said. Then they repeated the experiment using radioactivity. 'It was positive in all eight cases, and showed a primer on both hands and cheeks,' he said. 'Then we took the casts of Oswald's cheek and put them in a nuclear reactor. Remember that they already had been through the chemical tests which would wash particles away. I can say for the moment that we found no barium but we found antimony in every case,' Guinn added."

An article in the **September 1964** Reader's Digest brings Guinn's discussion of NAA to middle America. This article, entitled "Atomic Energy--Ace Detective," written by James E. Roper and Donald Robinson, quotes Guinn extensively and pushes for NAA tests to be performed in place of the standard paraffin tests for nitrates. It relates "NAA ignores nitrates, but detects any deposits of antimony and barium. These elements, used in the primers of all cartridges, are deposited on any person who fires a gun. Unlike nitrates, they are so rare that they do not collect on the skin of a person who has not fired a

gun. *Dr. Guinn's tests have already cleared several suspects.* When President Kennedy was assassinated, Dr. Guinn promptly suggested to the FBI that NAA tests be run on casts obtained from Lee Harvey Oswald, and highly secret NAA tests were run. The results, which included the discovery of antimony traces, were given to the Warren Commission investigating the assassination."

Oh well, so much for the Commission's plans to ignore the tests they'd known about since early March. As this article is clearly the article Redlich had been reading back in early July, one can only wonder why he hasn't prepared for its release.

On **9-5**, a Warren Commission internal memo from Melvin A. Eisenberg to Norman Redlich reveals that, with the Warren Report all ready to be printed, they have finally decided to interview a member of the FBI about the NAA performed on the paraffin casts. It seems clear Guinn's statements are the impetus. Eisenberg lists questions Redlich should ask the FBI regarding the tests performed more than seven months before. Included on this list are: "When the test was performed on the paraffin cast?"; "Were barium and antimony found on both sides of the paraffin cast of the cheek?"; "If so, doesn't that indicate that the casts were contaminated so that the whole test was worthless?"; "What is the meaning of statement in the letter from the FBI that there were more barium and antimony on the casts than might normally be expected to be found on a person who had not fired a weapon?" The leading nature of these questions indicates that Eisenberg, and by extension, Redlich, have decided, before even taking the testimony, that the testimony should focus on the irrelevance of the test on Oswald's cheek.

This isn't all that surprising. Let's reflect for a second. The tests were performed in mid-January. The test results for Oswald's hands have been mentioned in numerous reports and letters. And yet not once in all these reports has the test performed on Oswald's cheek cast been discussed, beyond that the tests were unable to differentiate between revolver residues and rifle residues. WHY HAS THERE BEEN NO DISCUSSION OF THE RELATIVE LEVELS OF RESIDUE ON A SHOOTER'S CHEEK WHEN FIRING A REVOLVER, AS OPPOSED TO FIRING A RIFLE? The use of NAA to test these levels, and the use of this information to determine if Oswald had fired a rifle, was first discussed by Aebersold in his 12-11-63 letter, and was discussed in more detail by Guinn in his 2-27 conversation with Gallagher. If the FBI had failed to perform these tests, they would have been truly negligent. And yet, they haven't mentioned these tests in their reports. Are they hiding something?

I believe so. Eisenberg's questions reveal his knowledge of these tests. He knows that there were problems with the test of Oswald's cheek cast, and that the FBI has decided that the cast was "contaminated." That the FBI has failed to say as much in any of their reports is more than a little suspicious.

A **9-14** Jevons to Conrad memo reveals that Redlich has called John Gallagher and has asked him to testify as soon as possible. This memo repeats the FBI mantra that "Deposits found on the paraffin casts from the hands and cheek of Oswald could not be specifically associated with the rifle cartridges." Once again, there is no mention of the test on Oswald's cheek cast, nor on the problems with the test discussed in Eisenberg's questions for Redlich.

On **9-15**, John F. Gallagher, the FBI's Spectrographic Specialist, testifies in private before Warren Commission Counsel Norman Redlich about the neutron activation analysis tests performed on the paraffin casts many months before. The men who actually performed the tests, Dr. Frank Deyer and Joel Emory of Union Carbide, are not called. With only a few interruptions, Gallagher testifies: "*Neutron activation analyses were conducted at Oak Ridge National Laboratory, Oak Ridge, Tenn., on the paraffin casts from the right hand, the left hand, and the right cheek of Lee Harvey Oswald... The paraffin casts were analyzed by neutron activation analyses to determine if these casts from Oswald, which were made, chemically treated, and subsequently washed by investigators in the Dallas area, bear any deposits which could be associated with the rifle cartridges found in the Texas School Book*

Depository Building...The deposits found on the paraffin casts from the hands and cheek of Oswald could not be specifically associated with the rifle cartridges. The casts from Oswald bore elements--namely, barium and antimony--which were present in the powder residues from both the rifle, and revolver cartridges. No characteristic elements were found by neutron activation analysis of the residues which could be used to distinguish the rifle from the revolver cartridges. In view of the fact that the paraffin casts were not made until after the reported firing and handling of the fired revolver, no significance could be attached to the residues found on the casts other than the conclusion that the barium and antimony in these residues are present in amounts greater than found on the hands of an individual who has not recently fired or handled a recently fired weapon."

If Gallagher's words sound familiar, it's no wonder—the italicized words above are all in the March 6 FBI Laboratory report or Hoover's March 10 letter to Rankin quoting this report. From this it's clear that Gallagher was allowed to read from his report during testimony. (One can only wonder how many other witnesses were afforded this same "courtesy".) Gallagher's testimony goes a bit further than his report, however. He tells the Commission "It is my opinion that the person from whom these casts were removed may have either handled a fired weapon, or fired a weapon", and that his tests are more definitive than the traditional paraffin tests because "The determination of barium and antimony by neutron activation analysis is specific. Although there are commercial products which contain the elements barium and antimony, these components in many of these commercial products are not as available for contaminating purposes as are nitrates and oxidizing agents detected by the diphenylamine or diphenylbenzidine tests."

Gallagher does discount the value of one of his tests. Not surprisingly, it is the neutron-activation analysis of the paraffin cast of Oswald's cheek. He asserts: "Barium and antimony were found on the cheek casts. However, when the cheek cast was analyzed, both surfaces of the cheek cast were studied. That is, the surface adjacent to the skin of the subject and the surface away from the skin of the subject, or the outside surface of the cast...The outside surface of this cast was found to contain barium and antimony--actually more barium was found on the outside surface of the cast than on the inside surface...There was slightly less antimony on the outside of the cast than on the inside of the cast...I have no explanation for this difference...I found that there was more barium and antimony on the inside surface of the cast than you would find on the cheek of an individual *who had recently washed his cheek*. However, the significance of this antimony and barium on the inside of the cheek is not known...The outside surface of the cheek was run as a control for this particular specimen." Redlich then leads: "And therefore the presence of a lesser amount of barium and a slightly larger amount of antimony on the inside surface was one of the reasons why you could not make a determination as to the significance of the barium and antimony on the inside surface, is that correct?" To which Gallagher replies, "Yes, sir." Gallagher eventually states it was possible the higher levels of antimony were related to Oswald's firing a pistol.

While at first it might seem generous for Redlich and Gallagher to refuse to use the barium and antimony on Oswald's cheek to demonstrate that Oswald fired the shots that killed Kennedy, there is another level to Gallagher's testimony that should not be overlooked. Implicit in Gallagher's statements is that the levels of barium and antimony found on Oswald's cheek were lower than would be expected of a man who'd recently fired a rifle, but higher than would be expected of a man who'd just washed his cheek. Well, first of all, how would Gallagher know the levels one should expect for a freshly-washed cheek? On 7-2, Redlich reported to Dulles that he'd been told by the "FBI lab", almost certainly Gallagher himself, that the FBI had "insufficient experience" to determine what a normal level of barium and antimony on the cheek would be, and there is no evidence they'd studied it afterward. And second of all, no one testified that Oswald had just washed his cheek! More to the point, there was nothing offered to indicate that the cheek casts were rinsed nor that rinsing them would remove barium

and antimony at anywhere near the rate of removal obtained by washing one's cheek. As the DPD was purported to have rinsed all the casts, and as Oswald's hand casts revealed plentiful barium and antimony, it makes little sense for Gallagher to assume the cheek cast was substantially impacted by the DPD's purported rinsing of the casts. When asked how the rinsing of the casts with diphenylbenzidine and water had impacted his results, Gallagher was, not surprisingly, suspiciously vague, telling Redlich "I can say that the washing did not remove all the antimony and barium...Chemical treatment and washing will remove portions of the barium and antimony from the casts. This was determined from test casts which were studied in connection with these analyses. But it did not remove all the barium and antimony." (That the amount of barium and antimony rinsed off the casts would be less than the amount washed off a cheek is supported by an article by Raymond Aaron in the June 1991 FBI Law Enforcement Bulletin. Aaron states "washing the hands removes *essentially all* GSR deposits." "Essentially all" sure sounds like a lot more than the "portion" described by Gallagher, but maybe that's just me.)

From this it seems that, instead of comparing Oswald's cheek cast to the cast of a man who'd just washed his face, Gallagher should have been comparing the amounts of barium and antimony on the paraffin cast of Oswald's cheek to the levels on the face of someone who'd recently been working with books, and had handled a pistol. (On 3-18 Hoover had sent the Commission a list of items containing barium and antimony; at the top of the list of items containing barium *and* antimony was...printed paper.)

There is just something odd about Gallagher's testimony. Could he *really* be contending we should disregard the implications of the LOW levels of barium and antimony found on the inside of the cheek cast simply because the *outside* of the cheek cast had been contaminated, and had overly HIGH levels of barium? Does this make sense? And, even if it does, shouldn't there have been an investigation to determine just how this cast had become "contaminated"? And isn't it suspicious that the test results discounted by Gallagher, which the Commission has known about since March, and which they were clearly hoping to leave out of their report, just so happened to suggest Oswald's innocence? And that Redlich didn't ask about the numerical results of these tests? I mean, at what point does *your* smoke and mirrors detector go off? Because *mine's* chirping like crazy...

Gallagher is the last witness to testify for the Commission. With his testimony, Eisenberg and Redlich complete their mission of turning the problematic results of the paraffin tests into a possible indication of Oswald's guilt. They had performed magic. Almost in plain sight. Not surprisingly, Gallagher's test results are not supplied to the Warren Commission and are not included in the hundreds of thousands of pages of assassination-related documents fed into the archives.

On **9-16**, Jevons writes Conrad to report on Gallagher's testimony. He states "SA Gallagher met with Mr. Redlich and after a conference with Redlich a deposition was taken." (One can only wonder what was discussed at this "conference.") Not surprisingly, Jevons submits that "In essence, SA Gallagher deposed that deposits characteristic of primer residues were found on the Oswald casts, which were taken from his hands." He then repeats the mantra "The deposits found on the paraffin casts could not be specifically associated with the rifle cartridges." There is no mention of the tests performed on Oswald's cheek cast, nor of Gallagher's acknowledgment to Redlich that this cast was inexplicably contaminated.

On **9-18**, Gallagher contacts Dr. Spofford English of the Atomic Energy Commission and alerts him to the 8-28-64 article on Guinn and the aspects of the article which are in opposition to the now official story.

On **9-21**, Jevons writes Conrad to report on Gallagher's phone call to English. He describes Guinn as a "typical 'high pressure salesman' with a sound scientific background who is actively promoting the

sales of his company's nuclear reactors and services." He reveals that "Since Dr. Guinn is an AEC contractor, Dr. English advised he would have Mr. E. Eugene Fowler, Acting Director of the Isotopes Division, AEC, contact Dr. Guinn as soon as practical and advise him that both the FBI and the AEC are concerned over the releases attributed to him relating to the assassination of President Kennedy. Guinn will be asked to cease commenting on this sensitive subject." Jevons also mentions that "Dr. Guinn recently received the American Nuclear Society's 1964 Award for 'particularly meritorious contribution' of 'a unique and proven tool to assist the law, clear the innocent and convict the guilty.' Well, perhaps this explains the FBI's avoidance of Guinn. Guinn believes that NAA can be used to establish a defendant's innocence, as well as his guilt. As made clear by Jevons' 11-27 memo, the FBI never had any interest in using NAA to test Oswald's innocence, only in using it to suggest his guilt should the other evidence against him have proved insufficient.

On **9-23**, Jevons writes Conrad again, this time to inform him that a copy of Gallagher's testimony "was furnished this Bureau for review and necessary corrections have been made. The corrected version of this deposition was returned to Mr. Redlich by SA Gallagher on 9/21/64. The changes were shown to Mr. Redlich and were accepted. A copy of the deposition showing the changes is attached hereto." (If anyone has this deposition complete with Gallagher's notations it should prove most interesting. That the FBI was fond of changing testimony is demonstrated by a 12-15-64 Jevons to Conrad memo, in which Jevons reviews the already-published testimony of his experts, including Cunningham and Gallagher. The memo includes a nine page list of changes Jevons would still like to make. Most of them are subtle. For example, he asserts that Gallagher's statement "However, the significance of the antimony and barium on the inside of the cheek is not known" should be edited to "However, *in view of the data obtained from the back of the casts*, the significance of the antimony and barium on the inside of the cheek is not known." One can only hope the FBI lab's experts were as careful in coming to their conclusions as they were in describing them...)

On **9-24**, the Warren report is released with references to Cunningham's and Gallagher's testimony. The overall pattern is to attach no significance to the paraffin tests, some significance to the neutron activation analysis of the paraffin casts, and none whatsoever to the analysis of the paraffin cast of the cheek. The report states: "The paraffin casts of Oswald's hands and right cheek were also examined by neutron-activation analyses at the Oak Ridge National Laboratory. Barium and antimony were found to be present on both surfaces of all the casts and also in residues from the rifle cartridge cases and the revolver cartridge cases. Since barium and antimony were present in both the rifle and the revolver cartridge cases, their presence on the casts were not evidence that Oswald had fired the rifle. Moreover, the presence on the inside surface of the cheek cast of a lesser amount of barium, and only a slightly greater amount of antimony, than was found on the outside surface of the cast rendered it impossible to attach significance to the presence of these elements on the inside surface. Since the outside surface had not been in contact with Oswald's cheek, the barium and antimony found there had come from a source other than Oswald. Furthermore, while there was more barium and antimony present on the casts than would normally be found on the hands of a person who had not fired a weapon or handled a fired weapon, it is also true that barium and antimony may be present in many common items; for example, barium may be present in grease, ceramics, glass, paint, printing ink, paper, rubber, plastics, leather, cloth, pyrotechnics, oilcloth and linoleum, storage batteries, matches and cosmetics; antimony is present in matches, type metal, lead alloys, paints and lacquers, pigments for oil and water colors, flameproof textiles, storage batteries, pyrotechnics, rubber, pharmaceutical preparations and calico; and both barium and antimony are present in printed paper and cloth, paint, storage batteries, rubber, matches, pyrotechnics, and possibly other items. However, the barium and antimony present in these items are usually not present in a form which would lead to their adhering to the skin of a person who had handled such items." There is no reference to Guinn and his tests in the report.

Now painfully aware that his test results were ignored and that his comments have angered the FBI and AEC, Guinn writes a letter to the New York World Telegram & Sun on **9-25**. He complains "In my opinion, the person who is responsible for the version that you published should be thoroughly bawled out--it is the worst job of reporting I have ever seen... Your version was shot full of atrocious misstatements. Worse yet, the writer had the gall to make up his own statements, then put them into alleged direct quotations attributed to me... All in all, I think your newspaper should hang its face in shame for publication of such garbled and erroneous nonsense." He then clears up a few mistakes in the article: "We at General Dynamic did not work with the FBI on the Kennedy case. We offered to, immediately after the assassination, but our offer was not taken up by the FBI. We did carry out test firings with an identical rifle, on our own, in conjunction with the Los Angeles Police Department, and made NAA measurements on paraffin casts from this study which yielded valuable information. This information was passed on to the FBI with the recommendation that they undertake NAA of the "used" Oswald casts, which by that time had apparently been turned over to the FBI. We understand that they acted upon this suggestion, but we at General Atomic had no hand in their measurements, and have no knowledge of their results." Guinn continues "The statement, 'We found no barium but we found antimony...' is an almost accurate statement of what I said about the results we obtained from the test firings of a similar Italian rifle (not the one used in the assassination) following NAA measurements on hand and cheek paraffin casts after they had first been processed by the usual chemical test." It is revealing that Guinn never disputes the article's representation of his basic findings, i.e., that the paraffin cast of Oswald's cheek probably *should have* revealed plentiful residue, had Oswald fired his rifle three times at the motorcade as purported.

(While Guinn, with this letter, effectively resolves the question of whether he'd ever worked for the FBI in an official capacity, he is being deliberately disingenuous. In 1975, in a sworn affidavit, Bertram M. Schur, the AEC's Associate General Counsel, would explain: "Some analytical work on simulated evidence was done by General Atomic at the John Hopkins Laboratory for Pure and Applied Science in San Diego, California, using a 6.5 mm. Mannlicher-Carcano rifle of exactly the same type as the one involved in the assassination of President Kennedy. This work was funded under an AEC contract, and was done in furtherance of a continuing, independent research program that began in 1962. The work involved no evidence samples from the assassination and was not done on behalf of the Warren Commission." Thus, the official story is that 1) the FBI sought the assistance of the AEC, 2) the AEC told them they were gonna consult with Guinn, 3) Guinn was PAID by the AEC to conduct tests on rifles like the one purportedly fired by Oswald, 4) Guinn reported his findings to the FBI agent supervising the NAA tests, John Gallagher, only to have Gallagher report his own tests to the Warren Commission, without mentioning Guinn's findings, and that, therefore, 5) Guinn *never worked for the FBI, nor on behalf of the Warren Commission*." Wink-wink. Nudge-nudge. Get it? It seems "plausible deniability" is not just practiced by the CIA.)

An article by Guinn in the **October 1964** Journal of the Forensic Science Society confirms that he felt there *should have* been gunshot residue on Oswald's cheek. After discussing the use of neutron activation analysis in detecting gunshot residue on men suspected of firing a handgun, Guinn states "Similar studies with rifles and shotguns are now being initiated, but to date the only such studies carried out have been with one particular type of rifle. These measurements, however, produced very interesting results, namely, that firing of this type of rifle deposited *quite measurable* amounts of Ba (Barium) and Sb (Antimony) on both hands and *both cheeks* of the firers."

In **January, 1965**, a letter written by Guinn is published in Science Magazine, summarizing the August Glasgow conference and announcing that abstracts of the conference are now available. He doesn't mention the Kennedy assassination. Within a few months, however, the paper delivered by Guinn at the August 1964 Glasgow conference is published in the book Activation Analysis Principles and

Applications. It supports Guinn's account of his statements in that it confirms that he'd never claimed to have worked with the FBI or for the Warren Commission. Even so, it is still intriguing, and damaging to the Commission's case. Guinn asserts "an Italian rifle, identical in type to the one allegedly used by Oswald, was purchased from the same store--in a study carried out jointly by the Los Angeles Police Department and the author's laboratory. A series of tests was made to determine the levels of residues on the cheeks and hands of a person firing it for various numbers of shots. Paraffin casts were made, some tested then by the diphenylamine procedure, others by NAA. The diphenylamine results were useless, but the NAA method clearly detected both Ba (Barium) and Sb (antimony), on both cheeks and both hands of the firer each time. The chemically-tested casts were then also examined by NAA; Sb was still found, but not Ba. *Subsequently*, the F.B.I. examined the Oswald casts, which had been tested by diphenylamine in Dallas, by this NAA procedure." (Aha! The root of the confusion! Guinn clearly implied his tests pre-dated the FBI's tests and that the FBI conducted its tests as a result of his information. This, apparently, was not true, but neither Guinn nor the AP reporter reporting on the conference could have known this.)

Guinn's chapter in the book then updates his paper, stating, in a "note added later": "as described in the Warren Commission Report, the NAA measurements showed the presence of Sb and Ba on both hand casts, and the one cheek cast of Oswald, but the results were inconclusive, as they were found on the outside as well as inside surface of each cast, *presumably* indicating careless handling of the casts at some earlier time." Well, this is intriguing. By saying "presumably," was Guinn expressing skepticism? And, by telling his fellow scientists that the problem was that barium and antimony were found on the outside of the casts, without admitting that the problem centered on one cast--the cheek cast--was Guinn trying to hide the suspicious nature of the problem?

Perhaps. On the other hand, in the aftermath of the Warren Commission, Guinn doesn't exactly shrink from controversy. In a June '67 article in Ramparts Magazine, and then again in his 1968 book on forensic evidence, *Invisible Witness*, former FBI man William Turner reports that Guinn admitted that he and a Los Angeles Police Department criminalist named Raymond Pinker had tested a Mannlicher-Carcano rifle like Oswald's and had found abundant gunshot residue on the cheeks of those firing the rifle every time. (Amazingly, Vincent Bugliosi, in his monster book *Reclaiming History*, ignores Guinn's published statements and implies that Turner misquoted Guinn. Yikes. Perhaps Vinnie's monster book needed a little more research and a little less rhetoric.)

In any event, when first released, Turner's book wasn't so readily dismissed. In 1969, presumably as a response to Turner's book, someone popped up with a perfectly reasonable explanation for the lack of residue on Oswald's cheek. Well...maybe not so reasonable. In her book *Investigation of a Homicide*, Dallas Times-Herald Medical and Science writer Judy Whitson Bonner dismisses the significance of the paraffin test of Oswald's cheek by claiming "Although the hand test was positive, the cheek test was negative, but this is inconclusive because he could have shielded his cheek while firing." Yeah. Okay. Oswald shielded his cheek to protect it from residue, just in case he should be tested, but did nothing to protect his hands, and not only got gunshot residue all over his hands, he left smudged fingerprints all over the trigger-guard of the rifle. Right.

But that's not the end of the story.

Weisberg's War

Over the next decade, researcher Harold Weisberg and lawyer Jim Lesar use the Freedom of Information Act and repeatedly sue the FBI and the Atomic Energy Commission for Gallagher's test results, not only for his tests on the paraffin casts, but also for his tests on the bullet fragments. (The tests were reportedly inconclusive as to whether or not the wrist fragment had come from the magic bullet.) The Federal Government fights hard against their release. In late, 1970, the Justice Department

moves to dismiss Weisberg's case on the grounds that the release of the FBI's analyses "would seriously interfere with the efficient operation of the FBI" and that this would "create a highly dangerous precedent." On November 16, 1970, the Justice Department goes even further, arguing that "the Attorney General of the United States (the subsequently disgraced Watergate conspirator John Mitchell) has determined that it is not in the national interest" to divulge these test results. This tactic proved successful.

But Weisberg starts over. On page 414 of his book *Post Mortem* he discusses how on June 30, 1975, Assistant U.S. Attorney Michael J. Ryan sought to settle one of his lawsuits by delivering 400 pages of random notes and calculations. On page 437, Weisberg mentions that "Most of those hundreds of pages are the raw material of the testing of the paraffin casts... These paraffin tests were subjected to neutron activation analysis. They show deposits on the hands, which need mean no more than that Oswald handled any of the many ordinary materials that can leave the invisible traces that NAAs pick up. This means that he could have fired a pistol, not that he had. *There is no similar evidence on his cheek. The tests given me show that in seven "control" cases where others fired a rifle this evidence was left on the cheeks.*" If Weisberg interpreted these pages correctly, and Gallagher did indeed run "control" cases showing clear deposits on the cheek, then Gallagher *knew* that his tests provided compelling evidence that Oswald *did not* fire a rifle on November 22, 1963, and that he would have to tell this to Hoover and the White House, unless he could find a reason to distrust his own test. This should make us wonder if the excess barium on the back side of the cast was really as significant as Gallagher later testified, or was even on the cast when first tested.

In September 2007 I acquired copies of thousands of the documents given to Weisberg. I found only one "control" for the cheek performed by Gallagher. And that was for a right cheek after only one shot had been fired. As a number of the other documents discussed Guinn and his tests, it seems likely Guinn's tests were the "controls" mentioned by Weisberg, and that Weisberg mistakenly believed he had the actual results for Guinn's tests.

When one thinks about it, however, it makes little difference if the "controls" mentioned by Weisberg were Guinn's tests or Gallagher's. On 4-1-64 Cortlandt Cunningham of the FBI testified "No, sir; I *personally* wouldn't expect to find any residues on a person's right cheek after firing a rifle." This was weeks after Guinn, as a paid consultant under contract to the AEC, had told the FBI of his tests on this matter. It was months after the FBI had created a paraffin cast of a shooter's cheek, and performed NAA on this cast, and found measurable levels of antimony and barium. FBI Crime Lab Chief Ivan Conrad, Cunningham's boss, and section chief Roy Jevons knew of Gallagher's and Guinn's test results and knew, therefore, that Cunningham's "personal expectation" was dead wrong. And yet Jevons' 4-2 memo to Conrad on Cunningham's testimony fails to note this mistake. Cunningham's testifying as an FBI expert, and offering a "personal expectation" at odds with both Guinn's and the FBI's own test results went uncorrected. From this it seems likely that Conrad and Jevons and Cunningham were all well aware of Guinn's and Gallagher's results, and were afraid these results might be interpreted as clearing Oswald of Kennedy's murder, and thereafter sought to get around them by having Cunningham state his *personal* expectation. Significantly, the man taking Cunningham's testimony was none other than Melvin A. Eisenberg, who'd discussed the NAA residue tests with Gallagher on March 16, and had become familiar enough with the issues that on 9-5 he coached Norman Redlich on how one could ask about the "contaminated" cheek cast, and demonstrate that the test upon this cast was "worthless." From this it seems likely he'd conspired on this deception as well.

But maybe that's just paranoid conspiracy thinking. Maybe it's just a coincidence that Guinn's and Gallagher's test results could have been used to support Oswald's innocence, and that the FBI and commission just so happened to keep them from the public.

The Lost Report Re-found

In November, 2007, I located and acquired a copy of Guinn's report on his tests. This report was not delivered to the Atomic Energy Commission until February 15, 1965, long after the Warren Commission had been disbanded. I re-print an excerpt below (*with comments added*).

Rifle Studies

A study of the disposition of Ba (barium) and Sb (antimony) on the hands and faces of persons who recently fired a rifle was made. Previously, only revolvers and automatic pistols had been investigated in this study. The weapon used in these tests was a used 6.5mm Mannlicher-Carcano rifle, of exactly the same type as the one used in the assassination of President Kennedy. The test firing and hand samplings were performed in a manner such that the conditions of the assassination were duplicated as nearly as possible. All of the persons who fired the rifle were right-handed, and the firings were performed in a room that had a door open to the outside; only a slight breeze was blowing at the time. The exact wind conditions at the time of the assassination were not known to us. (Note: this is a reference to an earlier test performed by Guinn. As recounted in his July 31, 1963 quarterly report to the Atomic Energy Commission, he'd found that wind direction in relation to a shooter makes a large impact on the levels of gunshot residue found on the shooter's hands. He found that six times as much barium and 50% more antimony would wind up on the hands of a shooter with a slight wind in front of him than on a shooter with a similar wind coming from behind. As Oswald was purportedly kneeling in front of an open window, with gusts of wind throughout the plaza, one might reasonably expect his cheeks to have more residue than the cheeks of Guinn's test shooters, who were not firing from a window. We'll see.) The hands and cheeks of the persons doing the firings were not sampled until three or four hours after they had fired the rifle. During this time, they went about their normal activities, but they did not wash their hands or face. This was to duplicate, approximately, the time between the assassination and the obtaining by the Dallas police of paraffin casts from the hands and right cheek of Lee Harvey Oswald, the suspected assassin. (Note: this seems about right. Although Oswald's hands and cheek were not tested until more than 8 hours after the assassination, he'd been sitting in police custody for most of that period.)

...The Ba and Sb values obtained from the casts on which the diphenylamine test was performed were quite scattered. The Ba values are low, the only apparent exception being for the right hand of the person who fired three shots. This cast is the only one that gave a positive diphenylamine test (a test for nitrates). However, the levels of Sb on the casts were still well above normal levels, even after the casts were treated by the chemical test. It appears, therefore, that performing the diphenylamine test on the paraffin casts removes the Ba fairly completely but does not remove significant amounts of Sb.

As a result of these studies, the paraffin casts of the hands and right cheek of Lee Harvey Oswald were analyzed by neutron-activation analysis for Ba and Sb by the Federal Bureau of Investigation at Oak Ridge National Laboratory. The casts had been previously treated with diphenylamine by the Dallas police. As reported by the Warren Commission, the results were inconclusive--not because of failure of the activation analysis technique, but rather because of earlier contamination of the casts, presumably by excessive handling. (Note: once again, Guinn takes credit for the FBI's tests. One wonders if he ever found out that they'd performed them without him.)

The important casts in rifle studies are those of the cheeks. Large amounts of Ba and Sb on the cheeks would indicate that a rifle had been fired, as these elements would not be expected to be deposited on the cheeks when a revolver or pistol was fired, unless the revolver or pistol was held very close to the face, which is unlikely. The Kennedy assassination is an example of a case where unaltered casts of the cheeks (i.e. not chemically treated and not mishandled) would have been extremely important. It was alleged that the suspect, after firing the rifle, also fired a revolver (there were witnesses to the revolver firing by Oswald, which resulted in the death of Officer Tippett). Casts of the hands alone would indicate that a gun had been fired, but it could not be determined whether it was a rifle or a hand

weapon. High levels of Ba and Sb on the cheeks would indicate that a rifle had been fired, regardless of whether a hand weapon had also been fired. The normal levels of Ba and Sb on the cheeks have not been determined, but there is no reason to suspect they should be higher than the normal levels on the hands.

The Confusing Results and Resulting Confusion

Here are the results of the FBI's tests, which I received from the Weisberg Archives, and Guinn's tests, which I received from the U.S. Government. These tests were performed between December 1963 and February 1964. I noticed the initials RF on one or more of Gallagher's work sheets, and take that as an indication Robert Frazier, the FBI ballistics expert for the Warren Commission, was the actual shooter for at least some of the tests. Guinn notes that he used four different shooters in his tests (as designated by the initials DM, EM, B, and H). Gallagher's tests are noted as JG and Guinn's as VG.

The Left Hand Tests

This last result is interesting. While, on the unwashed casts, both Guinn and Gallagher found far more barium than antimony, the washed casts revealed more antimony than barium. As a result, it appears that far more barium than antimony is lost by rinsing. This is obviously what Guinn was talking about when he said there was no barium on the casts once washed. As there was still a measurable amount of barium, however, he should have said that there was far less barium in comparison to antimony on the

washed casts than on the unwashed casts.

Beyond that observation, interpreting these results is rather complicated. Since Guinn used four different shooters in his tests, we cannot say for sure that repeated firings of the rifle decreased the amount of residue, or that washing the casts actually caused an increase in antimony. We can note the trends however.

Oswald's Left Hand Cast

As there appears to be far more barium on Oswald's left hand cast than was found on Gallagher's and Guinn's "controls" combined, it might be ventured that Oswald hands were more heavily covered from his handling his revolver, his firing from an open window, or both. Since the amount of antimony on his left hand was only slightly more than on the the controls, however, this makes little sense. After staring at these numbers for a spell, I suddenly remembered that for his tests Guinn had tried to minimize the amount of residue likely to be picked up through handling, and had modified his palm casts to exclude the palm of the shooter's hand. Sure enough, when one excludes the palm from Oswald's left hand cast, one gets numbers much more in line with Gallagher's and Guinn's tests of unwashed casts.

This leads me to suspect that Oswald's casts were not rinsed off, as purported.

The Right Hand Tests

While the notation of "specks" on these tests is vague and could be indicative that these totals are smaller than would otherwise be expected, it's nevertheless intriguing that Gallagher's results support Guinn's observations, in that the washing of the cast had far more impact on barium than antimony. Once again, strangely, we see that the amount of antimony on the cast after washing was higher than when it was not washed. As the two tests above were performed on different days, this probably reflects a different initial number, rather than that the washing itself had added antimony to the cast.

Date	Type of paraffin cast	(micrograms)	Ba	Sb	Ba/Sb

The Right Hand Tests, Cont'd

Well, these results are more than a bit erratic, wouldn't you say? Still, some observations can be made. On five out of five comparisons so far, the washed casts had a greatly reduced level of barium when compared to the unwashed casts. On four out of the five comparisons, the washed casts had a slightly increased level of antimony when compared to the unwashed casts. From this we can understand Guinn's finding that washing a cast had more of an impact on barium than on antimony.

Oswald's Right Hand Cast

As the Ba/Sb ratio on both of Oswald's hand casts is nowhere near the ratio for the control casts once washed, and is much more in line with the unwashed casts, it seems more than likely the casts weren't actually washed. In Table 6 of Guinn's February 15, 1964 report he notes the levels of barium and antimony on 14 suicides, using various revolvers and rifles. This gives us 28 hands on which to compare the "normal" ratio levels on unwashed paraffin hand casts, where someone has fired a weapon. (It is presumed that these casts, not created by Guinn himself but by various coroners, were full casts, including the palm of the hand). The ratios are 6.04, 2.13, 2.84, .39, 1.86, 1, 5.27, 6.87, .74, .53, 1.82, 6.71, 1.43, 4.61, 1.68, 2.12, 17.83, 31.74, 5.91, 5.74, 2.09, 2.68, 6.70, 4.14, 1.07, 1.56, 9, and 11. Although the two highest ratios were for someone who'd fired a .22 long rifle, it's important to remember that the Warren Commission felt Oswald fired his revolver five times after he'd fired his rifle. This means that the ratio on Oswald's hands, assuming he killed both Kennedy and Tippit, should be more in line with the revolver ratios.

In Table 3 of his July, 1963 report, Guinn noted the levels of barium and antimony on the shooting hands of fourteen men after they'd fired multiple shots with revolvers. Those shooting three shots with a .22 had ratios of 3.66 and 2.75. Those shooting six shots with a .22 had ratios of 1.88 and 1. Those shooting three shots with a .38 had ratios of 2.13, 1.33, 3.22, and 2.02. Those shooting 6 shots with a .38 had ratios of 2.56 and 1.94. Those shooting 3 shots with .45 had ratios of 5 and 5.47. Those shooting six shots with a .45 had ratios of 2.87 and 5.13. And yet the ratios on Oswald's hand casts are 28 and 25 to 1, when one includes the palm, and 13 and 14 to 1, when it is excluded. Something appears to be wrong.

In the April 1977 Journal of Forensic Sciences, Dr. S.S. Krishnan published an extensive study on gunshot residue analysis, in which he used NAA to detect the levels of barium and antimony. While collecting the gunshot residue by a different method than Guinn, and testing the entire hands of his subjects, his data is nevertheless informative. In Table 1 Krishnan reveals that he ran 300 tests on 6 different kinds of .38 caliber revolvers, and found that the deposits ranged from .19 to 1.4 micro grams barium, and .35 to 5.9 micro grams antimony, after a single firing. This means that of 300 firings, the highest possible barium/antimony ratio was 4 to 1. In Table 4 Krishnan compares his lab tests to some actual shootings, and reveals that the quantities and ratios of deposits are often higher outside the lab than in. Even so, the hands of the three killers using pistols and revolvers on this table had ratios of 11.36, 10.67, 5.59, 6.27, 7.71, and 3.34. So why were the ratios on Oswald's hands better than 25 to 1?

That Oswald fired his revolver multiple times is at best a partial explanation. In Table 5 Krishnan lists the results of 3 tests where a .38 caliber revolver was fired 4 times, unloaded, the cartridge cases handled, and the shooter's hands tested. One might think the ratios would be similar to those found on Oswald's hands. But no, once again the ratios are far less. The right hands in this study had ratios of 12.98, 11.15, and 8.95 to 1, while the left hands had ratios of 5.22, 3.47, and 4.56 to 1. The third test was performed 3 hours after firing. It would seem that the ratios decreased over time. And yet, Oswald's ratios, after 8 hours, were 28 and 25 to 1?

There's just too much barium on Oswald's hands compared to antimony.

The Cheek Tests

Well, this is more in line with our expectations. While the levels of antimony on the washed hand casts were greater than the unwashed casts four out of five times, this phenomena failed to occur on any of the four cheek casts tested by Guinn.

It's also important to note that, as already discussed, Gallagher's sole test on a cheek proved the assassination rifle leaked residue, and that FBI Agent Cunningham's subsequent testimony was misleading.

Since it seems likely Oswald's casts were not actually washed, and since Oswald was purportedly sitting in front of a window when firing his rifle, moreover, one might assume the level of antimony on his cheek cast would be higher than the .095 micro grams found on the cheek of Guinn's shooter. But one would be wrong.

Oswald's Right Cheek Cast

Intriguingly, while Guinn's unwashed control cast revealed .095 micro grams of antimony on his shooter's cheek, Gallagher found but .015 micro grams on Oswald's cheek cast. This .015 micro grams is barely half the .028 micro grams found on Guinn's shooter's cheek even after the cast was washed.

When one considers as well that the level of antimony on the cheek side was barely more than on the back side (Guinn's own measurements were net) and that Oswald's hand casts had many times as much barium and antimony as Guinn's and Gallagher's controls, one might reasonably take the small amount of antimony on Oswald's cheek cast (as compared to Guinn's control) as an indication that he did not fire a rifle on 11-22-63.

Should one accept that Oswald killed Tippit, moreover, then one must also accept the probability that at least some of the residue on Oswald's cheek came from his firing his revolver five times, and touching his face afterward. Heck, even if he didn't shoot Tippit, it's clear he handled his revolver in the theater, and came in contact with some residue in the process. This makes the small amount of antimony on his cheek cast even more disturbing...and the larger amount of barium more intriguing.

Let's try and give this some context. In Table 1 of Guinn's February 15, 1965 report, he presents the values of barium and antimony found on the hands of 22 individuals who had not recently fired a gun. The levels for barium range from .48 to .01 micro grams, and average .13 micro grams. The levels for antimony range from .06 to .01 micro grams, and average .015 micro grams. Guinn states "The normal levels of Ba and Sb on the cheeks have not been determined, but there is no reason to suspect they should be higher than the normal levels on the hands." Since Oswald's cheek cast had .015 micro grams antimony, average for the hands of someone who has not fired a weapon, and since, as we've seen, washing the cheek casts probably had little effect on this number, and would have at best cut the original number in third, it seems likely the amount of antimony on Oswald's cheek was within the normal range.

When one looks at another report by Guinn, one can see that the amount of barium on Oswald's cheek may also be less than one should expect, should Oswald have fired his rifle three times. By 1966, Guinn had tested 18 more pairs of hands, and had found that the hands of people working in certain occupations, e.g., painters, carpenters and auto mechanics, had on average nine times as much barium on their hands as his earlier group, with a range up to 4.7 micro grams. As Oswald worked exclusively with books, and as J. Edgar Hoover had told the Warren Commission that printer's ink and paper were two of the products containing the most barium, it seems reasonable that Oswald might fall into this category. If so, the .30 micro grams barium on his cheek cast might also fall within the normal range for people in Oswald's line of work and fail to indicate he'd fired a rifle.

Of course, if one presumes the .012 micro grams antimony and .97 micro grams barium on the back of Oswald's cheek cast came from the front of his cast, one might come to a different conclusion.

But there is little to suggest the antimony and barium on the outside of the cheek cast came from the inside of the cast. The paraffin test performed by the Dallas Crime Lab, after all, "showed no traces of nitrate" on Oswald's cheek. If the barium subsequently found on the cheek cast, both inside and out, had at that time been on the inside of the cheek cast, it seems probable it would have shown up at that time.

There's also this. In an online discussion, researcher Herbert Blenner and chemist Tom Pinkston alerted me to the little appreciated fact that barium, when in a form that is readily soluble, is extremely poisonous, and that most commercial forms of barium, including that in gun powder, are, as a result, not soluble. This means that the barium on Oswald's cheek cast, if it were from gunpowder, could be rinsed away, but would not readily dry onto the outside of the cast afterward. This is supported by the fact that the ratios of barium to antimony on the inside of Oswald's hand casts were 3-4 times greater than on the outside of the casts. As a result, one can not reasonably assume the .97 micro grams barium found on the back of the cheek cast came from the inside of the cast. To be consistent with the hand casts, moreover, one might assume the actual amount of barium on the outside of the cast would have been no more than ten percent of the amount on the inside, or .03 micro grams. This would put the

level of barium on Oswald's cheek cast, inside and outside, at .33 micro grams, within the normal range of unwashed hand casts, and quite possibly within the normal range of washed cheek casts of men in his line of work.

Of course, if one rids oneself of the notion that the residue on the outside of the casts came from the inside, and instead considers that at least some of the contamination on the outside of the cast reached the inside part that touched Oswald's cheek, it is hard to come to any other conclusion than that the tests on Oswald's cheek cast, prior to contamination, were negative.

As a result, we can understand John Gallagher's position when testifying before the Warren Commission. There was no way he could explain these results without casting doubt on Oswald's guilt, the scientific basis of his and Dr. Guinn's tests, their ability to run the tests without contaminating the evidence, or the competence and integrity of the Dallas Police. He had little choice but to act as though the contamination of the cheek cast made it impossible for him to come to any conclusions. He had little choice but to bury his test results in the FBI laboratory files, far, far, away from the Warren Commission and the ever-curious gaze of the public.

But we can do more. J. Edgar's long dead and he can't fire us anyhow. When one looks at the diminished Ba/Sb ratios on the back of Oswald's hand casts as compared to the inside, it's clear that one should expect there to be 6-9 times the amount of barium on the back of the cheek cast as antimony, should the residue on the back have occurred naturally (or by the same forces causing the residue on the back of the hand casts). And yet there's 80 times as much! This means there's more than ten times as much barium on the back of the cheek cast as one should expect. This suggests that the cheek cast was contaminated by something other than gunshot residue. When one considers that ALL of Oswald's casts had a higher ratio of barium to antimony than found on Gallagher's and Guinn's controls, one should wonder if the contamination on the cheek cast was but a symptom of a larger illness, and that all the casts had been contaminated to some degree, quite possibly on purpose.

While looking online for support that gunshot residue tests are admissible in court, (a few single-assassin theorist fanatics had wrongly assured me that they were not) I came across a letter from Dr. Jon J. Nordby of Final Analysis Forensics, a prominent expert witness, and the author of five books on forensic science. In his December 10, 2003 letter to the Alabama Attorney General's office, Dr. Nordby makes several assertions that are relevant to this case. He asserts that, while a lack of gunshot residue on a defendant's hands is not by itself proof of his innocence, a lack of residue on his face and clothes, when a defendant is accused of repeatedly firing a weapon that is known to leak residue, is a strong indicator of his innocence. He asserts, as well, that "it is the ratio of barium to antimony that is important, not its simple presence or absence. To be indicative of GSR, in fact, its concentration should be 8.3 +/- 2 Ba to 1 Sb otherwise the elements may have a source other than a gunshot."

While my initial analysis of Ba/Sb ratios was spurred on purely by my desire to understand the data received from Gallagher's and Guinn's tests, it appears from Nordby's statements that studies have been conducted on these ratios, and that the peculiar ratios on Oswald's casts are indeed suggestive that much of the residue on his casts did not come from his firing a weapon. If so, then it seems more than a coincidence that Dallas Crime Lab analyst Louie Anderson, before turning the casts over to the FBI for further testing on 11-27, had taken them home. Did Anderson accidentally expose the casts to barium during their brief time in his possession? Or did he or someone working with him do this on purpose, under the mistaken belief the FBI's tests would not differentiate between the ingredients of gunshot residue, a la the paraffin test he regularly performed? The test for nitrates performed by Anderson, after all, "showed no traces of nitrate" on Oswald's cheek cast. And yet there was a measurable amount of barium on both the inside and outside of the cheek cast when subsequently tested by the FBI. Barium, of course, is a nitrate. While it seems possible the low level of barium on the cheek cast noted by the FBI was not readily visible when tested by Anderson, it seems far more likely the contamination came

afterwards.

In any event, no follow-up questioning of Anderson was ever conducted. The source of the contamination remains a mystery.

The Ongoing Significance

In 1977 Dr. Vincent Guinn was hired by the HSCA to conduct tests on the bullet and bullet fragments recovered from the hospital stretcher, the limousine, and the President's brain. True to form, he would once again announce his results to the scientific community before the government was ready to make an announcement. On June 25, 1978, the San Diego Union trumpeted "Lee Oswald Confirmed as the Killer," citing Guinn's speech before the American Nuclear Society as its source. Guinn's test results on the fragments, of course, could in no way determine who'd fired Oswald's rifle. Guinn's earlier tests, which *could* determine if Oswald had fired a rifle, and cast doubt on his guilt, were not mentioned.

There is an even more ironic aspect to Guinn's tests on the bullet fragments. When coming to his conclusion that the small fragment found in Governor Connally's wrist matched the bullet found on a stretcher, which meant that all the recovered bullet fragments could have come from Oswald's rifle, Dr. Guinn threw out the result for copper and relied on just one element. That element was...ANTIMONY. Since, when interpreting Gallagher's results for the test on Oswald's cheek cast, one must ignore the obviously bogus test result for barium, one should, by Guinn's own precedent, rely exclusively on the result for antimony. Only this time, the result suggests that Oswald did not fire a rifle. That's right, while some, including Kenneth Rahn, Larry Sturdivan and Vincent Bugliosi, hold that Guinn's results for antimony in the NAA test of the bullet fragments indicates that Oswald's rifle fired the shots, they can not do so without also acknowledging that similar tests using this same technology, for this exact same element, suggest that Oswald himself did not fire the rifle.

There's reason to believe Guinn was aware of this conundrum. A May 10, 1977 letter from Guinn to researcher Harold Weisberg and found in the Weisberg Archives proves most intriguing. Guinn writes: *"At the moment I only have time to answer your letter briefly, but at a later time I can perhaps fill you in on the interrelationships of J. Edgar Hoover, Paul Aebersold, Jack Gallagher and myself in the Dallas case. Jack Gallagher is a good friend, so I doubt that he would have cast any aspersions on General Atomic or my group except under orders to do so from J. Edgar. I have received Xerox copies of all the spectrographic analyses (of the bullet lead specimens) and neutron activation analyses (of the paraffin casts and the bullet lead specimens) conducted by the FBI Laboratory, in connection with the Dallas case, and have examined them meticulously. I have also compared their results with my large collection of background NAA data on gunshot residues and bullet-lead comparisons (including data on Mannlicher-Carcano 6.5 mm ammo). Once my report on all this work is completed, I will be glad to send you a copy. I would indeed appreciate receiving copies of any relevant material that you have available, as mentioned in your letter."*

The significance of this letter may at first seem illusory. On closer examination, however, it becomes clear that 1) Guinn had been provided Gallagher's data on the paraffin casts, and 2) Guinn was preparing a report for the HSCA on BOTH the paraffin casts and the bullet fragments. The report ultimately provided by Guinn made NO mention of the paraffin casts. It made no mention of the small amounts of barium and antimony on the inside of the cheek casts. It made no mention of the fact these quantities were far smaller than the amounts found on Guinn's controls. It made no mention of the uncomfortable fact that here there was a test that could clearly demonstrate Oswald's guilt, but that it instead suggested his innocence.

Guinn's HSCA testimony only underlines this strange failure on his part. After a New York Times article claimed Guinn had previously worked for the Warren Commission, and questioned his

objectivity, Congressman Fithian asked Guinn the delicately phrased question: "Did you ever work for the Warren Commission or work for the FBI *in connection with the analysis of these evidence samples?*" To which Guinn responded "Neither one. I think Mr. Wolf called my attention to the existence of this article, which I haven't seen, and I don't know where they got their misinformation, but *I never did anything for the Warren Commission*, and although I know people in the FBI, *I have never done any work for them.*" Pretty sneaky, that Guinn. He knew full well the confusion came from his working on the paraffin casts for another agency cooperating with the FBI, and not the FBI itself. He had reason to believe, moreover, that the FBI was sharing this information with the Warren Commission... But he failed to provide this information, and instead pleaded ignorance... Perhaps he was convinced that a discussion of the casts would lead to some uncomfortable questions, for which he had no answers.... Perhaps not.

Guinn died in 2002. The report on the casts he'd described never saw the light of day.

Apparently, he thought them inconclusive, as they were of little help in proving Oswald's guilt. In the April, 1979 issue of Analytical Chemistry, published shortly before the release of the HSCA's final report, he proclaimed: "*The FBI took the Oswald paraffin casts to the Oak Ridge National Laboratory and analyzed them by neutron activation analysis [NAA] for the possible presence of primer residue ... still there after the Dallas dermal nitrate tests. The effort was thwarted by the fact that the casts were badly contaminated, essentially as much Ba and Sb being found on the outside surfaces of the casts as on the inside surfaces--which had been in contact with Oswald's skin. The right cheek cast, if it had not been contaminated by improper handling, might have established that Oswald had recently fired a rifle.*"

Well, this is disconcerting. Either Guinn was lying or he had forgotten there was, in fact, three times as much barium on the outside part of the cheek cast as on the inside. Three times as much is not, last I checked, "essentially as much". Guinn also failed to explain how he was able to determine that the casts had been "contaminated by improper handling." In 1965, let's remember, he wrote that they were contaminated "presumably" from improper handling. Had someone confirmed that they'd placed the cast...on a barium-covered counter? Or picked it up with barium-covered hands?

Was he unwilling to consider the more worrisome possibility someone exposed the cast to barium--which one might assume was in plentiful supply at a hospital such as Parkland--on purpose? The NAA test for gsr, after all, was brand new. Did someone think the cheek cast would be tested while intact, or that the results would be considered "positive" if either barium or antimony were discovered, sprinkle some barium powder on the cast?

It should also be noted that, as the use of the paraffin test declined, the use of neutron activation analysis to detect gunpowder residue on paraffin casts only grew in acceptance--so much so that by 1986 the standard text Scientific Evidence in Criminal Cases would state "neutron activation analysis and atomic absorption spectrophotometry for the detection of gunshot residues on the hands have received widespread judicial approval." According to Larry Ragle, a retired Director of Forensic Sciences for Santa Ana, California, in his 1995 book Crime Scene, as NAA grew in acceptance, "the historical method of painting heated paraffin on the hands of the suspect shooter was selected as the method of choice" for collecting the residue. While this method of gunshot residue detection was prohibitively costly, and replaced almost entirely by the use of Atomic Absorption Spectrophotometers (AA) in the 70's and Scanning Electron Microscopes (SEM) in the 90's, I have found nothing to indicate that NAA tests for gunshot residue were prone to false positives or negatives, as would often occur with the standard paraffin test for nitrates performed in Dallas. A September 1990 article in the Journal of Forensic Science by Havekorst, Peters and Koons, for example, describes a study in which 267 random sets of hands were sampled using NAA or AA (which was generally considered a cheaper and slightly inferior alternative to NAA). Less than 2 percent of these came up positive.

By March 2006, in fact, testing for gunshot residue using these methods had become so routine that the FBI discontinued performing these tests themselves, asserting that local police labs could adequately perform these tests and that the FBI's resources were better spent on "areas that directly relate to fighting terrorism." A May 26, 2006 article in the Baltimore Sun, however, expressed doubt about the FBI's purported reasons for discontinuing the tests and revealed that the FBI had conducted an internal contamination study in 2005 and had found "the presence of hundreds of particles consistent with gunshot residue in several areas of the lab." This, naturally, resurrects the ancient question of whether Gallagher and the FBI Crime Lab had "contaminated" the Oswald cheek cast, or the Dallas Police.

As for conducting gunshot residue tests on the face as well as the hands...that also continued after Guinn's and Gallagher's tests and only gained in acceptance. A 1977 article in the Journal of Forensic Sciences by SS Krishnan asserted that gunshot residue could be found on the hands of those firing a rifle, albeit in quantities less than would normally be found on the hands of one firing a revolver. This finding, of course, could be extended to the cheek of one firing a rifle, which would be roughly the same distance from any gunshot residue as the hands. The 2000 text Current Methods in Forensic Gunshot Residue Analysis confirmed that "The face of the shooter can be sampled on occasions when firearms such as rifles and shotguns are used in the shooting. Test firings have shown that large amounts of GSR (gun shot residue) are deposited in these areas when certain types of weapons are used that cause a condition of blow back toward the chest, face, and hair." This book included the results of a "plume study" conducted in 1994. For this study, various rifles were fired in front of a high speed camera. Without exception, clouds of gun shot residue were captured flying back onto the face of the shooters. A World War II U.S. military carbine similar to the rifle used by Oswald was included in this study. The study found that the area of highest gunshot residue concentration after firing such a carbine was "from the crook of the support hand, and backward over the shooting hand, face, forehead and arm." The back of Oswald's left hand was, of course, nearly barren of residue. In 1995's Crime Scene, Larry Ragle confirms the current acceptance of gunshot residue analysis for the cheek and expands "By design, revolvers can leak...Rifles, depending on their construction and wear, can also leak. There is only one way to determine the leakage capacity of any weapon and that is to collect samples from the hands or face firing the weapon under controlled conditions while using the corresponding ammunition." Of course, this is precisely the kind of test performed by Guinn and Gallagher back in 1964.

The acceptance of gunshot residue tests of the face has, in fact, in some ways, surpassed even that of gunshot residue tests of the hands. The Elsevier Encyclopedia of Forensic Sciences, published 2000, notes: "In the case of a living shooter, the gunshot residue may be removed by washing the hands; it may also be rubbed off the hands onto clothing. Because of the possibility that gunshot residue may be deliberately removed or inadvertently lost from a shooter's hands other sources of gunshot residue should be considered. Gunshot residue may be deposited on the face and hair of the shooter or on his clothing. *Gunshot residue deposited in these areas will generally be retained longer than gunshot residue of the hands.*" This, of course, feeds back into the question of why, 8 hours after the shooting, there was plentiful residue on Oswald's hands, but so little residue on his cheek. One possible solution, of course, is that he did not fire a rifle on 11-22-63.

Also worth noting...While the paraffin test for nitrates performed in Dallas had already fallen in disfavor by 1963, its use remained widespread for years afterward. In April 1965, Dr. LeMoyne Snyder, one of the nation's top forensic experts, published an article in Popular Science defending the work of the Warren Commission. He was critical on one point, however--its criticism of the paraffin test. He declared: "I have used it often with good results...I still regard it as a valuable investigative tool." As late as 1977, in fact, Snyder still stood by his guns. In his prominent text Homicide Investigation, he assured: "In investigating the assassination of President Kennedy, the Warren Commission was

informed that the dermal nitrate test had no value. In view of the fact that Lee Harvey Oswald fired both a rifle and a revolver several times shortly before his arrest, it is very possible and even probable that a dermal nitrate test, properly conducted, would have revealed very valuable information." As detailed in his 1965 article, Snyder believed the test results for Oswald had little merit, as the test was conducted in an office after "Oswald's hands were probably contaminated by ink from fingerprinting." This last statement, which has no support whatsoever in the historical record, indicates that Snyder was well aware that something was wrong with the residue levels and ratios on Oswald's hands, and that, much as Guinn, he had rationalized this by blaming it on the incompetence of the DPD.

In January 1967, a detailed study of paraffin test results was published in *The Journal of Forensic Sciences*. This study concluded that the test was simply not reliable. Even so, it revealed some interesting probabilities, some of which have a bearing on the Oswald case. For one, the study showed that "Contrary to the general belief, it was the rifle rather than the revolver that demonstrated the broadest dispersion" of nitrates. Accordingly, 75% of those firing rifles were found to have nitrates on the fingers of their left hand. Bear in mind, this was after one shot. Oswald's paraffin test revealed no nitrates on the fingers of his left hand, after purportedly firing three shots with a rifle and five shots with a revolver.

An October 1974 article by S.S. Krishnan in *The Journal of Forensic Sciences* reported on a similar, albeit much smaller, study using neutron activation analysis to detect gunshot residue. This study found that one could predict whether or not someone fired a weapon with 80% accuracy by comparing the relative barium, antimony, and lead levels found on the test subject's hands. It also found that the closer the levels, the more likely it was the test subject had merely handled a weapon. As Krishnan's study found that one should expect to find on average 2.33 times as much antimony, and 1.66 times as much barium, on the shooting hand of one who'd fired a .38 revolver, when compared to his non-shooting hand, and as Oswald's ratios were 2.18 for antimony and 2.01 for barium, it looks like Oswald did indeed fire his revolver on November 22, 1963.

That the residue on Oswald's right hand came from his merely handling his weapon is discounted by a more recent study as well. For this study, as described in the November 1995 *Journal of the Forensic Sciences*, the hands of 43 police officers—none of whom had recently fired a weapon-- were tested to see if they had picked up gunshot residue from merely handling their weapons. The tests were positive for only 3 of them. This once again suggests—it is by no means conclusive--that Oswald fired his revolver on November 22, 1963. If this is so, moreover, then Oswald is undoubtedly the leading candidate for the murder of Officer Tippit. If one is to use gunshot residue tests to suggest that Oswald shot Tippit, however, one must simultaneously acknowledge that these same tests failed to indicate that Oswald killed Kennedy, and that this absence speaks volumes.

The Probably Knot

At the outset of the chapter 4b, I noted that, in order to demonstrate Oswald acted alone, the commission was tasked with proving that three events occurred beyond a reasonable doubt.

1. Oswald was on the sixth floor before the shooting, putting together his rifle and building the sniper's nest.
2. Oswald was in the sniper's nest window, with his rifle.
3. Oswald fired a rifle on 11-22.

1. Did the commission demonstrate that Oswald was on the sixth floor before the shooting, putting together his rifle and building the sniper's nest?

While the commission believed the answer was "Yes" I believe a more honest answer is "No." To the more precise question of whether or not Oswald remained on the sixth floor for the forty-five minute period beginning with the sixth floor crew coming down for lunch and the shooting, the answer is "absolutely not."

2. Did the commission demonstrate that Oswald had been in the sniper's nest with the assassination rifle?

While the commission believed the answer was "Yes" I believe a more honest answer is "No." As the only ones seeing the sniper refused to ID Oswald as this sniper while he was alive, and described a man in different dress than Oswald, and as Oswald was seen on the second floor within 75 seconds of the shooting, calm and collected, there is certainly room for doubt. As the threads found on the rifle matched a shirt Oswald had most likely not been wearing at work that day, the fiber evidence is actually more suggestive of DPD and/or FBI tampering than of Oswald's guilt.

3. Did the commission demonstrate that Oswald fired a rifle on 11-22?

While the commission admitted that they could not prove this point, the answer is not only a "No" but that they had evidence suggesting the opposite--that he had not fired a rifle on 11-22. Their failure to properly examine and explain this evidence is inexcusable, and suggestive of a prosecutor's bias. Or worse.

So, does all this lead me to believe Oswald did it, but that the Warren Commission was unable to effectively demonstrate as much? Did Oswald, in fact, shoot Kennedy?

Probably not.

If Oswald was clever enough to steal a large piece of paper from his work without being noticed, bring it home on his person without being noticed, wrap his rifle in this paper without being noticed, hide this package in the building without being noticed, sneak it up to the sixth floor without being noticed, put his rifle back together without being noticed, hit at least two shots on a moving target without any practice, and race back down to the second floor without being noticed, only to appear innocent and calm when confronted by a police officer, it makes little sense he'd be so un-clever as to use a rifle sent to his own PO box, under a fictitious name easily traceable to himself, and have an ID in this name on his person when captured. Something just doesn't add up. While the simplest answer is that Oswald acted alone and was a devious and unpredictable lunatic, simple answers are often fed to simpletons to stop them from asking not-so-simple questions.

Chapter 5: The Jigsaw Puzzle

The beginning of a comprehensive look at the many ear and eye witnesses to the assassination, in an attempt to determine what REALLY happened

Rashomon

At left and above: photos of the Dallas motorcade. Governor John Connally and his wife Nellie sit in front of President John F. Kennedy and his wife Jackie. Governor Connally looks a bit nervous.

At left: another charming photo of the Governor.

At right: a crop from a photo by Robert Croft, taken just before the shots.

For reasons beyond my grasp, the first image in each chapter sometimes fails to appear. If there's nothing up above, don't despair; you can still see the image [here](#)

Rashomon

Rashomon is the title of a 1950 film by Japanese film-maker Akira Kurosawa. In the film the same event is recounted by four different participants, none of whom is completely reliable. Similarly, over the course of the next few chapters, we'll be looking at the statements of the many witnesses to the shooting, both before the conclusions of the Warren Commission, and afterward, to see if they can help us come to any conclusions on how the shots were fired.

So, why bother? You might ask.. Everybody knows that eyewitnesses aren't reliable. Well, that isn't really true. While everybody knows the impressions of one witness can't be trusted, everybody also knows that the statements of numerous witnesses should never be ignored.

Let's discuss, as an analogy, a party. Say we were invited to a big bash, but were not able to attend. Say we called around the next day to find out what happened. Say that five friends tell us that Mick Jagger showed up at the bash. We'd believe it, right? Now consider that two said he arrived at 10:30, while the other three said he arrived at 11:00. Well, this wouldn't make us think he'd actually never showed, now would it? If we actually cared what time he'd showed, we'd ask more questions, and piece together a puzzle. Say one of those thinking Jagger got there at 10:30 remembered looking at his watch when Jagger arrived. Say the other one thinking Jagger showed up at 10:30 remembered Jagger being at the party for a half-hour or so before going into a bathroom when the 11:00 news came on. Say one of those thinking Jagger showed up at 11:00 remembered his heading down a hall towards a bathroom at 11:00. Say another one of those thinking he'd got there at 11:00 remembered standing in a hall at 11:05, waiting for someone to get out of the bathroom, only to find it was Mick Jagger. Say the third person

claiming Jagger got there at 11:00 remembered someone telling him around midnight that Jagger had been there about an hour. Well, from the statements of these five people it's quite clear Jagger got there at 10:30, even though only a minority of them believed this to be true. A simple voice count on the time of Jagger's arrival was misleading. But a STUDY of their statements was conclusive.

By the end of Rashomon, most viewers have a similar feeling about what really happened to the characters in the movie, even though this story—the one the viewers usually come to decide is the real story—is never depicted in the movie. I suspect as much is true with the Kennedy assassination; that is, I suspect that by reading the many divergent accounts of the assassination we can come to a conclusion not necessarily described by any one person.

The LPM Scenario

While previously we have used the contemporaneous statements of the eyewitnesses to show how the conclusions of the FBI and Warren Commission were, well...un-Warren-ted (sorry), in this section we will try to make sense of what on the surface appears to be nonsense--the eyewitness testimony in the assassination of President John F. Kennedy.

Those who have attempted similarly comprehensive studies of the eyewitness evidence in the past have usually broken the evidence down by the number of shots heard by the witnesses and from where the witnesses believed the shots were fired. This approach, however, has its limitations. The first shot heard by some witnesses was clearly not the first shot heard by others, etc. Due to these complicating factors, I've found that the best way to effectively demonstrate that the current single-assassin theorist scenario—a first shot miss at Zapruder frame 160, a single-bullet striking Kennedy and Connally at Zapruder frame 224, and a fatal head shot at Zapruder frame 313 (from hereon referred to as the LPM scenario in honor of its chief proponents, Dr. John Lattimer, Gerald Posner, and animator Dale Myers)—is an *absolute myth* is to go through the eyewitnesses one by one and analyze their statements and testimony. I hope you'll see this out.

My inspiration in undertaking this examination came in part from re-reading the earwitness section of an earlier presentation. While doing so, I realized that everyone who heard three shots and who described the last two shots as being closer together than the first and second was simultaneously stating that the first shot hit President Kennedy. This comes from our familiarity with the Zapruder film. When one watches the film it is obvious that Kennedy is not hit before frame 188 but is hit by frame 224. It is also obvious that Kennedy is hit again at frame 313. For there to have been a first shot miss fired before these two obvious shots, and for the shots at 190-224 and 313 to have been fired closer together than the first shot miss and the second shot hit between 190-224, this first shot miss would have to have been fired at frame 132 or earlier, far earlier than proposed by even the most ardent single-assassin theorists, save one (Max Holland, whose outlandish claims are discussed below). If one grants that the *first* shot hit Kennedy between frames 190 and 224, however, then the second shot could have been fired around frame 260 and could have been closer to the presumed third shot at 313 than the first shot. The problem with this "second shot miss" theory, however, is that, through the research mostly of single-assassin theorists, the moment of the bullet's impact on Connally has now been established as occurring at frame 224. This is seemingly too close to 313 for Oswald to have aimed and fired a shot in-between. Well, how about the third shot having missed, then? Unfortunately for single-assassin theorists, while there is plentiful eyewitness evidence for a third-shot miss, there is no evidence that this shot was fired as long as 2.3-2.8 seconds after the shot at 313. This means the single-assassin theory is now **DEPENDENT** on a first shot miss fired before frame 173.

This mythical miss has been discussed and demonstrated so often and so convincingly, through countless simulations on TV, that most Americans have no idea that the Warren Commission discounted the likelihood of such a shot and that the eyewitness evidence offers virtually no support—not even

through cherry-picking—for this miss. Although much of the evidence for a first shot hit has been previously discussed--Physicist Don Olson and Criminalist Ralph Turner presented evidence for such a hit to the Academy of Forensic Sciences on February 25, 1971--it is now time to set the story straight, for once and for all: there was no first shot miss.

Mr. Holland's Colossal Blunder

On 2-19-07, long after I completed my study of the eyewitness evidence, the presumably sane historian Max Holland unveiled his theory that the first shot occurred when Kennedy was just making the turn onto Elm Street, 1.4 seconds before Zapruder starts filming the motorcade at frame 133. This is at odds with the evidence and signifies a desperate attempt to make the eyewitness evidence fit the single-assassin theory. On November 22, 2007, the New York Times published an Op-Ed piece by Holland further pushing this theory. In this piece, Holland wrote:

"In May 1964, with the help of surveyors, the Warren Commission first considered the idea that a shot could have been fired before Zapruder restarted his camera. The commission later heard testimony that included references to what the staff labeled "Position A." It did not appear on the Zapruder film, but represented the "first point at which a person in the sixth-floor window of the book building ... could have gotten a shot at the president after the car had rounded the corner."

If the commission had followed up this insight, it would have conceivably been able to describe the duration and intervals of the shooting sequence: that Oswald fired three shots in approximately 11.2 seconds, with intervals of 6.3 seconds and 4.9 seconds between the shots."

In February 2008, on Nation Public Radio, Holland was back at it, telling a nation of radio listeners: "It's always been a presumption, which I think turns out to be unwarranted, that the whole assassination was captured on the Zapruder film, because it is so gruesome to watch the second and third shots that people naturally thought the first one must be on it also. In fact I believe that the first shot occurred just before Zapruder started filming. That means three shots in a little over 11 seconds which relatively speaking is all the time in the world that he needed."

This latest statement by Holland spurred Dale Myers to respond, via his online blog: "Of course, it's *never* been a presumption, as Max Holland claims, that all three shots were fired while Zapruder's camera was turning. There is just *no credible evidence* that any shots were fired before the first frame was exposed, despite Holland's past and present claims. I agree with (former Senator Daniel Patrick) Moynihan's sentiments – 'You're entitled to your own opinions, but not your own facts.' When it comes to an early, pre-Zapruder film shot, Mr. Holland has offered up a spade full of supportive facts – all of his own making."

On this point, Myers and I are in full agreement. The fact that virtually every prominent single-assassin theorist had joined virtually every prominent conspiracy theorist in decrying the silliness of his theory, however, did little to dissuade Holland. In November, 2008, on his website, he returned with another installment, 11 Seconds in Dallas Redux, once again pushing his pet theory. In this one, he cited the recollections of three Secret Service Agents, Ready, Hickey and Bennett, and compared them to their actions in the Zapruder film, in order to conclude the first shot was fired long before anyone had previously believed.

There was a problem with this: the statements of NONE of these men supported Holland's analysis. Ready says he turned to the right after the first shot; Holland decides instead that he turned to the left after the first shot, and did not turn to the right until after the second shot. Hickey also says he turned to the right after the first shot. Holland decides instead that he too looked to his left after the first shot, and did not turn to his right until after the second shot. And, finally, Bennett says he looked to his left after the first shot and saw the impact of the second shot on Kennedy's back, immediately followed by a

third shot striking Kennedy's head. Holland decides instead that, unbeknownst to Bennett, Bennett had looked away from Kennedy between the second and third shots, and that, furthermore, the shot Bennett thought immediately followed the second shot was in fact not fired for 5 tension-filled seconds.

Holland then defended his re-interpretation of their words:

Human beings are not recording machines. An eyewitness to a crime is being asked "to be something and do something that a normal human being was not created to be or do." Recollections are frequently imperfect to begin with, no matter how vivid. Subsequently, they are prone to being subtly influenced by what others think and say, as well as information learned after the fact. If a person is in a responsible position, such as Ready and Hickey were, recollections can be edited unconsciously.

The only approach that makes sense is to examine each recollection carefully and weigh it against the totality of the ballistic, forensic, visual, and aural evidence gathered. A witness can offer one critical detail that is accurate and get almost everything else wrong. Another person's recollection, like that of Glen Bennett, may prove accurate in every important respect, although even Bennett failed to note that he was briefly distracted, after the second shot, away from his concentration on the president.

While Holland seems strangely sure of himself, we must ask how this can be? Far from examining "each recollection carefully and weighing it against the totality of the ballistic, forensic, visual, and aural evidence gathered", as claimed, Holland has twisted a few statements into supporting an otherwise unsupportable scenario, and then willfully ignored the statements of dozens of witnesses contradicting his twisted view of events. If this is what it takes to become a successful historian, respected by the mainstream media, and published in the New York Times, please count me out.

Unfortunately, that appears to be the case--that I've been counted out. In early 2011, I was approached by an historian in contact with the National Geographic Channel. He said they were looking for new theories to test, and that he would send them my recommendations. I sent him my recommendations, which he forwarded to his contact at the channel. I never heard back. It was to my sheer horror, then, that, many months later, when the channel broadcast its new documentary on the assassination, the theory they were testing was Holland's silly theory--a theory not supported by a single expert on the assassination, even those claiming Oswald acted alone.

As if to add insult to injury, moreover, the program was chock full of deceptions and lies. As but one example of its sheer awfulness, Holland, in the program, uses Amos Euins as his prime witness for the early shot he proposes. The narrator then claims ""Euins has lived most of his life outside the media spotlight, but his story remains the same--that all three shots...came from the sixth floor of the book depository, not from the grassy knoll." There was just one problem with this...a HUGE problem. Euins had testified in 1964 that he'd heard FOUR shots, not three! Holland, who fancies himself a "scholar" on the assassination, was certainly aware of this, and his failure to either mention this in the program, or warn viewers that the program was seriously misleading, reveals his contempt for both his audience and the truth, IMHO.

And that's just the tip of the iceberg. The sheer awfulness of JFK: The Lost Bullet is almost beyond description. Within a few days of its airing, the two eyewitnesses beyond Euins presented in the program, James Tague and Tina Pender, had both been outed as skeptics regarding Holland's theory. James Tague said Holland was "full of crap" in an email to a researcher, and Dan Sullivan, a photo analyst who'd worked on the program, admitted, in an article on Tina Pender's appearance, that "*The first bullet was actually shot way before they thought,*" with Tina being one of the "they." Sullivan then claimed: "*and it hit the traffic light...Consequently, we went back, looked at images of the traffic light, sure enough there was a hole.*"

Well, this bit about the hole shot another hole in Holland's credibility.

You see, although the program had pushed that no one saw the impact of the first shot proposed by Holland because it had been deflected by a traffic light, and Sullivan had claimed they'd found a hole in a traffic light, Holland had, in the program, only claimed a "white spot" was visible on images of the traffic light. Hmmm... Was Holland trying to have it both ways--let his audience think a bullet had hit the traffic light, without actually claiming what they'd found was a hole?

Apparently, so. A technical report was added to Holland's Washington Decoded website on 11-20-11, the day JFK: The Lost Bullet was broadcast. In this report, Holland admitted that in June 2011 the producers of JFK: The Lost Bullet had obtained and studied a traffic light identical to the one Sullivan claimed had been hit by a bullet on 11-22-63, and had concluded: **"After hanging the exemplar light and viewing it from roughly the same perspective as the USSS training film, the view through the drilled "bullet" hole showed that the intervening base lip, that was presumed to form a deflection surface, obscures the view. The viewing also revealed that a gap opening exists in the corner between the right and bottom back plates and produces a visible unobstructed hole in the same location as the "possible bullet hole" that was observed in the USSS training film. Consequently, the hole was eliminated as a possible bullet hole."**

But that wasn't all. The report then admitted that in September 2011 the producers had contracted with the HP White Laboratory to fire shots from a Mannlicher-Carcano rifle at the traffic light to see if it was possible a bullet had been deflected by the light without leaving a hole. This was their conclusion: **"All three test firings revealed that an exemplar Eagle signal could deflect a bullet from its flight path, but could not do so without sustaining very visible damage. It appears that if Oswald's first shot had been deflected by the Eagle signal, the damage to the traffic light would have been easily observable from a street level position. It surely would have been noticed in the wake of the assassination."**

Holland's theory had thus been shot to pieces, both figuratively and literally, even before the program pushing his theory had aired. And by the very producers of the program. And yet they'd failed to tell this to their TV audience... And had opted instead to let the truth slip out via Holland's website... And not only that--they'd kept it from others--like Sullivan--who'd not only worked on the program, but had thought they'd helped prove a bullet had hit the traffic light.

Well, by gosh, shouldn't there be a law against this--deliberately deceiving the public?

Oh, and by the way, if you're worried about poor Max Holland, don't be... Having his traffic light deflection theory shot to pieces led him not to abandon his early shot lunacy, as one might hope, but to wonder if the bullet hadn't hit the mast arm to the traffic light on a five foot section of the mast arm currently obscured by signage. Well, bravo for Holland. He is living proof that supposedly credible historians can be every bit as wacky and obsessive as the wackiest conspiracy theorists.

Should one wish to give Holland, a man with far more credentials than myself, the benefit of the doubt, however, one should read through the following sections with not only an eye out for witnesses suggesting that the first shot missed, but for witnesses whose statements, when taken as a whole, suggest the first shot rang out when Kennedy was on the turn onto Elm Street, directly in front of the entrance to the school book depository. While one will find a few vague statements to support such a scenario, one will find that there are many times more statements suggesting the first shot came with the limousine a hundred feet further down Elm. Holland's opus is instead Holland's blunder.

The Irony of It All

One of the great ironies about the "first shot miss myth" is that it was first proposed on a national level by CBS News in 1967, and that CBS used it to conclude that Oswald would have had enough time to

perform the shooting. (They concluded there was a first shot miss at frame 190 of the Zapruder film. They also concluded, without ever testing Zapruder's camera, that his camera was running slower than previously believed. This allowed them to feel confident that a 35 frame time span between the miss at frame 190 and single-bullet shot around 225 was long enough, when it had previously been accepted that a minimum of 42 frames was required.) The irony is that this same CBS investigation revealed the difficulty in getting off 3 rapid-fire shots with a rifle like Oswald's, even when given a few more seconds.

CBS initially approached a legendary marksman, Jim Crossman, and asked him to replicate Oswald's purported shooting (2 hits in 3 tries in 5.6 seconds). In 6 attempts, he was unable to do so. When interviewed by Dan Rather, Crossman said "To hit this target in the short times we were talking about—around 6 to 7 seconds—to hit the target consistently, you would have to be a pretty good shot, but to hit it maybe a couple of times, he could have zigged when the target zagged and vice versa. So it's a large element of luck gets in there." Not surprisingly, CBS never aired this interview. Later, CBS brought in 11 experienced shooters and asked them to try and replicate the shooting on a mock-up of Dealey Plaza. The shots these men were asked to make were a bit easier than those supposedly made by Oswald, as their rifle's scope was in alignment, and as the target these men were aiming at was moving at a constant speed and in a constant direction. They were also provided some practice shots. Even so, the results were less than convincing. First of all, the men were unable to complete 17 of the 37 test runs due to the gun's jamming or to the shooter's inability to operate the bolt fast enough to fire rapidly. This left just 20 completed runs, 26 including Crossman's earlier attempts. Let's take a closer look at these results (first attempts highlighted):

Sid Price: 4.10 seconds (1 hit, 2 complete misses) on his 4th run of 4.

Sid Price: 4.30 seconds (**not sure if any hits**) on his 2nd run of 4.

Ron George: 4.90 seconds (2 hits, 1 near miss) on his 3rd run of 3.

Al Sherman: 5.00 seconds (2 hits, 1 near miss) on his 1st run of 5.

Al Sherman: 5.00 seconds (1 hit, 2 near misses) on his 5th run of 5.

Howard Donahue: 5.20 seconds (3 hits) on his 3rd run of 3.

Al Sherman: 5.20 seconds (1 hit, 2 near misses) on his 4th run of 5.

John Concini: 5.40 seconds (1 hit, 2 near misses) on his 2nd run of 2.

Carl Holden: 5.40 seconds (0 hits, 3 near misses) on his 3rd run of 3.

Somersett Fitchett: 5.50 seconds (2 hits, 1 near miss) on his 3rd run of 3.

Somersett Fitchett: 5.90 seconds (2 hits, 1 near miss) on his 2nd run of 3.

Sid Price: 5.90 seconds (1 hit, 1 near miss, 1 complete miss) on his 1st run of 4.

Al Sherman: 6.00 seconds (2 hits, 1 near miss) on his 2nd run of 5.

William Fitchett: 6.00 seconds (1 hit, 2 near misses) on his 2nd run of 3.

William Fitchett: 6.10 seconds (**not sure if any hits**) on his 3rd run of 3.

Jim Crossman: 6.20 seconds (2 hits, 1 near miss) on his 6th run of 6.

Jim Crossman: 6.26 seconds (1 hit, 2 near misses) on his 4th run of 6.

John Concini: 6.30 seconds (no record of where shots went) on his 1st run of 2.

Jim Crossman: 6.34 seconds (2 hits, 1 near miss) on his 2nd run of 6.

Jim Crossman: 6.44 seconds (2 hits, 1 near miss) on his 3rd run of 6.

William Fitchett: 6.50 seconds (3 borderline hits) on his 1st run of 3.

Charles Hamby: 6.50 seconds (0 hits, 2 near misses, 1 complete miss) on his 3rd run of 3.

John Bollendorf: 6.50 seconds (1 hit, 2 near misses) on his 4th run of 4;

Jim Crossman: 6.54 seconds (0 hits, 3 near misses) on his 1st run of 6.

John Bollendorf: 6.80 seconds (2 hits, 1 near miss) on his 1st run of 4.

Jim Crossman: 6.99 seconds (1 hit, 2 near misses) on his 5th run of 6.

Notice anything? While it is obvious that repeated practice helped the shooters bring down their times--9 of the 11 completing a run had their fastest time on their final run--there is no clear correlation between the amount of time it took the shooters to fire their shots and the accuracy of their shooting. Those completing a run in a time shorter than Oswald's purported time--5.6 seconds--averaged 1.44 hits in 5.0 seconds. Those completing a run in a time longer than Oswald's purported feat, meanwhile, averaged 1.43 hits in 6.3 seconds. This is a strong argument against the widespread belief that having the first shot miss, and adding a couple of seconds onto the shooting scenario, makes the purported shots "easy."

I found a further illustration of this point in *Tactics*, by William Balck, published 1915. In this old book, on page 140 to be precise, I found a chart reflecting the accuracy of 6.5 mm Italian rifles (most certainly the Mannlicher-Carcano) when fired at various speeds, as tested by 100 shooters. Below is the chart:

	MEASURED RANGE.		ESTIMATED RANGE.	
	Slow fire†	Rapid fire†	Slow fire†	Rapid fire†
	Percentage of hits.	Percentage of hits.	Percentage of hits.	Percentage of hits.
At 500 m.	21.5	15.8	14.8	11.3
At 1000 m.	11.1	8.1	6.5	5.3
At 1500 m.	5.	3.4	2.6	2.2
Average results at —				
Ranges under 1000 m.	18.2	13.6	12.1	9.3
Ranges over 1000 m.	7.1	5.1	3.2	3.2

**Infantry Training*, 1905, p. 132, par. 2; p. 134, pars. 1, 2; p. 136, par. 6; p. 155, par 1. See p. 154, *infra*.

†Slow fire four shots, rapid fire fourteen shots, per minute.

As demonstrated above, the shooters firing 4 shots per minute (1 every 15 seconds if the clock began before the rifle had been aimed, or 1 every 20 seconds if the clock began with the first shot) were only 34-40% more accurate than the shooters firing 14 shots per minute (1 every 4.3 seconds if the clock

began before the rifle had been aimed, or 1 every 4.6 seconds if the clock began with the first shot). An approximately 350% increase in concentration time led to an approximately 35% increase in accuracy.

It's probably even worse. While reading an article on a Marine Corps website I realized that shooters firing ten rounds per seventy seconds using a five round clip are rated the same as shooters firing ten rounds per minute using a ten round clip. In other words, they are granted ten seconds to change ammunition clips. A shooter firing 14 shots a minute using a six round clip--which was standard for the Carcano--and another in the chamber, would, in such case, most likely be firing his rifle about 14 shots per 50 seconds (1 every 3.57 seconds if the clock began before the rifle had been aimed, or 1 every 3.85 seconds if the clock began with the first shot). This is close to the speed attributed to Oswald.

If the subjects tested in the study cited by Balck were firing 7 shots per clip change, then, the results in the chart above show that an approximately 520% increase in concentration time beyond the time allotted in rapid fire led to but a roughly 35% increase in accuracy.

And this isn't just the conjecture of a non-shooter. Ronald Simmons, who testified before the Warren Commission on the Army's test of Oswald's rifle, testified that "aiming error decreases as time increases. But once you get to the area of about 4 seconds in time, then there is very small decrease in aiming error for increase in time."

So...since the tests reported by Balck and the testimony presented by Simmons suggest that having a little more time would have been of little help to someone firing slower than once every 4 seconds, and since the tests performed by CBS suggest that having a little more time was of little help to men firing as fast as once every 2.5 seconds, it follows that if the first shot fired at Kennedy missed, and that the shooting sequence was actually 50% longer than originally proposed, then this additional time would still have only marginally increased the likelihood the shooter would hit the shots.

Of course, as we shall see, there was no first shot miss.

The First Shot Miss Myth

For those reluctant to read through the plethora of statements and testimony recounted in the pages to follow, but who are nevertheless curious as to how I can feel so sure the first shot did not miss, I hereby offer a telling taste of the statements of every witness I could find who described the activities in the limousine during or just after the first shot. While some of these witnesses believed the first shot missed, they almost all believed Kennedy responded to the shot by leaning forward or jerking to his left, actions the Zapruder film reveals occurred only after he'd been hit. My conclusion that these witnesses were thereby describing Kennedy's actions between frames 190 and 224 of the Zapruder film is further confirmed by the fact that not one of these witnesses said the President continued waving and smiling to the crowd on his right after the first shot rang out. Common sense tells us that this should have been the impression of at least a few of these witnesses should they really have heard a shot at the time proposed by most "first shot miss" proponents, around frame 160 of the Zapruder film. But common sense, alas, is often ignored in favor of something more glamorous.

Remote Viewers--those noting the impact of the shots from buildings looking down on Dealey Plaza (all listed witnesses heard three shots unless otherwise noted):

Ruth Smith (12-21-63 FBI interview, CD206 p.9) "She looked back toward President Kennedy's car after the first shot and thinks he raised his hands to his face."

Lillian Mooneyham (1-10-64 FBI report, 24H531) "Mrs. Mooneyham heard a gunshot and observed President Kennedy slump to the left of the seat of his car."

Cecil Ault (1-10-64 FBI report, 24H534) "Following the first shot Mr. Ault noted that President Kennedy appeared to raise up in his seat."

Dr. Samuel Paternostro (1-20-64 FBI report, 24H536) “He said he estimated several seconds, possibly four or five more, elapsed between the first report and the second and third reports. He said he observed President John F. Kennedy when he appeared to grab his head and thought at the time he is “well-trained;” then, when the other reports followed in quick succession, he realized that the President had been shot.”

Harold Norman (3-24-64 testimony before the Warren Commission, 3H186-198) "I can't remember what the exact time was but I know I heard a shot, and then after I heard a shot, well, it seems as though the President, you know, slumped or something."

James Jarman (11-24-63 FBI report, CD5 p334-335) “He said that he heard a shot and then saw President Kennedy move his right hand up to his head."

So, we're just beginning and the score is already 6-0. All these witnesses heard three shots and all of them believed Kennedy responded to the first shot.

Eastsiders--those noting the impact of the shots from a location in the Plaza to the east of the limousine:

TE Moore (1-10-64 FBI report, 24H534) “By the time President Kennedy had reached the Thornton Freeway sign, a shot was fired and Mr. Moore observed the President slump forward in the Presidential car."

Mrs. Ruby Henderson (12-6-63 FBI report, 24H524) “at the time the motorcade passed where she was standing, she heard what she initially thought was a firecracker, and saw what she thought was paper fly out of the Presidential car. She said she now realized it was a shot she heard and what she thought was paper was probably flesh." (If so, she thought the first of the four shots she heard was the head shot. This seems highly unlikely, in light of all the other statements. It seems probable then that she was mistaken on this point.)

Welcome Eugene Barnett (7-23-64 testimony before the Warren Commission, 7H539-544) “I was looking at the President when the first shot was fired, and I thought I saw him slump down, but I am not sure, and I didn't look any more then. I thought he was ducking down."

Pierce Allman (11-22-63 eyewitness report on WFAA radio, between 1:45 and 2:00 PM CST) “Right after Mr. Kennedy passed in front of me I heard one big explosion and my immediate thought like most of the people standing around me was “this is firecrackers, but it's in pretty poor taste”. I looked and saw the president, I thought, duck. Evidently, he was slumping at the time."

Phil Willis (7-22-64 testimony before the Warren Commission, 7H492-497) "When I took slide No. 4, the President was smiling and waving and looking straight ahead, and Mrs. Kennedy was likewise smiling and facing more to my side of the street. When the first shot was fired, her head seemed to just snap in that direction, and he more or less faced the other side of the street and slumped forward."

Linda Willis (7-22-64 testimony before the Warren Commission, 7H498-499) (When asked if she heard shots) “Yes; I heard one. Then there was a little bit of time, and then there were two real fast bullets together. When the first one hit, well, the President turned from waving to the people, and he grabbed his throat, and he kind of slumped forward."

Patricia Lawrence (11-24-63 FBI Report, 22H841): “When the motorcade passed she stated she was looking at Mrs. Kennedy who was looking to the other side of the car. The President was looking in her direction and she had waved. She heard the shot fired as the president was waving." (The president was not waving at frame 160 of the Zapruder film--the moment of the purported first shot miss--but was waving by frame 180, a second or so later. Still, as she does not specifically say the president stopped waving after the shot, it's difficult to say for sure that she is describing a first shot hit.)

Mary Sue Dickerson (Article by Beverly Shay in the **11-01-11** online edition of Now Magazine) "As she was making eye contact with the president of the United States, several things occurred at once. She heard what she thought were fire crackers, which initially seemed so celebratory, but then he slumped forward."

Mary Woodward (**11-23-63** newspaper article Witness From the News Describes Assassination written by Woodward for the Dallas Morning News) "After acknowledging our cheers, he [JFK] faced forward again and suddenly there was a horrible, ear-splitting noise coming from behind us and a little to the right. My first reaction, and also my friends', was that as a joke someone had backfired their car...I don't believe anyone was hit with the first bullet. The President and Mrs. Kennedy turned and looked around, as if they, too, didn't believe the noise was really coming from a gun." (Kennedy, of course, does not turn and look around after frame 160, but resumes waving. What Woodward called "turning" then is almost certainly a reaction to the first shot's impact.)

Jean Newman (**11-22-63** statement to the Dallas Sheriff's Department, 19H489, 24H218) "The motorcade had just passed me when I heard something that I thought was a firecracker at first, and the President had just passed me, because after he had just passed, there was a loud report, it just scared me, and I noticed that the President jumped, he sort of ducked his head down, and I thought at the time that it probably scared him too, just like it did me, because he flinched like he jumped. I saw him put his elbows like this, with his hands on his chest." (Only heard two shots.)

June Dishong (Letter written on **11-22-63**, as read by her daughter on CNN, 11-21-2003, and featured on the Sixth Floor Museum website) "here come the president and his wife...His arm in the air waving...He drops his arm as they go by, possibly 20 feet. Suddenly--a sound. Gun shots? So hard to tell above the clamor of the crowd. The president bent forward into his wife's lap as his arm slipped off the side of the car."

While we can't rightly count Mrs. Henderson, Ms. Lawrence or Ms. Newman as first shot hit witnesses, the statements of the other 8 witnesses definitely support that Kennedy was hit by the first shot. This makes the score 14-0. Unfortunately, things get a little more confusing when we move on to discuss the statements of those on the west end of the plaza.

Westsidiers--those noting the impact of the shots from a location in the plaza to the west of the limousine:

S.M. Holland (**11-22-63** statement to Dallas County Sheriff's Department, 19H480, 24H212) "the President's car was coming down Elm Street and when they got just about to the Arcade I heard what I thought for the moment was a fire cracker and he slumped over...After the first shot the President slumped over and Mrs. Kennedy jumped up." (Apparently, he thought the first shot was the head shot.)

Stavis Ellis (HSCA Vol. XII, p.23) "On **August 5, 1978**...Ellis said that just as he started down the hill of Elm Street, he looked back toward President Kennedy's car and saw debris come up from the ground at a nearby curb. Ellis thought it was a fragment grenade. Ellis also said that President Kennedy turned around and looked over his shoulder." (Even though Ellis believed the first shot missed, his description of Kennedy's actions by no means matches the behavior of Kennedy observed between frames 160 and 190 of the Zapruder film, and instead suggests the first shot hit. The "fragment grenade" observed by Ellis was most logically a piece of Kennedy's skull, which would suggest the first shot heard by Ellis was the head shot. It also seems possible Ellis heard less than three shots.)

Dallas County Sheriff Bill Decker (Undated **1963-1964** statement included with Decker Exhibit 5323, 19H458) "I distinctly remember hearing 2 shots. As I heard the first retort, I looked back over my shoulder and saw what appeared to be a spray of water come out of the rear seat of the President's car." (Only heard two shots, the first of which was most probably the head shot.)

Jack Franzen (11-24-63 FBI report, 22H840) “He said he heard the sound of an explosion which appeared to him to come from the President’s car and noticed small fragments flying inside the car and immediately assumed someone had tossed a firecracker inside the automobile.” (Once again, the first shot he describes is the head shot.)

Mrs. Jack Franzen (11-25-63 FBI report, 24H525) “She advised shortly after the President’s automobile passed by on Elm Street near where she and her family were standing, she heard a noise which sounded to her to as if someone had thrown a firecracker into the President’s automobile. She advised at approximately the same time she noticed dust or small pieces of debris flying from the President’s automobile.” (Her statement mimics her husband's. Once again, the first shot is the head shot.)

Malcolm Summers (11-23-63 statement to Dallas Sheriff’s Department, 19H500) “The President’s car had just come up in front of me when I heard a shot and saw the President slump down in the car and heard Mrs. Kennedy say, “Oh, no,” then a second shot and then I hit the ground as I realized these were shots.” (Only recalled hearing two shots, with the first one most probably the head shot.)

Emmett Hudson (11-22-63 statement to Dallas Sheriff’s Department, 19H481) “At the same time the President’s car was directly in front of us, I heard a shot and I saw the President fall over in the seat.” (First shot head shot.)

Mary Moorman (11-22-63 statement to Dallas Sheriff’s Department, 19H487, 24H217) “As President Kennedy was opposite me, I took a picture of him. As I snapped the picture of President Kennedy, I heard a shot ring out. President Kennedy kind of slumped over.” (Moorman's photo depicts the head shot. Once again...first shot, head shot.)

Jean Hill (11-22-63 statement to Dallas Sheriff’s Department, 19H479, 24H212) “Just as Mary Moorman started to take a picture we were looking at the President and Jackie in the back seat...Just as the President looked up toward us two shots rang out and I saw the President grab his chest and fall forward across Jackie’s lap.” (Once again...first shot, head shot.)

Well, this is a surprise. Here, we have nine witnesses from the west end of the plaza--all of them recalling at least two shots--and ALL of them describing the events observed in the Zapruder film at the time of the head shot as the events they observed at the time of the FIRST shot. Now, this is curious, and suggests that (as Kennedy was obviously hit at least once before the head shot) not only did the first shot not miss, but that the second shot was the head shot. This, in turn, suggests it was the THIRD shot that missed. (Now we can call it either 23-0 or keep it at 14-0. You decide.)

Centrists--those noting the impact of the shots from the center of the plaza.

Abraham Zapruder (2:10 PM 11-22-63 interview on WFAA) “as I was shooting, as the President was coming down from Houston Street making his turn, it was about a half-way down there, I heard a shot, and he slumped to the side, like this. Then I heard another shot or two, I couldn't say it was one or two, and I saw his head practically open up, all blood and everything, and I kept on shooting.” (Only heard two definite shots, but felt certain Kennedy was hit by the first one.)

Marilyn Sitzman (11-29-66 interview with Josiah Thompson) “There was nothing unusual until the first sound, which I thought was a firecracker, mainly because of the reaction of President Kennedy. He put his hands up to guard his face and leaned to the left.” (Only heard two shots.)

William Newman (11-22-63 interview on WFAA) “we were at the edge of the curb, getting ready to wave at the President when we heard the first shot and the President.....I don't know who was hit first but the President jumped up in his seat, and I thought it scared him, I thought it was a firecracker, cause he looked....you know, fear.” (Only heard two shots.)

Frances Gayle Newman (11-22-63 statement to Dallas Sheriff's Department, 24H218) "When President Kennedy's car was about ten feet from us, I heard a noise that sounded like a firecracker going off. President Kennedy kind of jumped like he was startled and then covered his head with his hands and then raised up."

Charles Brehm (11-22-63 NBC television interview first broadcast around 3:15 CST, as shown in Rush to Judgment) "He was coming down the Street and my five-year old boy and myself were by ourselves on the grass there on Commerce Street. And I asked Joe to wave to him and Joe waved and I waved (breaks up)...as he was waving back, the shot rang out and he slumped down in his seat."

John Chism (11-22-63 statement to Dallas Sheriff's Department, 19H471) "When I saw the motorcade round the corner, the President was standing and waving to the crowd. And just as he got just about in front of me, he turned and waved to the crowd on this side of the street, the right side; at this point I heard what sounded like one shot, and I saw him "The President," sit back in his seat and lean his head to his left side." (Only heard two shots.)

Marvin Faye Chism (11-22-63 statement to the Dallas Sheriff's Department, 19H472) "As the President was coming through, I heard this first shot, and the President fell to his left." (Only heard two shots.)

Well, this is also interesting. Why did so few of those in the middle of the plaza hear three shots? The thought occurs that one of the shots was harder to hear than the others. Counting only those initially claiming to have heard three shots, then, the score is now 25-0 or 16-0.

The motorcade witnesses:

Paul Landis (11-27-63 report, 18H758-759) "At this moment, I heard what sounded like the report of a high powered rifle behind me. My first glance was at the President, as my eyes were almost straight ahead at that time. I did not realize that the President was hit at that point. I saw him moving and thought he was turning in the direction of the sound." (Only heard two shots, but saw Kennedy react to the first sound.)

Glen Bennett (notes written on **11-22-63**, 24H541-542) "At this point I heard a noise that immediately reminded me of a firecracker. I immediately, upon hearing the supposed firecracker, looked at the boss's car. At this exact time I saw a shot that hit the boss about 4 inches down from the right shoulder. A second shoot followed immediately and hit the right rear high of the boss's head." (While the precise meaning of Bennett's words are open to debate, they do on first glance suggest that he felt the first shot missed. Since he did not see Kennedy's reaction to the first shot, but only saw him at the "exact time" he received the second shot, it seems possible the blood seen by Bennett came from the first shot. But we'll call this one a first shot miss.)

George Hickey (11-22-63 report, 18H765) "As 100-X made the turn and proceeded a short distance, I heard what seemed to me that a firecracker exploded to the right and rear. I stood partially up and turned to the rear to see if I could observe anything. Nothing was observed and I turned around and looked at the President's car. The President was slumped to the left in the car."

David Powers (5-18-64 affidavit, 7H472-474) "the first shot went off and it sounded to me as if it were a firecracker. I noticed then that the President moved quite far to his left after the shot from the extreme right hand side where he had been sitting."

Clint Hill (11-30-63 report, 18H740-745) "The noise came from my right rear and I immediately moved my head in that direction. In so doing, my eyes had to cross the Presidential automobile and I saw the President hunch forward and then slump to his left." (Only heard two shots, but saw the President react to the first one.)

Sam Kinney (11-22-63 report, 18H732) "The first shot was fired as we were going into an underpass...it appeared that he (the President) had been shot because he slumped to the left."

Emory Roberts (11-29-63 report, 18H733-738) "12:30 PM: First of three shots fired, at which time I saw the President lean toward Mrs. Kennedy."

B.J. Martin (4-3-64 testimony before the Warren Commission, 6H289-293) "one of the agents got off of the car after the first shot...I looked to my right (after the first shot)...I looked at the President after I heard the (first) shot and he was leaning forward—I could see the left side of his face."

Bobby W. Hargis (11-22-63 article in Dallas Times-Herald) "About halfway down between Houston and the underpass I heard the first shot. It sounded like a real loud firecracker. When I heard the sound, the first thing I thought about was a gunshot. I looked around and about then Governor Connally turned around and looked at the President with a real surprised look on his face...The President bent over to hear what the Governor had to say." (Only heard two shots, but he saw the President respond to the first one.)

James Chaney (11-22-63 interview on WFAA, as shown on Youtube) "We heard the first shot. I thought it was a motorcycle backfiring and uh I looked back over to my left and also President Kennedy looked back over his left shoulder." (By saying the President turned to his left after the first shot—which only happens after Kennedy had obviously been hit--Chaney suggests he was hit by the first shot.)

Roy Kellerman (12-10-63 FBI report, CD7 p.3-11) (11-22-63 FBI interview) "he advised he heard a shot and immediately turned around, looking past Governor Connally...to the President. He observed the President slump forward."

First Lady of Texas Nellie Connally (Notes written on 12-2-63, as reprinted in her book From Love Field, 2003) "then I heard a loud, terrifying noise...I turned and looked toward the President just in time to see him clutch his neck and see him sink down in his seat."

First Lady Jacqueline Kennedy (11-29-63 interview with Theodore White, notes released 5-26-95) "They were gunning the motorcycles; there were these little backfires; there was one noise like that; I thought it was a backfire. Then next I saw Connally grabbing his arm and saying no no nononono, with his fist beating—then Jack turned and I turned." (Only heard two shots, but thought her husband responded to the first one.)

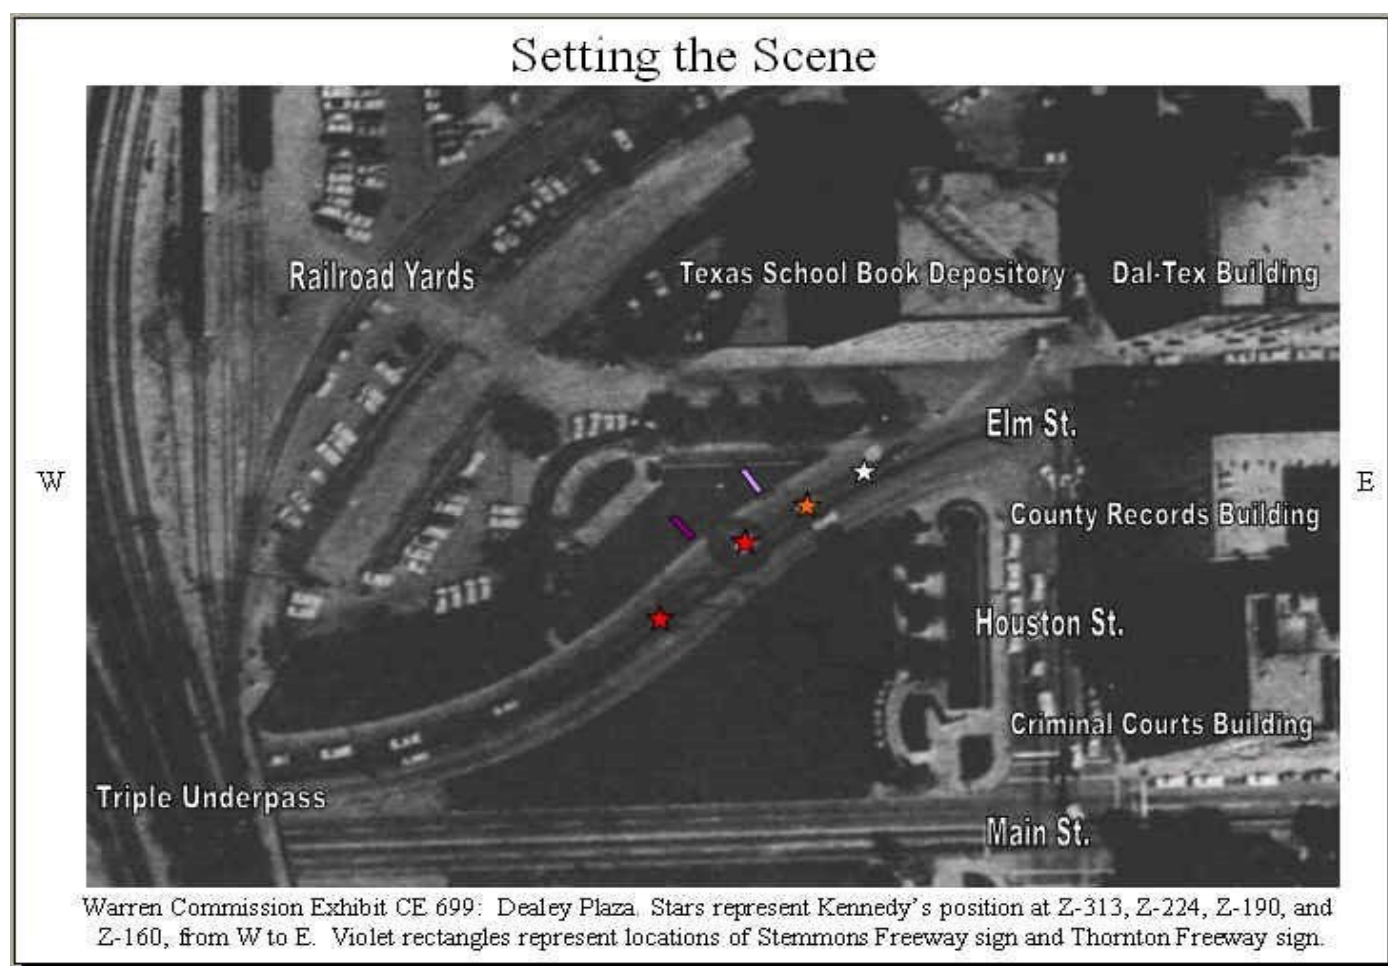

So...a final tally. When one performs even a cursory review of the statements regarding the movements within the limousine at the time of the first shot, one finds that 43 of these indicated Kennedy had a reaction to the first shot. Not one indicated he just sat there waving, or looked around and resumed waving. While Agent Bennett's statement indicated that Kennedy was not hit until the second shot, he does not describe Kennedy's behavior after the first shot, so that his movements can be compared to the Zapruder film. This makes it hard to discern just when Bennett looked at Kennedy, and just how accurate are his recollections. Even if one includes Bennett as a firm witness for a first shot miss, however, and arbitrarily dismisses the statements of those hearing only two shots under the assumption they failed to hear the first shot, and the statements of those claiming the first shot was the head shot under the assumption their recollections are just not credible, the score remains 24-1 in favor of statements indicating that three shots were fired and the first one hit, vs. statements indicating that three shots were fired and the first one missed. Unless someone can come up with a reason why all these witnesses were wrong while Bennett, who was not even asked to testify to clarify his statements, was right, the evidence is overwhelming that the first shot hit.

Let's recall here that Arlen Specter and his pals on the Warren Commission gave "substantial weight" to Agent Bennett's observation that the first shot missed, when they MUST have known, as most every

statement used in this study was available to them, that his was the ONLY statement describing Kennedy's actions at the time of the first shot that suggested the first shot missed, and that there were literally DOZENS of statements available suggesting that it hit, many of them from witnesses with far more credibility. It seems more than just a coincidence, furthermore, that, by giving Bennett's statement its undue weight, the commission was able to suggest that maybe just maybe the first shot missed and that, therefore, Oswald had plenty of time to fire the shots.

The statements of these witnesses thereby supports what we should already suspect: the Warren Commission was a whitewash, a prosecutors' brief created for political purposes without particular concern for the truth.

But what else can we learn from the witnesses?

Setting the Scene: Down on Main Street

Before we dive into the 7 course meal of eyewitness testimony awaiting us, we need to set the table. In order to set the table, and place the incoming testimony and statements in context, we need to understand what really happened. How many loud noises were there? How were they spaced? In order to do that, it's best that we begin by looking at the statements of those furthest away from the assassination scene, those who failed to see the President struck by any of the shots, but who were nevertheless close enough to hear the shots, and alert enough to write down what the shots sounded like. Witnesses equidistant from the grassy knoll and sniper's nest are especially desirable. Fortunately, there were a number of such witnesses on November 22, 1963. The Criminal Courts Building, at

Houston and Main, was home to the Sheriff's Office, and a number of Deputies were standing in front of the building watching the motorcade. As the shots rang out these men raced across the Plaza, many of them running all the way up to the railroad tracks. While their early reports are fascinating in many regards, we will focus here on how these men, all well-experienced with firearms, interpreted the shots. Keep in mind that any man who states the last two shots were closer together than the first two shots is in effect stating that the first shot did not miss, and that the LPM scenario is a myth. Here then are brief summaries of the statements and testimony of these deputies. (The citations refer to the volume and page where you can find their statements in the 26 volumes of the Warren Report. References to CD are references to Commission Documents, documents not released with the Warren Report, but now available on The Mary Ferrell Foundation website.)

Eugene L. Boone (11-22-63 report, 19H508) "I heard three shots coming from the vicinity of where the president's car was." (3-25-64 testimony before the Warren Commission, 3H291-295) "we heard what we thought to be a shot. And there seemed to be a pause between the first shot and the second shot and third shots—a little longer pause." (7-23-86 testimony in televised mock trial, On Trial: Lee Harvey Oswald) (Note: Boone's description of the shots comes from the transcript of this testimony reported in Vincent Bugliosi's book, Reclaiming History, but was not shown on the U.S. version of the program.) "So the first and second shots were closer together, then there was an interval, and then the third shot." (11-17-11 interview on KTXS News Abilene) "There was three shots. There was one shot. It went bang. There was a little space between the first and second shot. And then it was like bang...bang bang." (11-19-11 article by Greg Kendall-Ball found on the Abilene Reporter-News website) "Along with hundreds of others, Boone was on a sidewalk outside the Dallas County Criminal Courts Building — where the sheriff's offices were housed — at the corner of Main and Houston streets. He watched as President Kennedy, first lady Jacqueline Kennedy, Gov. John Connally and Nellie Connally rode by, then drove out of sight around the corner down Elm Street. Then he heard the shots." **Analysis:** when Boone described the shots before the Warren Commission he certainly made it sound that there was a bigger gap between the first two shots than between the second and third. And yet he later testified to the opposite. Now, when he told the Warren Commission "a little longer pause" he may have been talking about the pause between the second and third shots, but that seems unlikely, particularly in that his co-workers almost all said the last two shots were closer together (as we shall see). This leads me to conclude Boone changed his testimony between 64 and 86, after being prepped by prosecuting attorney Vincent Bugliosi. (Since few have ever seen the original tapes of this mock trial, we don't know if defense attorney Gerry Spence was astute enough to catch this change, and force Boone to explain this change, or even if Boone actually said what Bugliosi claims he said.) Thankfully, however, Boone cleared this up in 2011, when he reverted back to his original claim it was the second two shots that were bunched together. **Apparently changed story. Probable first shot hit 190-224 with last two shots bunched together.**

Jack Faulkner (11-22-63 report, 19H511) "I heard three shots and the crowd began to move en masse toward Elm..." (No More Silence p.215-223, published 1998) "When they turned back onto Elm Street and headed toward the Triple Underpass, then I heard three very distinct shots. I'll never forget the sequence: there was a pause between number one and number two, then number two and three were rapid. At the time, I actually thought that someone had attempted to shoot the President and possibly the Secret Service had shot back. It was that fast!" **Analysis: First shot hit 190-224. Last two shots bunched together.**

C.M. Jones (11-22-63 report, 19H512) "I heard an explosion followed in about 3 to 5 seconds later two more explosions. I am certain that I recognized the second two as being that of gunfire." **Analysis:** the grouping of the last two explosions as "two more" suggests there was no significant space between these shots. **Probable first shot hit 190-224. Last two shots probably bunched together.**

A.D. McCurley (11-22-63 report, 19H514) “I heard a retort and I immediately recognized it as the sound of a rifle. I started running around the corner where I knew the President’s car should be and in a matter of a few seconds heard a second shot and then a third shot.” **Analysis:** by failing to mention any gap between the second and third shots, McCurley suggests little time lapsed between these shots.

Probable first shot hit 190-224. Last two shots probably bunched together.

L.C. Smith (11-22-63 report, 19H516) “I heard the first shot, which I thought was a backfire, then the second shot and third shot rang out. I knew then that this was gun shots.” **Analysis:** once again “then the second shot and third shot” without mention of a five second space between the two. **Probable first shot hit 190-224. Last two shots probably bunched together.**

Buddy Walthers (11-22-63 report, 19H518) “I heard a retort and I immediately recognized it to be a rifle shot. I immediately started running west across Houston Street...At this time, it was not determined if, in fact, this first retort and 2 succeeding retorts were of a rifle, however, in my own mind, I knew.” (12-13-63 article in the Dallas Morning News) “Walthers and Sweatt were within a block of the slaying site when the sniper opened fire. They agree with other witnesses that the assassin fired only three shots.” (6-18-64 FBI airtel, FBI file 105-82555, sec 177, p18) “Walthers stated he made no statement whatsoever to anyone that one of the shots was fired from the railroad overpass and had actually concluded at the time that all shots had come from the Texas School Book Depository Building.” (7-22-64 memo from Arthur Marmor to Warren Commission Counsel Norman Redlich, as found on Jfkassassinationfiles.com) “Walthers said he then found where a bullet had splattered on the top edge of the curb on Main Street. He thought it was the last shot fired which had missed.” (7-23-64 testimony before the Warren Commission, 7H544-552) “I remember three shots...I told her that sounded like a rifle and I ran across here (indicating) and there is a wall along in here and I hopped over it.” **Analysis:** again we see no mention of an appreciable gap between the second and third shots. **Probable first shot hit 190-224. Last two shots probably bunched together. Last shot probably missed.**

Harry Weatherford (11-23-63 report, 19H502) “I heard a loud report which I thought was a railroad torpedo, as it sounded as if it came from the railroad yard...then I heard a second report which had more of an echo report and thought to myself, that this was a rifle and I started towards the corner when I heard the third report.” **Analysis:** although he confirms some of the other statements that the first shot sounded different than the second, he doesn’t tell us enough about the spacing to come to any other conclusions. **Too vague.**

Ralph Walters (11-23-63 report, 19H505) “I heard what was shots, three in number.” **Analysis: too vague.**

Lummie Lewis (11-23-63 report, 19H526) “I heard three shots.” **Analysis: too vague.**

Luke Mooney (11-23-63 report, 19H528) “I heard a shot and I immediately started running towards the front of the motorcade and within seconds heard a second and a third shot.” (3-25-64 testimony before the Warren Commission, 3H281-290) “we heard this shot ring out. At that time, I didn’t realize it was a shot...there was a short lapse between these shots. I can still hear them very distinctly—between the first and second shot. The second and third shot was pretty close together, but there was a short lapse between the first and second shot. Why, I don’t know.” (No More Silence p. 224-228, published 1998) “As the motorcade passed by us, we never attempted to follow it around the corner at Houston and were still standing there when we heard a shot ring out. I knew immediately that it wasn’t a backfire...Several of us started moving toward Houston Street at the moment we heard the first shot. By the time we reached the street (Main), the second shot had been fired, then there was a slight hesitation between the second and third. We had already heard all three shots before we had reached Main Street. **Analysis:** Mooney’s early testimony indicates the first two shots were further apart than

the "slight hesitation" between the second and third he described later. **First shot hit 190-224. Last two shots bunched together.**

J.L Oxford (11-23-63 report, 19H530) "we heard what I thought to be shots." **Analysis: too vague.**

Allan Sweatt (11-22-63 report, 19H531) "I heard a shot and about 7 seconds later another shot and approximately 2 or 3 seconds later a third shot which sounded to me like a rifle and coming from the vicinity of Elm and Houston Street." (12-13-63 article in the Dallas Morning News) "Walthers and Sweatt were within a block of the slaying site when the sniper opened fire. They agree with other witnesses that the assassin fired only three shots." **First shot hit 190-224. Last two shots bunched together.**

John Wiseman (11-23-63 report, 19H535) "I heard a shot and I knew something had happened. I ran at once to the corner of Houston and Main Street and out into the street when the second and third shots rang out." **Analysis:** by placing the second and third shots at the same moment in time—when he ran out into the street—Wiseman suggests that these shots were close together. **First shot hit 190-224. Last two shots bunched together.**

Roger Craig (11-23-63 FBI report, 23H817) "He heard a shot and ran around the corner onto Houston Street." (11-25-63 FBI report, 24H23) "he heard a noise which he presumed to be a gun shot. He states he immediately started west on Main Street toward Houston Street, and while en route, he heard two additional noises which he also presumed to be gun shots." (4-1-64 testimony before the Warren Commission, 6H260-273) "I heard an explosion...I knew it was a shot, but—uh—I didn't want to believe it. But a few seconds later, I heard another explosion and, this time, I knew it was a shot. And, as I began to run, I heard a third one." (When asked about the spacing of the shots) "The first one was uh-about two or three seconds... Well, it was quite a pause in there. It could have been a little longer." (When asked about the spacing between the second two shots) "Not more than two seconds. It was—they were real rapid." (March, 1968 interview in the L.A. Free Press) "Well the motorcade came by about 12:30 and made a right on Houston; several seconds later it made a left on Elm Street. I didn't watch it make a left; I was watching the rest of the cars behind it, but I estimated the time it took it to make a left on Elm Street. And then I heard the first shot. Well, I began to run towards Houston Street...And before I reached the corner--which was about 15 yards away--the third shot had already sounded...There was one report, a pause, and then two reports (claps hands twice quickly) just like that. Impossible for a man to pump a bolt action rifle that fast." (2-14-69 testimony in the trial of Clay Shaw) "I heard a shot. I immediately ran towards Houston...Before I reached the corner, the other two shots." (Self-penned article When You Kill a President, 1971) "The President had passed and was turning west on Elm Street . . . as if there were no people, no cars, the only thing in my world at that moment was a rifle shot! I bolted toward Houston Street. I was fifteen steps from the corner -- before I reached it two more shots had been fired. Telling myself that it wasn't true and at the same time knowing that it was, I continued to run." (4-7-74 taped interview with Lincoln Carle, shown in the film Two Men in Dallas, 1975) "The President came by and they made the right turn onto Houston Street and--oh, I'll say, y'know--a few seconds later--to give him time to get to Elm Street and make the left--I heard what was a, well, I call it a report, a gunshot. And I said, I said "Oh, my God" and I turned and started towards Houston Street running just as hard as I could and I was probably 15 steps from Houston Street and before I reached those 15 steps I heard two more reports. And I immediately went to Elm Street." (when asked how long this took) "Not more than a few seconds." **Analysis:** while Craig made a number of wild and inconsistent assertions over the years, his initial impression of the shots--that the last two were fired closely together--was locked in stone. **First shot hit 190-224. Last two shots bunched together.**

Seymour Weitzman (11-23-63 Affidavit to Dallas County, 24H228) "I was standing at the corner of Main and Houston...my partner was behind me and asked me something. I looked back at him and

heard three shots. I ran in a northwest direction.” (11-23-63 FBI report, CD5 p. 124) "Shortly after the President's car turned the corner along Elm Street, he was looking in another direction and heard three sounds in rapid succession, which he believed to have been gunshots. He believed these sounds to have come from a northwesterly direction from where he was standing." (11-25-63 FBI report, CD5 p.126) “as the motorcade went out of his line of vision...he heard three shots ring out and immediately ran to the point where Elm Street turns to go under the underpass.” (4-1-64 testimony before the Warren Commission, 7H105-109) “we heard what we thought at that time was either a rifle shot or a firecracker.” (When asked how many shots) “Three distinct shots...First one, then the second two seemed to be simultaneously.” “There was a little period in between the second and third shot.” (When asked which gap was longer, between the first and second or between the second and third) “Between the first and second shot.” (Interview with CBS, broadcast 6-25-67) (Describing the shots) "Well, just three quick bursts, like bang-bang-bang". **Analysis:** while Weitzman neglected to put a space in his re-enactment of the shots for CBS, his 3 "bangs" are so close together that his version is completely at odds with the LPM scenario. **First shot hit 190-224. Last two shots bunched together.**

Harold Elkins (11-26-63 report, 19H540) “Just a few seconds after the President’s car had passed my location I heard a shot ring out, a couple of seconds elapsed and then two more shots ring out.”

Analysis: by grouping the last two shots together, Elkins implies they were fired close together.

Probable first shot hit 190-224. Last two shots probably bunched together.

W.W. Mabra (11-22-63 article in the Dallas Times-Herald) "'I definitely heard three shots,' said Bo Mabrey." (11-27-63 report, 19H541) “we heard three shots. Officer Smith said...” “That sounded like a deer rifle.” (No More Silence p. 518-529, published 1998) "After the procession passed, we continued standing there talking when, in just a short time, we heard the first shot which sounded like a backfire from an automobile or truck well down in the Triple Underpass. That had happened a lot of times in the past and had sounded like a rifle shot. But when that first shot went off, of course, it startled both of us. We looked at each other, kind of caught our breath, wondering, since they had just gone around the corner. Then the second shot went off. Smith said to me, 'That was a deer rifle!' 'It sure was,' I responded. Then in a very few seconds a third went off. We then went around the corner as hard as we could run and could see people over on the grassy knoll. As we were crossing Houston running in the direction of the grassy knoll, I could see what looked like a swirl of smoke...By the time I got there, the smoke had disappeared; evidently it was from a cigarette..." (On his discussion with the Warren Commission) "they were trying to shake my story that a bolt action rifle could be worked with three shots being fired in six seconds. That was because my recollection of the timing was that the three shots were spaced within two to four seconds apart. It seemed like they were spaced longer between the second and third than the first and second." **Analysis:** while Mabra's recent recollections support that the first two shots were fired closer together than the second and third, he also rejects that the third shot could have been fired as much as five seconds after the second, and claims to have seen smoke on the knoll. This makes his statements as un-supportive of the LPM scenario as they are the first shot hit scenario consistent with the statements of so many others. So let's just call it a tie and say he's too vague. **Too vague. Saw smoke on knoll.**

Should one assume that standing on the north side of Main caused these deputies to hear the shots in a configuration different than how they were fired, there are also the words of these Main Street witnesses, who were on the south side of Main in the courthouse.

Ruth Smith (12-21-63 FBI interview, CD206 p.9) “She was on the second floor balcony of the old red courthouse...she heard what she felt was a shot. She stated there was a pause then two more shots fairly close together...At this time people seemed to panic...She looked back toward President Kennedy’s car after the first shot and thinks he raised his hands to his face. The car seemed to slow or perhaps stop after the first shot and then just after the third shot a Secret Service man from the second

car ran up...and threw himself into the rear seat.” **Analysis:** So here we have our first eyewitness, and she confirms what we’ve gathered from the statements of all the deputies: the first shot hit. Her statement that she thinks Kennedy raised his hands to his face after the first shot can only be interpreted as a reference to his reaching towards his throat in the frames just after frame 224. And yet she’d only heard one shot by this point; according to the LPM scenario she should have heard two--one at 160 and one at 224. **First shot hit 190-224. Last two shots bunched together.**

John Solon (1-8-64 FBI report, 24H535) “was in the Main Street entrance of the Old Courthouse... heard three shots which sounded as follows: First shot, pause, two shots, then echoes of the shots. Mr. Solon advised he would judge that approximately five and one-half seconds was taken for all three shots.” **Analysis: first shot hit 190-224. Last two shots bunched together.**

Malcolm Barclay (6-15-64 FBI report, 26H552) "did watch the Presidential procession pass the corner of Main and Houston streets, about one block south of the Texas School Book Depository, scene of the assassination. Shortly after the car bearing the president passed the place where Barclay was standing, Barclay turned to re-enter the court house, at which time he heard one or more loud reports which he identified in his own mind as rifle shots. He turned and the crowd seemed to be surging toward the Depository area. He did not see the Presidential automobile at that time, and it apparently left the area immediately." **Analysis: too vague.**

Robert West, Dallas County Surveyor, claimed to have been standing in front of the courthouse at Houston and Main when the shots were fired. (2-13-69 testimony in the trial of Clay Shaw) (When asked if he'd heard anything unusual after the limousine turned down Elm Street) "Some time after it turned on Elm Street what sounded to me at that time as what I thought was backfiring, a motorcycle." (When asked how many backfires he heard) "Four". (When asked if these backfires sounded the same) "Yes". (When asked what the first "backfire" sounded like) "A motorcycle backfired." (When asked what the second and subsequent "backfire" sounded like) "A rifle fired...It appeared to me it was rifle fire after the second. The first and the second my response was it was motorcycle backfire." (When asked again to describe the third sound) "Rifle fire." (When asked if these were loud sounds) "Yes, sir." (When asked from where he thought this sounds were coming) "The sound came from the northwest quadrant of Dealey Plaza...This entire area north and west of Elm Street." (When asked if he remembered the spacing of the shots) "No, sir." (When asked what happened after the shooting) "When I left my position on the corner of Main and Houston and went across into Dealey Plaza area, there was quite a commotion. A police motorcycle and several men coming up, what is indicated on the aerial photograph as the grassy knoll. When I got over to the motorcycle there were several men up behind the wood stockade fence along the north edge of the grassy knoll." (When asked to confirm that he heard four sounds and thought the first two were backfires and the second two rifle fire) "Right." (When asked if he felt sure about the number of sounds) "That was my response on that day." (When asked to pinpoint where he was standing) "I was standing at the point indicated by the pin here at the southeast corner of the intersection of Main and Houston." **Analysis:** West was the Dallas County Surveyor. Since the Secret Service, FBI, and Warren Commission all used his services to make plats of Dealey Plaza, and since they all came to different conclusions, and kept changing the locations for the shots, it only makes sense that he would grow suspicious of the official story, and suspect there'd been more than 3 shots. Still, he testified that he thought he'd heard four sounds from the very beginning. **Heard Four Shots.**

Setting the Scene: Eastern Spies

As the Down on Main Street witnesses were not technically in Dealey Plaza, there will be those who scoff at our using their statements to debunk the LPM scenario. They will insist that some sort of echo or something confused all those Sheriff's Deputies in a uniform fashion. Let us then examine the statements of those in the Criminal Courts Building watching the motorcade.

Mrs. Rose Clark (1-10-64 FBI report, 24H533) “was with Lillian Mooneyham and Mrs. Jeannette E. Hooker...From the window of Judge Henry King’s court room on the second floor of the court house, she heard the three shots, and it was her impression that the first shot was louder than the second and third shots. She noted that the second and third shots seemed closer together than the first and second shots...she noticed that the president’s automobile came almost to a halt following the three shots before it picked up speed and drove away.” **Analysis:** while her recollection of the first shot being louder than the others is unique, her recollection that it sounded different than the others is nevertheless informative, as is her contention that the last two shots were closer together. **First shot hit 190-224. Last two shots bunched together.**

Lillian Mooneyham (1-10-64 FBI report, 24H531) “Mrs. Mooneyham heard a gunshot and observed President Kennedy slump to the left of the seat of his car. At the time of the initial shot, Mrs. Mooneyham believed that a firecracker had gone off. Following the first shot, there was a slight pause and then two more shots were discharged, the second and third shots sounding closer together. Mrs. Mooneyham observed Mrs. Kennedy climb up on the back of the car...Mrs. Mooneyham estimated that it was a bout 4 ½ to 5 minutes following the shots fired by the assassin that she looked up towards the sixth floor of the TSBD and observed the figure of a man standing in the sixth floor window behind some cardboard boxes.” **Analysis:** as she saw Kennedy react to the first shot, and heard the last two shots closer together, Mrs. Mooneyham's statements are incompatible with the LPM scenario. **Saw first shot hit 190-224. Last two shots bunched together.**

Mrs. Jeannette Hooker (1-10-64 FBI report, 24H533) “Mrs. Hooker estimated that the President’s car was almost to the R.L. Thornton Freeway when she heard three gunshots. Mrs. Hooker observed Mrs. Kennedy stand up in the Presidential car and observed a man jump on to the back of the car.” **Analysis:** the report almost certainly should have said “Thornton Freeway *sign*.” The Thornton Freeway sign was alongside the limousine around frame Z-190 of the Zapruder film. **Probable first shot 190.**

Robert Reid (1-10-64 FBI report, 24H532) “followed the progress of the Presidential motorcade from the second floor windows of the court house...heard the three gunshots fired and took his eye from the President’s car because he noticed people who were lining the streets were either running or dropping to the ground after the shots were fired.” **Analysis: too vague.**

Cecil Ault (1-10-64 FBI report, 24H534) “After the presidential car had turned the corner onto Elm Street, Mr. Ault heard three loud reports...the first and second shots sounded to him to be close together and the third shot was spaced more after the second shot, the first two shots sounding close enough to be from an automatic rifle...Following the first shot Mr. Ault noted that President Kennedy appeared to raise up in his seat in the Presidential automobile and after the second shot the president slumped into his seat.” **Analysis:** as the “rising up” recalled by Ault is most probably Kennedy’s reaction to being hit in the Zapruder film after Z-224, the slumping mentioned by Ault would almost certainly be a reference to Kennedy’s falling over after the head shot. And yet Ault says this was the second shot. As he also remembered the first two shots being close together, and these two shots were five seconds apart, it seems likely he either misremembered, misspoke, or was misquoted in regards to which two shots were bunched together. Even if he remembered the spacing correctly, however, his contention that the first shot hit is at odds with the LPM scenario. **Saw first shot hit 190-224. Last shot possibly after the head shot.**

Dr. Samuel Paternostro (1-20-64 FBI report, 24H536) “viewed the presidential parade...from the second floor...with Ruth Thornton...they heard a report or shot...He said he estimated several seconds, possibly four or five more, elapsed between the first report and the second and third reports. He said he observed President John F. Kennedy when he appeared to grab his head and thought at the time he is “well-trained;” then, when the other reports followed in quick succession, he realized that the President

had been shot and it was not a practiced action on the part of the President when he fell against Mrs. Kennedy and later into the rear part of the vehicle he was riding in.” **Analysis:** as Kennedy grabbed his head with the first shot, there was a first shot hit. That the last two shots were bunched together confirms this. **Saw first shot hit 190-224. Last two shots bunched together.**

Mrs. Ruth Thornton (1-20-64 FBI report, 24H537) “she walked over to a window on the Houston Street side, as the Presidential car drove toward the triple underpass. She said she heard a report which she believed was a car backfiring, until somebody said “That was a shot!” Then she said two more reports followed in quick succession and she observed Mrs. Kennedy as she stood up in the rear seat of the Presidential car just before it was rushed away.” **Analysis:** the by-now familiar scenario. **First shot hit 190-224. Last two shots bunched together.**

E.R. Gaddy (1-20-64 report, CD 385 p13) "as he was leaving the courtroom he heard three reports or shots; however, he said he went to a window in the courtroom and looked toward the triple overpass just in time to observe the presidential car being driven away at a high rate of speed." **Analysis: too vague.**

The next group of witnesses were on Houston Street in front of the Criminal Courts Building and Old Jail.

Garland Slack (11-22-63 statement to the Dallas Sheriff’s Department, 19H495) “just after they rounded the corner from Houston onto Elm Street, I heard a report and I knew at once that it was a high-powered rifle shot. I am a big game hunter and am familiar with the sound of hi powered rifles and I knew when I heard the report that the shot had hit something. Within a few seconds I heard another report and knew it also had hit something and all I could see was the highly colored hat that Mrs. Kennedy had on. I couldn’t see anything else... it sounded to me like this shot came from away back or from within a building. I have heard this same sort of sound when a shot has come from within a cave.” (12-2-63 FBI report, 26H364) "He heard two shots in rapid succession and realized from the sound that they must have been fired from the interior of a building. He said he did not realize which building because actually the sound as he first heard it seemed to come from the direction of the overpass but its particular characteristics made him feel it had to come from a building instead of from an open area. He said when he heard the third shot he believed it came from the Texas School Book Depository Building. He said immediately after hearing the first two shots the crowds which were tremendously heavy went into a complete panic and a state of shock." **Analysis:** by his original signed statement that the two shots he heard came within a few seconds of each other and that they both hit, Slack makes it clear he didn’t hear a first shot miss at frame 160 of the Zapruder film. The FBI report, of course, clouds this considerably. Here, Slack is purported to have claimed there were three shots. Perhaps, then, he’d decided that the first shot he’d heard was in fact two shots, and that a third one followed. If so, his words could be considered supportive of the LPM scenario. This is undercut, however, by Slack’s subsequent assertion that panic broke out after the second shot. The testimony of the witnesses as a whole and the filmed footage of the assassination demonstrate beyond any real doubt that the crowd did not panic or go into shock until after the head shot. The probability exists then that, when interviewed by the FBI, Slack simply added a third shot onto his scenario. **Probably Only heard two shots. Probable First shot hit 190-224.**

Jay Skaggs (3-13-02 oral history for the Sixth Floor Museum) ”After the second and third shot, then I told Erma to stay there, and I took [off] running across from the parade, and I don’t remember what cars I was dodging. Anyway, I ran across the street and headed toward where people were still on the ground.” (12-2-02 article on Baptist Standard.com) “He and his family arrived early, parked their car not far from the School Book Depository, and then walked to the corner of Main and Houston...” “I knew they had to make a turn onto Houston Street, and I thought the car might slow down enough that I could get a good picture,” Skaggs recalled. "But when the president's car made the turn, he was

looking the other direction”...Skaggs instead snapped a photo picturing the back of Kennedy's head, a profile of the First Lady, and a slightly obscured view of Gov. John Connally and his wife, Nellie, turned partly away from the camera. Skaggs took a photo of the press bus that followed the presidential convertible. Then he heard the first gunshot. "I thought it was a firecracker--somebody just being stupid. Then I heard a second shot and a third one, and I knew it was a rifle," Skaggs said. Telling his wife and daughter to stay where they were, Skaggs crossed the street, dashing between cars. He snapped a photo of the assassination scene on Elm Street, about one minute after the last shot was fired.” (Interview in **11-22-03** WBAP radio program found on Youtube) "I mumbled something to my wife about some jerk shooting a firecracker. But then I heard the other two shots and I knew it was a rifle. And I ran across the street." **Analysis:** as the press bus would have been a ways from Houston at Z-160, the first shot must have come afterwards. His grouping of the last two shots together—with no mention of any activity in between, suggests they were bunched together. **Probable first shot 190-224. Last two shots probably bunched together.**

I.C. Todd worked in the Criminal Courts Building. (**11-27-63** Dallas County Sheriff's report, 19H543) "I walked outside and onto Houston Street to view the President's motorcade as it passed. A few seconds after the president's car passed me and had turned the corner off Houston onto Elm Street, I heard what I first thought was a backfire. I heard a total of 3 and after the last 2, I immediately recognized them as being gun fire." **Analysis:** groups the last 2 shots together. **Probable first shot hit 190-224. Last two shots probably bunched together.**

Arnold Rowland (**11-22-63** statement to Dallas County Sheriff's Department, 24H224) "the motorcade had just turned west on Elm bending down the hill when I heard a noise which I thought to be a back fire...then in about 8 seconds I heard another report and in about 3 seconds a third report." (**11-23-63** FBI report, 26H166) "The Kennedy motorcade...had just turned west on Elm Street and headed down the hill toward the triple underpass when he heard the first shot, which he said sounded somewhat like a backfire of an automobile. He said following the first shot some people around him had laughed. He said that about 8 seconds after the first shot there was another loud report, which he was positive was a rifle shot. A third shot then followed in about three seconds." (**11-24-63** FBI report, quoting Rowland, 16H955) "About 15 or 20 minutes later the President came by, but I did not see him get shot, nor did I see any shots fired. I did hear three shots." (**3-10-64** testimony before the Warren Commission, 2H165-190) "it was proceeding down Elm when we heard the first of the reports. This I passed off as a backfire, so did practically everyone in the area because...practically everyone in the vicinity started laughing ... Then approximately 5 seconds, 5 or 6 seconds, the second report was heard, 2 seconds the third report. After the second report, I knew what it was...I knew it was a gun firing." **Analysis:** although he adjusted his overall time, the relative gaps in Rowland's scenario are consistent. The last two shots were bunched together. **First shot hit 190-224. Last two shots bunched together.**

Barbara Rowland (**11-22-63** statement to the Dallas County Sheriff's Department, 24H224) "the President passed...and turned left onto Elm Street and started down towards the underpass when I heard a report and thought it was a backfire then in a few seconds another report sounded and in another few seconds the third report." (**4-7-64** testimony before the Warren Commission, 6H177-191) "as they turned the corner we heard a shot, and I didn't recognize it as being a shot, I just heard a sound, and I thought it might be a firecracker. And the people started laughing at first, and then we heard two more shots...the second and third were closer than the first and second...the people generally ran towards the railroad tracks behind the school book depository building, and so I naturally assumed they came from there." **Analysis:** while Rowland was asked to testify in order to discredit her husband's testimony that there were two men on the sixth floor just before the shooting, and she obliged, testifying that her husband had lied about his high-school grades, she nevertheless confirmed his contention that the last two shots were bunched together. **First shot hit 190-224. Last two shots**

bunched together.

Jim Willmon (as quoted in Crossfire, published **1989**) "The car turned down Elm Street. A car backfired, or so I thought. I said to my buddy, 'The Secret Service is going to have a heart attack!' But it wasn't a backfire. It was shots. People ran toward the grassy knoll. No one seemed to look up at the book depository." **Analysis: too vague.**

Hugh Aynesworth (**Early 1964** account written for the Dallas Morning News, published on the 2003 DVD The Story Behind the Story) "I stopped at the corner of Houston and Main. As I looked toward the Texas School Book Depository Building--never dreaming that this would become a legend, only interested in the Hertz clock it held high atop its roof--I spotted a man, I thought, named Maurice Harrell, an assistant district Attorney. I thought I'd walk over and say hello. He was standing out from the crowd at Elm and Houston. By the time I got there, he was gone, moved to another vantage point. Harrell told me later he was standing a block away at the time and that it probably wasn't him I saw. So, by at least a dozen strange quirks of fate, I found myself only a stone's throw away from where a crazed gunman fired three shots really heard 'round the world...Then came the first shot. I looked instinctively at one of the motorcycles to see if it was an exhaust. A woman near screamed. I saw a face look into mine with a lost look, much as mine must have been. Then another shot. This was a shot I knew. I recall darting my eyes to the President's open limousine, now slipping down Elm St. to the viaduct. The president jerked his head. I could not tell if he were looking to see what the noise was, but I recall thinking he was only jerking his head to wave at the people on the other side of the grassy slope. His hair seemed to jump up. Later I understood why. Some of the vehicles in the caravan seemed to come to almost a complete stop. Others crept along. I could not tell who was in charge. Then a third shot, clearer now, for I somehow almost expected it." (Article on Aynesworth by Nora Ephron, published in the **February 1976** issue of Esquire Magazine) "He was standing catty-corner to the School Book Depository Building when he heard three shots. 'I thought the first one was a motorcycle backfiring,' he says, but by the time I heard the second, I knew what it was." (Profile of Aynesworth in the **March 1976** Texas Monthly) "Aynesworth was standing in front of the County Records Building, across the street from the School Book Depository, when the motorcade came down Elm. The President waved. Nellie Connally leaned forward, said something. Then a shot, the President clutched at his throat, the agonizingly slow motion of the car, another shot, then another, and the President's head exploded. In an instant, the President's car was gone, speeding under the triple underpass." (**9-5-93** article in the Dallas Morning News) "Veteran author and newsman Hugh Aynesworth stood in the middle of Elm Street and 'could have hit Oswald with a rock' on that day. He also heard only three shots ring out." (**11-21-93** article in the San Antonio News-Express) "'I thought the first shot was a motorcycle backfiring. Actually, if I'd looked up, I could have seen who fired. It was only a few seconds until the second shot, and then I knew. 'I looked at the underpass first, because I could see some people starting to run in that direction.' Aynesworth said he then realized the shots had been fired from a window high up in the Texas School Book Depository building. 'My attention was first toward the people who were running and by the time I looked around, he had pulled the gun in after the third shot and gone.'"

(**11-21-93** Reporters Remember Conference, as quoted in Reporting the Kennedy Assassination) "I went over to the area around Elm and Houston Streets and was there when the three shots rang out. Three definite shots. Total chaos. I still have trouble putting it all together, how it happened." (**11-22-93** article in the Washington Times) "What I witnessed in the horrible few seconds as he was shot changed my life... I heard what I at first thought was the backfire of one of the police motorcycles veering left as it moved past the Texas School Book Depository... What I had heard were three rifle shots. "Chaos" is not too strong to describe what happened in the next moments. My lawyer friends took off in different directions. I saw two policemen running with guns drawn. Off to my right I saw a public relations man I knew, standing with hands on hips, a perplexed look on his face. Pure agony lined the face of a large

black woman holding a child... It must have been a minute or so before I saw two women pointing at a window high in the book depository building." (No More Silence, published **1998**, p.21-40) "There was no particular reason why I went to Elm Street other than the crowds were larger along Main Street, two or three deep, and I wanted to get a clearer view. Locating myself in the middle of the street a little toward the curb, had I looked up to my right I could have seen Oswald up there... The first shot I wasn't sure was a shot. I thought it might have been a backfire from one of the motorcycles since there were several in the vicinity. When you hear one, you listen more closely, and when I heard a second and third very clearly, there was no doubt in my mind that they were shots and that they were from a rifle... Immediately, people started jumping and running and some were throwing their kids down." (JFK: Breaking the News, **2003**) "when I saw a couple of familiar assistant district attorneys standing in front of the jail building near the corner of Houston and Elm, I walked over to join them... I was standing with my lawyer friends maybe 10 feet from the curb. As we watched the big blue Continental glide by—I vividly remember Governor Connally's grin—a huge black woman nearby burst into shouts... At 12:30 we heard the first loud pop. At first I assumed a nearby police motorcycle backfired.... (Secret Service Agent Roy) Kellerman turned in his seat just as two more shots were fired..." (Interview in film Oswald's Ghost, **2007**) "As he goes by, two or three seconds later I hear a pop. I think it's a motorcycle backfire because a motorcycle had just gone by. But then, suddenly, a second or two later another and then another. Three shots." (**4-28-11** article by Jim Schutze in the Dallas Observer) "You hear shots ring out, and you don't count how many seconds there are between them." (**5-2-12** article on News-Register online.com, reporting on a 4-2-12 appearance by Aynesworth at North Lake College) "It was amazing, the happiness and the feeling of good will that was in the crowd," recalled Aynesworth. "Then all of a sudden BOOM! One shot, but I thought it was backfire from a motorcycle. Then a second and then a third. I then realized it was shots from a rifle. We didn't know where the fire was coming from or if we'd be next. People were throwing their children to the ground and taking cover. Everyone was scared," he said. **Analysis:** Aynesworth, a career reporter, is not a very credible source of information. He originally claimed he was at Houston and Elm at the time of the shooting but eventually suggested he was out in front of the jail, a half a block away. Still, he said just enough to indicate that the single-assassin theory he's been standing behind all these years is not exactly solid. His grouping together of the last two shots suggests the last two shots were bunched together. Even more intriguing, his earliest statement indicates that the second shot was the head shot. **First shot hit 190-224. Last two shots bunched together, with the last shot after the head shot.**

Jay Watson and Jerry Haynes, WFAA newsmen, who'd been standing in front of the jail when the shots were fired. (**11-22-63** live broadcast on WFAA, around 12:45) Jerry: "Jay, I remember you said I thought it was a firecracker, or something like that. Then they followed one shot and a second or two later, a gun shot, and then another second..." Jay: "A third shot." Jerry: "And you said the man's been shot at, and then we turned..." Jay: "No, I said 'My God, that's gun shots.'" (**11-22-63** live broadcast on WFAA, around 2:15, while interviewing Abraham Zapruder) Jay: "We were about a hundred yards away and it sounded like there were three shots. And after the first couple I said 'My God, they've shot the President!'" "...At first they sounded like firecrackers. And somebody next to us said they were shooting off fireworks. But then we came to realize they were loud reports." (**11-22-64** WFAA program A Year Ago Today) Jay: "We turned to walk away when he got to the corner and started making the turn. And then we heard the first shot." Jerry: "Yes, we were just about right down here on the corner, on the sidewalk." Jay: "We stopped. And then the second shot." Jerry: "And you said 'My God, that's gunfire.'" Jay: "I said 'My God, they're shooting at him.'" (Oral History interview of Haynes for the Sixth Floor Museum, **1-23-04**) "They turned left onto Elm in front of that building, the school book depository. And I guess we turned to go, and we heard the first shot. And it sounded strange; it was echoes, y'know. And then we heard the second shot. And in our tape, Jay says I said that was a firecracker or something. I can't really remember what we said. And then the third shot, and by then we

knew something terrible had happened." **Analysis:** you gotta love the way Jay corrects Jerry no matter what Jerry says. It's intriguing that the second shot followed the first by a second or two, and that the third followed the second by just a second. It's also intriguing that they described no reaction to the third shot separate from their reaction to the second shot. If it had come 5 seconds later, as proposed in the LPM scenario, it would almost certainly have brought about a separate response. **First shot hit 190-224. Last two shots bunched together. (2X).**

James W. Powell, Special Agent, Military Intelligence, was running west on the south side of Elm St. towards Dealey Plaza at the time of the first shot. He said he was trying to take a picture of Kennedy, but saw the Presidential limo turn off Houston onto Elm when he was still a block away. (11-22-63 Memorandum for the Record found in the HSCA's files and posted online by Denis Morrisette.) "As I approached this intersection, at approximately 1228 hours, and was about one block away, Kennedy's motorcade was just turning west off Houston Street. At this point, I heard at least two loud explosions, which I assumed could either have been shots from a firearm or some sort of fireworks. Several people in the crowd, which was at the intersection to view the motorcade as it passed, pointed up at the Texas School Book Depository Building, 411 South Elm Street. I took a photograph of the building at that instant." (1-3-64 FBI Report, CD 206, p20) "Powell was approximately one-half block east of the intersection of Elm and Houston, and the Presidential motorcade had already turned west on Elm, when he heard the shots fired at President Kennedy. He then ran to the southeast corner of the Elm and Houston Street intersection and, seeing some people pointing to Texas School Book Depository Building, he took the picture...Powell stated that he recalls having heard two shots fired and possibly a third..." (4-12-96 interview with the ARRB's military analyst Timothy Wray, as published on the JFK Lancer website) "I was coming down this way and I was almost at this intersection when the motorcade came around and started down Elm Street, down the hill. I was probably half way down the block when I heard the shots fired. At that time, not expecting anything like that, you weren't sure if we had backfires going on or fireworks or actual shots. Obviously, it turns out that shots were fired." (When asked how far he was from the corner when the shots were fired) "Maybe a hundred feet." (When asked if he had any sense from where the shots had been fired) No, I didn't...I knew that when I got to this intersection, there were people pointing up at the Book Depository Building indicating that they had heard shots coming from there...When someone pointed up at the building and said they'd heard shots coming from up there, I wheeled around with my camera and took a picture of the building at that moment." **Analysis: could only swear to hearing two shots.**

Setting the Scene: Southern Spies

While some might think the preceding witnesses were cherry-picked, and that the recollections of witnesses from other parts of the Plaza differed greatly from those who were east of Houston Street, this is not the case. Here we look at a number of witnesses viewing the motorcade on Elm from the south, some along Houston Street, some along Main Street, and even a few from the south side of the Plaza.

Mark Bell filmed Kennedy's turn onto Elm past the front steps of the school book depository from the west side of Houston Street. (Letter to Josiah Thompson, 2-26-67, as referenced in Six Seconds in Dallas, 1967) "Mr. Bell heard two of the shots definitely bunched but could not honestly say which shots these were. 'Anyone could be mistaken on the bunching of shots...It happened within a few seconds and there was emotion, excitement, and fear involved.'" (Pictures of the Pain p. 267, Trask interview, 3-13-89) "I don't believe that any individual person can tell you exactly how many shots were fired, because of the echoes." **Analysis:** since virtually no one heard the first two shots bunched together, the "bunching" remembered by Bell almost certainly indicates the last two shots were bunched together. **Too vague.**

Marie Muchmore filmed the fatal head shot from the west side of Houston Street, near the cement peristyle. (12-4-64 FBI report CD7 p.31) “She advised that they stood on Main and Houston Streets. As the parade passed by there she heard the first shot but from where they were standing could not observe where the shot came from. She said she panicked after this shot and ran back to the office, later becoming deathly sick over the incident...She said she had a movie camera with her at the time and Wilma Bond had a box camera but she advised that she did not obtain any photographs of the assassination scene.” (2-18-64 FBI report, CD 735 p.8) “Mrs. Muchmore stated that after the car turned on Elm Street from Houston Street, she heard a loud noise which at first she thought was a firecracker but then with the crowd of people running in all directions and hearing the two further noises, sounding like gunfire, she advised that she began to run to find a place to hide.” **Analysis:** while, on the surface, Mrs. Muchmore’s words don’t tell us much, when one reflects that she continued filming after hearing an early shot, and only quit after hearing “two more noises”—grouping them together—it seems pretty clear she heard the last two shots bunched together around the moment of the head shot. As she described her thought process regarding the first shot—thinking it was a firecracker—it would be logical to assume she would have mentioned her thoughts about the second, if it had been a separate shot followed by a five second pause, as in the LPM scenario. Still, it's always possible she was merely playing stupid to try and hide the existence of her film from the FBI. For some strange reason, after having sold a film of the assassination to UPI on 11-25, she told the FBI on 12-4 that she'd failed to take photos of the assassination. **Probable first shot hit 190-224. Last two shots probably bunched together.**

Wilma Bond took a number of photos just before and after the shots. She was standing to the south of Marie Muchmore. (2-18-64 FBI report, CD 735.p.7) “She stated that due to the excitement she did not obtain any photographs at the time of the shooting. She also advised to the best of her knowledge, she heard at least three shots fired at the time of the incident but that due to the excitement, she does not recall the exact number.” (2-14-69 testimony in the trial of Clay Shaw) “I was trying to take a picture of the building, or I mean the corner there...when I heard what I thought was a firecracker...I proceeded on over to the alcove...I heard two more...Still firecrackers to me...I would be walking toward the triple underpass.” (When asked from where the shots came) “From my right” **Analysis:** as she grouped the last two shots together after mentioning a short pause after the first shot, she probably heard these last two shots bunched together. **Probable first shot 190-224. Last two shots probably bunched together.**

Orville Nix filmed the head shot from the southern half of the Plaza, on the southern side of Main Street. (12-3-63 FBI report, 24H539) “Nix believed the film depicts the third shot hitting President Kennedy and the sequence of events immediately after including Mrs. Jacqueline Kennedy reaching out over the back trunk lid to assist a secret service agent who is running to her aid.” (Interview in Rush to Judgment, filmed 3-27-66) (When asked where he thought the shots came from) “I thought it came from the fence between the book depository and the railroad tracks.” (When asked where he now believed them to have come from) “They came from the book depository because there’s proof that it did come from there...I believe in the Warren Report.” (Interview with CBS broadcast 6-25-67) (When asked what the shots sounded like) “I would say-- bang...bang...bang.” **Analysis:** it’s tough to say what Nix really believed. His granddaughter has made statements indicating that CBS tried to trick Nix into saying all the shots came from the school book depository for their 1967 special. Even if this is false, however, his comments to Lane and his rapid-fire “bang, bang, bang” on the CBS special (with the third shot coming but two seconds after the second) are at odds with the LPM scenario. **Last two shots bunched together.**

Charles Bronson filmed the head shot from a pedestal near the southwest corner of Houston and Main. (Letter to his sister, 11-24-63, as quoted in Pictures of the Pain, p.283) “they were about halfway down

to the underpass. And then it happened! My first impression was parade—celebration—fireworks when I heard the first two shots ring out in rapid succession and a slight pause before the third shot rang out...I remarked to Frances, “Is that fireworks or someone shooting?...right after my remark, Frances said “President Kennedy is bent over and Jackie has her arm around him and Governor Connally is lying down.” Then I looked and saw a few people lay flat on the ground just as the presidential car stopped for a split second and then take off.” (Interview with Dave Hawkins, **12-19-78**) “When the first shot rang out, it sounded like somebody had thrown like a cherry bomb—it sounded like they tossed it out between the School Book Depository—out of one of the windows—and on the opposite side of Houston Street. It sounded like it went off between the buildings because there was an echo...Then when the second and third shots went off, then it’s when I realized that it wasn’t a firecracker, it was rifle shots.” (Pictures of the Pain p.283-285, Trask interview **11-23-85**) “I was waiting till the limousine got into full view at about right angles (to my position) but the shot rang out just before...I instinctively jumped and snapped it at the same time...then when the second and third shots rang out, that’s when I decided they were rifle shots.” **Analysis:** while Bronson’s letter to his sister says the first two shots were bunched together, there’s reason to believe he was confused when he wrote this. He supposedly wrote this letter after not being able to sleep for two days. His confusion shows in the jumbled way he tells his story—first numbering the shots, and then mentioning details, such as his wife telling him that Jackie had her arms around the President and the limousine slowing down, as if these events occurred after the third shot. The Zapruder film shows these things took place just before the head shot, whether it be the second shot or the third. He doesn’t even mention in the letter that he’d filmed the head shot. In his later statements, he always talked about the first shot, and then grouped the other two shots together. He also mentioned that the still photo he took just before picking up his movie camera was taken just after hearing the first shot. As this photo was taken at approximately Z-220, and it would have taken the sound of a gun shot a half a second or so to reach Bronson from the north side of the Plaza, this photograph was clearly not taken in response to the second shot of the LPM scenario, at Z-222. It was more logically taken as a response to a shot at 188 or so, as the sound from this shot would have reached him around Z-197, a little over a second before the picture was taken. That this first shot could have been as early as Z-160 is brought into doubt by his comment to his sister that the car was halfway to the overpass at the time of the first shot. If Bronson really heard the first shot at Z-160 and felt the first two shots were bunched together, then, the second shot, according to the LPM scenario, would have rung out *just a split second after* Bronson took his picture, and would have been a more obvious frame of reference than a shot ringing out just before. As a consequence, it seems likely his later statements reflect his true impressions. **First shot 190. Last two shots probably bunched together.**

Robert Hughes filmed the motorcade from the western-most lane of Houston Street, below Main. (**11-22-63** letter to his parents as quoted in Pictures of the Pain p.265) “About five seconds after I quit taking pictures we heard the shots...Some of the people dropped to the ground at the first shot, but most of us just stood where we were...My first reaction was that somebody was shooting firecrackers...The car had just turned the corner to go under the triple underpass beneath the railroad tracks. I saw Mrs. Kennedy then. She seemed to be in about a half-standing position with her arm behind her on the back of the car.” **Analysis:** as Hughes did not hear a shot for five seconds after he stopped filming, and he stopped filming circa z-195, he did not hear a shot at Z-160, Z-190, or Z-224. He confirms this by saying people dropped to the ground after the first shot. As we shall see, no one who dropped to the ground did so before witnessing the head shot. The first shot he heard was therefore the head shot. As he wrote “we heard the shots” we can take it he heard a shot after this shot. **Only heard two shots. Last two shots probably bunched together (with the last shot after the head shot).**

D.V. Harkness was a traffic officer standing near Main and Houston during the final stretch of the

motorcade. It could very well be Harkness who walks in front of Robert Hughes' camera a few seconds before Hughes stopped filming the motorcade's progression up Houston Street. (4-9-64 testimony before the Warren Commission, 6H308-315) "I had started west on Main Street to the... plaza area with the crowd to observe the President as he went west on Elm Street...(When asked how many shots he heard) "Three" (and if he knew they were shots) "Yes, sir... When I heard the first shot and saw the President's car almost come to a stop and some of the agents piling off the car, I went back to the intersection to get my motorcycle. (When asked if he was doing that when he heard the second and third shots) "Yes, sir." (When asked where the shots came from) "I couldn't tell. They were bouncing off the buildings down there." (7-16-64 statement to the Dallas Police Department, 22H599) "When the first shots were fired, I was with Officer W.K. King and we were walking with the crowd west on Main on the north side, just west of Houston Street. We heard three shots. We were unable at that time to determine where the shots originated from." (No More Silence, p.204-210, published 1998) "when the motorcade made the turn to go down Elm street, they (the crowd) went back to grassy area there in the median between Main and Elm to get a better view of him. So I kind of followed the crowd. As the first shot rang out, then the second, I saw the President's head jerk. Then, as the third shot was fired, Mrs. Kennedy came out of the car and was on all fours on the trunk lid of the car. At the time, I was probably 150-200 feet from the car at the edge of the grassy media between Main and Elm, not far from where my motor was parked at the intersection. The sounds were loud reports. It seemed like there was more time between the first and the second shots than between the second and the third. The second and third were pretty close together. Due to the echo pattern in Dealey Plaza, though, I was unable to tell the direction of the shots. After they heard the shots, some people fell down. My first observation on this, if I would have been suspecting where the shots came from, I would have picked the building across from the School Book Depository because I looked up and there was a huge flock of pigeons that flew up from that building." **Analysis:** by saying that the President's car almost came to a stop and agents piled off the car after the first shot, Harkness is saying there was only one shot before frame 280 or so, when agent Clint Hill raced from the Presidential back-up car for the Presidential limousine. By saying he saw Kennedy's head jerk after the second shot, and that the third shot followed closely after the second shot, and that Mrs. Kennedy crawled out on the trunk as the third shot was fired, he is stating there was a shot after the head shot. **First shot hit 190-224. Last two shots bunched together (with the last shot after the head shot).**

W.K. King was with D.V. Harkness. (7-16-64 statement to the Dallas Police Department, 22H601) "When the first shots were fired, I was with Sergeant Harkness at the intersection of Main and Houston. We both ran into the park west of Houston between Elm and Main." **Analysis: too vague.**

J.B Allan was a Dallas patrolman on traffic duty that day. (7-17-64 statement to the Dallas Police Department, CD1259, p11) "At the time the President passed I was in the middle of Houston Street on the south side of Main holding back the crowd and I heard the shots. I did not know where they came from." **Analysis: too vague.**

W.H. Denham was a fourth traffic control officer at this intersection. He was on the northeast corner of Houston and Main at the time of the shots. (7-16-64 statement to the Dallas Police Department, CD1259, p6) "The motorcade was approximately halfway past my position when I heard the first shot. I did not know where it was coming from." **Analysis: too vague.**

Jack Weaver was standing on the southeast corner of Houston and Main. (12-12-63 FBI report, CD 329, p. 15) "took a Polaroid photograph of the President's automobile which depicts the automobile and its occupants as the automobile made a right turn onto Houston street from Main street." **Analysis: too vague.**

William Sharper was an elevator operator for the Dal-Tex Building. (1-24-64 FBI report, found in FBI Oswald File, Sec. 83, p43) "Sharper related that on November 22, 1963 he had left the Dallas-Tex

Building to observe President Kennedy, whose car he thought was to pass by the corner of Houston and Main Streets. According to Sharper a short time after the President's car passed by that point he heard several shots and subsequently crossed to the east side of Houston Street and walked to the corner of Houston and Elm immediately in front of the Texas School Book Depository where he remained standing for a very short time. He advised that he saw nothing of pertinence and could furnish no information which could be of assistance to this investigation. He then returned to the Dallas-Tex Building." **Analysis: Too vague.**

William T. Downey. (6-15-64 FBI report, 26H551) "Downey went to the corner of Houston and Main streets, about one block south of the Texas School Book Depository Building, where he watched the Presidential car drive by. Shortly after the car had passed the corner on which he stood, Downey heard one or more explosions, which he thought were firecrackers. Suddenly the crowd started surging in the direction of the school depository, and he saw the Presidential automobile drive away from the corner of Houston and Elm streets in a hurry, at about the time he heard someone in the crowd say the President had been shot." **Analysis: too vague.**

Harry Holmes watched the motorcade from his office in the Terminal Annex Building on the south side of the plaza. He was a postal inspector and was the last man to interview Oswald before Oswald was killed. (12-14-63 FBI report, CD205 p30) "Mr. Holmes said he was using a pair of binoculars himself at the time of the shooting, and one of the employees in his office was observing the President when the bullets struck the President." (4-2-64 testimony before the Warren Commission, 7H289-308) "the motorcade turned north on Houston and went to Elm and turned left on Elm where it started on a downgrade to what we refer to as a triple underpass. As it turned in front of the school book depository, I heard what to me sounded like firecrackers, and it was my recollection that there were three of them. I had my binoculars on this car, on the presidential car at the time. I realized something was wrong but I thought they were dodging somebody throwing things at the car like firecrackers or something, but I did see dust fly up like a firecracker had burst up in the air. (When asked where he saw the dust) "Off of President Kennedy and I couldn't tell you which one of the cracks of the firecracker resulted in this." (No More Silence, p.351-374, published 1998) "When the motorcade came by, I was watching with a pair of 7x50 binoculars when all of a sudden there was a CRACK!...CRACK!...CRACK!! All of us thought that somebody was throwing firecrackers... Anyway, about the first or second crack, I wouldn't know which, there was just a cone of blood and corruption that went up right in the back of his head and neck. I thought it was red paper or a firecracker. It looked like a firecracker lit up which looks like little bits of red paper as it goes up. But in reality it was skull and brains and everything else that went up perhaps as much as six or eight feet. Just like that. Then just a minute later another crack, and everybody fell down like they were ducking firecrackers." **Analysis:** so here we have Harry Holmes, one of the men who helped build the case against Oswald, acknowledging that there was a shot after the head shot. While he told the Warren Commission he couldn't tell which shot hit the President, or created the dust he saw fly up, he didn't tell them that he was unsure between the first and second shots, and that there was a shot after the dust flew up. Evidently it never occurred to Holmes, who was surely no Sherlock, that this was evidence for a second gunman, since the moment of this third shot, when Holmes saw people fall down, was before Z-340, barely a second and a half after the head shot. While Holmes says this crack was "just a minute later" we should not take him literally. Many people use "just a minute" interchangeably with "just a second." By connecting this final shot with people falling to the ground, Holmes showed he was not talking about 60 seconds later. **Probable first shot hit 190-224. Last two shots bunched together (with the last shot after the head shot).**

Sam Kelly, a postal worker, also claimed to have watched the motorcade from a window in the Terminal Annex Building. (11-21-93 article in the Bonham Daily Favorite) "I heard what I thought

were firecrackers,' Kelly remembered. 'I said, 'Somebody is going to get in trouble shooting firecrackers on an occasion like this.'...'I can't remember how many shots were fired,' Kelly admitted."

Analysis: Too vague.

J.C. Price watched the motorcade from the roof of the Terminal Annex Building. (11-22-63 statement to the Dallas County Sheriff's Department) "The cars had proceeded west on Elm and was just a short distance from the triple underpass, when I saw Gov. Connally slump over. I did not see the President as his car had gotten out of my view under the underpass. There was a volley of shots, I think five and then much later, maybe as much as five minutes later another one. I saw one man run towards the passenger cars on the railroad siding after the volley of shots....He had something in his hand. I couldn't be sure but it may have been a head piece." (Interview in Rush to Judgment, filmed 3-27-66) (When asked where the shots came from) "From behind the overpass over there, triple overpass, that's where I thought the shots were coming from." (When asked where he saw the man run) "Over behind that wooden fence past the cars and over behind the Texas Depository Building." (When asked to mark a map showing where he thought the shots came from, and then asked if he has marked the map "just behind the wooden fence where it joins the overpass.") "That is correct." **Analysis:** Price almost certainly heard echoes. No one anywhere near him heard four shots, let alone six shots. His recollection of seeing a man run out behind the school book depository makes perfect sense, however. It is worth noting that neither this man nor the witnesses in the parking lot mentioned by railroad worker Lee Bowers were standing at the corner of the stockade fence, believed by so many to be the site of a second shooter. They could very well have been witnesses frightened to death by what they witnessed and too camera-shy to ever come forward. There are many still-unidentified witnesses visible in the assassination films. **Heard six shots?**

Well, the scene has now been set. We've looked at the statements of **55** witnesses along the south and east sides of the Plaza, with no deliberate omissions. **17** of these witnesses failed to tell us much about the impact of the shots or how they were spaced. This leaves **38** witnesses whose statements can help us figure out what happened. The statements of **31** of these witnesses suggest that the first shot hit and the last 2 shots were bunched together. **2** of the remaining 7 made statements indicating the first shot was heard at frame Z-190 or afterward. Of the remaining 5, **1** could only swear to hearing two shots, **1** heard a shot after the head shot, **1** recalled no pause between the second and third shots, **1** heard 4 shots, and **the last** heard 6 shots. There is therefore but 1 witness whose statements remotely suggest the LPM scenario, the favored scenario of today's crop of single-assassin theorists. This witness is Eugene Boone, and his statement suggesting the scenario, in which he contradicted his testimony before the Warren Commission, was not obtained until 1986, after being contacted by Vincent Bugliosi for a TV show. And he--assuming he actually said what Bugliosi claims he said--reversed himself later. Thus, there is literally no support for the popular LPM scenario of a first shot miss, a 3 ½ second pause, a second shot, a 5 second pause, and then a head shot, when one looks at all the statements of these eyewitnesses. Surprisingly, there is more eyewitness support for a third shot miss after the head shot—5 witnesses so far—then there is support for a first shot miss—0 witnesses so far. With these numbers in mind, we can begin to look at the motorcade witnesses and try to determine not just how many shots rang out, but which shots struck who, when. We can also reflect on the rather shocking fact that the so-called defenders of the Warren Commission, beginning with CBS News in 1967, have insisted the first shot missed, thereby disregarding the statements and testimony of the majority of the witnesses, in favor of a convenient interpretation of the statements of but one or two witnesses, and a convenient interpretation of the Zapruder film. It is the purported role of the media to expose such deception, not sell it. Then why haven't any of CBS' competitors exposed them on this? Professional courtesy?

Chapter 5b: Primary Pieces

Those in the position to know...

Movements and Reactions

At right: A chart made by researcher Don Roberdeau, reflecting the head turns of the passengers between Z-140 and Z-200, with the top being left. Blue line---JFK. Red line---Jackie. Green line---JBC. Yellow line---Nellie.

Z-161

Z-188

Z-206

Z-223

Below: Figure II-5 from the HSCA report of William Hartmann.

FIGURE II-5.—A comparison of the three independent records of largest blurs or tracking errors, in the Zapruder film, as derived by W. K. Hartmann (top, above line), Frank Scott (top, below line), and L. Alvarez (bottom). Magnitude of blur or panning error is indicated by length of curve upward or downward along direction of vertical axis. Frame numbers and times in seconds are given at top and bottom along horizontal axis.

Movements and Reactions

The principal piece of evidence used by single-assassin theorists to support the LPM scenario is the Zapruder film. They claim that the reactions observed in the film, when matched up to the testimony of these witnesses before the Warren Commission, are clear-cut evidence for a first-shot miss. They also claim that the jiggle analysis of the Zapruder film supports that this first shot miss was between frame 150 and 160. Conveniently, a miss at so early a point provides a more than three second gap between the first and second shot in their scenario, which allows Oswald plenty of time to re-aim. What these theorists won't tell you, however, is that the biggest jiggle or blur of the Zapruder film prior to Connally being wounded at frame 224 is not between frames 150 and 160, but between frames 190 and 200. The jiggle or blur at this time, in fact, is far greater than the jiggle or blur apparent after the shot striking Connally at frame 224, so much so that the HSCA would conclude that only two jiggles could "reasonably be attributed to the photographer's startle reaction to the sound of gunshots" --one at 189-197 and one at 312-334. When one matches up Figure II-5 from the HSCA report of William Hartmann with a chart created by researcher Don Roberdeau reflecting the head turns of the Kennedys and Connallys, moreover, one finds that although all four of them turn to the right shortly before or after frame 160, President Kennedy alone jerks his head back to the left after frame 190. This suggests he

was hit at this point. A discussion of the witnesses, and whether their testimony indicates a first shot miss at frame 160 or a first shot hit at frame 190, follows...

First Lady Jacqueline Kennedy sat to the left of her husband. (11-29-63 interview with Theodore White, notes released 5-26-95, and subsequently published in the September 1995 Kennedy Assassination Chronicles) "They were gunning the motorcycles; there were these little backfires; there was one noise like that; I thought it was a backfire. Then next I saw Connally grabbing his arm and saying no no no nonono, with his fist beating—then Jack turned and I turned—all I remember was a blue gray building up ahead, then Jack turned back, so neatly; his last expression was so neat; he had his hand out, I could see a piece of his skull coming off; it was flesh colored not white—he was holding out his hand—and I can see this perfectly clean piece detaching itself from his head; then he slumped in my lap." (When describing the immediate aftermath of the shots) "All the ride to the hospital, I kept bending over him saying, "Jack, Jack, can you hear me, I love you, Jack." I kept holding the top of his head down trying to keep the..." (When describing her husband's condition upon arrival at the hospital) "From here down"--and here she made a gesture indicating her husband's forehead--"his head was so beautiful. I'd tried to hold the top of his head down, maybe I could keep it in...I knew he was dead." (Note found among White's type-written notes on his 11-29-63 interview with Mrs. Kennedy, as reported in the 5-28-95 Boston Globe) "I have left out of my transcript one or two matters so delicate I could not commit to paper." (11-29-63 interview with Theodore White as presented in The Making of the President 1964, published 1965. Although White, in his foreword, acknowledged the help of another motorcade witness, Malcolm Kilduff, it's clear his account was built at least in part upon his interview of Mrs. Kennedy.) "He had just turned easily, but with grace and precision as was his style, to wave at the Texans who cheered--when the sound rapped above the noise. It was a blunt crack, like a motorcycle backfiring (which is what his wife thought it was), followed in about five seconds by two more; then, suddenly, the sniper's bullets had found their mark and John Fitzgerald Kennedy lay fallen, his head in his wife's lap." (4-7-64, 5-4-64, 5-7-64, 5-8-64, and 7-20-64 interviews with William Manchester, as represented in The Death of a President, 1967) (On the first shot) "Jacqueline Kennedy believed it was a motorcycle noise." (On Connally's screaming) "Jacqueline Kennedy heard him. In a daze she wondered 'Why is *he* screaming?' Already she had started to turn anxiously to her husband." (On the final shot) "The First Lady, in her last act as First Lady, leaned solicitously toward the President. His face was quizzical. She had seen that expression so often, when he was puzzling over a difficult press conference question. Now, in a gesture of infinite grace, he raised his right hand, as though to brush back his tousled chestnut hair. But the motion faltered. The hand fell back empty. He had been reaching for the top of his head. But it wasn't there any more." (Manchester's narration for the immediate aftermath of the shots) "Leaning toward her husband Jacqueline Kennedy has seen a serrated piece of his skull--flesh-colored--not white--detach itself. At first there is no blood. And then, in the very next instant, there is nothing but blood spattering her, the Connallys, Kellerman, Greer, the upholstery, Clint running up behind, the curb alongside." (6-5-64 testimony before the Warren Commission, 5H178-181, with words deleted from the Warren Commission's transcript only to be re-discovered by Harold Weisberg and Mark Sobel presented in bold) "the car was very slow and there weren't very many people around...I was looking to the left. I guess there was a noise, but it didn't seem like any different noise really because there is so much noise, motorcycles and things. But then suddenly Governor Connally was yelling, "Oh, no, no, no"...I was looking this way, to the left, and I heard these terrible noises. You know. And my husband never made any sound. So I turned to the right. And all I remember is seeing my husband, he had this sort of quizzical look on his face, and his hand was up, it must have been his left hand. And just as I turned to look at him, I could see a piece of his skull **sort of wedge-shaped, like that**, and I remember that it was flesh colored **with little ridges at the top**. I remember thinking he just looked as if he had a slight headache. And I just remember seeing that. No blood or anything. And then he sort of did this (indicating), put his hand to his forehead and

fell in my lap. And then I just remember falling on him and saying, "Oh no, no, no," I mean, "Oh my God, they have shot my husband." And "I love you, Jack," I remember I was shouting. And just being down in the car with his head in my lap. And it just seemed an eternity. You know, then, there were pictures later on of me climbing out the back. But I don't remember that at all." (When asked if she remembered Secret Service Agent Clint Hill's climbing onto the limo after she climbed out the back.) "I don't remember anything. I was just down like that. And finally I remember a voice behind me, or something, and then I remember the people in the front seat, or somebody, finally knew something was wrong, and a voice yelling, which must have been Mr. Hill, "Get to the hospital," or maybe it was Mr. Kellerman, in the front seat. But someone yelling. I was just down and holding him. **I was trying to hold his hair on. But from the front there was nothing. I suppose there must have been. But from the back you could see, you know, you were trying to hold his hair on, and his skull on.**" (When asked how many shots were fired) "Well there must have been two because the one that made me turn around was Governor Connally yelling. And it used to confuse me because first I remembered there were three and I used to think my husband didn't make any sound when he was shot. And Governor Connally screamed **like a stuck pig**. And then I read the other day that it was the same shot that hit them both. But I used to think if I only had been looking to the right I would have seen the first shot hit him, then I could have pulled him down, and then the second shot would not have hit him. But I heard Governor Connally yelling and that made me turn around, and as I turned to the right my husband was doing this (indicating with hand at neck). He was receiving a bullet. And those are the only two I remember." **Analysis:** although Mrs. Kennedy turns her head to the right in the Zapruder film around the time the LPM scenario holds the first shot was fired, she states she turned her head to the right after hearing a backfire and hearing Governor Connally scream. Governor Connally doesn't scream out until after frame 240. This suggests the first shot she heard was fired between 190 and 224, and hit Governor Connally. Now, since she could only recall hearing two shots, one might try to claim she failed to hear the first shot, fired before the shot or shots fired between 190 and 224. But one can't automatically assume this. Since she fails to remember looking at her husband before she looked at Connally, moreover, and fails to remember climbing out on the trunk of the car after the shots, the most one can faithfully take from her statements is that at least two shots were fired and that Governor Connally was wounded before Kennedy was struck at Z-313. It is intriguing, nonetheless, that she told the Warren Commission that at "first she remembered there were three" shots, and that White, who'd interviewed her months before she spoke to the Warren Commission, in his book based in part upon her comments, described three shots, with the last two bunched together. Did she initially think, as so many other witnesses, that the last two shots were bunched together? Hmmm... **Only heard two shots. First shot hit 190-224.**

Texas Governor John Connally sat directly in front of the President. (11-22-63 report of CBS News' Walter Cronkite, quoting Connally's aide William Stinson as to Connally's response when asked from which direction the shots came) "I don't know. I guess from the back. They got the President, too." (11-27-63 televised interview with Martin Agronsky, transcript printed in the 11-28-63 New York Times.) "we had just turned the corner, we heard a shot; I turned to my left—I was sitting in the jump seat. I turned to my left to look in the back seat—the President had slumped. He had said nothing. Almost simultaneously, as I turned, I was hit and I knew I had been hit badly. I knew the President had been hit and I said, "My God, they are going to kill us all." Then there was a third shot and the President was hit again and we thought then very seriously. I had still retained consciousness but the President had slumped in Mrs. Kennedy's lap and when he was hit the second time she said, or the first time—it all happened in such a brief span--she said "Oh, my God, they have killed my husband—Jack, Jack." After the third shot, the next thing that occurred—I was conscious--the Secret Service man, of course, the chauffeur, had pulled out of the line--they said, "Get out of here..." (12-13-63 FBI report CD188, p. 3-5) "Governor Connally stated "First sense or realization of anything unusual I became conscious of a

shot or what sounded like a gunshot. I knew it came from my right rear. I instinctively turned to my right to look back and as I did so I sensed more than I saw that President Kennedy was hit. As I turned I realized something was amiss with President Kennedy and then I turned back to my left a little and as I did so I got hit with a bullet in my right shoulder...I believe I remarked "Oh my God, they are going to kill us all!" Realizing I had been hit I crumpled over to Mrs. Connally and she pulled me over towards her...I was conscious of a third shot and heard it...we were all splattered with what I thought was brain tissue from President Kennedy." ...When Governor Connally was asked about the elapsed time between the first and last shot he remarked "Fast, my God it was fast. It seemed like a split second. Just that quick" and he snapped his fingers three times rapidly to illustrate the time and said "unbelievably quick...Governor Connally felt the shots were fired so fast the assassin had hit him by accident on the second shot." (Comments made a (4-21-64 testimony before the Warren Commission, 4H129-146) "we had gone, I guess, 150 feet, maybe 200 feet, I don't recall how far it was, heading down to get on the freeway...We had just made the turn, well, when I heard what I thought was a shot. I heard this noise which I immediately took to be a rifle shot. I instinctively turned to my right because the sound appeared to come from over my right shoulder, so I turned to look back over my right shoulder, and I saw nothing unusual except just people in the crowd, but I did not catch the President in the corner of my eye, and I was interested...the only thought that crossed my mind was that this is an assassination attempt. So I looked, failing to see him, I was turning to look back over my left shoulder into the back seat, but I never got that far in my turn. I got about the position I am in now facing you, looking a little bit left of center, and then I felt like someone had hit me in the back. (When asked how long it was between the first shot and his feeling the impact) "A very, very brief span of time...I just looked down and I was covered with blood, and the thought immediately passed through my mind that there were either two or three people involved or more in this or someone was shooting with an automatic rifle. These were just thoughts that went through my mind because of the rapidity of these two, of the first shot plus the blow that I took...So I merely doubled up, and then turned to my right again and began to—I just sat there, and Mrs. Connally pulled me over to her lap...I reclined with my head in her lap, conscious all the time, and with my eyes open, and then, of course, the third shot sounded, and I heard the shot very clearly. I heard it hit him. I heard the shot hit something...I heard it hit. It was a very loud noise, just that audible, very clear...Immediately, I could see on my clothes, my clothing, I could see on the interior of the car...brain tissue...on my trousers there was one chunk of brain tissue as big as almost my thumb, thumbnail and again I did not see the President at any time either after the first, second, or third shots, but I assumed always that it was he who was hit and no one else. I immediately, when I was hit, I said, "Oh, no, no, no." And then I said "My God they are going to kill us all." (When asked about the timing of the shots) "It was a very brief span of time...so much so that again I thought that whoever was firing must be firing with an automatic rifle because of the rapidity of the shots...it just couldn't conceivably have been the first (bullet which struck him) ...when I heard the sound of that first shot, that bullet had already reached where I was, or it had reached that far, and after I heard that shot, I had the time to turn to my right, and start to turn to my left before I felt anything...I never heard the second shot, didn't hear it...I think I heard the first shot and the third shot." **Beginning Analysis:** Connally's earliest statements do not support the LPM theory. While he states he turned to his right after hearing the first shot, he more specifically states he turned to look over his right shoulder, which never occurs until long after Z-160 and Z-190, around Z-270.

Connally First Shot Analysis

On page 133 of Connally's Warren Commission testimony there is a most important exchange. Here,

counsel Arlen Specter hands the Governor an overhead photograph of Dealey Plaza and asks him to mark where he was "at the time the shooting first started." The Governor states "I would say it would be about where this truck is here. It looks like a truck. I would say about in that neighborhood." He then marks the photo. This marked photo was placed into evidence as Commission Exhibit 699. When one compares this photo to the surveyor's plat of Dealey Plaza, however, one can see that the area marked by Connally is nowhere near where the LPM theory holds Connally to have been when he heard the first shot. When one combines CE 699 with Connally's testimony that he had gone 150-200 feet down Elm before he heard the first shot, in fact, one should realize the LPM theory is on very shaky ground. At the time of Z-160, Connally was at best 115 feet down Elm (from the turning point in the middle of Houston). At Z-190, on the other hand, he was approximately 145 feet down Elm. Ironically, the closest possible shot to the location marked by Connally was Z-224, where he appears to be hit. The possibility exists, therefore, that Connally was simply confused, and marked CE 699 where he believed he was when first hit, and not where he was when he heard the first shot.

The possibility that Connally felt the first shot could have occurred as early as Z-160, however, is discounted by Connally's comments later that day.

(4-21-64 comments by Connally after studying the Zapruder film, as per a 4-22-64 memorandum for the record written by Warren Commission counsel Melvin Eisenberg) "(d) After viewing the films and slides, the Governor was of the opinion that he had been hit by frame 231. (e) The Governor stated that after being hit, he looked to his right, looked to his left, and then turned to his right. He felt the President might have been hit by frame 190. He heard only two shots and felt sure that the shots he heard were the first and third shots. He is positive that he was hit after he heard the first shot, i.e., by the second shot, and by that shot only."

Thus, we have the Governor giving numbers to the "very, very brief" interval between the first two shots he described in his testimony. While the LPM theory holds that there were almost 3 ½ seconds between the first two shots, the Governor was of the opinion there were barely 2 seconds. Since the Governor felt the first shot may have been around frame 190 and struck the President, and since this frame just so happens to correspond to a substantial blur on the Zapruder film and the President's turning to his left, shouldn't those supporting Connally as the most important witness, and building their theory around his testimony, hold that the first shot rang out around frame 190 and struck the President? The problem with this, of course, is that it doesn't leave enough time for Oswald to effectively re-aim for a second shot at frame 224. The pre-determined conclusions of the LPM defenders therefore determined the direction of their analysis. They built their theory around Connally's testimony while ignoring most of what he said. This would be acceptable if the bulk of the other witnesses corroborated a missed shot at frame 160. But, as we shall see, they do not. Far from it.

As The Governor Turns

As the Governor Turns

Still, defenders of the LPM theory will argue that, no matter what Connally's estimation of the distance he traveled down Elm was, and no matter what time in the Zapruder film Connally felt Kennedy was hit, the four passengers in the back of the limousine all turned to their right shortly before or after frame Z-160, and that therefore there must have been a shot at that time. Well, that's quite a leap. Couldn't there be another explanation for their turning their heads? Governor Connally sure thought so...

(6-22-64 interview on television station KRLD, most of which was re-broadcast on CBS 9-27-64) "just as we turned, down by the courthouse, Nelly turned around and said to the President--she was so impressed by the warmth of the reception-- she turned around and said to the President, "Well, Mr. President, you can't say that Dallas doesn't love you, too" and he said "No I think that's apparent" and or words to that effect... The crowds began to thin, but we were only about 5 minutes from the Trade Mart where the luncheon was to be held. *Uh...so...we all more or less straightened up...uh, in the car ...uh, I did I know and maybe I should explain that a little bit by sayin' when you sit for a prolonged period of time as we were, facing one direction acknowledging the crowd why, when you get an opportunity where the crowd thins you kind of shift in the chair and straighten up. We had just done that.* I had and I heard this shot and I say shot because I immediately thought it was a shot. And I immediately thought it was a rifle shot. Why? I don't know but I immediately thought of an assassination attempt. It's the only thing that crossed my mind. Fear just swept through me and I

immediately thought of him, of course. I was sitting on the seat in this seven passenger car, immediately in front of him. And I turned, thinking that the shot had come from back over my right shoulder. And I turned to look in that direction I think motivated by two things, first to see if I could see where the shot came from, see if I could see anything unusual; but equally but more important to me in that moment in my thought processes was a desire to face him, see if anything had happened, see if he was all right. So I turned and I obviously saw nothing but a tremendous crowd of people from where we had just come. And I saw nothing unusual, nothing out of the way except people who also had startled looks on their faces, they were turning, they were looking. And...and I didn't catch him in the corner of my eye, so I was in the process of turning to my left to look back over my left shoulder, and that's when I felt the impact of the bullet that hit me. There was no—there was no great pain associated with the bullet that hit me, notwithstanding it went into my back shoulder and came out my chest, right here. I felt as if someone had just hit me in the back, a sharp blow with a doubled up fist. It was an impact rather than any sort of searing pain. It more or less knocked me over at least enough to where I looked down. And of course I was covered in blood, and frankly thought that I had been fatally hit. I said, as I recall "My God, they're going to kill us all!" So there was no thought in my mind, really, but that this was an assassination attempt. I did not hear the second shot, the one that hit me. I understand there's some question in the minds of the experts about whether or not we could both have been hit by the same bullet and that was the first bullet. I just don't happen to believe that. I won't believe it, never will believe, because, again, I heard the first shot, I recognized it for what I thought it was. I had time to turn to try and see what happened. I was in the process of turning again before I felt the impact of a bullet. Obviously, if the bullet that hit me hit me before I could hear it, I was never conscious of the sound of the second bullet at all. I never heard the second bullet. After I said, "My God, they're going to kill us all," I, of course, didn't know that they'd actually hit the President, because I had not seen him. He had not said a word. And about that time Nellie pulled me down into—I had turned again in reaction to this bullet and had turned facing my right—and she pulled me down into her lap and put her head down on top of mine and just kept talking to me and saying "You're going to be all right, you're going to be all right." I was conscious the whole time. I never lost consciousness and I was lying there and heard the third shot. Now it takes a long time to tell this, Eddie, but this all happened, as you well know, in matter of seconds. I heard the third shot very distinctly. I heard it hit. I assumed that it hit the President. It obviously did. I did not see it hit him, but I heard it hit. And I knew obviously—again, if you've ever done any firing, even 200 or 300 yards, when you fire a rifle at a deer you know from the sound of that shell, the whine of it, whether or not it hit its target or whether it didn't. Makes a different sound. Well obviously the third shot hit something because the evidence was splattered all over the car and all over my clothes, all over Nelly. There was no question what had happened. My eyes were open. I was conscious. "I saw the two Secret Service men in the front seat. I heard what they said...Roy Kellerman, who was in the right front, between the second and the third shot—between the time I was hit and between the time of the third shot—both the driver and Roy were looking back into the seat to see what had happened. This was all, again, happening in a matter of seconds and they both had a look of almost consternation on their face. Roy, in the right seat turned around, on a radio communication, obviously working something on the panel of the car, and said, "Get out of the line." And then he said, apparently over the radio, "Get us to a hospital quick." So we immediately pulled out of the caravan and began picking up speed...No, the car never stopped. And about this time I lost consciousness...It was a time of just unbelievable stark tragedy. You, uh, so many things go through you mind at that moment that I think it's probably impossible to relate at any future time all the things that you thought. I know I thought, again I rather assumed without knowing that the president had been fatally wounded. And I rather assumed that, uh, that I had been..."

Intermediate Analysis: Connally is clearly telling us his sudden turn to the left prior to frame 160 and his sudden turn back to the right afterwards was him simply straightening out in the car. When one

looks at the Croft Photo taken at Zapruder frame 161 and the Betzner photo taken at Zapruder frame 186 one can see that the north side of Elm was still lined with spectators, while a look at any of the Zapruder film frames in this time period shows the south side of Elm to be almost vacant. It only makes sense then that the four political figures in the limousine would turn their heads to face the north side. This accounts for the sudden turn of all four people roughly at the same time. (It should also be noted that while Croft didn't hear a shot until seconds after snapping his picture, Betzner heard one just after he clicked. This is undoubtedly supportive of the first shot coming at frame 190 and will be discussed in more detail on the pages to come.)

Should Connally's words not be enough to convince one that the mass turn to the right of the limousine occupants preceded the first shot, there are also the words of Mary Woodward, who stood on the north side of Elm Street near the Thornton Freeway sign. In an eyewitness account published 11-23-63 she stated "After acknowledging our cheers, he (Kennedy) faced forward again and suddenly there was a horrible, ear-splitting noise." A 12-7-63 FBI report reflects she told the FBI much the same: "she was watching President and Mrs. Kennedy closely, and all of her group cheered loudly as they went by. Just as President and Mrs. Kennedy went by, they turned and waved at them. Just a second or two later, she heard a loud noise." (Kennedy is waving in her direction at frame 190.)

Should one doubt the words of both Governor Connally and Mary Woodward that the limousine occupants turned to the right before the first shot, there is also the testimony of Vickie Adams, who watched the motorcade from the fourth floor of the school book depository. In her 4-9-64 testimony before the Warren Commission, she stated "I watched the motorcade...proceed around the corner on Elm, and apparently somebody in the crowd called to the late President, because he and his wife both turned abruptly and faced the building...Then we heard—then we were obstructed from the view...A tree. And we heard a shot, and it was a pause, and then a second shot, and then a third shot."

The 6-22-64 Connally interview is also important because it is one of the few times he talked about the actions of the Secret Service agents in the front seat, agents Kellerman and Greer. Connally's assertions that he turned back to his right in reaction to the bullet strike and that he'd already been struck by the time the agents looked into the back seat are strong evidence he was hit long before Zapruder frame 285. This is a critical blow to the pet theory of those holding that Connally was first struck circa Z-285, or later.

(9-16-64 interview with William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) "Most of the hunters in the motorcade--Sorrels, Connally, Yarborough, Gonzalez, Albert Thomas--instinctively identified it as rifle fire." (Manchester's theory on what happened to the first bullet, after exiting Kennedy) "Continuing its flight, it had passed through Governor Connally's back, chest, right wrist and left thigh, although the Governor, suffering a delayed reaction, was not yet aware of it. At the moment, in fact, Connally was glancing over his right shoulder, in the direction of what he had recognized as a rifle shot." (On Connally's reaction to being hit, by what Manchester asserts was this same first shot) "At this instant, the impact of John Connally's wound hit him. It was as though someone had jabbed him in the back with a gigantic fist. He pitched forward, saw that his lap was covered with blood, and toppled to the left, toward his wife. Both John and Nellie were aware that the Lincoln was slowing down. Huddled together, they glanced up and saw the astounded faces of Kellerman and Greer, inches from their own. Suddenly, the Governor felt doomed. He panicked. 'No, no, no, no!' he shrieked. 'They're going to kill us both!'" (On the head shot) "'Nellie wonders if she is being sprayed by spent buckshot, but John Connally knows. John suddenly recalls his boyhood in the Model T, in a flash he remembers his father and Carlos Estrada, and as he slides bleeding into Nellie's lap, he fills his lungs and screams again and screams again and screams again in agony; in terror she

she begins to scream, too; and they are overwhelmed by matter, saturated in Kennedy's bright blood..." (9-27-64 Press conference on Connally's response to the Warren Report, as shown in the film *Rush to Judgment*, 1967) "Unquestionably, when the first shot was fired, I recognized it as a shot. I thought of nothing else, but it was a rifle shot. I turned to my right, I had time to think, I had time to react. I turned to my right to look back over my right shoulder to see if I could see anything unusual and particularly to see if I could catch him out of the corner of my eye—the President—because I immediately thought it was an assassination attempt the moment I heard the shot. I didn't see anything but the general blur of waving, of people moving. I did not see anything unusual—I did not see the President out of the corner of my eye and I was in the process of turning over to my left shoulder, and had about come to the point where I was looking straight forward again, when I felt the impact of the bullet that hit me...I am convinced beyond any question of a doubt that the first shot that was fired did not hit me. Then I was hit. I have no opinion or recollection of the sound of the shot that hit me. Beyond any question of a doubt the third shot did not hit me." (9-28-64 article in the *Chicago Tribune*, on the press conference the day before) (Note: I assume the press conference shown in *Rush To Judgment* is this same press conference, but have yet to establish this as a fact.) "The commission said the bullet that struck Kennedy in the throat probably also struck Connally. 'I'm convinced beyond any doubt that the first shot did not hit me,' Connally said. 'I heard the first shot and looked back over my right shoulder to see him (Kennedy). All I could see was the blur of people moving. I felt the impact of the second bullet but I did not hear it. The third shot I heard. I heard it hit him [Kennedy] and I saw the results of it. My eyes were open, I was conscious. I thought immediately that it was an assassination...' " (11-21-65 interview with UPI found in the *Brownsville Texas Herald*) "'The first inkling I had that anything was amiss was when I heard a sound that I thought was a shot. I tried to turn around in front of the President. I felt a hard impact. '...the first time I knew I had been hit was when I saw blood all over my clothing. 'I said lo Nellie, 'My God! They're going to kill us both.' She kept saying, 'Be still, be still. You're going to be all right.' 'I remember hearing the third shot and knew that someone had been hit a fatal blow. There was blood all over me and the car.'" (10-30-66 interview with *Life Magazine*, as reported in its 11-25-66 issue) (Note: a caption to a series of frames from the Zapruder film featured in this issue claims that after studying individual frames from the film, "Connally...says he was hit here," with an arrow pointing to frame 234.) (When discussing the frames of the Zapruder film immediately following Kennedy's emergence from behind the sign) "You can see my leftward movement clearly...I had turned to the right when the limousine was behind the sign. Now I'm turning back again. I know that I made that turn to the left before I was hit. You can see the grimace in the President's face. You cannot see it in mine. There is no question about it. I haven't been hit yet." (When discussing his choice of frame 234 as the frame where he was first hit) "Having looked at frames 233 to 235, I can begin to see myself slump in 234. The slump is very pronounced in 235. I am hunched. It looks as though my coat is pulled away from my shirt. My mouth is elongated. I don't think there is any question that my reaction to the shot begins in this time sequence..." (When reflecting on the shooting) "'Between the time I heard the first shot and felt the impact of the other bullet that obviously hit me I sensed something was wrong, and said "Oh, no, no, no." After I felt the impact, I glanced down and saw that my whole chest was covered with blood...I'll bet that you can recall every detail of the circumstances under which you heard of the assassination--or Pearl Harbor Day or the death of F.D.R. And that's why I know every split second of what happened in that car until I lost consciousness. When I heard that first shot, and was starting to turn to my right to see what happened, Nellie saw the President's hands reaching for his throat. I started to look around over my left shoulder, and somewhere in that revolution I was hit. My recollection of that time gap, the distinct separation between the shot that hit the President and the impact of the one that hit me, is as clear today as it was then." (When discussing his dispute with the Warren Commission) "history is bigger than any individual's feelings. I don't want to discuss any other facets of the controversy except my wounds as related to the first shot that hit the President. They talk about the 'one-bullet' or 'two bullet theory,' but as far as I'm concerned there is no 'theory.' There is my

absolute knowledge, and Nellie's too, that one bullet caused the President's first wound, and that an entirely separate shot struck me...It's a certainty. I'll never change my mind."

(11-23-66 AP article found in the Miami News on a press conference called by Connally, in which he read a prepared statement and denounced Mark Lane and other critics of the Warren Report as "scavengers.") "Connally told a questioner at a news conference that he had read none of the books criticizing the Warren Report but had read a number of news stories and reviews about them. He held steadfastly to his belief he was hit by a bullet that did not hit President John F. Kennedy on Nov. 22, 1963, in Dallas. The Warren Commission said one bullet hit both men. Connally said he disagreed with the Commission on that one point, but he sees no reason for reopening the investigation... Connally repeated yesterday the testimony he gave before the Warren Commission. He said he heard the first shot, that he did not hear the second one but felt it hit him in the back like a fist, and that he heard the third shot. He said his wife, riding in the other jump seat to his left, heard all three shots, and that they both agreed the shots they heard all came from 'back over our right shoulder,' the direction of the book depository. Some have argued that one shot was fired from the vicinity of a grassy knoll in front and to the right of the presidential limousine. Connally said he first thought two or three people were involved in the shooting because of the rapidity of the shots. 'This was something that went through my mind,' he said. 'It is not evidence. It was nothing but a fleeting thought. The fact that I thought there were two or three because of the rapidity really has no bearing on the case. Nor should it be considered as evidence of any kind.' Connally said he would not change his mind about the shots, but it was the Warren Commission's privilege to disagree." (11-24-66 New York Times article on the 11-23 press conference, in which more direct quotes are supplied) "I am convinced, beyond any doubt, that I was not struck by the first bullet. I know that I heard the first shot, that I turned to see what happened, and that I was struck by a second shot. The third shot struck the President and not me. As I said earlier, this testimony was presented to the Warren Commission. They chose to disagree, which is their privilege. I maintain my original view, always shall. I want to make it very clear, however, that simply because I disagree with the Warren Commission on this one detail does not mean that I disagree with the substance of their overall findings." (Interview with CBS broadcast 6-25-67) "All the shots came from the same place, from back over my right shoulder...Beyond any question, and I'll never change my opinion, the first bullet did not hit me. The second bullet did hit me. The third bullet did not hit me. Now, so far as I'm concerned, all I can say with any finality is that if there is - if the single-bullet theory is correct, then it had to be the second bullet that hit President Kennedy and me."

(9-6-78 testimony before the HSCA Vol.1, p. 11-59) "we had just turned onto Elm. We had gone, I suspect, oh, 150, 200 feet when I heard what I thought was a rifle shot and I thought it came from--I was seated right, as you know, the jump seat right in front of the President, and they have a fairly straight back on them so I was sitting up fairly erect. I thought the shot came from back over my right shoulder, so I turned to see if I could catch a sight of the President out of the corner of my eye because I immediately had, frankly, had fear of an assassination because I thought it was a rifle shot. I didn't think it was a blowout or explosion of any kind. I didn't see the President out of the corner of my eye, so I was in the process of, at least I was turning to look over my left shoulder into the back seat to see if I could see him. I never looked, I never made the full turn. About the time I turned back where I was facing more or less straight ahead, the way the car was moving, I was hit. I was knocked over, just doubled over by the force of the bullet. It went in my back and came out my chest about 2 inches below and the left of my right nipple. The force of the bullet drove my body over almost double and when I looked, immediately I could see I was just drenched with blood. So, I knew I had been badly hit and I more or less straightened up. At about this time, Nelly reached over and pulled me down into her lap. I was in her lap facing forward when another shot was fired. I only heard two shots. I did not hear the shot that hit me. I wasn't conscious of it. I am sure I heard it, but I was not conscious of it at all. I heard another shot. I heard it hit. It hit with a very pronounced impact, just [slap of hands] almost like that.

Almost that loud a sound; it made a very, very strong sound. Immediately, I could see blood and brain tissue all over the interior of the car and all over our clothes. We were both covered with brain tissue, and there were pieces of brain tissue as big as your little finger. It was something that was unmistakable. There was no question in my mind about what it was. About this moment in time, Roy Kellerman, who was the Secret Service agent sitting in the right-front seat, pushed, apparently was pushing some buttons on the panel, doing what, I don't know. I heard him say, "Let's get out of here fast," and the car lurched forward then. Bill Greer was the driver. He accelerated it tremendously. When I was hit, or shortly before I was hit--no, I guess it was after I was hit--I said first, just almost in despair, I said, "no, no, no, just thinking how tragic it was that we had gone through this 24 hours, it had all been so wonderful and so beautifully executed. The President had been so marvelously received and then here, at the last moment this great tragedy. I just said, "no, no, no, no". Then I said right after I was hit, I said, "My God, they are going to kill us all. The shots came, in my judgment, the two shots I heard came from the same direction, back over my right shoulder, came from behind us. Very clear to me where they came from. I don't think any shots came from any other direction. I was conscious until we hit the Stemmons Freeway and then I faded into unconsciousness. I would have to volunteer the very, very strong opinion, I know much has been written, much has been discussed, I was being a participant, I can only give you my impressions, but I must say to you, as I said to the Warren Commission, I do not believe, nor will I ever believe, that I was hit with the first bullet. I don't believe that. I heard the first shot. I reacted to the first shot and I was not hit with that bullet. Now, there's a great deal of speculation that the President and I were hit with the same bullet. That might well, be, but it surely wasn't the first bullet and Nelly doesn't think it's the second bullet. I don't know, I didn't hear the second bullet. I felt the second bullet. We obviously weren't hit by the third bullet. I was down reclining in her lap at the time the third bullet hit." (When asked how long it was between shots) "I think it is impossible for me to say with precision, but obviously a very short period of time, a matter of seconds, because it was, you know, I think undoubtedly a fairly fluid movement. I heard the shot, I reacted by looking, I saw nothing, and I was in the process of turning when I felt the impact. I guess 6, 8, or 10 seconds, in that range, but I certainly couldn't be more precise than that, but it wasn't long." (When asked if the shots were instantaneous) "No, it was not. It could not have been 1 second."

(**11-06-83** AP article by Robert Johnson found in the Daytona Beach Morning Journal) "Connally recalls hearing a rifle shot as the motorcade rolled by the Texas School Book Depository. Then he was hit by what he is convinced was a second shot that he did not hear--'I was more or less in a state of shock and it didn't register on me at all,' he said. But he remembers clearly the sound of a third shot, the one that shattered the president's skull." (**11-13-83** UPI article found in the Paris Texas News) "Connally was conscious, his eyes open, when the bullet hit Kennedy's head. "It hit with a loud bang." He illustrates now by smacking his left palm with his right fist. "And then blood and brain tissue were all over the car, all over us." (ABC News interview shown on the 20th and 25th anniversaries of the assassination, **1983**) "I heard a sound that I thought was a rifle shot. So I looked in the direction from which I thought the shot came, and then suddenly I felt an impact like someone had walked up behind me and hit me with a doubled-up fist right in the back. And it knocked me over. And before I could straighten up I saw that I was literally just covered with blood and I knew I had been hit badly, and I assumed, probably fatally." (The Men Who Killed Kennedy, broadcast **1988**) "I heard what I thought was a rifle shot. I immediately reacted by turning to look over my right shoulder because that's where the sound came from. I didn't see anything out of the ordinary and was in the process of turning to look over my left shoulder when I felt a blow in the middle of my back as if someone had hit me with a doubled-up fist about like that. The blow was of such force that it bent me over, and I immediately saw that I was covered with blood, and I knew I'd been hit. And I said "Oh, my God, they're going to kill us all. And I heard another shot. There was a last shot almost like that, and I immediately saw blood and brain tissue all over the back of the limousine." (**11-16-88** Cox News Service article by Seth Kantor

found in the Henderson, North Carolina Times-News) (Describing the impact of the shot) "It was like somebody had walked up behind me and hit me with a closed fist in the back"... 'I didn't hear that second shot. I felt the blow. Then I saw I was drenched with blood. I knew I'd been hit. I said 'My God, they're going to kill us all!' Then Nellie (Mrs. Connally) pulled me into her lap. I heard another shot, what I thought was a rifle shot (he slammed his hands together again). I heard the impact of it, which was very loud, a very distinct impact. I was conscious. I was lying down. I was looking straight into the back of the back seat. And after that shot had hit, I saw blood and tissue all over the blue velour covering of the presidential limousine. All over my clothes. My eyes were open. I knew what I saw. There was no question in my mind but what there were three shots. I did not hear the second. I only heard two. Nellie heard three, There weren't four. They didn't come from the grassy knoll. They all came from the same direction. From behind...they developed the theory that the president and I were hit by the same bullet and that one missed completely. I don't believe that. Never have believed that. They posed that question to me during the Warren Commission and I didn't believe it then; don't believe it now.'" (Interview with Larry King on CNN, January, **1992**) "I thought I heard a rifle shot...I turned to look over my right shoulder because that's where the sound came from. And I saw nothing out of the corner of my eye and I turned to look over my left shoulder. About the time I got square again, Larry, I felt a blow (slaps hands together) about like that, as if someone had hit me in the back with a closed fist. It knocked me over and as I looked down I was covered with blood... Conscious, and I said 'My God, they're gonna kill us all!'...I said it out loud...No pain, nope...just a thud. I felt no pain after that. Nellie then immediately pulled me down into her lap. And about that time ((slaps hands together) we heard another sound, another rifle shot. The loud smack was the bullet hitting the President's head... Immediately after that smacking sound the whole car was covered with blood and brain tissue. There were chunks of brain tissue as big as my little finger on my clothes." (CBS program "Who Killed JFK?," broadcast **1992**) "To me, it's just inconceivable that the first shot that went through the throat, through the neck, entered my back. I don't believe that. I don't wanna believe that. They can't run enough tests to make me believe that." (Interview in the Discovery Channel program The End of Camelot, broadcast **1993**) "I felt like someone hit me in the back with a balled-up fist. It knocked me over. And I looked down and I was covered with blood. And I said 'My God, they're gonna kill us all!'"

(In History's Shadow, **1993**, co-written with Mickey Herskowitz) "It was almost exactly 12:30 PM, November 22, 1963 when we followed the motorcycle escort onto Houston Street and past the ugly brick building where Lee Harvey Oswald waited with his scrambled egg off a mind. People were still jostling for a better view. The noise of the motorcycles, the clearing of the mechanical lungs, b-r-r-o-o-m, competed with the rising cheers, and at first many people thought what they heard was the backfire of a motorbike. I knew it wasn't. I had been to war, hunted, handled guns all my life. And even if there had been time to wonder, within seconds the evidence was all over us. The first shot struck the President in the neck. His hands flew to his throat, a reflex. I turned, and felt the blow against my back. My body was aligned in such a way that the bullet passed through my chest, shattered my right wrist, and lodged in my thigh. It is remarkable, over the years, how many people have tried to tell me where I was shot, and how. I never argue with them. I only need to consult my scars. I was still conscious when the third shot blew off part of John Kennedy's head...Everything I saw, heard, and felt is consistent with what was visible in the frame-by-frame analysis of the film taken by Abraham Zapruder, a Dallas merchant who became an accidental historian: The first shot passed through the neck of John F. Kennedy. I saw him clutch his throat. The second shot was the one that struck me; of this I have no doubt. Nellie had pulled me to her when the third bullet blew across the car a spray of the President's brain." (Final words on the subject) "I happen to support the major findings of the Warren Commission. I believe there were errors, including the so-called "magic bullet." My ear and my body told me that I was not wounded in three places by a bullet that hit President Kennedy. I remain convinced that he was hit twice, and I once, by three separate shots." **Final Analysis:** in late 1966, when public skepticism

about the single-bullet theory became rampant, Connally was in a bit of a bind. The Warren Commission had ignored his testimony that he had not been hit by the first shot and had instead presented that scenario as the most likely scenario. Through his 1966 interviews and beyond, he let the powers-that-be know that he would agree that he may have been hit by the same bullet as Kennedy, as long as they decided that it wasn't the first bullet fired. Shortly thereafter, CBS conducted its investigation concluding that this was indeed the case. Since that point, until 2006, when Mark Fuhrman offered a single-assassin scenario which did not include a miss, all prominent single-assassin scenarios have taken as gospel a first shot miss and a second shot striking both Kennedy and Connally. Connally's "playing ball" with the government after that point is made most clear by a subtle change between his Warren Commission and HSCA testimony. While Connally initially testified the time difference between the first two shots was "very, very brief" and indicative of automatic rifle fire or more than one assassin; by 1978 this gap was now as much as 10 seconds. Connally, a veteran, a hunter, and a former Secretary of the Navy, knew full well that a bolt-action rifle could be fired within 6 to 10 seconds, and that by stretching out the time span between the shots, he was helping to sell the single-assassin scenario.

Beyond his insistence that he was not hit by the first shot, or the third shot, it's difficult to take Connally's testimony at face value. While he testified he turned to look over his right shoulder just prior to being struck and that he never saw the President during the shooting sequence, the Zapruder film shows him look back at the President after he was hit (at around frame 274). From this, one can only assume that Governor Connally's memory was negatively affected by his experience. A 2004 article in the Journal of Law and Psychiatry by Charles Morgan et al examined the impact of extreme stress on eyewitness testimony. Morgan found that when military personnel were subjected to mock prisoner of war interrogations, and threatened with physical violence, and were asked the next day to identify the interrogators and guards, their identifications were only 30% accurate. Conversely, those interrogated in a less stressful environment were able to identify their captors with 62% accuracy. This suggests we should pay less attention to Mrs. Kennedy's and Governor Connally's recollections and more attention to the recollections of those around them. Still, due to Governor Connally's recollection of stretching before the first shot, his approximation of where the first shot occurred for the Warren Commission, and his initial approximation of the time span between the shots, we can safely put Connally in the first shot 190 category. **First shot 190-224. Was aware of two shots between 190 and 224.**

Bodies in Motion, Time Standing Still

By frame Z-280, Connally, Kellerman and Greer are all looking back towards the president.

The Zapruder film frames above and at left can help us place the testimony of the limousine passengers in context.

At left: a crop from Z-335.

Bodies in Motion, Time Standing Still

When one compares the Zapruder film to the testimony of the Mrs. Kennedy and Governor Connally, one can't help but notice how fragile their memories were. In frame 230, for example, we see Mrs. Kennedy looking at her husband. This is *before* Governor Connally begins to yell. Similarly, Governor Connally turns to look over his right shoulder in the frames between Z-270 and 288, and yet this is *after* he has obviously been hit. Neither of them remembered looking at the President at these times. Perhaps, by looking at the testimony and statements of the other three occupants of the limousine, the sequence of events will become more clear. (Perhaps not.)

First Lady of Texas Nellie Connally sat directly to the left of her husband and directly in front of Jackie Kennedy: (11-22-63 WFAA report on a press conference given by Connally aide Julian Read, who had just spoken to Mrs. Connally.) "The car had turned to the left on Elm Street and was getting ready to go under the Triple Underpass. At that moment, Mrs. Connally said she heard a shot. Instantly, when she heard the shot, her husband turned to see what had happened and at that instant he too was shot. Mrs. Connally says she believes the first shot was the one that struck President Kennedy in the head. There was a second shot. That shot struck Governor Connally in the back, and coming out of his body in the right chest. There are reports of a third shot and Governor Connally has a wound on his wrist and that could be the result of that third pistol shot, although Mrs. Connally is not certain whether there was a third shot or not. She said immediately after the first shot Mrs. Kennedy grabbed her husband. After the second shot Mrs. Connally grabbed her husband. All four of them ducked down into the car to escape any further fusillade of shots." (11-22-63 UPI article on Read's press conference.) "Mrs. John Connally, wife of the wounded Governor of Texas, said today she thinks President Kennedy was shot first....(Quoting Read)'They got ready to go through the underpass. Mrs. Connally heard a shot. When the first shot was fired, Connally turned in his seat and almost instantly was hit. She does not know about the third shot. But it may have been the one that hit the governor's wrist...Jackie grabbed the President and Mrs. Connally grabbed Connally and they both ducked down in the car... Mrs. Connally does not remember her husband saying anything." (Notes written on 12-2-63, as

reprinted in her book *From Love Field*, 2003) “then I heard a loud, terrifying noise...I turned and looked toward the President just in time to see him clutch his neck and see him sink down in his seat. There was no utterance of any kind from him...I had no sure knowledge as to what the noise was... Quickly, there was a second shot, John had turned to the right at the first shot to look back and then whirled to the left to get another look...John said, “No, No, No,” was hit himself by a second shot and said “My God, they are going to kill us all,” wheeled back to the right, crumpling his shoulders to his knees...I reached over and pulled him to me...Then came a third shot.” (12-13-63 FBI report, CD188, p.6-7) “she was facing the front of the car when the first shot was fired and turned to her right towards President Kennedy and saw him with his hand at his throat and then slump down. ...almost immediately Governor Connally recoiled in the opposite direction from her and was heard to remark “My God, they are going to kill us all.” She had feelings that buck shot was falling all around them and then she realized it was probably brain matter from President Kennedy’s head...When asked about the lapse of time between the first and last shots she replied “About like saying “crack, crack, crack.” She sensed that Governor Connally had been hit when she heard the second shot and she turned to hold him...The direction of all shots were from somewhere to the rear of the car.”

(4-21-64 testimony before the Warren Commission, 4H146-149) “When we got past this area I did turn to the President and said “Mr. President you can’t say Dallas doesn’t love you.” Then I don’t know how soon, it seems to me it was very soon, that I heard a noise...I turned over my right shoulder and looked back, and saw the President as he had both hands at his neck...he made no utterance, no cry. I saw no blood, no anything. It was just sort of nothing, the expression on his face, and he just sort of slumped down. Then very soon there was the second shot that hit John. As the first shot was hit, and I turned to look at the same time, I recall John saying, “Oh, no, no, no.” Then there was a second shot, and it hit John, and as he recoiled to the right, just crumpled like a wounded animal to the right, he said, “My God, ,they are going to kill us all”...I never again looked in the back seat of the car after my husband was shot...I remember that he turned to the right and then just slumped down into the seat, so that I reached over to pull him toward me...The third shot that I heard I felt, it felt like spent buckshot falling all over us, and then, of course, I too, could see that it was the matter, brain tissue, or whatever, just human matter, all over the car and both of us...(The time between the first and second shot was) Very short. It seemed to me that there was less time between the first and the second than between the second and the third. (At the time of the first shot) The underpass was in sight...(When asked about the Zapruder film, she said she thought her husband was shot at frame) “229—it could have been through the next three to four frames.” (Article in *McCall’s* magazine, **August, 1964**) “in that instant the first shot rang out, I heard it and though I handle guns myself and am familiar with rifles, I did not in that split second realize it was gunfire...I looked directly at the President. He clutched his throat with both hands, and I felt sure he was dead. His face went blank. There was no pain or shock or fear just nothingness. His face was completely expressionless, as if the person had gone. Sitting on my right, John, the Governor, turned very fast to his right trying to look around at the President. Not getting him in his line of vision, he started turning to his left and the second bullet hit him. I heard John say, “They’re going to kill us all” He recoiled to his right and slumped over, still upright in his seat...I pulled him down onto my lap and bent over him...I heard the third shot and the Secret Service command to pull out of the motorcade and drive to the nearest hospital, but after John was hit, I didn’t look back again.” (9-30-64 interview with William Manchester, as represented in *The Death of a President*, 1967) (On her response to the first shot) "Nellie Connally twisted in her seat and looked sharply at Kennedy. His hands were at his throat, but he wasn't grimacing. He had slumped a little." (On her response to the head shot) "Nellie wonders if she is being sprayed by spent buckshot." (10-30-66 interview with *Life Magazine*, as reported in its 11-25-66 issue) “As far as the first two shots go...my memory is divided into four events. First I heard the shot, or a strange loud noise--I'm not that expert on rifles--back behind us. Then next I turned to my right and saw the President gripping at his

throat. Then I turned back toward John, and I heard the second shot that hit John...I must have been looking right at him because I saw him recoil to the right...so you see I had time to look at the President after he was already hit, then turn and see John hit by a second shot. Then, of course, he slumped, and I reached to pull him toward me.” (When discussing her contention her husband was hit by a different bullet than the one striking Kennedy) "No one will ever convince me otherwise." (Interview with CBS broadcast **6-25** and **6-26-67**) “They all came from the same direction...behind us, over my right shoulder. You see the first one, the first sound, the first shot, I heard and turned and looked right into the President’s face. So the sound drew me to that direction and had a definite reaction...He was clutching his throat, and just slumped down. He just had a - a look of nothingness on his face. He- he didn't say anything. But that was the first shot. The second shot, that hit John - well, of course, I could see him covered with - with blood, and his - his reaction to a second shot. The third shot, even though I didn't see the President, I felt the matter all over me, and I could see it all over the car. So I'll just have to say that I think there were three shots, and that I had a reaction to three shots. And - that's just what I believe.”

(**9-6-78** testimony before the HSCA, Vol.1 p.11-59) “I heard a noise that I didn't think of as a gunshot. I just heard a disturbing noise and turned to my right from where I thought the noise had come and looked in the back and saw the President clutch his neck with both hands. He said nothing. He just sort of slumped down in the seat. John had turned to his right also when we heard that first noise and shouted, "no, no, no," and in the process of turning back around so that he could look back and see the President--I don't think he could see him when he turned to his right--the second shot was fired and hit him. He was in the process of turning, so it hit him through this shoulder, came out right about here. His hand was either right in front of him or on his knee as he turned to look so that the bullet went through him, crushed his wrist and lodged in his leg. And then he just recoiled and just sort of slumped in his seat. I thought he was dead...the only thing I could think of to do was to pull him down out of the line of fire...So, I pulled him down in my lap... I never looked back after John was hit. I heard Mrs. Kennedy say, "they have shot my husband.” Then, I heard a third shot and felt matter cover us and she said, "They have killed my husband, I have his brains in my hand". I thought John was dead, and I heard the Secret Service man say, "Let's get out of here quick." So, we pulled out of the motorcade and we must have been a horrible sight flying down that freeway with those dying men in our arms and going to no telling where.” (ABC News interview shown on the 20th and 25th anniversaries of the assassination, **1983**) "I turned to look back at the President and saw him clutch his throat, and just sorta sink down. There was no sound. He said nothing. And John was turning around and then he was hit by--the second shot hit John. He collapsed, he just collapsed. And I reached over to pull him down into my lap, to get him out of the line of fire so they wouldn't hurt him anymore. And there was a third shot. This all happened very rapidly (snaps fingers snap snap) The third shot. There was matter all over the car. And that was the shot, of course, that hit the President. And I heard Jackie say 'My God, what have they done to you' and then later she said 'I've got his brains in my hand. It was a horrifying, horrible, horrible moment in history.' (Interview with Diane Sawyer on 60 Minutes, **1988**) "And then the shot. I looked right at the President cause I was in the seat in front of Jackie, and I saw it--saw him clutch his throat. Then I heard the second shot and John just collapsed. I pulled him down and tried to cover him." (**11-22-88** Interview on KTRK TV, as reported in an 11-23-88 AP article) "Nellie Connally recalled that she heard a noise and turned, but didn't realize it was gunfire. "John knew that it was a shot," she said. 'I just heard a noise and turned and saw the president clutch his throat and sink into the part of the car where he was sitting. Then I knew something terribly bad had happened." Nellie Connally said she pulled her husband into her lap after he was shot and kept telling him "it's going to be all right." At first I thought he was dead." She said once her husband was in her lap and she was hovering over him, a third shot rang out. "Then there was matter all over us and all over the car. I knew then that the president had to be — had to be dead."

(Interview with Larry King on CNN, **January, 1992**) "I turned at the first noise, but I didn't recognize it as a gunshot, just a noise. And I turned and I saw the President reach up and (unintelligible) clutch his throat. And he just sat down. He said nothing...Then there was the second shot--well, John was twirling around, and he was hit...He didn't hear the second bullet. You don't hear the one that hits you...All this happened in seconds. I reached over and grabbed him and pulled him down in my lap...I never looked back in the back again after I had John in my lap. But the third shot--all this matter and everything sprayed all over us." (Interview in the Discovery Channel program *The End of Camelot*, broadcast **1993**) "We were driving along, and I heard a noise. And I turned around to have a look back and saw the President. His hands flew up to his neck, and he collapsed and made no sound." (Interview with Larry King on CNN, **7-4-2002**, replayed 11-24-2002) "I heard this noise. And it came from the back of me. And I looked back toward the president and saw his hands just fly up to his neck and he slumped down. He said not one word...I didn't know for sure that it was a gunshot when I heard it...It was just a noise. We had noises around. John knew it was a gunshot. And he turned to see the president...He couldn't see him. So he whirled to the other side and he still couldn't see him. And in the process of moving back, the second shot hit John...From the same place...Well, then we had a third shot...From the same place...bloody matter covered the car and covered all of us...Three shots, three reactions." (When asked about the single-bullet theory) "That's baloney." (When asked about the possibility shots were fired from the knoll) "Well, maybe there was. But in my mind, by the time we passed the grassy knoll, got to the grassy knoll, everything that happened in that car had already happened."

(From *Love Field*, **2003**) "A moment later, a terrifying noise erupted behind us. Instinctively, I felt it was a gunshot. I looked back and saw the President's hands fly up to his throat...From the corner of my eye, I saw my husband, John, turn clockwise in his seat..." "No, no, no!" he cried out. Then—a second shot. My husband spun in his seat. He had been hit in the back by the second bullet. "My God," he blurted, "they are going to kill us all!"—then crumpled forward...I pulled him into my lap... A third shot rang out." (Interview with Houston PBS, **2003**) "I heard this loud noise...When I heard this noise, it came over my right shoulder, and I turned around. And I didn't know at first what it was because the motorcycles, you know, backfire and make all that noise, But I knew it was not a good noise. And I turned back just in time to see the president's hands fly up to his neck and then he just sunk down a few inches in the car. John, who is seated in front of him...he knew that was a gunshot. And he turned to his right but he couldn't see the President who was directly behind him. So then he flipped to his left and he still couldn't see him and he said "No, no, no," and turned back. And when he got about half-way back the second shot hit John Connally and he said "My God, they're gonna kill us all!" And then just collapsed forward, blood everywhere. Now I know this takes longer than six seconds but it happened, all happened in six secondsI just pulled him over...across my lap...While I had him down there was the third shot...Tiny bloody matter was all over whatever part of the interior of the car there was and all over our clothes so I knew that had been a pretty powerful shot. That's the one that took the President's head...Jackie said, "They've killed my husband! I have his brains in my hand." That's when I knew it was head." (Interview on *The View*, **11-21-2003**) "I heard this noise. I didn't know what it was but I tried to look at the President and his hands flew up to his neck and he sort of sunk down in his seat. He didn't say a word, but his eyes looked so troubled. John, who was seated in front of the President, knew it was a gun shot. He turned to his right--to see the President--but he couldn't see him. So he turned to his left--and he couldn't see him. On the way back--about midway--he was shot with the second shot...The third shot came, and I couldn't turn around because the weight of my husband in my lap. But I heard Jackie say 'They've killed my husband. I have his brains in my hand.' And then all around us--all over the car--was a bloody mass of--it looked like buckshot is the best way--all over the car and all over us and our clothes--and that was when the President took the third shot in the head." (Interview with Dan Rather on CBS, **11-21-03**) "And I heard this loud noise. And I turned to look. I saw the President's hands fly up to his neck, and he just slumped down into the

seat. The second shot came, and as John was hit he said "My God, they're gonna kill us all" and just fell over. (When asked about a third shot) "Yes. The word out of the back seat--I couldn't look--was Jackie saying "They've killed my husband. I have his brains in my hand." (From an **11-22-03** WBAP radio program on Youtube) "And I heard this loud noise that I was not certain what it was. But I turned toward the noise. When I turned I could look right at the President. And I saw his hands fly up to his neck. John, who sitting in front of him, turns to his left, and this takes seconds. And the second shot went through John Connally. He said 'My God, they're going to kill us all.' There was a third shot. The car was covered. We were covered with a bloody matter that I assumed was the President's head." (Interview with Larry King on CNN, **11-22-2003**) "I heard this noise...I wasn't sure it was a gunshot because the motorcycles had been , you know, backfiring all around us. But I knew it was something and I turned and looked just in time to see his hands fly up to his face. And he just sunk down in the car. Said not a word. He had just a strange look in his eyes and said nothing...(My husband) turned quick...to his right and he couldn't see him because he was directly in front of him. And he said "No, no, no" and turned to his left and he still couldn't see him. Now this is a second or two. Then as he whirled back, the second shot hit John...It went under his shoulder, out through--under the nipple. It went through--it took out five inches of his fifth rib and went through one of his lungs...It crushed this wrist and, you know, shot the cufflink off...And then it landed in his leg...John said, "My God, they're going to kill us all," and just fell over. Blood everywhere.... There was a third shot...I heard the third shot and then, bloody matter, like buck shot, little pieces were all over the interior of the car, all over our clothes...(When asked about the single-bullet theory) "Well, let me ask you this, do you think a bullet that went through the president's neck can hang there in air between the two seats while John turned to the right, turned to the left and came back? That's what I asked the Warren Commission. I said, "I don't believe a bullet could do that." That bullet--the same bullet did not hit both of them." (**11-23-2003** article in Dallas Morning News) "His hands flew up to his neck...and he sank down in his seat. He didn't say a word... John... turned to his right, and couldn't see him, so he flips to his left, and he still can't see him. And he says, "No, no, no." And when he was trying to turn back, the second shot came. John said "My God they're trying to kill us all!"...Then he collapsed...he fell forward... Then came the third, most damaging shot."

Analysis: Mrs. Connally's statements are a hodgepodge of what she remembers mixed with what her husband told her he remembered, mixed with her inaccurate recollections of what he told her he remembered. Her latter-day statements that her husband yelled out "no, no, no" while turning to the left *before* he was hit, and that he was hit while spinning back around to his right are but one example. The Zapruder film shows that Connally yelled out both "no, no, no" and "my God" as he faced his right between Z-240 and 260, and never turned to his left in between. Furthermore, while the break between these utterances is around Z-250, Mrs. Connally testified before the Warren Commission that she felt her husband was hit by Z-229. These inconsistencies in her testimony make interpreting her words difficult. Even so, her testimony is clearly not supportive of the LPM theory. She insists that the President was hit by the first shot. She also distinctly remembers her husband being hit *after* she witnessed Kennedy raise his arms to his throat. This is indicative that either she failed to actually hear a second shot or that she failed to immediately recognize that her husband had been hit. There is reason to believe, then, unless one is to assert that she is completely mistaken, that she witnessed a first shot hit on the President at approximately frame 190 and a second shot hit on her husband at frame 224... and that she was simply in error in her recollection of when her husband cried out in relation to the shots. Finally, while some might wish to present her remembrance of a last shot head shot as conclusive, her original thoughts as communicated by Read on 11-22-63 were, in fact, a blur. She was quite possibly too low in the limousine, and too pre-occupied with pulling her husband to safety, to notice any shots beyond the one exploding Kennedy's skull. **First shot hit 190-224. Was aware of two shots between 190 and 224.**

Another point worth making about Mrs. Connally's statements is that, late in life, she was influenced or victimized by LPM theorists. While in both her original notes and in her various testimony she stated that she saw President Kennedy clutch at his throat after the first shot, she described this clutching as his hands flying up to his throat in her final statements. This feeds into the LPM theory that President Kennedy's arms flew up after he was hit as a result of a neurological response and not as a conscious act. This allows the LPM theorists to explain why President Kennedy appears to respond to the shot at 224 as early as 225, much faster than would normally be expected. While Mrs. Connally is totally within her rights to change her impressions of the President's actions, this change of "clutch" to "flying up to" is more insidious than at first meets the eye, as the change not only takes place in the text of her 2003 memoir *At Love Field*, but in a transcription in the book made from her original notes. That's right: in the transcription of her notes it is reported that the President's hands flew up to his neck, but in the notes themselves, thankfully re-printed in her book for all to see, it is reported that she saw the President "clutch" his neck. This indicates that either Mrs. Connally herself or her co-writer Mickey Herskowitz, was not above misrepresenting the evidence a little to help support the LPM theory. This is disappointing. Unfortunately, this is far from an isolated incident. As one reads through the many eyewitness accounts one witnesses a great many such incidents, where witnesses under the influence of one theory or another subtly change their testimony to make it "fit." Another example of Mrs. Connally's willingness to support the government line is her statement that all the shots came from the same location, behind her right shoulder. As she was lying flat in the limousine at the time of the third shot, "behind us, over my right shoulder" would mean the third shot came from the south, and not the Texas School Book Depository. Perhaps by reading the accounts of the two secret service agents in the car, we will come to a better understanding of what happened.

Roy Kellerman sat on the passenger side of the front seat. (11-22-63 statements regarding the shooting while on the flight back from Dallas, as recalled by reporter Charles Roberts in *The Truth About the Assassination*, 1967) "But it was not just minor details on which the eyewitnesses to that day's history--some of them trained professional observers--disagreed during that flight back to Washington. On the important question of how many shots had been fired, there was dispute, even among Secret Service men. Agent Roy Kellerman, who rode in the front seat of the President's car, told me (as he later told the Warren Commission) that he had heard a 'flurry' of shots." (11-22-63 FBI interview, conducted during Kennedy's autopsy, as described in a 12-10-63 FBI report, CD7 p.3,) "he advised he heard a shot and immediately turned around, looking past Governor Connally...to the President. He observed the President slump forward and heard him say "Get me to a hospital." Mr. Kellerman then heard Mrs. Kennedy say "Oh, no!" as the President leaned towards her...He stated he distinctly heard three shots. He advised he did not see the Governor get hit, nor did he observe the second bullet hit the President." (11-27-63 FBI interview, CD 7, p.5-8) "Towards the end of town, the vehicle came to a sharp right turn in the street. Few people were on either side at this time. In a matter of a block, the road veered to the left. There were extremely few people on either side of the road at this point. The vehicle was still going at the normal speed which Kellerman estimated to be approximately 15 miles per hour...Kellerman advised he does not recall passing the Texas State Book Depository Building. He advised the vehicle appeared to be going down a small decline at which time everybody in the car was seated. Kellerman said he heard a noise like a firecracker...Upon hearing a noise like a firecracker, he distinctly and positively heard the President say "My God, I've been hit." Kellerman advised he immediately turned his head to the left rear and almost instantaneously heard two additional shots. Upon turning his head to his left, he observed President Kennedy with his left hand in back of him appearing to be reaching to a point on his right shoulder. The President fell on Mrs. Kennedy's lap. She stated, "My God, what are they doing to you?" Governor Connally never said a word." (11-29-63 report, 18H724-727) "As the motorcade completed the main thoroughfare through Dallas, we made a sharp right turn for about 1 block, then a curved left turn into a slight downhill grade, entering an area

with little or no spectators...Immediately I heard what I firmly believe was the President's voice, "My God, I'm hit!" I turned around to find out what happened when two additional shots rang out, and the President slumped into Mrs. Kennedy's lap and Governor Connally fell into Mrs. Connally's lap. I yelled at William Greer to "Step on it! We're hit!" and grabbed the mike from the car radio and called SA Lawson in the lead car." (3-9-64 testimony before the Warren Commission, 2H61-112) "As we turned off Houston onto Elm and made the short little dip to the left going down grade, as I said, we were away from the buildings, and where there was a sign on the side of the road which I don't recall what it was and what it said, but we no more than passed that and you are out in the open, and there is a report like a firecracker, pop...as I turned my head to the right to view whatever it was or see whatever it was, I heard a voice from the back seat and I firmly believe it was the President's 'My God! I am hit!,' and I turned around and he has got his hands up there like this (he put his hands up to his neck)...So, in the same motion I come right back and grabbed the speaker and said to the driver, 'Let's get out of here, we are hit!,' and grabbed the mike and I said, 'Lawson, this is Kellerman... We are hit; get us to the hospital immediately.' Now, in the seconds that I talked just now, a flurry of shells come into the car." (When asked about his recollection of Kennedy speaking out) "This noise which I attribute as a firecracker, when this occurred and I am in the process of determining where it comes because I am sure it came off my right rear somewhere; the voice broke in right then" (When asked if he heard Mrs. Kennedy say anything) "after the flurry of shots, I recall her saying, 'What are they doing to you?'" (When asked how long the shooting lasted, in seconds) "Three or four" (When asked how many shots were in the flurry) "I am going to say two, and it was like a double bang--bang, bang." (When asked again if this meant there were two shots after the first noise) "Yes, sir; yes, sir, at least." (When asked the timespan between the first shot and the flurry) "I will estimate 5 seconds, if that." (When asked to describe the second and third shots) "You have heard the sound barrier, of a plane breaking the sound barrier, bang, bang? That is it." (When asked at what point Greer accelerated the limousine) "Our car accelerated immediately on the time—at the time—this flurry of shots came into it...Between the second and third shot." (Signed statement in the 5-5-64 Secret Service report on the behavior of the presidential detail on the night before the shooting, 18H678) "I retired to my room in the neighborhood of 1 a.m. November 22, 1963. I did not leave my room at any time during the night." (11-17-64 and 5-12-65 interviews with William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) "Lawson, Kellerman, Greer, Ready, and Hill, all thought that a firecracker had been exploded." (On the explosion of Kennedy's skull) "To Kellerman it appears that the air is full of moist sawdust." (8-24-77 interview with HSCA investigator, ARRB Medical Document 56, p7) "Kellerman recalled that when he was in the car just moments after the shots there was '...a splattering of metal all around me.' Kellerman said there had to be '...four or five metal fragments in the car.'" (The Kennedy Detail, by Gerald Blaine, 2010) (Describing Kellerman's actions after hearing a first shot, looking back at the President, and then turning around to pick up the radio and report that the President had been hit) "As he was relaying the message, he heard one bang, and then another."

Analysis: Kellerman's assertion that he heard three shots and that the limousine was away from the buildings when the first shot rang out is undoubtedly indicative that the first shot came after frame 160. His recollection of a sign being on the side of the road is possibly a reference to the Thornton Freeway sign, adjacent to the limo around Z-190, but also possibly a reference to the Stemmons Freeway sign, somewhat further down the road. He is also quite clear that he heard two shots (or more) after the President was hit. In addition his assertion that the third shot occurred after Agent Greer began to accelerate the car is an indication that it may have been fired after frame 313. If one is to defend the LPM line, then perhaps the best way to explain Kellerman's testimony is to insist he mistakenly interpreted the sound of the bullet fragments hitting the windshield as a third shot, and missed the first shot entirely. While this is certainly possible, it seems unlikely a Secret Service agent would make such a mistake. His statements to the HSCA argue against this as well, as here he remembers the shots and

the sounds of the fragments bouncing around the car as separate events. Kellerman was clearly incorrect on one point, however. While Kellerman felt quite sure he heard the President speak after being struck, and Mrs. Kennedy yell out just after, Kellerman didn't turn to look at the President until Z-255, just after Governor Connally concluded his outbursts. As Mrs. Kennedy, Governor Connally, and Mrs. Connally all failed to hear the President speak after he was shot, it should be obvious that Agent Kellerman heard the Governor, and mistakenly thought he heard the President and the First Lady. Fellow Secret Service Agent Blaine's reporting of Kellerman's statements is also of interest. While writing his book in part as a defense of Kellerman and Greer, Blaine clearly found Kellerman's description of the last two shots problematic, and opted to present the shots to his readers as two separate sounds--which could conceivably be seconds apart. This is not what Kellerman told the Warren Commission. **First shot hit 190-224. Last two shots bunched together. Last shot possibly after the head shot.**

William Greer was the driver of the limousine. (12-10-63 FBI report, CD7 p.4, based upon an **11-22-63** FBI interview) "He advised that the throngs of people were great and that he had just emerged from the congested area of people and was proceeding into an open area of the highway, which a short distance away passed beneath an overpass. Greer stated that he first heard what he thought was possibly a motorcycle backfire and glanced around and noticed that the President had evidently been hit. He thereafter got on the radio and communicated with the other vehicles, stating that they desired to get the President to the hospital immediately. Greer stated that at the time this incident occurred, he was traveling at the rate of 12 miles per hour..." (**11-27-63** FBI interview, CD7 p.9-11) "Greer estimated that the motorcade was traveling at a speed of 15-20 miles per hour down the main thoroughfare...The procession made a right turn, facing in the direction of the Book Depository Building, and then a left turn, bringing the motorcade in front of this building which was then on the right. The same speed was maintained as the motorcade passed in front of this building and Greer estimates that he had crossed the center line of the building when he heard a noise which sounded like a motorcycle backfire. On hearing this noise he glanced to his right toward Kellerman and out of the corner of his eye noticed that the Governor appeared to be falling toward his wife. He thereafter recalls hearing some type of outcry after which Kellerman said, "Let's get out of here!" (**11-28-63** report, 18H 723) "There was a right turn for about half a block and then a left turn. At this point, I would say that the President's automobile was traveling about 12-15 miles per hour. A short distance ahead the street passed under a railroad or expressway. A building stood on the right side of us that would have been the last building we would have to pass before entering the underpass. The President's automobile was almost past this building and I was looking at the overpass that we were about to pass under in case someone was on top of it, when I heard what I thought was the backfire of a motorcycle behind the President's automobile. After the second shot, I glanced over my right shoulder and saw Governor Connally start to fall, I knew then that something was wrong and immediately pushed the accelerator to the floor and Mr. Kellerman said get out of here." (**3-9-64** testimony before the Warren Commission, 2H112-132) (When asked how far they were from the overpass when the first shot rang out) "I wouldn't have a distance recollection... It wasn't too far... Well, when we were going down Elm Street, I heard a noise that I thought was a backfire of one of the motorcycle policemen. And I didn't--it did not affect me like anything else. I just thought that it is what it was... And then I heard it again. And I glanced over my shoulder. And I saw Governor Connally like he was starting to fall. Then I realized there was something wrong. I tramped on the accelerator, and at the same time Mr. Kellerman said to me, "Get out of here fast." And I cannot remember even the other shots or noises that was. I cannot quite remember any more. I did not see anything happen behind me any more, because I was occupied with getting away." (When asked how many shots he heard) "I know there was three that I heard - three. But I cannot remember any more than probably three. I know there was three anyway that I heard... I knew that after I heard the second one, that is when I looked over my shoulder, and I was conscious that there

was something wrong, because that is when I saw Governor Connally. And when I turned around again, to the best of my recollection there was another one, right immediately after." (When asked how much time elapsed between the first and second shots.) "It seems a matter of seconds, I really couldn't say. Three or four seconds." (When asked how much time elapsed between the second and third shots.) "The last two seemed to be just simultaneously, one behind the other, but I don't recollect just how much, how many seconds were between the two. I couldn't really say." (When asked to describe the sound of the second shot when compared to the first) "The second one didn't sound any different much than the first one but I kind of got, by turning around, I don't know whether I got a little concussion of it, maybe when it hit something or not, I may have gotten a little concussion that made me think there was something different to it. But so far as the noise is concerned, I haven't got any memory of any difference in them at all." (When asked if Roy Kellerman yelled to him after the first shot) "I believe it was at the second that he and I both simultaneously--he said, "Get out of here fast," and I speeded up as fast as I could then and as fast as the car would go." (3-11-64 memorandum from Arlen Specter to J. Lee Rankin, found in the Weisberg Archives) "Mr. Greer told me on March 3rd that he recollected two shots, but testified that he heard three shots." (4-7-64, 5-4-64, 5-7-64, 5-8-64, and 7-20-64 interviews of Jacqueline Kennedy by William Manchester, as represented in *The Death of a President*, 1967) (On Greer's approaching Mrs. Kennedy at Parkland Hospital) "Those who had been in the motorcade were racking their brains with *if only this, if only that*. One of them came to her. Bill Greer, his face streaked with tears, took her head between his hands and squeezed until she thought he was going to squeeze her skull flat. He cried, 'Oh, Mrs. Kennedy, oh my God, oh my God. I didn't mean to do it, I didn't hear, I should have swerved the car, I couldn't help it. Oh, Mrs. Kennedy, as soon as I saw it I swerved. If only I'd seen in time! Oh!' Then he released her head and put his arms around her and wept on her shoulder." (11-19-64 interview with author William Manchester RIF#180-10116- 10119) "After the second shot I glanced back. I saw blood on the Governor's white shirt, and I knew we were in trouble. The blood was coming out of his right breast. When I heard the first shot, I had thought it was a backfire. I was tramping on the accelerator and at the same time Roy was saying, 'let's get out of here fast.'" (11-19-64 interview with William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) "Lawson, Kellerman, Greer, Ready, and Hill, all thought that a firecracker had been exploded."

(12-6-70 phone interview by Roy Ennis posted on Youtube by Vince Palamara) "I didn't know at first that, whether it was a shot or not. I thought it might be a motorcycle policeman's motorcycle. That's what I said. But then I said that when I looked over my shoulder and saw the blood on the governor's shirt, y'know, on his white shirt, then I knew it was blood coming out. And then I knew it was trouble. (When asked how many times he looked back) "Just the one time, after the governor was hit." (When asked if he saw the president hit) "I didn't really see the president at all...I had a car in front of me and couldn't see very much." (2-28-78 interview with HSCA investigator, file # 180-10099-10491) "The first shot sounded to him like a backfire. He did not react to it. After the second shot he turned to his right and saw blood on Governor Connally's shirt. At the same moment he heard Kellerman say 'We're hit. Let's get out of here,' or words to that effect. He said he immediately accelerated and followed the pilot car to Parkland Hospital...Greer does not recall the third and final shot. He heard nothing from the back of the car; his mind shut it out, and he concentrated on driving at a high rate of speed to Parkland Hospital." (11-10-83 AP article on Greer found in the Lakeland Ledger) "The motorcade moved into downtown Dallas and turned onto Elm street, moving past the Texas School Book Depository where Lee Harvey Oswald waited with a high-powered rifle. Above the noise of the throng that crowded the street, Greer heard a popping sound. The other agents thought the sounds were firecrackers. Greer thought they were made by a motorcycle back-firing. When he heard a second pop, he looked over his right shoulder and saw blood running down Connally's white shirt. Kellerman yelled, 'We've been hit! Get out of here!' Greer floored the accelerator. Kellerman grabbed the radio and told the car ahead to make for the nearest hospital. The limousine leaped forward as a third pop sounded. A bullet fragment

whipped past Greer's head and smashed into the windshield."

Analysis: Greer may have heard two shots. On the other hand, he may have heard four. While he sometimes reported he turned around and saw Connally fall (an apparent reference to Connally's collapsing into his wife's arms between frames 287 and 303) after hearing the *second* shot, and he can be seen turned around in Zapruder frame 279, he testified before the Warren Commission that the last two shots were simultaneous. He couldn't have heard two shots before he turned around and two shots after he turned back and still have heard three. As Greer, in his original statement, failed to mention how many shots he heard, and as he only told the Warren Commission he heard three shots after being asked a direct question, it seems possible he was trying to skirt the issue. Still, he let what was probably his true impressions sneak into his testimony. He testified that after Kellerman told him to "take off," he couldn't remember how many "shots or noises" he heard--when officially there could be but one. He also let it slip that after he turned back around from looking at Connally, which he does not do till frame 318, he heard another shot "right immediately after." Sounds like the man heard four shots. That he later told an HSCA investigator he could recall hearing but two shots suggests the possibility he realized his predicament, and had convinced himself that he'd heard but two shots and their echoes.

Still, maybe he interpreted the sounds of the gun fire and impact within the car as separate shots. If so, his testimony regarding the second shot that "I got a little concussion of it, maybe when it hit something or not" would certainly suggest the second shot he heard was the head shot, followed closely by the sounds of the bullet fragments impacting the windshield and its frame. The 12-10 FBI report contributes to the confusion surrounding Greer. Here, Greer reportedly says he saw the President when he turned around and that *he* used the radio to contact the other cars. From this, it seems likely the author of the report simply got his agents confused, as Agent Kellerman, riding next to Greer, readily admitted to both seeing the President and using the radio. The disparity between what Greer claims to remember and the Zapruder film, however, is not so easily explained. While Greer can be seen looking back into the limousine at frame 279, and turning back around at 292 after Connally begins to fall, he looks back *again* at frame 302 and appears to be looking *directly at the President* at the moment of the head shot. Only *after* this shot has struck the President, around frame 318, does Greer turn back around and accelerate the limousine. This is in disagreement with his statement that he pressed down the accelerator just after seeing the Governor fall. Perhaps, as some suggest, Greer was part of the conspiracy. More likely, however, in light of his trying to avoid the issue of how many shots he heard (not exactly conspirator-like behavior), Greer simply blocked the explosion of the President's skull out of his mind, or missed it while turning away. Perhaps this was his guilty conscience at work, as he'd failed to take evasive action in a timely fashion. In any event, his testimony that the last two shots were "simultaneous" puts his statements at odds with the LPM scenario. **Inconsistent. Possibly heard but two shots. Possibly heard four. May have heard two shots prior to frame 279. Last two shots possibly bunched together (with the last shot probably after the head shot).**

From comparing the words of the witnesses furthest away from the shots to the words of those actually in the limousine, a conflict has emerged. While those furthest away heard the last two shots bunched together, three of the witnesses in the limousine believed two shots were fired before these shots. This raises the possibility that the second shot perceived by these witnesses, the one felt but not heard by Connally, rarely reported as heard by his Mrs., and only possibly heard by Greer, was a silenced shot. Even a silenced shot, after all, makes some noise when impacting its target. That this second probably-silenced shot was not one of the two "bunched" shots heard by the more distant earwitnesses is supported, moreover, by the words of Agents Greer and Kellerman, who heard two or more shots closely bunched together *after* Connally had been hit. When one reflects on the activities of Mrs. Kennedy and the Connallys during this period--staring at the President as his head explodes and ducking down in their seat as his brain showers down upon them--it's easy to understand how they

might miss hearing the second of these last two shots.

There's something else to consider. In 1995, researcher Harold Weisberg wrote former Warren Commission Counsel (and self-appointed Champion of the Commission) David Belin and challenged him regarding his recent articles. On January 31, Belin responded, with a spirited 12-page letter. Included in this letter is the following analogy:

"Your concentration on the affidavit of T.F. Bowley is a vivid example of what I call the 'Kellerman Syndrome'. In the Presidential limousine at the time of the motorcade, Secret Service Agent Roy Kellerman, riding in the front seat next to the driver, said he heard President Kennedy say, after the first shot, 'My God, I am hit!' Edward J. Epstein, in his book Inquest, used this as a rationale for disputing the findings of the Warren Commission. Indeed, Epstein was correct in his quotation of what Kellerman said. But what Epstein did not do is to tell his readers that everyone else in the Presidential limousine disagreed with Kellerman. The driver, William Greer, said the President said nothing. So did Governor Connally. So did Nellie Connally. And the exact words of Jacqueline Kennedy were, 'And my husband never made a sound.' Your case is built on the Roy Kellermans of the world. The Warren Commission conclusions were based on the William Greers, John Connallys, Nellie Connallys, and Jacqueline Kennedys of the world."

Feel free to read that again. And again. Let it sink in. Have you ever read such self-serving nonsense? While Belin wants Weisberg to believe "the Warren Commission conclusions" were based on the testimony of the bulk of the witnesses, he ignores completely that the bulk of the witnesses claimed the last two shots were bunched together, and that the commission accepted (and he now proposed) a five second gap between these shots.

And there's something even more ironic. While Belin offers that the Warren Commission conclusions were consistent with the recollections of four of the five witnesses in the limousine, he overlooks that there was something--a BIG something--on which they were inconsistent with ALL five. And that's the single-bullet theory. NONE of the witnesses recalled Kennedy and Connally reacting to a single shot, whether it be the first, second, or third. And NONE of them were aware of a shot to which neither Kennedy nor Connally reacted.

Thus, it is easy to see that the Warren Commission conclusions were NOT based on the William Greers, John Connallys, Nellie Connallys, and Jacqueline Kennedys of the world. Belin was blowing smoke.

The Mounted Escorts...

Above, the Altgens photo at Z-255, the limousine with its escorts.

Above: a frame from the Bell film, taken seconds after the Altgens photo, the limousine without its escorts.

At left: three frames from the Nix film, with the head shot at top, and the braking of Chaney and Jackson at bottom. That's Abraham Zapruder on the far pedestal.

The Mounted Escorts

B.J. Martin rode his motorcycle on the far left behind Jackie Kennedy. (4-3-64 testimony before the Warren Commission, 6H289-293): "one of the agents got off of the car after the first shot...I looked to my right (after the first shot)...I looked at the President after I heard the (first) shot and he was leaning forward—I could see the left side of his face. At the time he had no expression on his face" (Then I heard) "Two more shots...immediately after the first shot I saw him (the President) and after that I couldn't see him." (2-14-69 testimony in the trial of Clay Shaw) "after we turned onto Elm Street I heard what I thought was a shot and then I heard, I looked back to my right and two more shots or what I thought to be two more shots I heard...(Asked if he saw the effects of the third shot) "No, sir, I did not...All during the shots I was looking to my left and right trying to find out where the shots were coming from...it was after the third shot it had almost come to a stop, it was going very slow." (As quoted by Fred Newcomb in an unpublished manuscript, *Murder from Within*, 1974) "You could smell the gunpowder...you knew he wasn't far away. When you're that close you can smell the powder burning, why you - you've got to be pretty close to them...you could smell the gunpowder... right there in the street." (The Kennedy Assassination Tapes, 1979) Officer D "I was looking at the President when the first shot was fired. It missed. The second shot hit the President in the back, and the third shot hit him in the head." **Analysis:** As all the agents remained on the back-up car until after frame Z-255, (as demonstrated in the Altgens photo) and as Martin claims to have heard only one shot when an agent (Clint Hill) jumped off the back-up car, he heard but one early shot. Although he later said he thought the first shot missed, Martin's original testimony that the President was leaning forward after the first shot (after 160, the President is smiling and waving) is a strong indication that the first shot hit and occurred after frame 190. The last comments by Martin for The Kennedy Assassination Tapes are not to be trusted. The book's writer, J. C. Bowles, (who would become the long-time Sheriff of Dallas County) was determined to show everyone that the DPD did not stand by the HSCA's conclusion that a second shooter was likely. After all, talk of conspiracy would inevitably turn to suspicion of the Dallas

Police Department itself, seeing as they had helplessly stood by while Ruby killed Oswald. Perhaps Martin, who is described in the book but not named, simply told Bowles what he wanted to hear. Or perhaps Bowles added to his statements, which could explain why he published the statements without names. **First shot hit 190-224. Last two shots probably bunched together.**

Bobby W. Hargis rode to the right of Martin and to the left of Mrs. Kennedy. (11-22-63 article in the Dallas Times-Herald) "About halfway down between Houston and the underpass I heard the first shot. It sounded like a real loud firecracker. When I heard the sound, the first thing I thought about was a gunshot. I looked around and about then Governor Connally turned around and looked at the President with a real surprised look on his face... The President bent over to hear what the Governor had to say. When he raised back up was when the President got shot... I felt blood hit me in the face and the Presidential car stopped almost immediately after that... I racked (parked) my motorcycle and jumped off. I ran to the North side of Elm to see if I could find where the bullets were coming from. I don't think the President was hit with the first shot... I felt that the Governor was shot first." (Undated typescript of interview with Hargis found within the Dallas-Times-Herald's photograph collection, as reported by Richard Trask in Pictures of the Pain, 1994. This is almost certainly the basis for the 11-22 article) "I felt blood hit me in the face, and the presidential car stopped almost immediately after that and stayed stopped about half a second, then took off at a high rate of speed. I racked my cycle and jumped off. I ran to the north side of Elm Street to see if I could find where the bullets came from. I don't think the President got hit with the first shot, but I don't know for sure. When I heard the first shot, it looked like he bent over. I feel that the Governor was shot first. I could be wrong. Right after the first shot, I was trying to look and see if the President got shot. When I saw the look on Connally's face, I knew somebody was shooting at the car... The fatal bullet struck the President in the right side of the head. I noticed the people in the Texas School Book Depository were looking up to see the top. I didn't know if the President stopped under the triple underpass or not. I didn't know for sure if the shots had come from the Book Depository. I thought they might have come from the trestle." (11-23-63 UPI article found in the Fresno Bee) "I saw flesh flying after the shot, and the president's hair flew up," Hargis said, "I knew he was dead." (11-23-63 article in the Houston Post, as quoted by John McAdams in his book JFK Assassination Logic. Note: the ellipse conceals Hargis' description of the head shot, and his claim it hit Kennedy on the "right side of the head.") "A Dallas motorcycle officer who was riding two feet from the presidential car described to the Houston Post Friday what he saw when a sniper fired the shots that killed President Kennedy and wounded Gov. John B. Connally. 'When the first rifle bullet spewed into the open limousine,' said Patrolman J.H. Hargis, 'The President bent forward in the car.'...Hargis said he jumped off his motorcycle and began a search of the building from which the shots were fired. 'I knew it was high and from the right. I looked for any sign of activity in the windows, but I didn't see anybody.'" (11-24-63 article in the New York Sunday News) "We turned left onto Elm St. off Houston, about a half block from where it happened. I was right alongside the rear fender on the left side of the President's car, near Mrs. Kennedy. When I heard the first explosion, I knew it was a shot. I thought that Gov. Connally had been hit when I saw him turn toward the President with a real surprised look. The President then looked like he was bent over or that he was leaning toward the Governor, talking to him. As the President straightened back up, Mrs. Kennedy turned toward him, and that was when he got hit in the side of his head, spinning it around. I was splattered with blood. Then I felt something hit me. It could have been concrete or something, but I thought at first I might have been hit. Then I saw the limousine stop, and I parked my motorcycle at the side of the road, got off and drew my gun. Then this Secret Service agent (in the President's car) got his wits about him and they took off. The motorcycle officer on the right side of the car was Jim Chaney. He immediately went forward and announced to the chief that the President had been shot."

(4-3-64 testimony before the Warren Commission, 6H293-296): "I was next to Mrs. Kennedy when I

heard the first shot, and at that time the President bent over, and Governor Connally turned around. He was sitting directly in front of him, and (had) a real shocked and surprised expression on his face...I thought Governor Connally had been shot first, but it looked like the President was bending over to hear what he had to say, and I thought to myself then that Governor Connally, the Governor had been hit, and then as the President raised back up like that the shot that killed him hit him." (When asked about the blood) "when President Kennedy straightened back up in the car the bullet hit him in the head, the one that killed him and it seemed like his head exploded, and I was splattered with blood and brain, and kind of bloody water, It wasn't really blood. And at that time the Presidential car slowed down. I heard somebody say 'Get going' or 'get going.'" (When asked about the source of the shots) "Well, at the time it sounded like the shots were right next to me. There wasn't any way in the world I could tell where they were coming from, but at the time there was something in my head that said that they probably could have been coming from the railroad overpass, because I thought since I had got splattered, with blood--I was Just a little back and left of--just a little bit back and left of Mrs. Kennedy, but I didn't know. I had a feeling that it might have been from the Texas Book Depository, and these two places was the primary place that could have been shot from." (8-7-68 interview with Tom Bethel and Al Oser, NARA #180-10096-10005) (When discussing how he could have been sprayed with blood, if the shot came from behind) "Well, that right there is what I've wondered about all along, but see there's ah -- you've got to take into consideration we were moving at the time, and when he got hit all that stuff went like this, and of course I run through it." (When discussing his interpretation of the direction of the shots) "Well, like I say, being that we know that the shot came from the School Book Depository, right then it was kind of hard to say what run through your mind. You know you pick up these little things. You don't know why you do it. You don't know why you do 'em, you just do 'em. It's just kind of instinct. But I had in my mind the shots you couldn't tell where they was coming, but it seemed like the motion of the President's head or his body and the splatter had hit me, it seemed like both the locations needed investigating, and that's why I investigated them. But you couldn't tell, there was -- it looked like a million windows on the Book Depository. You couldn't tell exactly if there was anyone in there with a gun." (When asked if the shots could have come from anywhere) "Uh huh. That's correct." (When asked if he saw the President's head jerk as a response to a bullet's impact) "Yes. Uh huh...To the left forward. Kind of that way...I couldn't see what part of it got hit...If he'd got hit in the rear, I'd have been able to see it. All I saw was just a splash come out on the other side." (Interview with NBC broadcast on the 1988 program That Day In November) "It sounded like a firecracker to me and I thought 'Oh Lord, let it be a firecracker. And it looked like the President was bending over, forward. And then when he raised back up is when that second shot hit him in the head."

The next three reports were posted on the Education Forum by Chris Scally, 6-21-11. (Interview by HSCA investigators James Kelly and Harold Rose on 10-26-77, notes transcribed 11-16-77, JFK document #003300, RIF 180-10107-10243) ""When they turned left on Elm from Houston, he was watching the President's car. Shortly afterwards, he heard a shot. He saw President Kennedy slump forward and Governor Connally turn. He felt at the time that Connally might have been hit and the President was leaning forward to find out what happened. He said the first shot sounded to him like a firecracker. The second shot hit JFK in the head. The presidential car had slowed almost to a stop. After the second shot, the car accelerated rapidly and sped to Parkland Hospital. Hargis said he pulled over to the curb at the grassy knoll. He got off the bike and went up the hill on the grass. He didn't see anyone with a gun, so he went over to the Texas School Book Depository at 411 Elm Street and helped other police officers seal it off." (Interview by HSCA investigator Jack Moriarty dated 8-8-78, notes transcribed 8-23-78, JFK document #014362, RIF 180-10113-10272) "When the first report sounded, he was "about one-third of the way down Elm", having made the last turn from Houston. It sounded like a firecracker, but he was unable to tell where it came from. He looked to his right and saw Connally turning and the President appeared to be leaning forward as if he was trying to hear what the

Governor was saying. He had seen JFK lean forward in like manner during the motorcade as he and Connally had been conversing. This time, though, the President had an expression of pain on his face. When the second shot was fired - no doubt gunfire this time as it hit the President's head - the limousine slowed so much it practically stopped and he had to put his feet down to maintain balance. Then the driver accelerated and several motormen started the escort. Hargis remained behind parking his bike where it stood in the left side of Elm now about one half way down the hill. He ran to the grassy knoll and continued until he had reached the top section of the underpass. Finding nothing significant, he returned to his bike - still on the stand with the radio on (and working) and the engine off. He started the bike and drove back up Elm and parked just west of the front door of the TSBD where he joined Brewer as they became part of the effort to seal off this building, although, he adds, at that time no-one was certain just where the shots had come from." (Interview by HSCA investigator Jack Moriarty, **12-29-78**, JFK document # 014224, RIF 180-10109-10354). "Reached Mr. Hargis at his new residence... today and developed the following additional information. At the sound of the first shot, he was "in position" - some five to six feet from the left corner of the rear bumper of John F. Kennedy limousine. At the sound of the second shot, he was a bit closer (the limousine slowed and nearly stopped) - perhaps four feet. By the third shot (although he doesn't recall the actual, but saw John F. Kennedy's head explode), he was "almost even with Jackie - no more than two or three feet, if that."

(**6-26-95** interview with Mark Oakes, posted on Youtube by Gil Jesus) "There was not three shots; there was only two. I only heard two...The facts was there was two shots--one that hit him in the back and one that hit him in the head. And the one that hit him in the head just busted his head wide open... (On William Greer, the driver of the limo) "That guy slowed down, maybe his orders was to slow down, slowed down almost to a stop." (**11-23-95** Dallas Morning News article found in the Herald Journal) "I'm the only one living who was beside the car," said Detective Hargis, now 63. "When he was shot in the head, it splashed up, and I ran into all that brain matter, and all that. It came up and down, all over my uniform." (**November 1998** interview with Texas Monthly) "About ten seconds after we made that left-hand turn, that first shot rang out... I remember Kennedy leaned forward to listen to what he had to say. And then when he raised back up, that second shot hit him in the head. But we figured out that he had got shot—that first bullet had gone through the upper part of his back, well through the seat, and hit Connally's wrist and glanced off and went into his thigh." (Interview within an **11-22-03** WBAP radio program found on Youtube) "Yeah I looked toward the President and I thought maybe John Connally was hit because he turned around to look at the President. He had a real surprised look on his face. Kennedy was bending over like he was listening to what Connally had to say. When he raised back up, that second shot hit him in the head. That's what killed him, There was only two shots fired." (**11-22-03** article in the Dallas Morning News) "Hargis differs with the Warren Commission and most eyewitnesses, insisting that only two shots were fired. With the first, "a thousand million things went through my mind," he says. After the last, "there was a plume of blood and brains and plasma. It was just like a fog, and I ran right through it." (Oral History interview performed for the Sixth Floor Museum, **9-24-10**) (When asked if his observations suggested that the fatal shot came from in front of Kennedy) "No." (When asked if it bothered him that people use his statements to suggest there'd been a conspiracy) "Yeah, it does...There was no conspiracy, whatsoever. There was two shots fired, and both shots, we found the bullet." (On the possibility there was a second gunman on the grassy knoll) "To me it sounds ludicrous." **Analysis:** Hargis insists he heard only two shots. As he can be seen in the Zapruder film turning towards the President around frame 198, it seems likely the first shot he heard was just before this point. The fact that he heard only one more shot can be taken as an indication that one of the two shots heard by others was fired quite close to one of the two he heard, or that one came just after the head shot, while Hargis was driving through a cloud of blood. It should also be noted that many conspiracy theorists, most usually citing Vincent Palamara, use Hargis' Warren Commission

testimony to suggest that William Greer stopped the limo to allow Kennedy's killers to fire upon a stationary target. Well, this is a myth, as Hargis specified in his statements and testimony that he thought the limo slowed (or stopped, as he'd originally claimed) only after Kennedy's head had exploded. **Only heard 2 shots. First shot hit 190-224.**

James Chaney rode to the right and rear of the President. Although he was the closest witness behind the President at the time of the shooting and had a private conversation with Jack Ruby the next day, Chaney was never questioned by the Warren Commission. (11-22-63 interview with KLIF radio, reportedly around 12:45 PM--but not broadcast at that time--as transcribed by Harold Weisberg from the KLIF album *The Fateful Hours*) "On the first shot we thought it was a motorcycle backfire. I looked to my left and so did President Kennedy, looking back over his left shoulder, and when the second shot struck him in the face then we knew someone was shooting at the President." (When asked what happened after the President was hit) "He slumped forward in the car. He fell forward in the seat there." (When asked Mrs. Kennedy's reaction) "I don't know. When I seen that he was hit I went on up to tell Chief Curry's group there that he had been hit there, and we took him on to the hospital from there." (When then asked if he saw where the bullet had come from) "No, all I knew it came over my right shoulder." (Note: some sources have it that Chaney mentioned "a third shot that was fired that (he) did not see hit the President" and that he did see "Governor Connally's shirt erupt in blood.." in one of his first interviews, but I can not find a primary source for these quotes.) (11-22-63 interview with Bill Lord on WFAA television, apparently in the early evening) "I was riding on the right rear fender... We had proceeded west on Elm Street at approximately 15-20 miles per hour. We heard the first shot. I thought it was a motorcycle backfiring and uh I looked back over to my left and also President Kennedy looked back over his left shoulder. Then, the, uh, second shot came, well, then I looked back just in time to see the President struck in the face by the second bullet. He slumped forward into Mrs. Kennedy's lap, and uh, it was apparent to me that we were being fired upon. I went ahead of the President's car to inform Chief Curry that the President had been hit. And then he instructed us over the air to take him to Parkland Hospital and he had Parkland Hospital stand by. I went on up ahead of the, to notify the officers that were leading the escort that he had been hit and we're gonna have to move out." (When asked if he saw the person who fired on the President) "No sir, it was back over my right shoulder." (11-24-63 article in the *Houston Chronicle*, posted online by Chris Davidson) "A motorcycle policeman just six feet from President Kennedy when he was hit said the assassin's first shot missed entirely. The second of the three shots felled Kennedy, said patrolman James M. Chaney. He was six feet to the right and front of the President's car, moving about 15 miles an hour while rounding a curve. The shot, said Chaney, came from the sixth floor of a warehouse building about 50 feet or less behind the President's car. From the sixth floor to the President, the bullet traveled about 110 feet, Chaney estimated. Chaney was an infantryman in Europe during World War II, with experience in sharpshooting. 'When the first shot was fired, I thought it was a backfire,' Chaney said. Everyone looked around. The President was looking back over his left shoulder. A second or two after the first shot, the second shot hit him. 'It was like you hit him in the face with a tomato. Blood went all over the car. There was screaming and yelling. A secret service man yelled 'Let's get out of here!'" Chaney said the motorcade stopped momentarily after the shots rang out. A policeman ran between two cars with his pistol drawn, heading toward the building. 'I sped to the lead car carrying Chief (Jesse) Curry and Forrest Sorrels, chief of the secret service division of the Treasury Department in the Dallas area. I told them the President had been hit and it appeared bad,' Chaney said. 'A piece of his skull was lying on the floor of the car,' Chaney said." (Article in the 12-2-63 issue of *Newsweek*, presumed to be based on an 11-22-63 interview of Chaney, by motorcade witness Charles Roberts) (On the first shot) "'I thought it was a backfire,' said Dallas Patrolman James M. Chaney, who was riding a motorcycle 6 feet from the right rear fender of the President's car." The President jerked his head around...Then (came) the second shot and his head exploded in blood..." (12-8-63 AP article by Sid Moody) "His head erupted in blood"

said Dallas patrolman James Chaney, who was 6 feet away from the president." (The Torch is Passed, a book by the Associated Press put out in **December 63**) "'His head exploded in blood,' motorcycle officer James Chaney later would say."

(**3-25-64** testimony of Marrion Baker before the Warren Commission, 3H242-270) "I talked to Jim Chaney, and he made the statement that the two shots hit Kennedy first and then the other one hit the Governor." (Taped interview of Chaney with researcher Gil Toft, **1971-1973**, as transcribed by Josiah Thompson and posted on the Education Forum, 1-4-12) (When asked if Kennedy's limousine came to a stop during the shooting) "I don't know whether the lead car ever stopped or not. I know that... I mean Kennedy's car. The one behind them apparently did because an officer could run from the left hand side in front of me. I know I stopped. Whatever happened there. I know Hargis, one of the officers riding escort on the other side, run across in front of me... Whether or not the lead car stopped... I don't believe that it did. It slowed down though. What was this agent's name? Clint Hill?" (Continuing his thought) "Slowed down enough that he did get on that car. Now whether he was on there or not on... Several different times during the procession there he would run up and jump on those little steps and ride there for a couple of seconds and jump off. It all depended on how fast it was going along and where we were at. So whether... I don't believe that it actually stopped. It could have but I just don't... The second car... cause I recall it was Officer Hargis jumped off his motor and run across in front of me... I don't recall myself stopping but as I stopped--to think of it I must have come almost to a stop for Hargis to have got off his motor over on the left-hand side and run between those two cars and run in front of me. Apparently, I did too. I don't recall stopping but I must have." (When asked if Kennedy's brain matter sprayed everywhere) "Well, it was all over with as soon as you see it. It did splatter everything."

(**9-12-75** FBI report) "Chaney stated that as the President's car passed the...(TSBD), he was four to six feet from the President's right shoulder. He heard three evenly spaced noises coming seconds apart, which at first he thought to be motorcycle backfire. Upon hearing the second noise, he was sure it was not a motorcycle backfire. When he heard the third noise he saw the President's head "explode" and realized the noises were gunshots. He said that the shots did not come from his immediate vicinity and is positive that all the shots came from behind him." (**9-17-75** FBI report, FBI file 62-109060, sec 181, p168-170) "after making a left turn off Houston Street and shortly after the car had passed the School Book Depository, Chaney heard a noise which sounded like one of the motorcycles close to the President's car had backfired... Chaney said he glanced to his left at the two motorcycles on the opposite side of the President's car... Within a few seconds after Chaney heard the first noise, he heard a noise again and turned to his right to try and determine what the noise was and where it was coming from... Chaney said he then looked straight ahead to avoid colliding with the curb and presidential car and then looked at the President just as he heard a third noise. Chaney said while he was looking at President Kennedy, he saw his head "explode." Chaney said he was positive that all the noises he heard were coming from behind his motorcycle and none of these noises came from the side or the front of the position in which Chaney was located. Chaney said the noises were evenly spaced." **Analysis:** it seems apparent that Chaney initially believed the first shot missed the President, the second shot hit the President in the face, and the third hit Connally. Chaney's statement that Kennedy looked back over his left shoulder, however, indicates the first shot was a hit, as Kennedy only leaned to the left after being hit. Sure, enough, Baker's testimony indicates that Chaney himself came to believe the first shot was indeed a hit. That Chaney, the closest witness behind Kennedy at the time of the head shot, initially believed there was a shot after the head shot, is undoubtedly intriguing. As he saw no impact from this final shot on the President, perhaps his eyes strayed to Connally as Connally was being pulled down in the seat by his wife. If this is so, then Chaney's initial statements are consistent with those of Greer, Kellerman, and Martin. In any event, it seems clear that by 1975 Chaney had changed his views again, and had tried to bring them in line with the "official" story. Here, the head shot is the third shot. As the Altgens photo, taken at Z-255, a second-and-a-half after what the LPM scenario holds was the second

shot, shows Chaney to be looking to his left, and as Chaney's 1975 story specified that he looked back to his right after the second shot, however, his new story was still at odds with the LPM scenario. **First shot hit 190-224. Last shot after the head shot.**

Douglas Jackson rode on the far right of the President. (Notes written on the night of **11-22-63** as reprinted in *The Kennedy Assassination Tapes*, 1979): Officer C "we turned west onto Elm Street. Drove only a short way traveling very slowly. About that time I heard what I thought was a car back fire and I looked around and then to the President's car in time for the next explosion and saw Mr. Connally jerk back to his right and it seemed that he look right at me. I could see a shocked expression on his face and I thought 'Someone is shooting at them.' I began stopping my motor and looking straight ahead first at the Railroad overpass and saw only one Policeman standing on the track directly over the street. I looked then back to my right and behind me then looked back toward Mr. Kennedy and saw him hit in the head; he appeared to have been hit just above the right ear. The top of his head flew off away from me. Mrs. Kennedy pulled him toward her. Mrs. Connally pulled Mr. Connally down and she slid down into the seat. I knew that the shooting was coming from my right rear and I looked back that way but I never did look up. Looking back to the front again I saw the Secret Service Agent lying down across the car over Mr. and Mrs. Kennedy, the presidential limousine was beginning to pick up speed and the Secret Service men were running past the presidential car drawing their guns as they ran. I said to Jim Chaney "Let's go with them" and we sped away, he pulled past the President's car and up toward Chief Curry's car." (As quoted by Fred Newcomb in *Murder from Within*, an unpublished manuscript from **1974**) "Mr. Connally was looking toward me. And about that time then the second shot went off. That's the point when I knew that somebody was shooting at them because that was the time he [Connally] got hit - because he jerked. I was looking directly at him...he was looking...kind of back toward me and...he just kind of flinched." "...that car just all but stopped...just a moment." (**9-17-75** FBI report, FBI file 62-109060, sec 181, p171-173) "As the presidential vehicle was proceeding down Elm Street, and Jackson was turning the corner from Houston to Elm Street, he heard a loud report which he first thought to be a motorcycle backfire. He looked at the Presidential car to see what the reaction was and observed Texas Governor John Connally turn to his right in the car. At the same time he heard a second noise and saw Connally jerk to his right. At this point, Jackson had just rounded the corner from Houston to Elm Street and he recognized the second noise as a definite gunshot. At this point, he was 15 to 20 feet away from the Presidential vehicle and he stopped his motorcycle in the street and looked toward the railroad overpass, directly in front of the Presidential car. He observed a police officer with his hands on his hips, looking toward the Presidential car. As this appeared normal, he then looked to his right and rear in the direction of the Texas School Book Depository and the intersection of Houston and Elm Street and observed many bystanders falling to the ground. He looked toward the Presidential vehicle and at the same time heard a third shot fired. He observed President Kennedy struck in the head above his right ear and the impact of the bullet exploded the top portion of his head, toward the left side of the Presidential vehicle. Jackson immediately knew that Kennedy had been hit and that the shot had been fired from his right rear. He turned and looked back at the intersection of Houston and Elm Street, however, did not look up at the windows in any of the buildings. When he looked back toward the Presidential car, a Secret Service agent was climbing onto the trunk of the vehicle and the car was picking up speed. Jackson then told Officer Chaney that they should go with the vehicle and Chaney proceeded forward to Chief Curry's car and then cleared the way toward Parkland Hospital...Jackson advised he had recognized three distinct noises at the time President Kennedy was shot and could identify two as definitely being gunfire. He further stated he is positive the shot that struck President Kennedy in the head was fired from the right rear, the vicinity of the Texas School Book Building." **Analysis:** while Jackson's statements suggest there was a first shot miss as they turned the corner, that Connally was hit by the second shot and looked to his right, and that there was a final head shot, there are holes in this. First, at

what point does Connally turn far enough to his right to look at Jackson? Not until Z-280 or so. Is that when Jackson heard the second shot? And, at what point does Jackson stop his motorcycle? While Jackson says it was after the second shot, the Nix film shows that Jackson only slowed his motorcycle after Kennedy was struck in the head! This could indicate that Jackson heard a shot (a first shot hit) looked around, looked back to Connally, heard the head shot, slammed on his brakes, and heard the third shot as he looked up and saw the President's wounds. Still, since he distinctly remembered seeing a piece of the President's skull fly away, it would seem he saw the actual impact. This raises the possibility that he heard a shot, looked around, saw Connally jerk to his right and then fall back into the car after being hit by a silent bullet, saw the President's head explode, heard a shot, slammed on his brakes, and looked back to the President as a third shot rang out, but then got himself mixed-up when he tried to make sense of the movements and the shots. Another possibility is that he was simply mistaken about when he stopped his motorcycle in relation to the shots. In any event, one can not honestly say Jackson's statements clearly support the LPM theory, or any other theory. Even so, his notes are intriguing in that his initial impression of the fatal shot was that Kennedy had been hit above the right ear, and not on the back of the head. Curiously, Jackson was not interviewed by Hoover's FBI after the assassination, nor was he called before the Warren Commission. **Possible LPM scenario. Possible first shot hit 190-224. Last two shots possibly bunched together (with the last shot after the head shot).**

The Changing of the Guards

At left: the Betzner photograph at Z-186

Above: the Willis photograph at Z-202

At left and below: the Altgens photograph at Z-255.

The Changing of the Guards

In order to place the statements of the occupants of the Presidential follow-up car in context, one first needs to familiarize oneself with the photographs of Hugh Betzner, Phil Willis, and James Altgens. Betzner's photograph, taken just before he heard a shot, was later shown to correspond to Z-186; Willis' photograph, taken just after he heard a shot, was shown to correspond to Z-202; and Altgens'

photograph, taken a few second after he first heard a shot, was shown to correspond to Z-255. (The memories of all three photographers are therefore consistent and suggestive that the first shot came at Z-190.) In these photos, the reactions of the President's guards, or lack thereof, are made clear.

Sam Kinney was the driver of the Presidential back-up car. (11-22-63 report, 18H732) "The first shot was fired as we were going into an underpass...it appeared that he (the President) had been shot because he slumped to the left. Immediately, he sat up again. At this time, the second shot was fired and I observed hair flying from the right side of his head...I did hear three shots but do not recall which shots were those that hit the President." (11-30-63 report, 18H730-731) "As we completed the left turn and on a short distance, there was a shot...I saw the President lean toward the left and appeared to have grabbed his chest with his right hand. There was a second of pause and then two more shots were heard. Agent Clint Hill jumped from the follow-up car and dashed to the aid of the President and first Lady in the President's car. I saw one shot strike the President in the right side of the head." (2-19-65 interview with William Manchester, as represented in *The Death of a President*, 1967) (On the head shot) "Sam Kinney, seeing the back of the President's head erupt, stomps on his siren button with his left foot to alert Kellerman and Greer." (2-26-78 interview with HSCA investigator, file #180-10078-10493) "Kinney immediately recognized the first sound as that of gunfire, realizing that it was a 'shot from over our right shoulder' which hit the president in the throat. The President, his movement (in Kinney's opinion) affected by the brace he wore, fell toward Jackie, who, 'after catching him, set him back'...'While Jackie was setting him back up, Connally turns right, then left, then pow, pow. The second shot' (hit Connally and) 'left Connally's back open.' 'The third shot hit the President.' As the third shot landed, SA Kinney was able to see 'hair coming up.'" (11-22-93 interview on the Today Show put up on Youtube by Vince Palamara) "I saw the President grab his neck. And then by that time there was two following shots, just like a pow...pow." (3-5-94 and 4-15-94 interviews with Vince Palamara, as reported by Palamara in January 1996's *JFK Deep Politics Quarterly*) "However, it was during interviews conducted on 3/5/94 and 4/15/94 that Kinney totally amazed me with details concerning his first-hand observations of the President's wounds. Sam told me twice that he saw the back of JFK's head come off immediately when the fatal shot struck him. (Kinney was watching JFK's head and the rear bumper of the limo--as a normal part of his duty to maintain a 5' distance between the follow-up car and JFK's limo, something he had done many times). Sam told me, 'It was the right rear--I saw that part blow out.' He added that his windshield and left arm were hit with blood and brain matter immediately after the head shot. Once at Parkland Hospital, Kinney helped remove the President from the back seat of the car, with help from Clint Hill, Roy Kellerman, and Dave Powers. This gave him an extremely vivid, up-close look at JFK's head wound. 'His brain was blown out," Kinney said, '...there was nothing left!' I pressed further, learning, 'There was brain matter all over the place...he had no brains left in his head'...Kinney, who believes there was a conspiracy (although he believes Oswald was the only shooter), wanted his story told... As for the shooting on Elm Street, Kinney was adamant, on 3 separate calls, that he 'saw all three shots hit' and that 'the second shot hit Connally and he agrees with me.'" (3-5-94 and 4-15-94 interviews with Palamara, as quoted in the Summer 1997 *Kennedy Assassination Chronicles*) (Kennedy) "Would have survived the first one, probably. The second shot hit Connally right in the back...I saw all three shots hit." (On the head wound) "He had no brain left. It was blown out...there was nothing left...the back of the head...I saw it hit and I saw his hair come out...I had brain matter all over my windshield and left arm, that's how close we were to it...It was the right rear part of his head, because that's the part I saw blown out. I saw hair come out, the piece blow out, then the skin went back in--an explosion in and out." ((*The Kennedy Detail* by Gerald Blaine, 2010) "Follow-up car driver Sam Kinney's responsibility was to maintain his focus on the President's car. He saw Kennedy's reaction to the first shot and then saw Clint (Hill) leap onto the pavement a split second later. He immediately turned the follow-up car to the right to clear a path for Clint to reach the President and First Lady. His eyes were still focused on President Kennedy when he heard the second

shot and saw Governor Connally slump toward his wife...In the driver's seat of the follow-up car, Sam Kinney clearly heard the loud crack of the third shot. Like Jack Ruby, his gaze was transfixed on Kennedy's head." **Analysis:** Kinney's initial statement was that the second shot caused the President's hair to fly up. He then backtracked and said he was not sure if it was the second or third. In his next report he simply claimed that after a second of pause two more shots were heard. He thereafter tried to connect the second shot to Connally's wounds, not realizing that Connally had been hit long before JFK fell toward Jackie. Even so, it's interesting that Gerald Blaine, in his book *The Kennedy Detail*, a book written to convince the public the Secret Service was not involved in a conspiracy to kill Kennedy, and that Kennedy was not even killed by a conspiracy, chooses to use Kinney's latter day statements--which are in DIRECT conflict with his earliest statements--to support a three shots/three hits scenario. Clearly, he saw that, in order to not dismiss Kinney, he would have to either trust his earliest statements--which suggest the last two shots were fired closely together and that there was more than one shooter--or his latter statements--which completely undermine the single-bullet theory. It's interesting he chose the latter. Perhaps Blaine, like Governor Connally and Warren Commissioners Russell and McCloy before him, simply failed to fathom that without the single-bullet theory, the single-assassin conclusion was sunk. **First shot hit 190-224. Last two shots bunched together (with the last shot probably after the head shot).**

Emory Roberts sat next to Kinney in the front seat of the back-up car. He was directly behind the President. (11-22-63 report, 18H739) "at 12:30 PM, two or three shots were fired, at which time I saw the President lean over on Mrs. Kennedy. I knew he was hit. Just as the second or third shot was fired, Hill ran from follow-up car to president's car... I could not determine from what direction the shots came, but felt they had come from the right side. I immediately asked everyone on car to look to see if they could determine where the shots came from, no one seemed to know." (11-29-63 report, 18H733-738) "12:30 PM: First of three shots fired, at which time I saw the President lean toward Mrs. Kennedy. I do not know if it was the next shot or third shot that hit the President in the head, but I saw what appeared to be a small explosion on the right side of the President's head, saw blood, at which time the President fell further to his left... Just after the third shot was fired, I picked up the car radio and said "Halfback (code name for SS. follow-up car) to Lawson, the President has been hit." (4-28-64 signed statement in the Secret Service report on the behavior of the presidential detail on the night before the shooting, 18H679) "Special agents Ready, Lawton, McIntyre, Bennett and myself arrived at the Texas Hotel on November 21, 1964, at approximately 11:50 P.M., (which was a few minutes after the president arrived) and I went directly to my room where I remained until I got up to report for duty. (Note: Roberts reported for duty at 7:20 A.M., 18H679) (12-4-64 and/or 4-26-65 interview with William Manchester, as reported in the TV documentary "The Kennedy Assassination: 24 Hours After," 2009) "I looked at the President. He was leaning to the left, toward Mrs. Kennedy. Then the other shot hit him in the back of the head. I saw what appeared to be a small explosion on the right side of the President's head. And there was never any doubt in my mind that he was dead." (12-4-64 and 4-26-65 interviews with William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) "Emory Roberts recognized Oswald's first shot as a shot." (On the head shot) "From his seat beside Kinney, Roberts had seen the last shot strike Kennedy's skull. He was certain the wound was mortal, and he had assessed the implications at once." (Interview with Kennedy Detail author and fellow SS agent Gerry Blaine on Kansas City radio station 98.9, 11-12-10) (On whether any shots came from the front) "You know, one of the strange things, the driver of the follow-up car and the shift leader were not called before the Warren Commission and both of those gentleman watched each shot hit its mark." (4-15-11 article in *Dome Magazine*) "Emory Roberts, in his initial report of the event, a report uncharacteristically shared with son Doug, wrote that "two or three shots were fired," Doug recalls. "I asked him, 'How come you don't know whether it's two or three?' And he answered me, 'Because the brain is not a tape recorder.'" **Analysis:** Roberts, as Kinney, was being deliberately vague. If there had

been a five second gap between the second and third shots, he would certainly have noted it and reported it. He knew that it was after the third shot that he picked up the radio. For him to express any confusion about the second and third shots is therefore an indication that the shots were bunched together. His interview with Manchester certainly suggests as much; for there, he only described two shots. Blaine's assertion many years later is also of interest. Presumably, Roberts told others on the detail he saw the second shot hit Connally. But, if this was so, why did he, as Kinney, fail to say as much in their official reports? Perhaps then, the most we can take from Blaine's comment is that members of the Kennedy detail never bought into the single-bullet theory, and felt the Warren Commission's avoidance of Kinney and Roberts--two of the closest witnesses--was not a coincidence. **First shot hit 190-224. Last two shots bunched together (with the last shot possibly after the head shot).**

By now, what we first described as a pattern has become the dominant scenario. This dominant scenario is in direct opposition to the LPM scenario on a number of points; 1) The first shot did not miss, but, instead, hit the President; 2) The second and third shots were fired close together; and 3) The last shot quite possibly was fired after Kennedy had already been struck in the head.

Clint Hill rode on the outside of the back-up car by the driver's door. (11-30-63 report, 18H740-745) "On the left hand side was a grass area with a few people scattered along it observing the motorcade passing, and I was visually scanning these people when I heard a noise similar to a firecracker. The noise came from my right rear and I immediately moved my head in that direction. In so doing, my eyes had to cross the Presidential automobile and I saw the President hunch forward and then slump to his left. I jumped from the follow-up car and ran toward the Presidential automobile. I heard a second firecracker type noise but it had a different sound—like the sound of shooting a revolver into something hard. I saw the President slump more toward his left. I jumped onto the left rear step of the Presidential automobile. Mrs. Kennedy shouted, "They've shot his head off;" then turned and raised out of her seat as if she were reaching to her right rear toward the back of the car for something that had blown out. I forced her back into her seat and placed my body above President and Mrs. Kennedy. SA Greer had, as I jumped onto the Presidential automobile, accelerated the Presidential automobile forward. I heard ASAIC Kellerman call SA Lawson on the two-way radio and say, "To the nearest hospital, quick." I shouted as loud as I could at the Lead car, "To the hospital, to the hospital." As I lay over the top of the back seat I noticed a portion of the President's head on the right rear side was missing and he was bleeding profusely. Part of his brain was gone. I saw a part of his skull with hair on it lying in the seat...At approximately 2:45 A.M., November 23, I was requested by ASAIC to come to the morgue to once again view the body. When I arrived the autopsy had been completed and ASAIC Kellerman, SA Greer, General McHugh and I viewed the wounds. I observed a wound about six inches down from the neckline on the back just to the right of the spinal column. I observed another wound on the right rear portion of the skull. Attendants of the Joseph Gawler Mortuary were at this time preparing the body for placement in the casket." (3-9-64 testimony before the Warren Commission, 2H132-144) "Well, as we came out of the curve, and began to straighten up, I was viewing the area which looked to be a park. There were people scattered throughout the entire park. And I heard a noise from my right rear, which to me seemed to be a firecracker. I immediately looked to my right and, in so doing, my eyes had to cross the Presidential limousine and I saw President Kennedy grab at himself and lurch forward and to the left... I jumped from the car, realizing that something was wrong, ran to the Presidential limousine. Just about as I reached it, there was another sound, which was different than the first sound. I think I described it in my statement as though someone was shooting a revolver into a hard object--it seemed to have some type of an echo." (On what he saw upon arrival at Parkland) "The right rear portion of his head was missing. It was lying in the rear seat of the car. His brain was exposed. There was blood and bits of brain all over the entire rear portion of the car. Mrs. Kennedy was

completely covered with blood. There was so much blood you could not tell if there had been any other wound or not, except for the one large gaping wound in the right rear portion of the head." (When asked if he saw any wound other than the head wound at the autopsy) "I saw an opening in the back, about 6 inches below the neckline to the right-hand side of the spinal column." (When asked if he had an impression of the direction from which the second shot had been fired) "It was right, but I cannot say for sure that it was rear, because when I mounted the car it was--it had a different sound, first of all, than the first sound that I heard. The second one had almost a double sound--as though you were standing against something metal and firing into it, and you hear both the sound of a gun going off and the sound of the cartridge hitting the metal place, which could have been caused probably by the hard surface of the head. But I am not sure that that is what caused it." (Signed statement in the **5-5-64** Secret Service report on the behavior of the presidential detail on the night before the shooting, 18H685) "I departed the Texas Hotel between 1:15 A.M. and 1:30 A.M. and went to the Press Club, Fort Worth, arriving there about five minutes after departure from the Texas Hotel. While there I consumed the (?) glass of scotch and water and purchased two packs of cigarettes. I departed the Press Club at approximately 1:45 A.M. I then went to a place known as "The Cellar, arriving there at approximately 1:50 A.M. While at The Cellar I was served a beverage which I can best describe as grape fruit juice and soda. It was called a 'Salty Dick.' I did not drink the entire drink. I departed The Cellar at approximately 2:45 A.M. and returned to my room in the Texas Hotel." (Note: Hill reported for duty at 8:05 A.M.) (**11-18-64 and 5-20-65** interviews with William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) "Lawson, Kellerman, Greer, Ready, and Hill all thought that a firecracker had been exploded."

(**December, 1975** interview with Mike Wallace shown on CBS' program 60 Minutes) (When asked if there were multiple shooters) "There were only three shots. It was one gun. Three shots." (When asked if he was satisfied that Oswald acted alone) "Completely." (Television interview found on Youtube as Clint Hill Interview 1, apparently taken from the History Channel program *The Secret Service*, **1995**) "I heard a sound from my right rear. I was on the left-hand front of the follow-up car. As I began to turn to my right toward that sound, my eyes crossed the back of the presidential car. And I saw the president grasp at his throat and lurch a bit to his left. And I realized something had happened. And I got off the car as quickly as I could and ran to the presidential car. By the time I got there two more shots had been fired and he had been hit in the head." (Television interview found on Youtube as Clint Hill interview 2, apparently taken from the Discovery Channel program *Inside the Secret Service*, **1995**) "We made a left-hand turn, and shortly after we made a left-hand turn there was an explosion to my right rear that sounded a bit like a gun shot or a firecracker. And I responded by looking to my right and as I did so my eyes went across the back of the presidential car. And I saw the president grab at his throat and lurch to the left. And I jumped from the car and ran to the presidential car. Before I got there he had been shot again in the head." (Interview conducted for the National Geographic Channel program *Inside the Secret Service*, first broadcast **10-24-04**. Note that this is, in fact, a compilation of two different edits of the interview as found on Youtube. The sections found in the DVD are in italics.) "We traveled along this open area which was on my left and then made a left turn, but it wasn't a 90 degree left turn, it was like a 120 degree left turn. The open area was still on my left, and *shortly after we got into that turn and started on that street, I heard a sound--which I wasn't sure what it was--whether it was a gunshot or a firecracker. I turned to see what was happening, and as I did I saw President Kennedy grab at his throat and lurch forward. I knew something was wrong. Before I could get to the presidential limousine, another shot had been fired and hit President Kennedy in the head. About that time I reached the back of the presidential limousine and tried to get on. I was trying to get my foot up on the back of the car. And I slipped. I had to run three or four more steps before I could get up. By that time Mrs. Kennedy had come out onto the trunk. It appeared to me she was searching for something, trying to retrieve something. But I got up on the back of the car and placed her back in the*

seat. The President at that time had slumped down into her lap. And I could see the back of his head. And there was a gaping hole above his right ear about the size of my palm. And there was white brain matter and red blood throughout the entire car. We then--the car jolted forward and we sped off to Parkland Hospital."

(Foreword written by Hill for The Kennedy Detail, **2010**) "I would be very pleased if the results of the Warren Commission and its investigation would be accepted as the final word." (Interview on Fox News Network promoting the release of The Kennedy Detail, **11-12-10**) "I heard the first shot, saw the President grab his throat, and lurch left. I knew something was wrong so I ran out to the car. I tried to get up on the trunk. The driver accelerated. I slipped. When I gained my footing, I got up on the trunk of the car. About that time, Mrs. Kennedy started up on the rear of the trunk. She was trying to retrieve something that came off the President's head. She didn't know I was there. I helped her get back in the back seat and the President fell to the left in her lap." (When asked what he believes happened) "What happened was a single shooter fired three shots from an elevated position to the rear of the motorcade. All three shots hit what they were aimed at. The first one hit President Kennedy. The second one hit Governor Connally. The third one hit President Kennedy in the head. That's the fact. The rest of it is just theory. Unlike fact." (Interview on Free Johnny Dare radio program on 98.9 The Rock in Kansas City, **11-12-10**) (When asked what happened after he saw the president react to the first shot) "Well, I tried to get there as quick as I could. I came off the follow-up car, ran to the presidential vehicle. I could not hear the second shot 'cause I was running. By the time I got close the third shot had hit the president in the head. Some material came off the right rear. Mrs. Kennedy came out of her seat and onto the trunk to try to retrieve that material. I slipped, I tried to regain my position. I got up on the trunk. She did not know I was there. And I grabbed her, and put her back in the seat when the president fell to his left onto her lap." (When asked what he saw when he climbed up onto the trunk and looked at the president) "I saw that there was a portion of his skull removed from the upper rear above the right ear about the size of my palm, and brain material and blood was all over the back of the car including myself." (When asked if the president was still breathing when they got to the hospital) "Well, I couldn't tell if that was the case. His eyes were fixed, and a hole was in the upper right portion of his head. So it appeared that he was fatally wounded." (London Daily Mail Online article stupidly entitled "What have they done?": Jackie's words as JFK was shot are revealed by secret service agent who *breaks silence* after almost 50 years", **11-14-10**) "'I heard the first shot, saw the president grab his throat, lurch left and I knew something was wrong," he recalled, his voice halting. "When I got to the presidential vehicle, just as I approached it, a third shot rang out, hitting the president in the head, just above the right ear, and left a hole about the size of my palm. There were blood and brains spewed about over myself and the car. I helped Mrs Kennedy get in the back seat and the President fell into her lap. I was quite sure it was a fatal wound. The First Lady was in shock. She was doing the best she could, she was covered in blood." On the way to Parkland Hospital, where the president would be certified dead there was little conversation. But, according to Mr. Hill, Mrs Kennedy "said something about, 'Oh, Jack, what have they done? What have they done?'" (Oral History interview performed for the Sixth Floor Museum, **11-18-10**) "About 50-60 feet down Elm Street, I was looking to my left, to a grassy area. There were very few people in that area. Some people there were taking pictures and that sort of thing. I heard an explosive noise to my right rear. I had been looking to my left, and so I scanned from my left to my right. When I did that my eyes had to go across the back of the President's car. And I saw the President grab at his throat and lurch to his left. So I knew something was wrong, something had happened. So I jumped from the car and ran toward the Presidential vehicle. Now I didn't hear any shot when I was running, but they tell me there was a shot at that time. But just before I reached the Presidential vehicle, I heard another shot and I felt the results, because the shot hit the President in the head, to the upper right rear of his head, above the right ear, and material came out of that wound, spewing over the back of the car, and over myself. I tried to get up on the back of the car. The driver

started to accelerate more. I slipped. I ran a few more feet then got up on the car. About that time Mrs. Kennedy was coming out on the trunk. She looked like she was reaching for something that had come off the right rear of the car from the President's wound. I don't know what it was. She did not know I was there. I helped her as best I could to get back into the back seat of the car. When she got into the back seat and sat down, the President's body fell to its left onto her lap. When he fell like that, the upper right portion of his head was exposed, and I could see that a portion of his skull was missing, that it appeared someone had taken a scoop into the brain matter and removed portions of it, and scattered it around because there was brain and blood matter over the entire interior of the rear of the car, including Mrs. Kennedy. I noticed that his eyes appeared thick. I assumed that it was a fatal wound."

(11-20-10 interview of Hill and Gerald Blaine by Gary Mack at the Sixth Floor Museum, broadcast on CSPAN2, 12-12-10) (When Mack offers "You heard three shots.") "The three shots all came from the same location." (When Mack asks if the three shots were evenly spaced) "I didn't hear the second shot, so I only heard two shots. The first shot came from my right rear. And I was looking to the left of the grassy area on the left hand side of Elm Street when I heard the shot. My vision took me to the right toward that shot. In so doing my eyes went across the back of the President's car. I saw him grab at his throat and he started to lurch to his left. He didn't move too far but he was trying to go to his left. I knew something was wrong. So I jumped off the car and started running to the President's car, trying to get there in time to get on top and cover--what we try to do is cover and evacuate. I was trying to get there to cover up so nobody would impart further damage to the President or Mrs. Kennedy. About the time I got to the car, just before I got there, the third shot--that I heard, and I felt--because it hit the President in the head just above the right ear, right up in here (he places his hand just above his right ear, with some of his fingers to the back of the his ear), and blood and brain matter were spewing all over the place, including on me. About that time Mrs. Kennedy came out of her seat out onto the trunk of the car. She was trying to retrieve something that had come off the President's head and went to the right rear. I slipped at first while trying to get onto the car 'cause Bill Greer the driver accelerated the car. I gained my footing again, got up on the car, and helped her get back in the seat. When I did that the President fell over to his left onto her lap and I could see the upper right portion of his head (he again places his hand above his right ear, only this time he places it directly above the ear, about an inch forward of where he'd placed it only 30 seconds before) had a large hole about the size of my palm. It looked like somebody had taken a scoop and removed brain matter and just thrown it around the car--blood and brain matter and bone particles all around the car. His eyes were fixed. I was quite sure it was a fatal wound." (When Mack points out to him that the scenario Hill has been pushing in his recent interviews entails three shots and three hits) "That is correct." (When Mack points out that this puts Hill at odds with the conclusions of the Warren Commission) "I recognize that. But the two of us believe that the second shot hit Governor Connally. The other person who said that, Nellie Connally, was sitting right beside him when he was hit. So I think I'm in pretty good company in believing that the second shot hit the Governor and that the third shot was the fatal wound to the President."

(Article by Hill in the New York Times, **11-22-10**) "We were traveling through Dallas en route to the Trade Mart, where the president was to give a lunchtime speech, when I heard an explosive noise from my right rear. As I turned toward the sound, I scanned the presidential limousine and saw the president grab at his throat and lurch to the left. I jumped off the running board and ran toward his car. I was so focused on getting to the president and Mrs. Kennedy to provide them cover that I didn't hear the second shot. I was just feet away when I heard and felt the effects of a third shot. It hit the president in the upper right rear of his head, and blood was everywhere. Once in the back seat, I threw myself on top of the president and first lady so that if another shot came, it would hit me instead." (Interview with Bob Barnard on WTTG, Washington D.C.'s channel Fox 5, and subsequently posted on the website promoting The Kennedy Detail, **11-22-10**) "I was scanning the left side of the street in Dealey Plaza, and I heard an explosive noise from my right rear. And so I scanned from my left to my right going

toward that noise. When I did so I scanned across the back of the car. What I saw was the president grab at his throat, and lurch to his left. And I knew something was wrong. So I jumped from the car and ran, ran toward the presidential vehicle. Now there was another shot, the second shot, I did not hear that because I was running. Just before I got to the car there was a third shot, and it hit the president in the head, causing an explosion to the upper right of his head, and brain material and blood spattered all about, including on myself. Mrs. Kennedy at that had come out on the trunk. She was apparently trying to retrieve something that had come off the president's head, and had gone to the right rear. She didn't know I was there. And so I grabbed her as best I could and put her into the back seat. And as I did that the president fell to his left onto her lap, with his right side of his head exposed. I could see his eyes, they was fixed, with a hole in his head about the size of my palm above his right ear." **(11-22-10** CNN.com report by Dugard McConnell and Brian Todd) "'After the first shot hit the president,' former agent Clint Hill says, 'I saw him grab at his throat and lean to his left. So I jumped and ran.' Hill is the man seen running toward the limousine in the famous film of the shooting, captured by a bystander named Abraham Zapruder. Hill jumped onto the back of the presidential car, in a desperate attempt to protect the president. 'Just before I got to the car, the third shot hit him in the head.' Hill says. 'It was too late.' (Unidentified book store appearance captured in Youtube video US Secret Service Agent Clint Hill Recalls Dallas, uploaded **11-24-10**) 'About 50 feet or 60 feet down Elm Street I heard an explosive noise from my right rear. Now I had been looking to my left over the grassy area. So when I looked back toward that explosive noise my vision took me across the back of the President's car. When I did that I saw the President grab at his throat and go left. And I knew something was wrong. So I jumped from the car and ran to the presidential limousine. I didn't hear another shot. They tell me there was a shot that occurred while I was running. By the time I had just about got to the car--I was a few feet from it--there was another shot. It hit the President in the head above the right ear. It removed a portion of his skull about the size of my palm. And there was blood and brain matter spewing about the entire area, including on myself.' (Interview on C-Span program Q & A, **11-28-10**) (Hill's comments while watching the Zapruder film) 'When the third shot hit--which is right about now--I was just about to get onto the car. And I slipped. Then I regained my step. Then I got up on the car. Mrs. Kennedy at that time was coming out onto the trunk. She was coming out on the trunk to try to retrieve something that came off the President's head that went off to the right rear. She did not know I was there. When I got up on the trunk, I pushed her as best I could back into the rear seat. When I did that, the President fell down into her lap with the right side of his head up, exposed. I could see that his eyes were fixed and that there was a large hole above the right ear--just to the rear--above the right ear, about the size of my palm. That part of the skull was missing and there was brain matter--it looked like somebody'd taken an ice cream scoop and gone in there and removed a whole portion of the brain and thrown it around the back of the car. The back of the car and she were covered in blood and brain.'

(BBC 4 audio interview published online, **12-1-10**) "Well, we were turning left onto Elm Street in Dallas. And as we progressed down Elm Street I heard a sudden explosive noise from the right rear of the motorcade. And so my vision changed from looking left to looking toward that sound, which took my vision across the back of the presidential vehicle. And when I did that I saw the president grab at his throat and lurch to his left. And I knew something was wrong. And so I jumped from the follow-up car which was immediately behind the presidential vehicle and ran toward the presidential vehicle, attempting to get there to throw my body up on top of the car to form a shield between the president and Mrs. Kennedy and whoever was shooting at them." (When asked how many shots he heard) "I only heard two because while I was running apparently the second shot was fired. The third shot which I heard and felt because I was near the presidential vehicle when that happened hit the president in the head--upper right rear of the right ear--and it spewed blood matter, brain matter, and bone fragments out over the car and myself. And then I was getting up on the back of the car and Mrs. Kennedy was trying to come off out on the trunk of the car to retrieve something that had come off the president's

head to the right rear. She did not know I was there. I pushed her back into the seat. And then the president's body fell to its left onto her lap." (When asked if at that time he knew Kennedy was dead) "Well, his right side of his face was up. I could see his eyes were fixed, that there was a hole in his skull above his right ear to the rear about the size of my palm. And I was quite sure that the shot had been fatal." (When asked if he felt the shots had come from the same place) "Yes I believe they all came from an elevated position to our right rear of the motorcade--it turned out to be the Texas School Book Depository--that they were all fired by the same rifle, and that they were all fired by one individual." (Interview in Discovery Channel program The Kennedy Detail, first broadcast **12-2-10**) "The driver had to slow the car considerably in order to make the turn. Instead of going the 10-12 miles an hour we had been going he had to cut the speed at least in half. About that time, as I was scanning the left area from Elm Street, there was a large explosive noise to my right rear. I thought it was a fire cracker. My eyes passed over the back of the presidential car. And I saw the President grab at his throat and lurch slightly to his left. And I knew something was wrong. (Moments later in the program) Just before I got to the presidential vehicle I heard another large sound from the right rear. And then I heard the sound of an impact like a bullet hitting something hollow. Now Mrs. Kennedy was out on top of the trunk of the car trying to retrieve something she'd seen come off the President's head. I was trying to get up on the car. The driver all of a sudden accelerated. I grabbed the handle, pulled myself up, grabbed Mrs. Kennedy, put her in the back seat. The President slumped over into her lap. I looked down and realized how severe the President had been hit. Above the right ear, there was an area about the size of the palm of my hand that was gone. The skull was gone. It looked like an ice cream scoop had gone in and removed all the brain in that area. There was brain matter, skull, and blood throughout the entire car... (Later in the interview) On the way to Parkland, I had seen Governor Connally's chest covered in blood. That was the first that I realized that he'd also been shot."

(**12-3-10** appearance at Warwick's Bookstore, New York City, posted on Youtube) "We had just started to straighten out the vehicle as as we started down Elm Street toward the Stemmons Freeway. At that point, I was scanning to the left, which was a grassy area. I heard an explosive noise to the right rear of the motorcade to my right ear. My eyes took me to the right rear toward that sound. In so doing, I had to scan across the presidential vehicle. When I did that I saw the President grab at his throat and move to his left, and I knew something was wrong. So I jumped from the follow-up car and I ran toward the presidential vehicle. My intent was to get on top of the presidential vehicle and place myself between the President and Mrs. Kennedy and whoever was shooting at them. I ran, and apparently, in that time I ran there was a second shot. I did not hear it. As I approached the vehicle there was a third shot. It hit the President in the head, upper right rear of the right ear, caused a gaping hole in his head, which caused brain matter, blood, and bone fragments to spew forth out over the car, over myself. At that point Mrs. Kennedy came up out of the back seat onto the trunk of the car. She was trying to retrieve something that had gone off to the right rear. She did not know I was there. At that point I grabbed Mrs. Kennedy, put her in the back seat. The President fell over into her lap, to his left. His right side of his head was exposed. I could see his eyes were fixed. There was a hole in the upper right rear portion of his head about the size of my palm. Most of the gray matter in that area had been removed, and was scattered throughout the entire car, including on Mrs. Kennedy. I turned and gave the follow-up car crew the thumbs-down, indicating that we were in a very dire situation. The driver accelerated; he got up to the lead car which was driven by Chief Curry, the Dallas Chief of Police . . ." (When later asked, by someone claiming to have been given permission to inspect the autopsy photos in 1979, about his description of a wound on the right rear of the head) "Above the right ear. (At this point he touches his head above his right ear and slides his hand back behind his ear) It's hard for me to describe so that people like you can understand it." (He places his hand back on his head and turns his back to the audience. The palm of his hand is above his ear and his fingers stretch to the crown of his head.) "Right in here. That portion of the skull was gone. About the size of this..." (He shows the audience his palm.)

"My palm. It was an entry wound from the rear (He points to the EOP area of his skull, where the autopsy doctors claimed the bullet entered.) and it caused the entire area of that skull to lift up." (4-16-11 article by Dan Rozek on the Chicago Sun-Times website, reporting on a 4-16 appearance by Hill at Anderson's Bookshop in Naperville Illinois) "Within seconds of shots being fired at President John F. Kennedy, Secret Service Agent Clint Hill climbed onto the president's still-moving, convertible limousine and saw Kennedy slumped over with a 'gaping' wound in his head. 'I assumed the wound was fatal. I turned, I gave a thumb's down to the follow-up car,' Hill said Saturday, as he recounted the traumatic Nov. 22, 1963 assassination in Dallas of the nation's 35th president." (Later) "Hill described how he jumped off his car and ran toward the presidential limousine, reaching the vehicle just as a bullet struck Kennedy in the head. As soon as he saw Kennedy's injuries, he realized the president likely was dead. 'I could see that his eyes were fixed, there was a gaping hole in the upper right rear of his head about the size of my palm,' said Hill, struggling to hold his composure."

(4-19-11 article in the Chicago Daily Herald on the 4-16 appearance by Hill at Anderson's Bookshop in Naperville Illinois) "Hill, one of the agents closest to Kennedy when shots were fired, told the assassination story from his point of view. On what was a warm November day in Dallas, windows were open at the high-rises surrounding the streets where the president's vehicles proceeded to a campaign stop, Hill said. He was scanning a building to his left when he heard an "explosive noise" from his right, which turned out to be the first gunshot fired from a sixth-story window by Lee Harvey Oswald. After the first shot: 'What I saw was the president grabbing at his throat and moving to the left,' Hill said, speaking quickly, as though his words were memorized and well-practiced. 'I knew he was in trouble and something was wrong.' After the second shot: Hill said he tried to 'cover and evacuate,' a Secret Service technique that would have allowed his body to block those of the president and Jackie Kennedy. After the third shot: Hill saw a 'gaping hole' in Kennedy's head as blood, brains and bone sprayed out from the gunshot wound, covering his clothing as well as Jackie Kennedy's. 'I assumed the wound was fatal,' Hill said." (10-9-11 article on Hill on the Fargo--Moorehead Inforum) "During the motorcade, Hill was positioned behind Jackie Kennedy on the follow-up car and was scanning people taking photos from a grassy area off to the left. Then he heard an explosive noise over his right shoulder, and his eyes scanned past the presidential vehicle. 'I saw the president grab at his throat and kind of move to his left. I knew something had happened,' Hill said. 'I jumped from the follow-up car and ran toward the presidential vehicle,' he said. 'My attempt was to get on the back of the presidential car and place my body above the president and Mrs. Kennedy so that I would shield them from anything that was a possibility of happening. There was a second shot, apparently, but I didn't hear it because I was running. Then the third shot happened just as I was approaching the presidential vehicle. I slipped, had to regain my steps, got up on the car. The president had been hit in the upper right rear of his head with that third shot. There were blood and brain matter and bone fragments throughout the entire area, including myself. He slumped to his left. Mrs. Kennedy came up from her seat onto the trunk of the car trying to grab some of the material that came off his head. I grabbed her and put her back into her seat. When I did that, the president's body fell into her lap. The right side of his face was up, and I could see his eyes were fixed. There was a hole in the upper right rear of his head. It appeared to me that he was dead.'"

(Mrs. Kennedy and Me, co-written with Lisa McCubbin, published **March, 2012**) (On p. 290) (On his reaction to the first shot) "We turned left onto Elm Street. It was an unusually sharp turn, and because 100X was no ordinary vehicle, Greer had to slow down considerably. Halfback had similar problems and Kinney maneuvered slowly through the turn. The vehicles straightened out and began to return to our normal parade pace of about ten miles per hour. I was scanning to the left at the grassy area when I heard a sudden explosive noise, over my right shoulder, from the back of the motorcade. I turned my head toward the noise, and as my eyes moved across the president's car, I saw President Kennedy grab at his throat and lurch to his left. I jumped off the running board and ran toward 100X. I wasn't

thinking, only reacting. Somebody had fired a shot at the President, and I had to get there. I had to get on the car and get myself between the shooter and the president and Mrs. Kennedy. I was running as fast as I could. Nothing else mattered. I have been told there was a second shot which occurred at this time. I did not hear it. My feet were hitting the pavement; the motorcycle engines were loud in my ears. *I'm almost there. Mrs. Kennedy is leaning toward the president. I'm almost there.* I was almost there and then I heard the shot. The third shot. The impact was like the sound of something hard hitting something hollow--like the sound of a melon shattering onto cement. In the same instant blood, brain matter and bone fragments exploded from the back of the president's head. The president's blood, parts of his skull, bits of his brain were splattered all over me--on my face, my clothes, in my hair. My legs were still moving. I assumed more shots were coming. I reached for the handhold and grabbed it. Just as I grabbed it the car lurched forward. Bill Greer had stepped on the gas and the car reacted with a jolt. I slipped. I was gripping with all my strength, my feet now back on the pavement. My legs kept moving, as I held on, trying to keep up with the rapidly accelerating car. Somehow--I honestly do not know how--I lunged and pulled my body onto the car, and my foot found the step. In that same instant, Mrs. Kennedy rose up out of her seat and started climbing onto the trunk. What is she doing? What is she doing? The car was accelerating; we were really speeding up. Good God, she's going to go flying off the back of the car! Her eyes were filled with terror. She didn't even know I was there. She was reaching for something. She was reaching for a piece of the president's head. I thrust myself onto the trunk, grabbed her arm, and pushed her back into the seat. When I did this the president's body fell into her lap. As I peered into the backseat of the car, I saw the president's head in her lap. His eyes were fixed, and I could see inside the back of his head... I could see inside the back of the president's head..."My God! They have shot his head off!" Mrs. Kennedy screamed. Blood was everywhere. The floor was covered in blood and brain tissue and skull fragments. "Get us to a hospital! Get us to a hospital." I screamed at Bill Greer." (Later, on p. 305-306, when discussing the autopsy) "I took a deep breath, as Kellerman opened the door. Lying on a table, covered with a white sheet, was the body of President Kennedy, only his face was exposed and it looked like he was sleeping. Bill Greer was there and Dr. Burkley and General Godfrey McHugh, the President's Air Force aide. There were additional people I did not recognize. A man in a white coat stood beside the table. I'm sure they told me his name but it didn't register. The man gently lowered the sheet just enough to expose the president's neck, and he began describing the wounds to me. A wound in the front neck area where a tracheotomy had been performed at Parkland Hospital in an effort to revive the president. He said it covered an exit wound. Then, rolling the president gently over to one side, he pointed out a wound in the upper back, at the neckline, quite small. This, he said, was the entry wound that corresponded to the exit wound at the throat. Moving the body back and slightly to the left he pointed out the wound in the upper right rear of the head. I swallowed hard, listening closely, as the doctor explained what had happened. It appeared that the impact of the bullet hitting the president's head was so severe, it caused an explosive reaction within the makeup of the skull and brain, so portions of the brain erupted outward, and a portion of the skull with skin and hair attached became like a flap. The image of what I saw when I was wedged up above the backseat came flashing back into my mind. The head wound was exposed to me and I could see into his brain, part of which had exploded outward. It looked like somebody had flipped open the back of his head, stuck in an ice-cream scoop and removed a portion of the brain, then scattered it all over Mrs. Kennedy, the car, and myself. It was a horrific sight. And I couldn't get it out of my mind. "Yes Doctor," I said "That is exactly what happened. I know I saw it. I was five feet away from the president when the impact occurred." *If only I had run faster, reacted a little quicker...* The explanation by the doctor and my observation of the body was concluded. I thanked the doctor and returned to the seventeenth floor."

(Interview with Savannah Guthrie broadcast on NBC's Today Show, **4-5-12**) "That's the one thing I can't get out of my mind. The picture of him lying on her lap, with his head exposed to me...looking

into the back of his head, into his brain, his eyes fixed, blood and brain and bone fragments all over the car, over Mrs. Kennedy, and myself." (On Jackie's climb onto the back of the limo) "There was some material from the President's head that had gone off to the right rear. And she had come up on the back of the car trying to retrieve that material." (4-5-12 interview with Piers Morgan on CNN) (When asked when he realized the President was gonna die) "After I got up on the car, Mrs. Kennedy came up on the trunk to retrieve some material that had gone off to the right rear from the President's wound in his head. I put her back in the seat. When I did that, his body fell into her lap, face up. And I could see that his eyes was fixed. There was a wound in the upper right rear of his head. I could see into his brain. Part of his brain was missing. There was brain matter, and bone fragments, and blood spattered all over the rear of the car, including on myself and Mrs. Kennedy. And I was sure at that time that the shot had been a fatal shot." (On his sense of guilt) "I've always felt a sense of guilt. I was the only agent present who had an opportunity to do anything because of the way everything happened. When the shots came in from the right rear, because I was on the left running board, my vision took me across the back of the President's car. I saw the President grab at his throat and lunge to his left. I knew something was wrong. None of the other agents could do that because when they looked toward the shot they looked away from the President's car. So I was really the only one who had a chance." (When asked if he felt it was Oswald acting alone) "Yes, I have no question but what it was Lee Harvey Oswald. There were three shots. They all came from the sixth floor of the school book depository. And that was it." (4-6-12 interview with Megyn Kelly on Fox News Network) (On what Mrs. Kennedy was doing when he got to the limousine) "She was trying to retrieve some material that came off the president's head, from the wound which he had suffered. The wound was so severe that portions of the bone matter, blood and brain matter were scattered all over the car. And she was trying to retrieve it." (4-6-12 interview on the Opie and Anthony radio show, on satellite radio station Sirius/XM) (On his disputing those claiming the first shot missed) "The first bullet hit him in the middle of the back way up there at the neck line and came out through the throat. The second shot did not hit him. Mrs. Connally was sitting next to her husband. She said the second shot was the shot that hit her husband. That is where the magic bullet theory comes in--which I don't believe in either." (On the first shot) "I wasn't sure exactly what it was. I heard the explosive noise. But when I saw him react, then I realized that something had happened. And I jumped and ran. And while I was running there was a second shot, apparently. I didn't hear it." (On the direction of fire) "From the right rear." (On his climbing onto the limo) "When the President was hit in the head with the third bullet, the explosion was so severe in the head that bone fragments and blood and brain matter erupted from the wound. Some of it came off and went to the right rear, across the trunk of the car. She saw that and she was trying to reach some of that material. And then I grabbed her and I put her in the back seat. And then his body fell into her--his head--in her lap." (On whether he knew it was a fatal wound) "I thought it was as soon as I saw him lying in her lap, because his eyes were fixed. I could actually see into his head from the wound. And I could see a lot of the brain matter was gone." (On the sound of the impact) "A bullet hitting something hard but hollow, something like a melon--similar. And it caused the wound to open up and then it caused a flap. The skin from the exterior of the skull didn't actually come off. Part of it was intact, and so it just kinda made a flap forward." (On conspiracy theorists) "They're very annoying, but I've gotten to the point where I just ignore them, because most of it is so foolish and stupid that it's just not believable to anybody." (He then proceeds to mock the "Greer did it" and "Hickey did it" theories) (On why people believe in a conspiracy) "They can't believe that one person did this." (On his strongest memory) "The picture of the President lying in Mrs. Kennedy's lap, the right side of his face up, the eyes fixed, with a hole in the right rear of his head. And my knowing that he was dead." (On his reaction after first seeing the Zapruder film) "I was really surprised at what I did see, because I had no idea what it looked like." (The year he first saw it) "Sometime in 1964." (4-13-12 article on the 10news.com website, the website of KGTV, presumably reporting on a televised interview) "'I saw the president grab his throat and I knew something was wrong,' he said when describing the shooting. Hill threw his body over the back

of the presidential car to form a human shield. 'Mrs. Kennedy had come out of the back of the car and she was trying to retrieve part of the president's head. I put her back in the seat. You could see his eyes were still. There was a hole in his head and his brain was missing,' said Hill."

(5-4-12 interview with Chris Matthews on MSNBC program Hardball) (On what happened after he heard the first shot) "Well, I raced to the car, but just before I got there the third shot was fired. I didn't hear the second shot because I was running. The third shot was fired just as I was approaching the car. It hit the President in the head--upper right rear. And it was a tremendous wound, causing blood and brain matter to come out of the wound over myself and the car. About that time Mrs. Kennedy come up on the trunk of the car. She was trying to retrieve material which came off the President's head--off the right rear. And I got up on the car and pushed her back into the seat. And when I did that the President's body fell over into her lap." (On whether the car was still moving at this time) "The car was continuously moving, and began to accelerate just as I got there." (On whether or not there was a conspiracy) "One shooter, three shots, all from the same rifle." (5-9-12 interview on MyFOXNY) (On his memories) "What I see in my head is what happened that day, and the president lying in Mrs. Kennedy's lap in the back seat of the car with his head blown open and blood and brains all over the back of the car and over myself and everybody else." (On the limousine slow-down) "At the time the shots were fired we weren't going at the normal speed which would have been 10-12 miles per hour. And he gradually started to speed up a little bit. But then he heard the first shot, and he thought one of the tires had blown. And if you watch the Zapruder film real close you'll see that the brake lights come on. He tapped the brake to see if he could get any response from the tires because he thought he'd blown a tire. So he did slow down slightly at that time, but he never stopped, and he kept on going. And then he started to accelerate just before I got there." (On the question of conspiracy) "Three shots, all fired from the same location by the same person, Lee Harvey Oswald." (5-22-12 interview with Dan Rea on WBZ radio, CBS Boston) "When we got to the point on Elm Street below the school book depository, I was scanning over to my left, which is a grassy area. There weren't a lot of people there, but there were some. And at that point I heard an explosive noise from over my right shoulder, to the right rear of the motorcade. And when that happened, I looked toward that noise, and in so doing my eyes passed across the back of the Presidential car. And so I saw what happened. I saw the President grab at his throat, move to his left. I knew he was in trouble. So I jumped and ran." (On the question of conspiracy) "There was only one shooter. There were only three shots. They all came from the same place, the sixth floor of the school book depository. And the shooter was Lee Harvey Oswald."

Analysis: Hill's description of the second shot he heard's strange sound is suggestive that he heard the third shot, but processed it as an echo of the second shot. When one reflects that Hill was running past Bobby Hargis towards Jacqueline Kennedy at the time of the head shot, and that they also heard but two clear shots, it should make us suspicious that all three heard the third shot, but processed it as an echo of the second shot. If one makes that jump, then all three of these witnesses can be added into the first shot hit 190 (or afterward) category. There is certainly nothing in their statements to make us believe that the first shot missed. Hill, in particular, states that he heard the first shot while he was looking to his left and that he saw the President react to this shot after he looked to his right. Between the Betzner photo at Z-186 and the Willis photo at Z-202, Hill seems to have begun to look to his right. By Zapruder frame 223, he is clearly looking at the President. By the Altgens photo at Z-255, he has turned to the President. That he recalls hearing only one shot by this time is a strong argument against the LPM scenario. It is also quite interesting that Hill wants the public to accept the conclusions of the Warren Commission, while he himself rejects the conclusion central to its conclusions: the single bullet theory. This shows that he, as Governor Connally, suffered from a cognitive disconnect, and could never bring himself to understand that without the single-bullet theory, the single-assassin conclusion promoted by the Warren Commission was at odds with the evidence. **Only heard two shots. First shot hit 190.**

Kenneth O'Donnell, a Kennedy assistant, rode in the back-up car in the middle seat behind the driver. (5-4-64, 6-4-64, 8-6-64, and 11-23-64 interviews with William Manchester, as represented in *The Death of a President*, 1967) (Manchester's narration for the aftermath of the shooting) "In the jumps seats, Ken O'Donnell and Dave Powers have heard the sickening impact of the fatal bullet, and Dave has seen it. O'Donnell crosses himself. Powers whispers 'Jesus, Mary, and Joseph...'" (5-4-64, 6-4-64, 8-6-64, and 11-23-64 interviews with William Manchester, regarding the possibility Kennedy was killed by Texas oilman, as represented in *The Death of Lancer*, the original draft of *The Death of a President*, as quoted in an article by Edward Jay Epstein in the July 1967 issue of *Commentary Magazine*) "They did it. I always knew they'd do it. You couldn't expect anything else from them. They finally made it." (5-18-64 testimony before the Warren Commission, 7H440-457) "We turned—I remember the overpass. And then the shots occurred--which, at that time, I did not know were shots. My first impression was it was a firecracker. And then either somebody said "He has been hit," or I noticed the slump—he had been waving out the right side of the car and I noticed him slump over toward Mrs. Kennedy, and I realized then that they had been shots. But as fast as that realization occurred, I saw the third shot hit." (When asked how close the back-up car was to the limousine) "My guess would be 5 to 8 feet...I would presume they were just about turning to step up the speed a little bit, because there would be no crowds from there. (When asked if the Secret Service car had completed its turn onto Elm Street) "My recollection is they had, just about. I don't recollect a separation of this nature. It was a slight sloping turn, as I remember, and I thought we were right together." (When asked what Kennedy was doing with his hands prior to the time of the shooting) "He was waving. We had just left the mass of crowds. But as we turned on the grass plot, there were four or five people there, and I believe he waved to them." (When asked how many shots he heard) "Three" (When asked the time span of the shots) "I would say 5-6 seconds." (When asked if the shots came in a pattern) "Yes. The first 2 came almost simultaneously, came one right after the other. There was a slight hesitation, then the third one." (Asked his reaction) "My reaction is in part a reconstruction and is that they came from the right rear. That would be my best judgment." (When asked how others reacted) "The agents all turned to the rear...I would think watching the President when the shot—the first shots hit—that it would be automatic it would have to have come from the rear. (When asked again about the agents' reactions) "The reaction I note would be right rear. And again, looking at the manner of the President's movement I would think you would have to feel the thrust of the shot was from the right rear...He was leaning out waving. He may have just been withdrawing his hand. And the shot hit him, and threw him to the left. He slumped on Mrs. Kennedy. (When asked which shot this was) "It was not the third shot. Whether it was the first or second, I would not know...If I had to pick one of the two, I think it might have been the second shot." (A 1968 conversation with Congressman Tip O'Neill, as recounted in O'Neill's autobiography *Man of the House*, 1987) "I was surprised to hear O'Donnell say that he was sure he had heard two shots that came from behind the fence. 'That's not what you told the Warren Commission,' I said. 'You're right,' he replied. "I told the FBI what I had heard, but they said it couldn't have happened that way and that I must have been imagining things. So I testified the way they wanted me to. I just didn't want to stir up any more pain and trouble for the family...The family--everybody wanted this thing behind them." (Johnny We Hardly Knew Ye, co-written with Dave Powers, published 1972) "I had just finished speaking when we heard shots, two close together and then a third one. There must have been an interval of at least five seconds before the third and last shot because, after the second shot, Dave said to me, "Kenny, I think the President's been shot." I made a quick sign of the cross and said "What makes you think that?" "Look at him!" Dave said. "He was over on the right, with his arm stretched out. Now he's slumped over toward Jackie, holding his throat." While we both stared at the President, the third shot took the side of his head off. We saw pieces of bone and brain tissue and bits of his reddish hair flying through the air...I said to Dave, "He's dead." (6-15-75 article in the *Chicago Tribune*. This article reported that a source within the CIA had told the Church Committee that Kennedy aides Kenneth O'Donnell and David Powers had been pressured by the FBI into leaving their

suspicious that shots came from the front out of their statements. It also quoted O'Donnell's response to this allegation.) "The story is an absolute lie," O'Donnell declared in a phone interview. "I'm not accusing the reporter, but whoever gave that story is lying. It's an absolute, outright lie." (Later in the article) "I spent four hours before the commission and my testimony is quite clear," O'Donnell said in the phone interview. "I told them exactly what I saw. I was in charge of the whole operation so I know what happened. I arranged the whole trip..." "I testified under oath and I stand by it." O'Donnell recalled he told the Warren Commission he heard two shots, the first of which he initially thought was a firecracker. Both came from behind, he said. And Powers, O'Donnell said, recalled hearing three shots, all from the same direction. He denied that either he or Powers ever had suspicions that the shots came from anywhere but the depository. Further, O'Donnell asserted he was never pressured or asked to change or omit anything from his testimony, either by the FBI or CIA. "I met with them every day (while working for President Johnson on the investigation)" O'Donnell said. "Not one of them ever even raised the question. They worked for me. I didn't work for them." (Interview with O'Donnell's son, Kenneth O'Donnell, Jr. by David Talbot, as reported in *Brothers*, published 2007) (On the source of the shots heard by his father) "He said there was fire from two different directions." (Quoting his father on his father's impressions of the Warren Commission) "I'll tell you this right now, they didn't want to know"... (It was) "the most pointless investigation I've ever seen."

Analysis: from his jumping to the third shot in his testimony, it seems likely that O'Donnell decided that the "firecracker" he heard was in fact two separate shots. His subsequent statements that the first two shots rang out "simultaneously" and "one after another," and that there was a space of five seconds before the head shot, confirm this suspicion. That the quickness of these first two shots troubled O'Donnell, furthermore, is suggested by his subsequent recollection that he'd only testified to hearing two shots. His testimony that he thought Kennedy may have been hit by the second shot--a shot fired only a split second after the first shot, mind you--is therefore of little help to the LPM scenario. It is, in fact, an argument against it. More concretely, O'Donnell's recollection that Kennedy was waving to a small group of people at the time he was hit, and that this happened near a "grass plot," suggests the first shot was heard around frame 190. Since Powers later confirmed O'Neill's recollection about O'Donnell's impression of the source of the shots, moreover, we should suspect O'Donnell's denial of this to the Chicago Tribune in 1975 was, in fact, a lie. His misrepresentation of Powers' impression of the shots--that they all came from behind, when Powers from the earliest claimed he'd had an impression the final shot came from the front--suggests, unfortunately, that he was not above such behavior. **First shot hit 190. First two shots may have been bunched.**

David Powers, another Kennedy assistant, rode in the middle seat to the right of O'Donnell. (4-8-64, 8-10-64, 10-21-64, 3-17-65, and 5-24-65 interviews with William Manchester, as reported in the TV documentary "The Kennedy Assassination: 24 Hours After," 2009) "I am looking at the Presidential car. His hand was waving and now he put his hands slowly to his throat and slumps towards Jackie. And I say to Kenny 'I think the President's been hit.' Kenny and I not only saw the next one we heard it. We just saw that handsome head get blown off. We heard the shot and we heard the impact of the shot. It was the most sickening thing--like a grapefruit being thrown against a brick wall." (4-8-64, 8-10-64, 10-21-64, 3-17-65, and 5-24-65 interviews with William Manchester, as represented in *The Death of a President*, 1967) (On his response to the first shot) "Powers, in Halfback's right-hand jump seat, shouted at O'Donnell, 'I think the President's been hit!'" (Manchester's narration for the aftermath of the shooting) "In the jumps seats, Ken O'Donnell and Dave Powers have heard the sickening impact of the fatal bullet, and Dave has seen it. O'Donnell crosses himself. Powers whispers 'Jesus, Mary, and Joseph...'" (On whether or not Rufus Youngblood actually climbed into the back seat of LBJ's car, or simply turned around, as purported by Senator Ralph Yarborough) "Dave Powers, who glanced back, confirms the Senator." (5-18-64 affidavit, 7H472-474): "the first shot went off and it sounded to me as if it were a firecracker. I noticed then that the President moved quite far to his left after the shot from

the extreme right hand side where he had been sitting. There was a second shot and Governor Connally disappeared from sight and then there was a third shot which took off the top of the President's head and had the sickening sound of a grapefruit splattering against a wall...My first impression was that the shots came from the right and overhead, but I also had a fleeting impression that the noise appeared to come from the front in the area of the triple overpass." (A **1968** conversation between Ken O'Donnell and Tip O'Neill recounted in O'Neill's memoir *Man of the House*, 1987) "I was surprised to hear O'Donnell say that he was sure he had heard two shots that came from behind the fence. 'That's not what you told the Warren Commission,' I said. 'You're right,' he replied. 'I told the FBI what I had heard, but they said it couldn't have happened that way and that I must have been imagining things. So I testified the way they wanted me to. I just didn't want to stir up any more pain and trouble for the family...The family--everybody wanted this thing behind them.' Dave Powers was with us at dinner that night, and his recollection of the shots was the same as O'Donnell's. Kenny O'Donnell is no longer alive, but during the writing of this book I checked with Dave Powers. As they say in the news business, he stands by his story." (**5-13-76** interview on WGBH TV, as quoted in L.A. Free Press Special Report Number 1: JFK Murder Solved, published 1976) "If the bullet that wounded the President was not the same bullet that wounded John Connally, and I testified that it wasn't, and John Connally testified that it wasn't, then there would have had to be more than one assassin."

(**11-19-78** UPI article found in the Reading Eagle) "I was in the Secret Service car," said Powers, "Me and Kenny O'Donnell. When I saw the first bullet hit him as he was waving, I turned to Kenny and said 'My God, they've shot our president.' Kenny blessed himself. Then I saw the second bullet hit the back of his head..." and the voice trails off into silence. Then, very softly, Powers adds, "Every day I think about it. Every day I get a pain in the back of my head where I saw the president get hit." (A **1980** conversation with Gary Mack, as recounted in a series of emails from Mack to John McAdams, posted online by John McAdams, 4-9-03) "Powers told me he and O'Donnell both thought one of the shots might have come from the front. When they told the FBI, the agents didn't take them seriously. Dave was quite insistent on that." (In a follow-up email posted by McAdams at the same time, Mack clarified) "Powers may have told me one or two of the shots might have come from the front--my note to you was not taken from any notes I took at the time. This was a long conversation we had by phone around 1980. Powers told me they didn't know that shots came from the front, just that they thought one or two might have. He never said or hinted they were intimidated to change their story or to keep quiet. But they were disappointed that no one they told the story to seemed very interested in what they thought." (**11-20-83** article by Thomas Farragher on Powers found in the New London, Connecticut Day) "The time the first shot was fired, I was 7 yards away from the President. I'm looking at the President. The Secret Service are trained to look elsewhere. And he had been waving to the people on the right side. His hand was way over. And I saw him bring his hand in and then fall toward Jackie. Now a bullet travels faster than the speed of sound. So I saw this happening and then I heard that noise at the same time that I would have thought was a firecracker. But I didn't see the President react that way and I turned to Ken O'Donell (another JFK aide). He's in the jump seat beside me. And I said 'Ken, our President has been shot.' And I remember Kenny made the sign of the cross. I believe that the second shot hit John Connally, and then while we're riding, we're praying. 'You see it's happening behind the agent driving the car--Bill Greer. Great guy. Loved the President. And we're doing about 12 mph but it's happening behind him and he's not aware of it. It seemed to me it was about five seconds from the shot that wounded the President and the one that killed him.'"

(**5-30-87** AP article featuring an interview with Powers found in The Evening News) "On November 22, 1963, Powers was in the car directly behind Kennedy's when he heard two shots ring out in succession and saw the President slump down. Then, a few moments later, a third shot ripped open the President's head." (**8-31-87** AP article by Christopher Callahan on Tip O'Neill's just published claims

about O'Donnell and Powers, found in the New London, Connecticut paper The Day) "Powers, in a telephone interview last week, said O'Neill's version is incorrect. Powers, curator of the JFK Library in Boston, said he did not want to address O'Neill's points directly. 'It's too painful to talk about,' said Powers." (Interview in **1988** TV documentary JFK: The Day The Nation Cried) "Coming down from that short flight from Fort Worth to Dallas, I'm talking to the President and Jackie in the back of the plane and I said 'Mr. President, you wave to the Texans on the right, and Jackie'll wave to the ones on the left.' And this is exactly what's happening when the first shot was fired... I had heard the noise. I'm looking at the President at the same time, and he had pulled his hand up toward his throat and he fell over toward Jackie. There's a second shot, and now Governor Connally is out of sight. The first two sort of came close together, but now we're riding and praying. And now we see the shot that hit the President in the head." (**6-5-91** interview with Lamar Waldron and Thom Hartmann, as recounted in Ultimate Sacrifice, 2005) "We were shocked when Dave Powers, head of the John F. Kennedy Presidential Library in Boston and a close aide to JFK, vividly described seeing the shots from the "grassy knoll." Powers said he and fellow JFK aide Kenneth O'Donnell clearly saw the shots, since they were in the limo right behind JFK. Powers said they felt they were "riding into an ambush"--explaining for the first time why the driver of JFK's limo slowed after the first shot. Powers also described how he was pressured to change his story for the Warren Commission." (**11-7-91** article in the L.A. Times) "I heard the first shot, positively above and behind me," says Powers, who was riding behind Kennedy's car. 'I'm looking at the President like I always did, and I saw him bring his hand in and kind of fall toward Jackie. I said 'Our President's been shot!' and now I see that terrible thing that hit the President on the head, and you never talk about it,' he says, his voice tightening. 'And now the car begins to accelerate.'"

Analysis: as the leftward shift of the President noted by Powers as a response to the first shot occurred just after frame 190, it is clear he felt the first shot occurred at this time and that it struck Kennedy. His appraisal of the second shot is far less clear. While he indicated this shot came shortly after the first, he also claimed the gap between the first and third shots was but five seconds and that he'd talked to O'Donnell just after the first shot. O'Donnell, as we've seen, heard no shots between Powers' comments on the first "firecracker" sound, and the head shot. This suggests that Powers was talking to O'Donnell when he thinks the second shot was fired, and that he didn't actually hear this shot. His statements to Manchester certainly suggest as much, for there he described but two bursts of gunfire. Powers' associating the second shot with Connally's disappearing from sight, which did not occur till just before the head shot, moreover, suggests that he wasn't sure when he heard a third shot, and only tried to make sense of it later. Since Powers associated the second shot with an occurrence just before the head shot, moreover, he may also have heard the last two shots bunched together, and then moved the second shot closer to the first so he could correlate his recollections with O'Donnell's. Although O'Donnell clearly lied about his own impression of the shots, that Powers' original statement suggests there may have been a shot from the front, suggests that neither of them were actually pressured to change their impression. It seems likely then that O'Donnell changed his story on his own, for reasons all his own. That Powers told Waldron he'd been pressured into changing his story as well, however--when his story doesn't appear to have actually been changed--outside his addition of a shot that hit Connally--is indeed a bit curious. Perhaps he'd said they were uninterested in what he had to say, and Waldron had misinterpreted or misrepresented his words. Or perhaps Powers was simply exaggerating. **First shot hit 190-224. Possibly heard but two shots. Last two shots possibly bunched together.**

John Ready rode on the outside of the right side of the back-up. (**11-22-63** report, 18H750) "I heard what sounded like firecrackers... The shooting occurred as we were approaching the Thornton Freeway... There appeared to be no spectators on the right side of the roadway... After the initial shot I attempted to locate the area from where they had come from but was not able to. It appeared that the

shots came from my right-rear side.” (Undated report, presumably collected with the **11-29-63** reports of the other agents in the detail, 18H 749) “I heard what sounded like firecrackers going off...I immediately turned to my right rear trying to determine the source but was unable to determine the exact location.” (**12-8-63** signed statement in the Secret Service report on the behavior of the presidential detail on the night before the shooting, 18H690) “I departed the Texas Hotel, Fort Worth, Texas, at about 12:20 A.M. Friday, November 22, 1963, walking 10-15 minutes to the Fort Worth Press Club...While there I had two cans of beer and left this club between the time of 1:15 A.M. and 1:30 A.M. I arrived at The Cellars, a Fort Worth coffee house, about 1:45 A.M. Here I had two, a third which I consumed partially, fruit drinks. I remained here until about 3:15 A.M., then departed, and walked to the Texas Hotel.” (Note: Ready reported for duty at 7:20 A.M., 18H679) (**5-24-65** interview with William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) “Lawson, Kellerman, Greer, Ready, and Hill, all thought that a firecracker had been exploded.” (**3-1-78** interview with HSCA investigator, file #180-10071-10165) “He thought the first shot was a firecracker thrown from behind them. He said that the second and third shots were closer in time than the first and second shots. He heard someone say either “He’s hit,” or “He’s shot,” but doesn’t remember when it was said, relative to the second or third shot.” **Analysis:** while Ready’s statement is incredibly vague, the Zapruder film shows his head begin to turn to its right after frame 190. By the time of the Altgens photo, Z-255, he is totally turned around. His grouping of the last two shots completes the picture. **First shot hit 190-224. Last two shots bunched together.**

William McIntyre rode on the outside of the driver’s side of the limousine, behind Clint Hill. (**11-22-63** report, 18H748) “As we approached the underpass leading to the Thornton Freeway, there was little if any crowd present. I heard three shots fired...I recall a rolling lawn to the right of the area where the President was shot, and seem to also recall an expanse of lawn to the left of the Presidential vehicle.” (**11-29-63** report, 18H746-747) “The Presidential vehicle was approximately 200 feet from the underpass when the first shot was fired, followed in quick succession by two more. After the second shot, I looked at the President and witnessed his being struck in the head by the third and last shot. By that time, Mr. Roberts had used the radio in our car to direct the vehicles to a hospital.” (**1-31-78** interview with HSCA investigator, file #180-10082-10454) “As they were approaching the overpass, McIntyre heard the first report, which he described as “very loud.” He said that he had no doubt that it was a shot. There was a pause and then two more shots in succession. McIntyre stated that at the first two shots, he was scanning the area to try to determine where they were coming from. He stated that the President was directly in his vision when the third shot was fired and he saw the President struck in the head. He remembers saying to Jack Ready ‘What the hell was that?’ He feels certain that Clint Hill left the running board and ran to the limousine before the third shot was fired.” (**11-23-03** article in the Bucks County Courier-Times, purportedly written by an old friend of “Tim” McIntyre’s, and relating what McIntyre purportedly told this friend in December 1963) “By the time the motorcade turned onto Elm Street, the security detail was beginning to feel some relief. Now, in just a few seconds, the motorcade would be on a freeway and picking up speed. Then Tim heard the first rifle report. But was it actually gunfire or just a firecracker? The ominous clue was the unusual activity in the president’s car. A second or two later came another loud crack and Tim remembered instinctively turning to his right, the direction of the now-threatening sounds. Quickly glancing back toward the president, he heard still another loud report and was horrified to witness what he described as the back of the president’s head exploding.” **Analysis:** the limousine was far more than 200 feet from the underpass at the time of the first shot under any scenario, but McIntyre’s statement is particularly damaging to the LPM theory, which holds the President was barely off of Houston Street. His description of the rolling lawn is certainly more in line with the first shot occurring at frame 190 or afterwards than frame 160. The article by his supposed friend is also of interest in that it suggests McIntyre thought the first shot hit. Still, it is a second-hand report, 40 years removed from the supposed conversation, and of little

value. **First shot hit 190-224. Last two shots bunched together.**

Paul Landis stood along the right side of the back-up car behind John Ready. (11-27-63 report, 18H758-759) "At this point the President's car and follow-up car had just completed its turn and both were straightening out. At this moment, I heard what sounded like the report of a high powered rifle behind me. My first glance was at the President, as my eyes were almost straight ahead at that time. I did not realize that the President was hit at that point. I saw him moving and thought he was turning in the direction of the sound. I immediately returned my gaze to the building which I had observed before, at a quick glance saw nothing and dropped my eyes to the crowd, scanning it quickly from right to left....I think I recall Special Agent Jack Ready saying, "What was it? A firecracker?" I remarked "I don't know. I don't see any smoke." All during this time I was returning my gaze to the President's car. ...I looked at the front right tire of the President's car and saw it was alright...I glanced back towards the President, he still appeared upright in his seat, leaning slightly towards Mrs. Kennedy. It was at this moment that I heard a second report and saw the President's head split open and pieces of flesh and blood flying through the air." (11-30-63 report, 18H751-757) "As the President's car continued around the corner, I continued to survey the crowd along the righthand side of the road and noticed that it was fairly scattered, with hardly enough people to form a single line. I continued to look ahead to an overpass over the route we were traveling. At approximately this point, I would say, the President's car and the Follow-up car had just 'completed their turns and both were straightening out. At this moment I heard what sounded like the report of a high-powered rifle from behind me, over my right shoulder. When I heard the sound there was no question in my mind what it was. My first glance was at the President, as I was practically looking in his direction anyway. I saw him moving in a manner which I thought was to look in the direction of the sound. I did not realize that President Kennedy had been shot at this point. I immediately returned my gaze, over my right shoulder, toward the modernistic building I had observed before. With a quick glance I saw nothing and immediately started scanning the crowd at the intersection from my right to my left. I observed nothing unusual and began to think that the sound had been that of a fire cracker but I hadn't seen any smoke. In fact, I recall Special Agent Jack Ready saying, "Oh, what was it? A fire cracker?" I remarked, "I don't know; I don't see any smoke." So far the lapsed period of time could not have been over two or three seconds. All during this time I continued to scan the crowd, returning my gaze towards the President's car. It must have been another second or two before the next shot was fired because, as I recall having seen nothing out of the ordinary, I then thought that maybe one of the cars in the motorcade had had a blowout that had echoed off the buildings. I looked at the right front tire of the President's car and saw it was all right. I then glanced to see the right rear tire, but could not because the Follow-up car was too close. I also thought of trying to run and jump on the President's car but did not think I could make it because of the speed at which we were traveling. I decided I had better stay where I was so that I would at least be near the First Lady, to whom I am assigned. I think that it was at this point that I thought, "Faster, Faster, Faster," thinking that we could not get out of the area soon enough. However, I don't have any idea as to how fast we were then moving. I had drawn my gun, but I am not sure exactly when I did this. I did leave my suit unbuttoned all during the motorcade movement, thinking at the time that I could get to my gun faster this way, if I had to. I glanced towards the President and he still appeared to be fairly upright in his seat, leaning slightly toward Mrs. Kennedy with his head tilted lightly back. I think Mrs. Kennedy had her right arm around the President's shoulders at this time. I also remember Special Agent Clinton Hill attempting to climb onto the back of the President's car. It was at this moment that I heard a second report and it appeared that the President's head split open with a muffled exploding sound. I can best describe the sound as I heard it, as the sound you would get by shooting a high powered bullet into a five gallon can of water or shooting into a melon. I saw pieces of flesh and blood flying through the air and the President slumped out of sight towards Mrs. Kennedy. The time lapse between the first and second report must have been about four or five seconds. My immediate

thought was that the President could not possibly be alive after being hit like he was. I still was not certain from which direction the second shot came, but my reaction at this time was that the shot came from somewhere towards the front, right-hand side of the road. I did not notice anyone on the overpass, and I scanned the area to the right of and below the overpass where the terrain sloped towards the road on which we were traveling.”

(Signed statement in the **5-5-64** Secret Service report on the behavior of the presidential detail on the night before the shooting, 18H687) "I arrived at the Press Club at approximately 1:15 A.M., where I had one scotch and soda. I departed the Press Club at approximately 1:45 A.M. I arrived at The Cellar at approximately 2:00 A.M., where I had two drinks which I believe were call 'Salty Dick.' I departed The Cellar at approximately 5:00 A.M." (Note: Landis reported for duty at 8:05 A.M., 18H679) (**11-20-83** AP article found in the Elyria Ohio Chronicle-Telegram) "I used to hunt a lot and you know a gunshot sounds pretty familiar. You know what that's like. I knew it came from over my right side, or right shoulder" Landis, who was assigned to protect Jacqueline Kennedy, did not see the first shot hit the President...He recalls seeing fellow agent Clint Hill, also on the First Lady detail, jump from the left front bumper and run forward..." I turned and just as I turned to look at the President's car, that's when I heard the second shot, and saw him get hit in the head," Landis said. "I saw the piece of flesh or head fly off. It was right all about that point that the cars were accelerating and a lot going on. People were diving all over the place." (Interview in Discovery Channel program The Kennedy Detail, first broadcast **12-2-10**) "I head a sound over my right shoulder which I immediately recognized as a gunshot. I'd been a hunter. I'd fired high-powered rifles. And I knew what the sound was like. (For the next sentence, Landis is off camera) I heard a second report. (He is then back on camera) I remember seeing Clint jump off the running board going for the President's limo. I just kept thinking 'C'mon, Clint, go, go, go. (Moments later) "I saw the president's head explode just like a melon, that would've, just a lot of blood." (**5-5-11** article on Landis by Leon Bib, found on the WEWS website) "I heard the gunshot," said Landis. "It came over my right shoulder." Landis was within a few feet of the presidential limousine, the top of which had been removed at the president's request. Movies of that day show Landis and several other secret service agents trailing the limousine as each man watched for any unusual movement in the crowds of people who had lined Dallas streets to get a view of the nation's chief executive. Landis said when he heard the first shot, his eyes turned toward where he thought the shot had originated. Still searching the crowd, there came another shot in quick succession. "And when my eyes came back to the president again, it was a third shot and that was the one that hit him in the head," Landis remembered."

Analysis: Landis only heard two shots: one early shot striking the President, and the head shot, which he initially thought may have come from the knoll. As Hill, he makes note of the unusual sound of the last shot. Was this the two shots heard by others heard as one? It is also worth noting that the Discovery Channel, in The Kennedy Detail, hid Landis' only hearing two shots from its viewers by inserting his stating he heard a second report into their program BEFORE Clint Hill and then Landis described the head shot. They failed to reveal that the second report heard by both Hill and Landis, the witnesses on the program, WAS the head shot. While Hill claimed he'd failed to hear what the program's producers would have us believe was the second shot because he was focused on running to the limo, Landis had no such excuse. And so, presto change-o, with some creative editing, the program's producers had Landis mention a second report when the program's producers wanted him to say there was a second shot--before he noticed Clint Hill running to the limo and saw Kennedy's head explode--even though he'd never prior to this program claimed to hear such a shot. Shame shame shame. That Landis was a witting participant in this deception is suggested by his later words to Leon Bib, in which he suddenly claimed to hear a third shot. Shame and shame again. **Only heard two shots. First shot hit 190-224.**

George Hickey sat on the driver's side of the rear seat of the back-up car. (**11-22-63** report, 18H765)

“As 100-X made the turn and proceeded a short distance, I heard what seemed to me that a firecracker exploded to the right and rear. I stood partially up and turned to the rear to see if I could observe anything. Nothing was observed and I turned around and looked at the President’s car. The President was slumped to the left in the car. I heard what appeared to be two shots and it seemed as if the right side of his head was hit and his hair flew forward.”(11-30-63 report, 18H761-764) “Just prior to the shooting the Presidential car turned left at the intersection and started down an incline toward an underpass followed by 679x. After a very short distance I heard a loud report which sounded like a firecracker...I stood up and looked to my right and rear in an attempt to identify it. Nothing caught my attention except people shouting and cheering. A disturbance in 679X caused me to look forward to the President’s car. Perhaps 2 or 3 seconds elapsed from the time I looked to the rear and then looked at the President. He was slumped forward and to his left, and was straightening up to an almost erect sitting position as I turned and looked. At the moment he was almost sitting erect I heard two reports which I thought were shots and that appeared to me completely different in sound from the first report and were in such rapid succession that there seemed to be practically no time element between them. It looked to me as if the president was struck in the right upper rear of the head. The first shot of the second two seemed as if it missed because the hair on the right side of his head flew forward and there didn’t seem to be any impact against his head. The last shot seemed to hit his head and cause a noise at the point of impact which made him fall forward and to his left again. Possibly four or five seconds elapsed from the time of the first report and the last. At the end of the last report I reached to the bottom of the car and picked up the AR 15 rifle, cocked and loaded it, and turned to the rear. At this point the cars were passing under the over-pass and as a result we had left the scene of the shooting. I kept the AR 15 rifle ready as we proceeded at a high rate of speed to the hospital.” (6-15-78 HSCA interview, as reported by Joe Backes in his 1-30-96 article The 12th Batch) "After they made the turn from Houston onto Elm, the Presidential limousine was about 20 feet ahead when Hickey heard what he thought sounded like a firecracker coming from his right rear. He stood up and looked towards the right rear but observed nothing. He heard excited talking in the front of his car and turned to the front. He observed that the President had slumped forward and to the left. Mrs. Kennedy appeared to be aiding him and he was coming to an upright position. Hickey then heard two reports sounding like gunfire and saw what he described as a cloud of dust appear from the right rear of President Kennedy's head. Hickey stated that he would guess at about 3 to 4 seconds between the first and second shots. He stated that the second and third shots were almost simultaneous." **Analysis:** As Hickey makes a rapid turn to his right in the split second between the Betzner photo (z-186) and the Willis photo (z-202), and as he states he turned to the right after hearing the first shot, his statements are exceptionally helpful. His statement that the last two shots came in together but that he thought the first one merely brushed past Kennedy’s hair is also informative, and is indicative that the first of these two shots struck the President. Hickey, not surprisingly, was not called to testify by the Warren Commission. **First shot hit 190. Last two shots bunched together (with the last shot probably after the head shot).**

Isolating Bennett

At left and below: blow-ups from the Willis photo at far left and the Altgens photo at bottom left. Both show Glen Bennett, in the back seat of the follow-up car, looking to his right.

While the Warren Commission and its defenders have long used the statements of Secret Service agent Glen Bennett to suggest the first shot missed, they have been quite wrong to do so. Bennett reported that he heard a shot and immediately looked toward the President, only to notice a shot hit the president in the back and then a second one hit him in the head. While Bennett's notes and subsequent report show some changes, and make his actual recollections unclear, the Willis photo taken at frame 202 of the Zapruder film shows him looking to his right, and the Altgens photo taken at frame 255 of the Zapruder film, less than 3 seconds later, shows him still looking to his right. This makes it extremely doubtful he saw Kennedy hit circa frame 224 of the Zapruder film, as pushed by so many.

Isolating Bennett

Glen Bennett sat on the right side of the rear seat of the back-up car. (notes written on **11-22-63**, 24H541-542) "We made a left hand turn and then a quick right. The President's auto moved down a slight grade and the crowd was very sparse. At this point I heard a noise that immediately reminded me of a firecracker. I immediately, upon hearing the supposed firecracker, looked at the boss's car. At this exact time I saw a shot that hit the boss about 4 inches down from the right shoulder. A second shoot followed immediately and hit the right rear high of the boss's head. I immediately hollered to Special Agent Hickey, seated in the same seat, to get the AR-15. I drew my revolver and looked to the rear and to the left--high left--but was unable to see any one person that could have rendered this terrible tragedy." (**11-23-63** report, 18H760) "The motorcade entered an intersection and then proceeded down a grade. At this point the well-wishers numbered but a few, the motorcade continued on down this grade en route to the trade mart. At this point I heard what sounded like a firecracker. I immediately looked from the right/crowd/physical area and looked towards the President who was seated in the right rear seat of his limousine open convertible, At the moment I looked at the back of the President I heard another firecracker noise and saw the shot hit the President about four inches down from the right shoulder. A second shot followed immediately and hit the right rear high of the President's head. I immediately hollered "he's hit" and reached for the AR-15 located on the floor of the rear seat. Special Agent Hickey had already picked-up the AR-15. We peered towards the rear and particularly the right side of the area. I had drawn my revolver when I saw SA Hickey had the AR-15. I was unable to see anything or one that could have fired the shoots." (Signed statement in the **5-5-64** Secret Service report on the behavior of the presidential detail on the night before the shooting, 18H682) "I arrived at the Press Club about 12:30 A.M. and joined agents at a table...I had two beers, thanked the hostess for the club's hospitality and departed about 1:30 A.M....I arrived at The Cellar about 1:40 A.M. and had two

grape fruit drinks. I departed The Cellar at approximately 3:00 A.M. and went directly to the hotel." (Note: Bennett reported for duty at 7:20 A.M.) (1-30-78 interview with HSCA investigator, file # 180-10082-10452) "He remembers hearing what he hoped was a firecracker. He then heard another noise and saw what appeared to be a nick in the back of President Kennedy's coat below the shoulder. He thought the President had been hit in the back...he believes the first and second shots were close together and then a longer pause before the third shot...he does not recall any agents reacting before the third shot. He believes he called out to no one in particular, after the third shot, 'he's been hit'.... he believes he saw the nick in the President's coat after the second shot."

Analysis: due to Bennett's suggestion, in his 11-23 report, that the President was hit in the back by the second shot, Bennett is a star witness for LPM theorists. He is not deserving of this star status, however. One problem is that he said the bullet struck Kennedy 4 inches below his shoulder—too low to support the single-bullet theory. He also said the limo was heading down a grade when the first shot rang out, and that the crowd was very sparse—a description far more in line with a shot at 190-224 than at 160. He also said the third shot immediately followed the second. While Bennett was later to tell the HSCA that there was more space between the second and third than between the first and second, there is reason to believe this was simply his adjusting his memory to fit the single-assassin scenario. After all, if he'd really witnessed the second bullet striking Kennedy at Z-224 but didn't yell "he's hit!" until after the President was shot in the head five seconds later, he would have to have been the worst secret service agent in history. There's also the problem that the Willis photo at Z-202 shows Bennett still staring to his right. If there'd been a shot at Z-160 and had Bennett immediately turned to his left, as pushed by those claiming Bennett's statement the Rosetta Stone, he should already be looking at Kennedy in the Willis photo. This suggests instead that Bennett heard a shot at 190, not 160. Another problem, as pointed out by researcher Robert Harris, is that the Altgens photo shows Bennett still looking to his right at Z-255. This might make one suspect he heard an early shot, turned to face the President after Z-255, and heard two more shots ring out, associating the first shot with the "nick" in the president's back he first noticed at this time, and the second with the bullet striking Kennedy in the head. This possibility is further supported by the fact that Bennett—in opposition to most every other witness to the president's first being struck—failed to note his subsequent lurch to the left or lean forward. It is also supported by the fact that when speaking to the HSCA's investigator, Bennett backtracked from claiming he saw the bullet hit Kennedy and said instead that he'd noticed a nick in the back of the President's coat. There's another possibility, however. In Bennett's original notes he does not say that he saw the second shot hit the president, or that he heard a shot when he looked at the President and noticed his back wound. He says he saw "a shot that hit the boss". He then writes that "A second shoot followed immediately and hit the right rear high of the boss's head". This suggests the possibility that when Bennett looked at the President he saw "that a shot *had hit* the boss" and that he then saw a second shot hit Kennedy in the head. This would mean that he'd heard but two shots, which puts his words in line with fellow Secret Service agents Clint Hill and Paul Landis. Should one doubt that Bennett would change his impressions overnight, and go from hearing two shots to the by-then politically-correct three shots, or that someone else would write his 11-23 report and correct his impression, one should consider that in his original notes, Bennett asserted that he'd yelled to Hickey to get the AR-15 rifle, and that only a day later he reported that he tried to get the rifle himself, but Hickey beat him to it. The notes written before Bennett knew the official story also reflect that he turned to his left upon hearing the shots, while the typed up report the next day leaves this out, and says instead that he looked at "particularly the right side of the area." These changes then reflect either Bennett's confusion or his desire to bring his story in alignment with what he'd been told. Maybe someone typed-up Bennett's 11-23 report based on his notes, and made a few changes. No matter what, we just can't be sure what he saw. **Possible LPM scenario. Possible first shot hit 190, with the last two shots bunched together. Possibly heard but two shots.**

After looking at the testimony of but **19** motorcade witnesses--5 in the limousine, 4 on motorcycles, 10 in the follow-up car, we can notice that the pattern established by the earwitnesses is continuing. There are **10** motorcade witnesses now whose statements confirm there was an early hit followed by two shots bunched together. There are **3** others who failed to comment on the bunching but who described the first shot in such a manner that we can conclude that it hit. There are **4** others whose statements fit this same scenario provided they heard the last two shots as one, or missed hearing the last shot. While an LPM theorist might say that the statements of these last four are also consistent with there being a first shot miss at frame 160, the fact is that this would mean speculating that these witnesses didn't hear a shot that NO ONE who heard three shots has yet described. It is undoubtedly much more logical, when comparing those who heard two shots against those who heard three shots, to assume that those who heard only two shots missed hearing a shot that was *heard* by those who heard three shots. It is also much more logical to conclude that those witnessing a man's head explode would not make note of a sound a second or two later, than that 13 of the closest witnesses, men all well familiar with guns, would believe they heard two shots after Kennedy was first hit when there was but one. It is also significant that there are convincing reasons to doubt the accuracy of the statements of the only two witnesses to suggest the first shot missed. For these reasons and more, I submit that the LPM theory is garbage and should be buried. Those already convinced and bored with this may want to jump ahead a few chapters. Those still curious or still subscribing to the LPM scenario should read on.

Chapter 6: Pieces on the Road

A continuation of our look at the eyewitness statements, with a focus on the witnesses in the motorcade

Finding The Right Time

Above: Z-160

Finding the Right Time

As noted in the discussion of the eyewitness testimony of those in the follow-up car, an analysis of the Zapruder film can help us put the testimony of the eyewitnesses in context. In frame 193, agent George Hickey is looking to his left, but by frame 202, less than half a second later, he has turned to his right. By frame 202, agent John Ready has also turned to his right. By frame 223, agent Clint Hill is turning to his right. We can study bystanders as well. In frame 160, 10-year old Rosemary Willis can be seen running beside the limousine. In frame 193 we can see that she is still running. By frame 202, on the other hand, she has come to a complete stop. As she said she stopped after hearing the first shot, this helps us place the first shot around frame 190. It seems more than a coincidence that her actions correlate to a shot being fired circa frame 190, the moment for a first shot established by the photographs and statements of both Phil Willis and Hugh Betzner. Even so, LPM theorists use young Rosemary as proof the first shot was fired circa frame 160. In one of the many misleading statements in his hugely influential book, *Case Closed*, Gerald Posner writes "By frame 187, less than 1.5 seconds later (that is, after Posner's proposed moment for the first shot) the (Zapruder film) enhancement clearly shows she (Rosemary Willis) had stopped, twisted completely away from the motorcade, and was staring at the School Book Depository." As you can see by looking at her legs in the slide above, Miss Willis was still running at frame 193, and didn't come to a stop until frame 202. Posner was bluffing (aka lying).

The long-term effects of this bluff have been palpable. That Willis stopped immediately after a shot fired circa frame 160 of the Zapruder film has become so widely accepted among single-assassin theorists that no one even blinked when someone as supposedly evidence-based as Larry Sturdivan inaccurately asserted (in his book, *The JFK Myths*, no less) that "At frame 165, Rosemary rapidly begins to slow her running steps and comes to a complete stop before frame 190."

But don't take my word for it. Richard Trask, a fair-minded single-assassin theorist, conducted a book-length study of the Zapruder film entitled *National Nightmare on Six Feet of Film*, in which he concluded that Miss Willis turned and faced the direction of her parents, with the school book depository in the background, "around Z200". At the bottom of this page, moreover, was an image of Z193, with a caption declaring that Miss Willis was still running in this frame.

Heck, even the HSCA, which concluded the first shot came at 160, and was searching for evidence of this shot, believed Miss Willis continued running past Posner's stopping point of 187. The HSCA report dealing with this issue, posted online by researcher Barb Junkkarinen, reads, in part, "there was not a reaction on the part of anyone except Governor Connally to a sharp noise or other attention-seizing distraction. However, a young girl, recently identified as the daughter of Willis (who made one of the important still photographs of the Presidential limousine) can be seen running or trotting across the grass beyond the far curb of the street where the limousine was traveling. She appears to be running in the same direction as the motion of the limousine, from about frame 165 to beyond frame 190. At frame 190 she begins a sudden stop, and by frame 195 she has turned, sharply to her right. However, her position at the time she stops is about 10 to 12 feet behind and to the left of the limousine. So, the position of her head after completing the turn, at frame 195, indicates that she is looking back up the street in a direction well behind the limousine itself. This action can be interpreted as a response to some sharp noise or other noticeable distraction."

Unfortunately, the HSCA failed to match the Zapruder film with the eyewitness testimony. If they had, they would have realized that the light-blue Vice-Presidential limousine was just making the turn at frame 160, with its Secret Service back-up car in close-pursuit, and that there was no way an audible shot was fired at this point. As demonstrated below...

Hurchel Jacks was the driver of the light blue Lincoln transporting Vice-President Johnson. (11-28-63 statement to the Secret Service, 18H801) "We had just turned from Main onto Houston, drove one block, and turned left. My car had just straightened up from making the left turn. I was looking directly

at the President's car at that time. At that time I heard a shot ring out which appeared to come from the right rear of the Vice-President's car. Mr. Rufus Youngblood, the Secret Service Agent riding in my car asked me what that was and at the same time he advised the Vice President and Mrs. Johnson to get down. He climbed to the rear of the seat with the Vice President and appeared to be shielding the Vice president with his own body. At that time I heard two more shots ring out." (Interview with CBS broadcast 6-26-67) "The car in which I was driving which occupied the Vice-President had just completed its turn and I felt a blast of which appeared to be a rifle shot came from behind me. I turned and looked up to the school book depository... I heard three shots and I could feel the concussions from all three." **Analysis:** as Jacks said the limousine had completed the turn before the first shot, and as Jacks only heard one early shot, his recollections are completely at odds with the LPM theory. **First shot hit 190-224. Last two shots bunched together.**

Rufus Youngblood sat in the front seat of the Vice-Presidential car. (11-27-63 AP article found in the Dubuque Telegraph-Herald) "An agent for 13 years, Youngblood was riding with Vice-President Lyndon B. Johnson, two cars behind the presidential car, when he heard the shots that mortally wounded President John F. Kennedy and seriously wounded Texas Governor John B. Connally. He could not be positive that the reports were shots, but Youngblood, from his position next to the driver, turned and pulled Johnson to the floor and shouted 'get down,' and half-sat and half-sprawled on top of him. 'It could have been a firecracker, a bomb, or a shot,' Youngblood, 39, said in an interview. 'I recognized it as an abnormal sound and realized some action had to be taken. I saw quick, unnatural movements in the President's car.'" (11-28-63 New York Times article) "I heard three explosions but I think the quick unusual movements in the President's car also made me react. I'm not sure I reacted on the first shot, between the first and second, or on the second. I had no idea where the shots came from." (11-29-63 report, 18H766-772) "The motorcade then made a left turn, and the sidewalk crowds were beginning to diminish in size. I observed a grassy plot to my right in back of a small crowd...I heard an explosion...I noticed that the movements in the Presidential car were very abnormal, and, at practically the same time, the movements in the Presidential follow-up car were abnormal. I turned in my seat and with my left arm grasped and shoved the Vice-President, at his right shoulder, down and toward Mrs. Johnson and Senator Yarborough. At the same time, I shouted "get down!" I believe I said this more than once and directed it to the other occupants of the rear seat. They all responded very rapidly. I quickly looked around again and could see nothing to shoot at, so I stepped over into the back seat and sat on top of the Vice-President. I sat in a crouched position and issued orders to the driver. During this time I heard two more explosion noises...I am not sure that I was on top of the Vice-President before the second shot—he says I was. All of the above related events—from the beginning of the sound of the first shot to the sound of the third shot, happened within a few seconds." (3-9-64 testimony before the Warren Commission 2H144-155) "Well, the crowd had begun to diminish; looking ahead and to the right the crowd became spotty. I mean it wasn't continuous at all like it had been. As we were beginning to go down this incline, all of a sudden there was an explosive noise. I quickly observed unnatural movement of crowds, like ducking or scattering, and quick movements in the Presidential follow-up car. So I turned around and hit the Vice President on the shoulder and hollered, get down, and then looked around again and saw more of this movement, and so I proceeded to go to the back seat and get on top of him. I then heard two more shots. But I would like to say this. I would not be positive that I was back on that back seat before the second shot. But the Vice President himself said I was. But--then in hearing these two more shots, I again had seen more movement, and I think someone else hit a siren--I heard the noise of a siren... Well, there wasn't too much difference in the noise of the first shot and the last two. I am not really sure that there was a difference. But in my mind, I think I identified the last two positively as shots, whereas the first one I thought was just an explosive noise, and I didn't know whether it was a firecracker or a shot. It seems, as I try to think over it, there was more of a crack sound to the last two shots. That may have been distance, I don't know... There seemed to be a longer

span of time between the first and the second shot than there was between the second and third shot.” (11-17-64 interview with William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) "Emory Roberts recognized the first shot as a shot. So did Youngblood." (On his reaction to the first shot) "Youngblood was less positive than he seemed. In the back of his mind he was thinking that if he was wrong this was going to be very embarrassing. But his voice was firm. He snapped at Johnson, 'Get down!'" (On the speed at which Youngblood moved to protect Johnson) "According to Johnson, Rufus Youngblood hurled him to the floor before the fatal shot. Youngblood himself doubts that he moved that quickly."

(11-22-73 article in the *Dallas Times Herald*) "It was an explosive noise. It wasn't the backfire of a motorcycle...I spun around in the seat. With my arm I hit him (Johnson) on the shoulder and told him to get down. Then I proceeded to climb into the back seat. There were two more shots...Johnson says I jumped on him before the second shot. I never said it. I wouldn't say it now." (20 years in the Secret Service, published 1973) "We had straightened on Elm now and were beginning to move easily down the incline in the wake of the cars ahead. Suddenly there was an explosive noise--distinct, sharp, resounding. Nothing that could be mistaken for the incessant popping and backfiring of the motorcycles, but in the instant I heard it I could not be certain if it had been a firecracker, bullet, bomb or some other explosive. I looked around quickly but saw nothing to indicate its source. But the movements in the President's car were not normal. Kennedy seemed to be falling to his left and there was sudden movement among the agents in the car directly ahead of us. I turned instinctively in my seat and with my left hand I grasped Lyndon Johnson's right shoulder and with all the leverage I could exert from a sitting position I forced him downward. "Get down!" I shouted. "Get down!" The vice-president reacted immediately. Still not seeing the source of the explosion, I swung across the back seat and sat on top of him. There were two more explosions in rapid succession, only seconds after the first. From my crouched position I saw a grayish blur in the air above the right side of the President's car. George Hickey, standing in the follow-up car just ahead of us, was poised with the AR-15 rifle, swinging back toward the building we had just passed. People along the sides of the street were scattering in panic." (Article by Gary Goettling on Youngblood in the **Spring, 1992** issue of *Georgia Tech's* magazine) "As the procession crawled into Dealey Plaza, Youngblood glanced up at the clock on the roof of the Texas School Book Depository. It flashed 12:30. Less than a minute to the freeway, and only five minutes to the Trade Mart, he thought. That instant, piercing through the shouts of the thinning crowd, and the stuttering and backfiring of police motorcycles, Youngblood heard the shattering crack! of a rifle. His reaction was immediate and instinctive. "Get down!" he yelled. "GET DOWN!" And in the time it takes to pull the bolt of a Mannlicher-Carcano rifle, Youngblood had vaulted over the back of the limousine seat onto Vice President Johnson, pushing him to the floor of the Lincoln convertible and shielding Johnson's body with his own. Johnson, in his statement to the Warren Commission, said that Youngblood reacted immediately after the first shot and was sitting on top of him by the time the second shot and fatal third shot were fired into Kennedy. Youngblood's heroic action earned him the Treasury Department's highest honor, the Exceptional Service Award, presented by President Johnson on Dec. 4, 1963. In his own testimony before the Warren Commission, Youngblood said: "As we were beginning to go down this incline, all of a sudden there was an explosive noise. I quickly observed unnatural movement of crowds, like ducking or scattering, and quick movements in the presidential follow-up car. So I turned around and hit the vice president on the shoulder and hollered, 'Get down,' and then looked around again and saw more of this movement, and so I proceeded to go to the back seat and get on top of him." From his position, Youngblood noticed "a grayish blur in the air above the right side of the president's car light after the third shot. "There were shouts from ahead, then the cars in front of us lurched forward toward the underpass." **Analysis:** the first shot as described by Youngblood was certainly not at frame 160. Not only did he claim he was traveling down Elm Street at the time, as opposed to just turning onto Elm, he said he observed unusual

movement in the presidential limousine and back-up car just afterward. He also described two more shots, grouping them together in a manner suggestive they were bunched together, and not five seconds apart. He also marked on Exhibit CE 354 his impression of the Vice-Presidential limo's location at the time of the first shot. It was far down the road from its location at Z-160, and was probably closer to its location at Z-224. **First shot hit 190-224. Last two shots bunched together.**

Senator Ralph Yarborough sat the on the back seat behind the driver of the Vice-Presidential car. He discussed the shooting with reporters outside Parkland Hospital while most everyone else went inside. (11-22-63 AP article found in the Long Beach Press-Telegram) "The horror of the assassination was mirrored in an eye-witness account by Sen. Ralph Yarborough, D-Tex., who had been riding three cars behind Kennedy. "You could tell something awful and tragic had happened," the senator told newsmen before Kennedy's death became known. His voice breaking and his eyes red-rimmed, Yarborough said: "I could see a Secret Service man in the President s car leaning on the car with his hands in anger, anguish and despair. I knew then something tragic had happened." Yarborough had counted three rifle shots as the presidential limousine left downtown Dallas through a triple underpass. The shots were fired from above — possibly from one of the bridges or from a nearby building." (11-22-63 article in the Dallas Times-Herald) "To the Texas Senator, it sounded like an explosion. 'There was this bang. It wasn't bang-bang-bang. It was like someone was taking aim.' The Senator, Vice President Lyndon Johnson, and Lady Bird Johnson were in the third car. 'After the second shot, a Secret Service man told the Vice President and Mrs. Johnson to get down. The President's car ran off at a terrible rate of speed. This is horrible.' ...Sen. Yarborough said it seemed to him that the shots came from the right rear of the motorcade. He said 'there were three definite reports, the last one came after a pause.'" (11-22-63 report on NBC television, at approximately 1:45 PM) "Yarborough said he was in the third car behind the President. It seemed to him, he said, that at least two of the shots were fired from the right rear. He said he couldn't say anything about the third shot." (11-23-63 article quoting Yarborough in the San Antonio Light)) "The shots were louder than a pistol. At first we thought they were cherry bombs." (11-23-63 article in the Chicago Sun-Times, quoting Yarborough's words outside Parkland Hospital) 'I heard three loud explosions like a deer rifle,' he said. 'You could smell powder on our car nearly all the way here (to the hospital). I was in the car with the Vice President and Mrs. Johnson. After the second shot, the Secret Service man had us to lie over so we wouldn't project on the seat. He said 'Get down! Get down! Get down' 'It seemed the shots came from the right rear.' He said there seemed to be a pause of a few seconds between the first and second shots. And then, he said, there was an even longer pause between the second and third shots. The third shot he heard might have been a Secret Service man returning the fire, he said. Yarborough said he saw a Secret Service man beating his fists against the side of the President's car, presumably 'in frustration, anger, and despair. He said his view of the President's car was partially blocked by a Secret Service car immediately ahead, but he could see no movement in the President's car after the shots. Then the President's car started off at a 'fast rate,' he said, and 'we knew something was wrong.'" (11-29-63 article in The Texas Observer, quoting Yarborough's words outside Parkland Hospital) "I heard three loud explosions, like a deer rifle. You could smell powder all the way here. I thought it was rifle shots....After the second shot, the Secret Service man had us lie over so we wouldn't project over the seat. He said "get down, get down, get down." The shooting ended...There was a slight pause between the shots... "Bang"...a pause of two or three seconds... "bang"...And then a longer pause before the third shot." (11-30-63 AP article found in the 12-1-63 Washington Star, presumably quoting Yarborough's words outside Parkland Hospital) "Senator Yarborough, Democrat of Texas, said the sound was 'bang-bang-bang.' The Senator, a war veteran, said it sounded like measured fire, not a fusillade. He described the sounds before the type of rifle was known by him." (The Truth About the Assassination, 1967, by Charles Roberts of Newsweek, quoting Yarborough's words outside Parkland Hospital) "'I smelled the gunpowder...It clung to the car nearly all the way to the hospital.'" (On Yarborough's response to Roberts' question about the location of Kennedy's head wound) "'I can't

tell you,' he answered, unconsciously holding his hand to the right side of his head, where he had seen blood streaming from the President. 'This is a deed that's indescribable.'"

(**4-6-64** interview with William Manchester, as recounted in *The Kennedy Assassination: 24 Hours After*, 2009) "At the first shot, I knew right away it was a rifle shot. I began to smell it before the second shot, and I thought that was odd. The reason I smelled it is that we were right under the trajectory--right in front of the muzzle blast." (**4-6-64, 11-11-64, and 5-26-65** interviews with William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) "Most of the hunters in the motorcade--Sorrels, Connally, Yarborough, Gonzalez, Albert Thomas--instinctively identified it as rifle fire." (On what came next) "In the Vice Presidential car, Yarborough thought he smelled gunpowder. 'My God! he yelled. 'They've shot the President!'" (On whether or not Youngblood climbed into the back seat) "Ralph Yarborough goes further: he insists that Youngblood never left the front seat. It is the Senator's recollection that the agent merely leaned over the seat and talked to Johnson in an undertone. He contends that there was insufficient space in the rear for Youngblood." (**7-10-64** affidavit, 7H439-440) "as the motorcade went down the slope of Elm Street toward the railroad underpass, a rifle shot was heard by me; a loud blast, close by....When the noise of the shot was heard, the motorcade slowed to what seemed to me a complete stop (though it could have been a near stop). After what I took to be about three seconds, another shot boomed out, and after what I took to be one-half the time between the first and second shots (calculated now, this would have put the third shot about one and one-half seconds after the second shot...) a third shot was fired. After the third shot was fired, but only after the third shot was fired, the cavalcade speeded up....I saw people fall to the ground on the embankment on our right, at about the time or after the second shot, but before the cavalcade started up and raced away."

(**3-28-75** article in the *Dallas Times-Herald*, quoting an ABC TV report from the evening before) "Yarborough, riding two cars behind the President, said he, too, heard three shots, but he believed some had been fired from in front of Kennedy and not from the Texas School Book Depository where Oswald allegedly fired the shots that killed Kennedy. 'You don't smell gunfire unless you are upwind from it, and it blows in your face,' said Yarborough, who has urged the reopening of the investigation. He said he could not have smelled the gunpowder if the shots had been fired from behind the motorcade." (**12-27-78** letter to the HSCA, HSCA vol. V, p.698) "In the motorcade in Dallas, the first explosion was so distinct in its nature that my mental processes immediately registered "rifle shot" — it was an immediate mental reaction without conscious thought process on my part. On many occasions since, I have stated that there were definitely three explosions (this while the FBI was expounding its two shot theory), but during all these years I have been troubled by the fact that the two subsequent explosions did not sound like that first clear sound of indisputable rifle fire, clear as a signal. I assumed that the difference might have been caused by the changed position of the car, or other movement. The recent revelations of a possible fourth shot possibly clear up that doubt as to the reason for the difference in sound between the different explosions." (**11-13-83** UPI article found in the *Paris Texas News*) "He remembers the sharp crack of rifle fire and the smell of gunsmoke drifting down above his right shoulder as Johnson's car rolled past the southeast corner of the Texas School Book Depository. "I've hunted all my life, I handled all kinds of weapons in the Army, and I knew it was rifle shots, and there were only three," he says." (Interview with Jim Marrs published in *Crossfire*, **1989**) "I thought 'Was that a bomb thrown?' and then the other shots were fired. And the motorcade, which had slowed to a stop, took off. A second or two later, I smelled gunpowder. I always thought that was strange because, being familiar with firearms, I never could see how I could smell the powder from a rifle high in that building." (**1-18-92** Interview with Deborah and Gerald Strober, published in *Let us Begin Anew*, 1993) "And then the shots rang out. I knew that the first one was a rifle shot. And I knew that the third one was a rifle shot. And I was kind of dumb-fussing about the middle one, because there were three distinct explosions. That Warren Report that there were two was just a lot of bunk. The third

one caused my confusion there. Immediately after the first shot the motorcade slowed up--slowed up to just nearly a walk. I thought it stopped. And I could smell smoke--gunsmoke --'cause it's coming down from that rifle right over us; we were in the back seat, behind it, that second shot, then it came. It was just like counting: one, two, three. I thought: My goodness. Was there a bomb? What's that smoke up there? And what are they stopping for? Was I mistaken? Was that a bomb, instead of a rifle? And then, after the third shot, they took off. Well, after the confusion of the second shot, I just assumed it was all in one place. I was very much concerned about that second shot, because I was smelling smoke. Somebody--one of the Lyndon Johnson men--was trying to discredit me; he said I was so excited I thought I smelled gunsmoke. I told the Dallas police later--I was by there later and saw them--and they said, "We all smelled that gunsmoke." Let me tell you one thing that didn't happen: that cock and bull story he (Johnson) told about Youngblood pushing him down and jumping over and sitting on him. It's just plain--a fabrication. It didn't happen at all. Youngblood turned around. He had a little box--I guess it was an information box from the radio--and he leaned over. See, we had a small car; you couldn't have pushed big old Lyndon down there. So Youngblood leaned over and looked right in Johnson's eyes, and Johnson looked straight ahead and didn't look at anything." **Analysis:** Yarborough's statements regarding the spacing of the shots and the sound of the shots were inconsistent and quite literally all over the map. He was more consistent on some of the other aspects, however, and these aspects suggest that Yarborough heard the shots much as most everyone else. As Yarborough notes that the motorcade slowed down after the first shot, and as the motorcade only slowed down after agent Greer turned around to look at the President circa frame 255 of the Zapruder film, his statements are inconsistent with a first shot miss at frame 160 and a second shot hit around frame 224, as proposed in the LPM scenario. His statement that people dived to the ground after the second shot, when, as we shall see, none of the close-by witnesses recalled diving to the ground before witnessing the head shot, suggests as well that the second shot was the head shot, and that a third shot followed. **First shot hit 190-224. Last two shots probably bunched together (with the last shot after the head shot).**

Lady Bird Johnson sat next to Yarborough in the middle of the back seat of the Vice-Presidential car. (Transcription from a tape recording started on **11-30-63**, and then added to over the next two days, 5H564-567) "we were rounding a curve, going down a hill and suddenly there was a sharp loud report—a shot. It seemed to me to come from the right, above my shoulder, from a building. Then a moment and then two more shots in rapid succession. There had been such a gala air that I thought it must be firecrackers or some sort of celebration. Then, in the lead car, the Secret Service men were suddenly down. I heard over the radio system "Let's get out of here," and our Secret Service man who was with us, Rufus Youngblood I believe it was, vaulted over the front seat on top of Lyndon, threw him to the floor and said "Get down." (Interview with Ruth Montgomery conducted a few weeks after the assassination, as quoted in Montgomery's **1964** book *Mrs. LBJ*, and serialized in the 5-7-64 *Milwaukee Sentinel*) "I had never thought that there would be anything worse than a hurled tomato, or egg, or an ugly sign, but suddenly in that brilliant sunshine there was a sharp rifle shot. It came, I thought, from over my right shoulder. A moment passed. And then there were two more in rapid succession. I could see in almost the same instant that everybody in the lead car went down. Rufus Youngblood, the Secret Service man who was in the front seat of our car, simply vaulted across to the back. I don't see how he got over in that crowded space, but he fell on top of Lyndon and pushed him to the floor. Mr. Youngblood is the politest of men, but he just said to Senator Yarborough and me, in a pre-emptory voice, "Get down." (**3-1-64** L.A. Times article by Frances Spatz Leighton, presumably built upon discussions with Mrs. Johnson) "12:30 PM: She heard three shots. Firecrackers, she thought, still smiling. 12:31 PM: a voice on the intercom car radio said sharply 'Let's get out of here!' Secret Serviceman Rufus Youngblood had thrown himself over her husband and said in a commanding voice 'Get down, get down, get down!' She obeyed, crouching far down as she felt the car lurch forward." (**6-15-64** interview with William Manchester, as represented in *The Death of a President*, 1967) (On the

last thing she noticed before hearing the first shot) "Lady Bird had been gazing idly at the red brick of the Dal-Tex Building and then the rust-colored brick facade of the Book depository." (On what happened after the first shot) "In the Vice Presidential car, Yarborough thought he smelled gunpowder. 'My God! he yelled. 'They've shot the President!' Lady Bird gasped, "Oh, no, that can't be!" (On whether or not Youngblood climbed into the back seat) "Lady Bird and Hurchel Jacks--Jacks could see the back seat in his rear-view mirror--agree that Youngblood's head and shoulders were in the rear, with Johnson beneath him. 'Get down!' the agent kept shouting in his Georgia drawl. Lady Bird leaned to the left, against Yarborough. She was thinking, There isn't much down to get." (Interview in PBS documentary "LBJ", broadcast **1997**) "It all began so hopefully, but the feeling in Texas was not good for Kennedy and so, of course, we were uptight. And we were going along and I was heaving a sigh of relief, "Thank the Lord, everything's going to be all right," and then came that shot. The Secret Serviceman suddenly vaulted over Lyndon and pushed him to the floor." **Analysis:** Mrs. Johnson's recollections regarding the shots themselves are in line with those of Jacks and Youngblood. Her statements that they were "rounding a curve"—not "making a turn"—and "going down a hill" place the limousine further down the street than it was at frame 160. While her statement that the shot came from her right led Vince Bugliosi and others to cite her statement as evidence that she was saying the shot came from the sniper's nest as early as frame 160, the building to the right of Mrs. Johnson at frame 160 was not the school book depository, but the Dal-Tex Building. **First shot hit 190-224. Last two shots bunched together.**

Vice-President Lyndon Johnson sat on the right-hand side of the back seat of the Lincoln. (**11-23-63** letter to Secret Service Chief James Rowley) "Upon hearing the first shot, Mr. Youngblood instantly vaulted across the front seat of my car, pushed me to the floor and shielded my body with his own." (**6-24-64** written response to William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) "Above the car radio Lyndon Johnson had heard what he knew to be an explosion. Before he could define it further he saw Youngblood coming over the front seat toward him" (On whether or not Youngblood climbed into the back seat while shots were still being fired) "According to Johnson, Rufus Youngblood hurled him to the floor before the fatal shot." (**7-10-64 statement**, 5H561-564) "The motorcade proceeded down Main Street and then turned right on Houston. It then turned into Elm, which is a block, I believe, beyond the intersection of Main and Houston. The crowd on Elm Street was smaller. As the motorcade proceeded down Elm Street to the point where the assassination occurred, it was traveling at a speed which I should estimate at 12 or 15 miles and hour. After we had proceeded a short way down Elm Street, I heard a sharp report. The crowd at this point had become somewhat spotty. The Vice-Presidential car was then about three car lengths behind President Kennedy's car, with the Presidential followup car intervening. I was startled by the sharp report or explosion. but I had no time to speculate as to its origin because Agent Youngblood turned in a flash, immediately after the first explosion, hitting me on the shoulder, and shouted to all of us in the back seat to get down. I was pushed down by Agent Youngblood. Almost in the same moment in which he hit or pushed me, he vaulted over the back seat and sat on me. I was bent over under the weight of Agent Youngblood's body, toward Mrs. Johnson and Senator Yarborough. I remember attempting to turn my head to make sure that Mrs. Johnson had bent down. Both she and Senator Yarborough had crouched down at Agent Youngblood's command. At some time in this sequence of events. I heard other explosions. It was impossible for me to tell the direction from which the explosions came." (**8-19-69** tape prepared for Johnson's memoir *The Vantage Point*, as transcribed and published by Michael Beschloss in the December, 2001 issue of *Texas Monthly*) "I was very impressed and very pleased with the crowds. Then we heard shots. It never occurred to me that it was an assassination or a killing. I just thought it was firecrackers or a car backfiring. I had heard those all my life. Any politician—any man in public life—gets used to that kind of sound. The first time I knew that there was anything unusual was when the car lunged forward. And at the same time, this great big old boy from Georgia said, "Down!" And

he got on top of me. I knew then that this was no normal operation. Something came over the radio. No—I don't know whether I really heard this or whether I've just read it and it impressed me so much that I assume I heard it. Anyhow it said, "We're getting out of here." (The Vantage Point, 1971) "Just after our car made a left turn at the top of Elm, I was startled by an explosion...I did not know what it was. Before the echo had subsided, before the noise had completely registered on my consciousness, Agent Youngblood spun around, shoved me on the shoulder to push me down, and shouted to all of us, "Get down!" Almost in the same moment, he vaulted over the seat, pushed me to the floor, and sat on my right shoulder to keep me down and protect me. "Get down!" he shouted again to all of us...I still was not clear about what was happening...At some time in the sequence of events, I heard other explosions. It was impossible to tell where they were coming from and I still was not certain what they were. Then a voice came crackling over the radio system: 'Let's get out of here.'" **Analysis:** as the limousine was just turning onto Elm Street at frame 160, and as President Johnson described proceeding down Elm Street "a short way" before hearing the first shot, his statement is suggestive the first shot was heard after frame 160. His contention that Youngblood climbed on top of him after the first shot, when Youngblood is still in the front seat of the Lincoln at Z-255, is more than suggestive that there had only been one shot by that point, which must have hit, and that two shots followed. His description of "other explosions" is suggestive that these explosions were closely spaced, but is too vague to come to a conclusion. **First shot hit 190-224.**

Joe Henry Rich drove the Vice-Presidential back-up car. (11-28-63 statement to the Secret Service, 18H800) "We turned off of Houston Street onto Elm Street and that was when I heard the first shot. I noticed a lot of confusion up ahead of me, motorcycle policemen and in the President's car and the President's security car. This Secret Service man in the front seat made the remark "What the hell was that?" and about that time I heard two more shots. The cars ahead of me started up then at a fast pace." **Analysis:** Rich's statement is short but to the point. They were on Elm, which places the shot after 160. The last two shots are mentioned together, which at this point we can assume means they were bunched together. **First shot hit 190-224. Last two shots bunched together.**

Cliff Carter sat in the front seat of the back-up car beside Rich. (5-20-64 affidavit, 7H474-475) "At approximately 12:30 PM our car had just made the left hand turn onto Elm and was right along side of the Texas School Book Depository Building when I heard a noise which sounded like a firecracker. Special Agent Youngblood, who was seated on the right hand side of front seat of the Vice-President's car immediately turned and pushed Vice-President Johnson and in the same motion vaulted over the seat and covered the Vice president with his body. At that instant, Mrs. Johnson and Senator Yarborough who were riding in the back seat along with the Vice President, bent forward. Special Agent Youngblood's action came immediately after the first shot and before the succeeding shots. I distinctly remember three shots." (10-1-68 oral history interview with the Johnson Library) "this first shot that was fired came right over my right shoulder. My immediate reaction--I thought it was a cherry bomb-type firecracker. I thought somebody had popped a firecracker. But then quickly I saw Rufus Youngblood in the Vice-President's car just immediately ahead reach over and shove Mr. Johnson down and jumped in the back seat himself and put himself over Mr. Johnson's body. And about this time I saw something also going on up in the first car--in the President's car...It was about three quarters of a block before--maybe a block, I don't remember--from the corner of the Depository to the underpass that we were fixing to go under. And then I saw something happening in the President's car also. About that time the second shot was fired. The next thing I noticed Mrs. Kennedy was trying to get out of the President's car. She had jumped out of the seat and had jumped out on the back--the rear end of the car and was trying leave; it looked like she had been hit. By the time the second shot was fired, of course, I realized by this time that someone was firing at the cars and she had made a movement that looked like she almost vaulted out of the back seat out on the back end of the car and was trying to get off the car...I had seen President Kennedy slump over, but we couldn't tell, at this

minute, couldn't tell how bad anything was...There were three shots fired, Dorothy, and there is no question. I heard three and the timing is very clear in my mind even today. And I have fired--when I was in the Army, I fired rifles--there's no question that one man could easily do this. In my mind there's no question but what one man did do it. I don't know whether it was Lee Harvey Oswald or who it was, but moving at the slow speed that our motorcade was, everybody in there was an easy target. Anybody that can half-way fire a rifle would have no trouble picking off any target he wanted to. One, it was a very easy shot. And secondly, it was very easy to flip the emptied shell out and load a new one and fire again. It was done, I think, in six or seven seconds, they say, and it could be very easily done. And all the firing came right over my right shoulder. There was none in front or back or any place." **Analysis:** since the car was on Elm at the time of the first shot, the first shot must have come after frame 160, when the car was just turning onto Elm. Furthermore, since Carter says there had been but one shot at the time agent Youngblood vaulted into the back seat and since the Altgens photo at frame 255 shows this event had not yet taken place, there were not two early shots. Carter's statements to the Library are also of interest. Here, he confirms that the shot forcing Jackie to get out of the car was the second shot. His insistence that the shots were easy and that they all came from the depository is also intriguing. In the early 1980's a former crony of Carter's and Johnson's named Billie Sol Estes came forward with a story implicating Carter and Johnson in Kennedy's death. That Carter is the one person in the motorcade, outside Johnson, implicated in Kennedy's murder, and he's also the one motorcade witness to insist the shots were easy and that there was but one shooter, only adds to the intrigue. **First shot hit 190-224. Last two shots bunched together (with the last shot probably after the head shot).**

Jerry Kivett sat on the right side of the front seat of the VP back-up car. (11-29-63 report, 18H776-781) "the motorcade was heading slightly downhill toward an underpass. As the motorcade was approximately 1/3 the way to the underpass, traveling between 10 and 15 miles per hour, I heard a loud noise—someone hollered "What was that?" As I was looking in the direction of the noise, which was to my right rear, I heard another report—then there was no doubt in my mind what was happening—I looked toward the Vice Presidential car, and as I did so, I could see the spectators—approximately 25-50, scattering—some were falling to the ground, some were running up a small hill, and some were just standing there stunned—here I heard the third shot." **Analysis:** Kivett heard the first shot as they were already on Elm, so no first shot miss at 160. As with Yarborough, Kivett saw people scatter after the second shot. As none of those who scattered reported doing so before the head shot, this indicates there was a shot after the head shot. **First shot hit 190 -224. Last two shots bunched together (with the last shot after the head shot).**

Warren Taylor sat in the back seat of the VP back-up car behind the driver. (11-29-63 report, 18H782-784) "Our automobile had just turned a corner (the names of the streets are unknown to me) when I heard a bang which sounded to me like a possible firecracker—the sound coming from my right rear. Out of the corner of my eye and off slightly to the right rear of our car, I noticed what now seems to me might have been a short piece of streamer flying in the air close to the ground...I opened the door and prepared to get out of the car. In the instant that my left foot touched the ground, I heard two more bangs and realized they must be gun shots. Also at that instant, the car paused slightly and I heard something over the radio to the effect that something or someone had been shot. At that moment the car picked up speed and I pulled myself back into the car." **Analysis:** as Taylor describes the car as having already turned the corner when the first shot rang out, and the car had not turned the corner by frame 160, his report indicates the first shot came afterward. As he heard the second and third shots as he put his foot on the ground, and as the Altgens photo circa Z-255 shows his door opened but no foot on the ground, it also follows that shots two and three were bunched together around the time of the head shot. **First shot hit 190-224. Last two shots bunched together.**

Thomas (Lem) Johns sat on the right side of the back seat of the VP back-up car. (11-29-63 report,

18H773-775) “at approximately 12:35 PM CST, I heard two “shots,” not knowing whether they were firecrackers, backfire or gun shots. These two shots were approximately two or three seconds apart, and at this time we were on a slight downhill curve to the right. On the right hand side of the motorcade from the street, a grassy area sloped upward to a small 2 or 3 foot concrete wall with sidewalk area. When the shots sounded, I was looking to the right and saw a man standing and then being thrown or hit to the ground, and this together with the shots made the situation appear dangerous...I jumped from the security car and started running for the Vice President’s car...Before I reached the Vice president’s car a third shot had sounded and the entire motorcade then picked up speed and I was left on the street.” (8-8-78 interview with HSCA investigator, file # 180-10074-10079) “I heard two shots. They seemed close together. They were shots, not backfires, or firecrackers. Our car was moving very slowly, and my door was open so I jumped out on the street. Before I could begin to move towards the VP’s car I heard the third shot. The first two sounded like they were on the side of me towards the grassy knoll but then that’s because of the confinement of the backseat and opening to that side plus the fact that people falling to the ground on the grassy slope made me feel that the shots were from that direction. I never got a fix on the third shot because I was running toward LBJ’s car, which was now some distance away from us and picking up speed.” (2-21-99 article by Michael Dorman in Newsday, when discussing the possibility the fibers found on the bullet nose were fibers from JFK’s tie) “Lem Johns, a former assistant Secret Service director in charge of all the agency’s protective operations, was an agent riding in the Dallas motorcade. ‘If you get the tie nicked by a different bullet, you’ve got a second gunman - simple as that,’ Johns said. ‘I’ve never thought that was out of the question.’” (12-30-11 article by Rick Watson on 280living.wordpress.com, built upon an interview with Johns) “I was in the right rear seat of the car following the vice president’s limo, and I heard a shot that came from the right,’ he said. Johns was riding in the third car in the motorcade with his door cracked, and the instant he heard the shot, he bolted from the vehicle and raced toward Vice President Lyndon B. Johnson’s limo.” **Analysis:** although the closeness in time of the first two shots described by Johns gives the appearance he is describing the LPM scenario, this fails to hold up under close examination. For one, he indicates the back-up car was already on Elm when the shots rang out, when the car at frame 160, when the LPM scenario holds the first shot was fired, was in the middle of the turn onto Elm. For two, he claims he bolted from the car after the second shot, after seeing a man fall to the ground. Well, seeing as one can look and look at the photos and films and find no evidence anyone fell to the ground before the head shot, this suggests the second shot Johns heard was the head shot, and not the single-bullet shot, as in the LPM scenario. His vague recollection of hearing a third shot after this point, moreover, is in keeping with what many others remembered. Johns’ most recent statements only add to the confusion. He suddenly claimed the first shot came from his right--which, due to his position at Z-160--suggests the LPM scenario. This fails to hold up, however, when one reads his earlier statements, and sees that he originally thought the shots were coming from where people were falling down--at his right front, on the knoll. **Possible LPM scenario. Possible first shot 190-224. Possible shot after the head shot.**

Milton Wright was the driver of the next car in the motorcade, the car of Dallas Mayor Earle Cabell, which was yet to make the turn onto Elm in frame 160. (11-28-63 statement, 18H802) “The car I was driving had just turned onto Elm Street and approximately 30 feet from the intersection when I heard the first shot. When the second shot was fired I noticed a number of people running away from the motorcade and I saw several Dallas motorcycle policemen had their guns drawn. Then the motorcade speeded up and we went toward the hospital.” (8-28-98 letter to Vince Palamara quoted in JFK: The Medical Evidence Reference and featured in Palamara’s Youtube video JFK Assassination Rarities Part 2) “As we were turning in front of the book depository, the first shot was fired. When the second shot was fired I believed that it came from the book building. I stopped and was looking at the building when the third shot was fired. I did not see the rifle because I was too close to the building and the

shooter was inside the building. If you read the Warren Report you probably saw that Mrs. Cabell stated she saw the rifle being pulled back into the building after the third shot. That was impossible because of our position and she was riding in the left rear. After the first shot she slid down in the seat with her back to the building. I gave an affidavit to the Secret Service but my testimony was not usable. Mrs. Cabell was flown to Washington to testify. That's how her husband got to be a congressman.

While I was thinking about this, I tried to recall who the third passenger was in my car. Do you know?"

Analysis: Wright's initial statement that he was 30 feet down Elm at the time of the first shot and that people were running away from the motorcade after the second shot could indicate he missed the first shot and only heard the last two bunched together. His more recent statements to Palamara, however, indicate he heard three shots. If this is so, then he heard a shot after the head shot, as he initially said he saw people running after the second shot. Since even in this statement, he claims they were turning in front of the building at the time of the first shot, we can rule out a first shot miss at frame 160. **First shot 190-224. Last two shots possibly bunched together (with the last shot after the head shot).**

Congressman Ray Roberts sat in the front seat next to Wright but never filed a report or gave an interview in which he described the shooting. If Wright was telling the truth in his letter to Palamara, it seems possible Roberts didn't want to say anything that would conflict with Mrs. Cabell's claim she saw the rifle. (7-13-64 testimony of Mrs. Earle Cabell before the Warren Commission, 7H485-491) (When asked how soon after the shots were fired was it that she first smelled gunpowder) "I cannot say for sure, because as I told you, the motorcade was stopped. And somewhere in there, Congressman Roberts said, "That is a .30-06." I didn't know what a .30-06 was." (When asked if she'd mentioned the gunpowder at the time) "No; because there was too much confusion. But I mentioned it to Congressman Roberts when we were in Washington a couple of weeks ago." (When asked if he'd told her he'd also smelled gunpowder) "As well as I remember, he said 'Yes.' We were in a group, a large group, and there was much conversation."

Mrs. Earle (Dearie) Cabell, the wife of the mayor, sat in the back seat on the left hand side. (7-2-64 AP article found in the Spartanburg Herald-Journal) "Mrs. Cabell earlier revealed that she saw the rifle of the assassin extending from a window of the Texas School Book Depository Building. She said she heard the first shot and then looked up, seeing the rifle immediately. The Cabells were in the fourth automobile behind the president's convertible. 'I never saw a person or even a person's hand on the rifle,' Mrs. Cabell said." (7-13-64 testimony before the Warren Commission, 7H485-491)

"Congressman Roberts was sitting just as this lady is now, and turned the same way. I was turned facing him. The position of our car was such that when the first shot rang out; my position was such that I did not have to turn to look at the building. I was directly facing it...we were making the turn... Just on the turn...I heard the direction from which the shot came, and I just jerked my head up...I saw a projection out of one of those windows...I turned around to say to Earle "Earle, it is a shot" and before I got the words out, just as I got the words out, he said "Oh no; it must have been a ---" the second two shots rang out." **Analysis:** Mrs. Cabell's placement of the car as just on the turn is consistent with a first shot at Z-190. Her statement that the second two shots rang out implies they rang out together. **First shot hit 190. Last two shots bunched together.**

Mayor Earle Cabell sat in the back seat on the right side. (7-13-64 testimony before the Warren Commission, 7H476-485) "Well we were just rounding the corner of Market and Elm, making the left turn, when the first shot rang out...I heard the shot. Mrs. Cabell said "Oh, a gun" or "a shot" and I was about to deny and say "Oh, it must be a firecracker" when the second and third shots rang out. There was a longer pause between the first and second shots than there was between the second and third shots." **Analysis:** despite mistakenly calling Houston "Market," Mayor Cabell confirms his wife's statements in every way. **First shot hit 190-224. Last two shots bunched together.**

We have now looked at the statements of 32 motorcade witnesses, only three (Jackson, Bennett, and

Johns) who have made statements remotely supporting the LPM scenario. Even more convincing, the statements of all three of these witnesses, when compared to the photographic evidence, are equally suggestive of the scenario described by the bulk of the other witnesses. From this we can make the assertion that the eyewitness evidence supports a first shot hit, followed after a pause by two shots bunched closely together. This scenario is consistent with the words of most every witness so far. That CBS, the HSCA, Lattimer, Posner, Myers, and ABC have been able to convince so many there was a first shot miss is proof positive that myths and myth-making are not things of the past, but of the here and now. But let's continue on with this analysis and leave no stone unturned.

Where's Dearie?

215

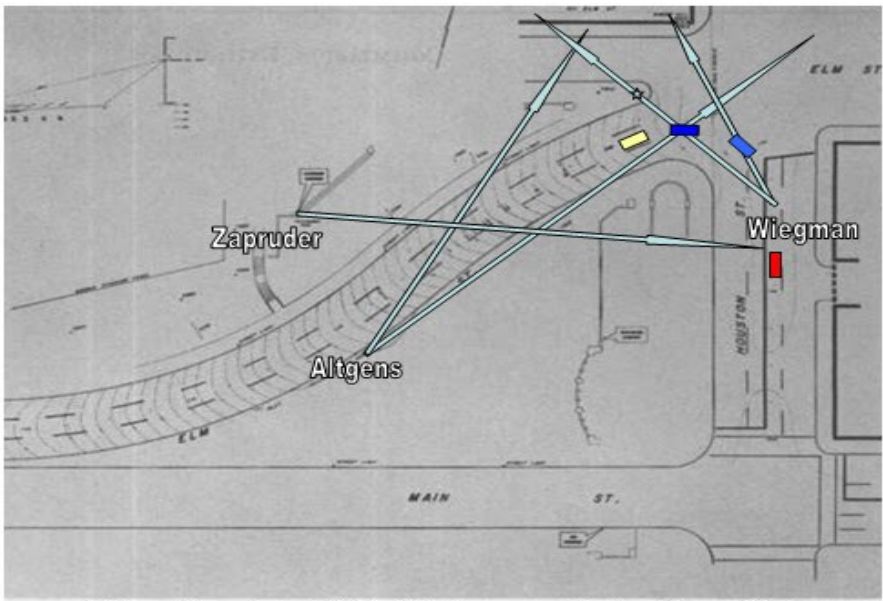

Above: Zapruder frame 215, with camera car #1 in the background.

The Altgens photo, taken at Zapruder frame 255.

First frame of the Wiegman film, roughly corresponding to Z-265.

Warren Commission Exhibit CE 883: a map of Dealey Plaza, with the added-in locations of the Vice-Presidential back-up car in the Altgens photo (yellow rectangle), the two cars in the Wiegman Film, (blue rectangles) and camera car #1 in the Zapruder film (red rectangle).

Where's Dearie?

As previously discussed, Zapruder frame 160 does not show the car of Dallas Mayor Earle Cabell making the turn onto Elm Street. This is a blow to the LPM scenario, as the passengers in the Cabell car all reported hearing the first shot ring out as they negotiated this turn. Unfortunately, it is difficult to figure out just when this car did make negotiate the turn. When I looked at the Altgens photo, which shows the Elm/Houston intersection circa Z-255, I fully expected to see the Cabell car back behind the Vice-Presidential back-up car. But it was nowhere to be seen. This led me to compare the Altgens photo to the first frame of the Wiegman film, which shows the Cabell car in the intersection and is widely reported as beginning at a point 3½ seconds before the Z-313 head shot, at approximately Z-247 (In 2007, Dale Myers published a comprehensive study of the assassination films and concluded it begins at Z-245). Something was wrong. If the Wiegman film really begins around frame 247, the Cabell car *should* be in the Altgens photo. Eventually, I concluded that the first frame of the Wiegman film I'd been studying--which showed both the Cabell car directly in front of the school book depository and a blue Impala press car in the middle of the intersection--correlated to frame 265 of the Zapruder film. (I later realized that there were a number of frames clipped from the beginning of the

Wiegman film I'd been studying, and that this accounted for much of the discrepancy.) Anyhow, this suggested that the blue Impala hard-top would have been just approaching the turn at the time of the first shot should it have been fired around Z-190, and would have still been on the straightaway of Houston Street should it have been fired around Z-160.

Merriman Smith, a reporter for UPI, sat next to the driver of the blue Impala. After the shots rang out, he picked up the car phone and called the Dallas UPI bureau. As a result his first reports were on the wire before the president's limo even reached the hospital. (11-22-63, 12:34, earliest UPI teletype) "Three shots were fired at President Kennedy's motorcade in downtown Dallas." (11-22-63, 12:39 UPI teletype) "Kennedy seriously wounded, perhaps seriously, perhaps fatally, by assassin's bullet." (11-22-63, 12:45 UPI teletype) "Reporters about five car lengths behind the Chief Executive heard what sounded like three bursts of gunfire. Secret Service agents in a follow-up car quickly unlimbered their automatic rifles. The bubble top of the President's car was down. They drew their pistols, but the damage was done. The President was slumped over in the backseat of the car face down. Connally lay on the floor of the rear seat. It was impossible to tell at once where Kennedy was hit, but bullet wounds in Connally's chest were plainly visible, indicating the gunfire might possibly have come from an automatic weapon. There were three loud bursts. Dallas motorcycle officers escorting the President quickly leaped from their bikes and raced up a grassy knoll." (11-22-63, 12:46 UPI teletype) "It was impossible to tell at once where Kennedy was hit, but bullet wounds in Connally's chest were plainly visible, indicating the gunfire might possibly have come from an automatic weapon. There were three loud bursts. Dallas motorcycle officers escorting the President quickly leaped from their bikes and raced up a grassy hill." (11-22-63, a 12:54 Smith dispatch to UPI) "Some of the Secret Service agents thought the gunfire was from an automatic weapon fired to the right rear of the president's car, probably from a grassy knoll to which police rushed." (11-22-63 statement regarding the number of shots while on the flight back from Dallas, as recalled by reporter Charles Roberts in *The Truth About the Assassination*, 1967) "Smith had heard three." (Smith's 11-23-63 Pulitzer-prize winning eyewitness account, published in hundreds of papers) "The procession cleared the center of the business district and turned into a handsome highway that wound through what appeared to be a park. I was riding in the so-called White House press "pool" car, a telephone company vehicle equipped with a mobile radio-telephone. I was in the front seat between a driver from the Telephone Company and Malcolm Kilduff, acting White House press secretary for the President's Texas tour. Three other pool reporters were wedged in the back seat. Suddenly we heard three loud, almost painfully loud cracks. The first sounded as if it might have been a large firecracker. But the second and third blasts were unmistakable. Gunfire. The President's car, possibly as much as 150 or 200 yards ahead, seemed to falter briefly. We saw a flurry of activity in the Secret Service follow-up car behind the Chief Executive's bubble-top limousine...Our car stood still for probably only a few seconds, but it seemed like a lifetime." (4-14-64 interview with William Manchester, as represented in *The Death of a President*, 1967) "Smith was not as astute a reporter as he seemed. Despite extensive experience with weapons he had thought the sounds in the plaza were three shots from an automatic weapon, and in a subsequent message he identified them as 'bursts.'" (11-14-66 UPI article found in the Sarasota Herald-Tribune. This version of the article was published in the 11-20-66 Washington Post as well.) "I was only a few hundred feet from John F. Kennedy when he was shot in Dallas. I would swear there were three shots and only three shots fired at his motorcade. The car in which I rode as a press association reporter was not far from the presidential vehicle itself, and in clear view of it. *We were at the point of coming out of an underpass* when the first shot was fired. The sound was not entirely crisp and it seemed for a split second like a firecracker, a big one. *As we cleared the underpass*, then came the second and third shots. The shots were fired smoothly and evenly. There was not the slightest doubt on the front seat of our car that the shots came from a rifle to our rear (and the Book Depository at this point was directly to our rear). We remarked about rifle fire before we knew what had happened to Kennedy, although we had seen him

slide from view in the rear of the open White House car...Clint Hill, the Secret Service agent who raced from the follow-up car to the presidential vehicle to shield the fallen leader and his shocked wife, Jacqueline, heard only three shots.” (11-14-66 UPI article found in the Bucks County Courier Times, with the references to the underpass removed from the more prevalent version above. Presumably, an alert editor at this paper caught Smith's mistake.) "I was only a few hundred feet from John F. Kennedy when he was shot in Dallas. I would swear there were three shots and only three fired at his motorcade. The car In which I rode as a press association reporter was not far from the presidential vehicle itself, and in clear view of it when the first shot was fired. The sound was not entirely crisp and it seemed for a split second like a firecracker, a big one. Then came the second and third shots. The shots were fired smoothly and evenly. There was not the slightest doubt on the front seat of our car that the shots came from a rifle to our rear (and the Book Depository at this point was directly to our rear). We remarked about rifle fire before we knew what had happened to Kennedy, although we had seen him slide from view in the rear of the open White House car." **Analysis:** Smith's reporting of bursts and automatic weapon fire, and his subsequent representation of the last two shots together, indicates he probably heard the last two shots together. His dispatch stating that Connally's chest *wounds* indicated the use of an automatic weapon suggests, moreover, that he at least briefly suspected that shots had come from the grassy knoll. Intriguingly, given Smith's subsequent suicide, his 1966 article shows that either he'd "corrected" his impressions to match the official version, or was beginning to lose his mind. There was, of course, no underpass to "clear" which might account for the different sound of the first shot. Clint Hill, of course, had consistently claimed he'd heard but two shots, not three. The Texas School Book Depository "directly" to Smith's rear during the last two shots was, for that matter, in front of him or to his right as late as frame 265, the beginning of the Wiegman film. Smith's recollection that the depository was to his rear when the second and third shots were fired can therefore be taken as an indication that the second shot he heard was seconds after frame 265, and quite possibly the head shot. **Probable first shot hit 190-224. Last two shots probably bunched together.**

Assistant Press Secretary Malcolm Kilduff sat on the right side of the front seat of the "pool" car. (December 1963 audio recording found in the National Archives as Dialogue on Dallas, Group W, as presented in President Kennedy Has Been Shot, 2003) "We saw a flash of pink-which of course was Mrs. Kennedy. We realized she was doing something. I saw the Secret Service agent in the follow-up car raise the rifle. At that point we realized these were shots." (5-2-64 and 5-19-65 interviews with William Manchester, as represented in The Death of a President, 1967) (On the first shot) "Kilduff, in the pool car directly under the gun, asked 'What was that?'" (11-13-66 AP article by Merriman Smith) "Malcolm Kilduff of the White House press staff who was seated beside me in the front seat of the pool car heard only three shots." (11-22-66 AP article found in the Cedar Rapids Gazette) "Kilduff says he does disagree with the Commission's finding that the first bullet that struck Kennedy and passed through his neck was the one that wounded Texas Gov. Connally. A second shot in the head killed Kennedy. "In my mind," Kilduff said, "there were three shots fired. I have verified that with other people who were riding in the same car. I have verified it with Secret Service Agents."... Kilduff said he had talked to Connally who agrees he was hit by a separate bullet, that the governor said he heard the first shot and was turning to look back when he was hit." (11-24-66 newspaper column by Crosby S. Noyes in the Washington Star) "After the first shot he recalls that Merriman Smith of the United Press International asked, "What was that?" and that he replied, "It sounded to me like a firecracker." The second shot, according to Kilduff, came at least five seconds after the first. The third, which killed Kennedy, followed after a shorter interval." (Late 1966 interview with Lawrence Schiller recounted in The Scavengers And Critics of the Warren Report, published 1967) (on how many shots were fired) "Malcolm Kilduff heard three." (10-26-77 article by Scott Payton for the Knight-Ridder news service and found in the Michigan City News-Dispatch) ""The shots came over my right shoulder. There's absolutely no question they came from the Depository. I was riding in the right front seat--that put the

depository directly over my right shoulder. My first thought was that someone had thrown a firecracker. We immediately sped off. We couldn't tell what was happening. I think the last thing in the world anybody thought of was that the President had been shot.' After the race to Parkland Hospital (during which two reporters for the AP and UPI fought furiously over the single phone in Kilduff's car) he saw what had happened. 'His head was just a mass of blood,' Kilduff says. 'It looked like hamburger meat.'" (12-22-78 AP article by Bill Bergstrom on Kilduff found in the Kentucky New Era) "The press pool car in which I was riding on Nov. 22 1963 was directly under the window of the Texas School Book Depository when the shots were fired. I have never had any question in my mind from which direction the shots came or the number of shots fired. There were three shots and they came from above my right shoulder. From my vantage point I was looking directly at the now famous 'grassy knoll.' No one on the knoll was firing a gun." (11-11-83 AP article found in the Bowling Green Daily News) "I was the person in the motorcade closest to the School Book Depository. I was right under it in the pool car,' Kilduff recalled. Sitting by the open car window, he heard the shots clearly. 'My first thought was 'this is Thanksgiving week and they sell firecrackers in Texas' and somebody had thrown a firecracker. Then I saw that some of the Secret Service men had turned around, and a couple of them had pulled their guns," he said. 'There has never been any question in my mind that the shots came from that window,' Kilduff said. 'My reaction was to turn around and look upward over my right shoulder. If they had come from the so-called grassy knoll they would have been from off to my left.'" (11-21-88 AP article by Steve Robrahn found in the Lewiston Daily Sun) "Someone in the car said 'What was that?,' Kilduff recalled. 'I thought, this is the week before Thanksgiving and they sold firecrackers. I said, 'It sounded to me like a firecracker.' Another shot was fired and they realized it wasn't firecrackers.'" (4-17-91 interview with Harrison Livingstone published in High Treason 2) "I do not accept the so-called 'Magic Bullet' theory... It was a very short period of time between the second and third shot." (5-21-92 letter from William Neichter to Harold Weisberg found in the Weisberg Archives) "Mac Kilduff now lives in Kentucky. Recently he was on WHAS 840 AM with Jim Moore, Jim Marrs, and Judge Burt Griffin. It was amazing that Kilduff agrees with the Warren Commission, except that he says that he thinks 'there were three bullets, three hits.' That is a pretty big except!" (11-1-93 AP article found in the Williamson Daily News) "I was looking directly at the guy on the 'grassy knoll' and he was no more carrying a gun than I was,' Kilduff said, referring to reports that someone on a slight mound in front of the motorcade had fired. 'The shots came from my right shoulder and above me,' he said. 'What am I looking at? The window of the sixth floor of the depository, which is precisely what I've been saying for 30 years. Except that I haven't written a book.'" (4-16-93 oral history for The Sixth Floor Museum) "I heard this first noise and Merriman Smith said, 'What the hell was that?' And I said, 'Well, it sounded to me like a firecracker.' And then, the second shot, by that time, I had noticed that Clint Hill... had jumped off the Secret Service follow-up car and was running towards the president's car. But then I looked up to where the second shot came from and I was looking, of course, at the sixth—looking up at this building. Now I cannot say I was looking at the exact location it was coming from. I knew it was coming from above and over my right shoulder. It was not coming from the grassy knoll over there (looks right). It came from above and from my rear.' (When asked if at this time two shots had been fired) 'That's right. There was a longer space between the first and second than between the second and third shots.'" (11-23-99 article in the Ft. Worth Star-Telegram) "Former White House press aide Malcolm Kilduff remembers hearing the first bullet that hit President John F. Kennedy as he rode in a motorcade down Elm Street on Nov. 22, 1963. Kilduff, who was riding two cars behind Kennedy, said he thought someone had set off a firecracker. Six seconds later, he heard another shot and turned and looked above to 'that window' on the sixth floor of the old Texas School Book Depository" **Analysis:** by stating that Clint Hill (who is still on the back-up car at frame 255) began running for the limousine after the first shot, and by stating that the last two shots were closer together than the first two, Kilduff was describing a first shot hit, followed by two closely-bunched shots. **First shot hit 190-224. Last two shots bunched together.**

Jack Bell, a reporter for the Associated Press was in the back seat. (11-22-63 AP Bulletin, marked as 12:41 PCS) "Bell reported three shots were fired as the motorcade entered the triple underpass, which leads to the Stemmons Freeway route to Parkland Hospital." (11-22-63 news bulletin on WBAP, moments later) "Bell of the Associated Press says that three shots were fired as the motorcade entered the triple underpass which leads to the Stemmons Freeway route to Parkland Hospital." (11-22-63 news bulletin on WBAP, around 1:00) "Associated Press reporter Jack Bell says the President and Connally were shot as the motorcade entered a triple underpass that leads to the Stemmons Freeway. Bell said a man and a woman were scrambling on an upper level of a walkway that leads to the underpass." (11-23-63 AP article in the Christchurch Star. Christchurch is in New Zealand, 18 hours ahead of Dallas. This was an afternoon paper. As a consequence, this article must have been written within a few hours of the shooting.) "The assassination took place near a three-highway intersection close to the business area of the city. Within seconds of the shooting, Mr. Kennedy slumped over in the back seat of the car, face down. Mr. Connally lay on the floor of the rear seat. Three bursts of gunfire, apparently from automatic weapons, were heard. Secret service men immediately unslung their automatic weapons and pistols. Mrs. Kennedy and the Governor's wife, who was also in the car, both crouched over the inert forms of their husbands as the car sped towards the hospital." (11-22-63 eyewitness account written for the Associated Press, found in the 11-22-63 Spokane Spokesman-Review and the 11-23-63 New York Times) "There was a loud bang as though a giant firecracker had exploded in the caverns between the tall buildings we were just leaving behind us. In quick succession there were two other loud reports...The reports sounded like rifle shots. The man in front of me shouted 'My God, they're shooting at the president!' Our driver braked the car sharply and we swung the doors open to leap out. Suddenly the procession, which had halted, shot forward again...As my eye swept the buildings to the right, where the shots--if they really were shots, and it seemed unbelievable--might have come, I saw no significant sign of activity." (11-22-64 AP article found in the Ada Oklahoma Evening News) "As the motorcade made a right turn off the packed street, suddenly there were only a few waving spectators. Ahead, we rode toward a left turn into a street which led to an underpass. Nearby was a building with a sign which read: 'Texas School Book Depository.' The President's auto, four cars ahead, already had made the turn toward the underpass and we had just completed it when there was a loud report. My first thought was: Those Texans, now they're shooting off giant firecrackers. Then came two more reports, paced possibly five seconds apart. They had the ominous sound of rifle crack. The President's car had stopped. We reporters riding 'pool' scrambled to get out to run ahead. But at almost that instant, a Secret Service man, riding in the front seat of the presidential limousine stood up, phone in hand, and waved the preceding police cruiser on. In that numb moment we all sensed that something horrible might have happened." (4-19-66 Oral History interview performed for the Kennedy Library) "We turned a corner, and there was the Texas Book Depository. Then we turned another corner heading toward an underpass. I thought somebody had set off a cherry bomb. I thought to myself, 'My God, these Texans don't ever know when to quit. They've given the man everything they could. Here they are shooting off firecrackers and cherry bombs.' About three seconds later there was another report, and then there was a third one. By that time everybody thought this was a rifle shooting. So we started to jump out of the car...We started to get out. There was an assistant White House press secretary in there, too. He yelled out as we were just getting out, 'My God, they're shooting at the President!' We all thought this was probably true, but we didn't know. There was no way of finding out at this point what was happening because Kennedy's car was four cars ahead, and we couldn't see it clearly. And then the motorcade began to move, so we all jumped back in the car. It moved very fast." (11-23-66 AP article found in the Oil City Pennsylvania Derrick) "Three years ago in a sunny midday in Dallas I heard from the fourth car in a motorcade the sound of three rifle shots that killed a president and wounded a governor. There was the sound of three cadenced shots—no more, no fewer. As our car bearing four newsmen, a presidential press aide and a driver turned left in front of the Texas School Book Depository, the first of these rang out. The sound came from above and to our right. It echoed down the canyon-like block of

moderately tall buildings behind us. I remember thinking that some over-enthusiastic Dallasite must have exploded a cherry bomb. Then there was a second crack, unmistakably that of a rifle. It was followed in about five seconds by a third. Then there was a moment of awful silence, broken by shrill cries and screams. People scurried toward whatever protection they could find. As we scrambled back into our car, the motorcade, which had halted, was moving again. Up ahead I saw a man, looking fearfully back over his shoulder and the book depository building, push a woman down on the grassy knoll that led to an overpass and throw his body protectively over hers. The sounds of the three shots had come from above and to the right of us. To one who had been familiar with shooting ranges they sounded like the cadenced quick fire of an experienced rifleman squeezing off a shot, re-loading by bolt action, firing again and a third time..." **Analysis:** if the Christchurch article was written by Bell, his statement that the shots were apparently from automatic weapons is consistent with his early account of the shots being in quick succession, and sounding like firecrackers, and destroys the credibility of his later assertion that the three shots were "cadenced." Even if he didn't write that, however, his story is still at odds with the LPM scenario. For, even in his later writings, his assertion that the car in which he was riding had made its turn onto Elm when the first shot rang out places this shot well after frame 160. His early reports of activity on the overpass are also interesting, as they suggest he thought the shots came from the front. **First shot hit 190-224. Last two shots probably bunched together.**

Robert Baskin, a reporter for the Dallas Morning News, was also in the back seat. (11-23-63 article in the Dallas Morning News) "As the presidential motorcade approached the triple underpass, at the height of the paved hill at Elm and Houston, I was in the 'pool' car three cars back of the President. The President's car had just passed the Texas State Book Depository building when we heard a shot, off to the right. It seemed to come from rather high up. Then we heard two more shots, carefully measured, as though a calm, determined sharp shooter were at work. The Presidential caravan ground to a halt, and suddenly there was a great deal of activity around the President's car. But the impact of the awful act didn't register until we saw people falling down on the streets and frantically trying to find cover. Then we realized it was actual gun fire we had heard." (11-23-63 article in the Dallas Morning News, apparently a re-write of his original account) "Then came the approach to the triple underpass, with the leading cars picking up speed as the crowd thinned out. Over to our right loomed the gaunt structure labeled the Texas School Book Depository. It was 12:30 p.m. The sharp crack of a rifle rang out. But at that moment we couldn't believe it was just that. "What the hell was that?" someone in the car asked. Then there were two more shots, measured carefully. We saw people along the street diving for the ground. Several persons shielded children. Then we knew that the presidential party was under fire. The motorcade ground to a halt. There was a good bit of activity around the President's car, with Secret Service men running about. Before we could get out of our car, however, police sirens began wailing loudly. The President's car started up and quickly was going at breakneck speed." (5-15-64 interview with William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) "Bob Baskin, in his seat behind Kilduff, knew what it was; he was an infantry veteran of the 85th Division, and he looked around wildly for cover." (3-16-74 interview with the Johnson Library) "We heard the first shot ring out and...I instinctively thought it was a rifle shot. Then the other shots followed and I was convinced it was rifle fire. But then this commotion started around the President's car and people were falling to the ground over there. And our press car came to a halt and we were throwing open the back doors to get out, and all of a sudden the thing began to move, and we moved down fast to Parkland." (11-19-78 Dallas Morning News article on the 15th anniversary, based in part on a previously unpublished Baskin account from 1963) "We turned off Main Street and onto Houston for the last leg of the motorcade route to the Trade Mart at almost 12:30. We saw the President's car make the turn onto Elm in front of the Texas School Book Depository, gaining a bit of speed. The press car was halfway down the block before the left turn when the first shots rang out. "What the hell was that?" one of us asked. The motorcade kept moving and we had just turned the corner for the approach to the

triple underpass some four seconds later when a second and then a third shot were heard. We came to a halt. Ahead we could see considerable movement around the President's car but couldn't make out what it was all about." **Analysis:** while Baskin's "measured carefully" might lead some to put him in the LPM category, he also said the limo was past the book depository when the first shot rang out. Of course, he also said the depository was to his right when the first shot rang out. The book depository was straight ahead of him at Z-160, and even at Z-190. But he was a lot closer to making the turn at Z-190 than at Z-160. He confuses things further by later stating that the press car was only halfway down the block before the turn when the first "shots" rang out. This suggests a first shot seconds before frame 160. As he grouped the last two shots together, and didn't notice a commotion until after the last two shots were fired, it seems doubtful he heard the last two shots five seconds apart, as in the LPM scenario. **Probable first shot hit 190-224. Last two shots possibly bunched together.**

Bob Clark, a reporter for ABC News, was in the back seat as well. (Phoned-in report on ABC, **11-22-63**) "Three shots were fired at the President's motorcade as it passed out of the downtown area of Dallas...The shots rang out as the motorcade had entered an open area just beyond the main downtown business district. It was impossible to determine where the shots had come from." (Phoned-in recap, broadcast around 2:10 PM, **11-22-63**) "We had just rounded the corner at the fringe of the business district when three shots suddenly rang out. They sounded at this stage like an automobile backfiring. They were extremely loud...We heard the shots very clearly but it was almost inconceivable at this stage that this was an assassination. Then three or four seconds elapsed before the car that the president was traveling in--this car came to an immediate stop. The Secret Service follow-up car--some of the agents piled out then almost immediately leaped back in." (**6-3-96** interview on C-Span) "When Oswald fired the shots, I was in the pool car, about the sixth car back from the President, about maybe 250 or 300 feet behind the President. But our car was just making the turn underneath the window where Oswald was firing. So in our car the sounds of the shots were very loud and very clear, and what was to become more significant historically, equally loud and clear. So we all felt after the first one, the first was just a loud noise--it might have been a firecracker or something. But with the next two shots we all knew they were shots and we all knew they came from very close to us, up above and again almost directly overhead." (**3-4-03** Interview conducted for President Kennedy Has Been Shot, 2003) "When (Merriman Smith) said those were gunshots, I think we all in the car just accepted they were gunshots. They were loud and clear and more significant—for the historical record—they were equally loud and equally clear and were clearly fired from almost over our head." (**11-20-03** article on Gwhatchet.com reporting on a meeting of the National Press Club) "'Right as we turned in front of the Texas School Book Depository I heard three extremely loud and clear shots,' said Clark, referring to the building from which suspected assassin Lee Harvey Oswald reportedly fired three shots. Clark told the audience of 100 that he and other journalists were unaware of exactly what happened because they could not see the presidential limousine." **Analysis:** it's interesting that Clark says all the shots sounded the same but that the only reason he knew they were shots was because Smith, who'd said the first shot sounded different than the others, told him so. It's also interesting that he says that they were turning as they heard the shots. As people claiming they heard something at a given time are most commonly implying that they heard the beginning of a sound or series of sounds at that time, and not the end of a sound or series of sounds at that time, this suggests the first shot heard by Clark was fired long after frame 160, when he was still three cars from the corner. **First shot hit 190-224.**

John Hoefen, an NBC sound technician, sat in the middle of the front seat of the following car, the first of three Chevrolet convertibles reserved for the Press. (**11-22-63** phoned-in report broadcast on NBC radio--WBAP in Dallas--at approximately 1:50) "We were just leaving the business district of Dallas when this shooting took place...We were making a sweeping curve here on a roadway approaching a freeway when the first shot rang out. Our first reaction was that some teenager had fired a cherry-bomb. When the second one rang out, we sort of felt that there was something wrong up there.

People started to drop down to the ground ahead of us, roughly 50 to 60 feet up near the President's car. Then there was a third and if I remember correctly a fourth shot. Immediately, after that last shot the President's car took off in a tremendous burst of speed followed by the Secret Service follow-up car..." (11-22-63 phoned-in report broadcast on NBC television, at approximately 2:00 PM) "We were approaching a drive which would put us on a freeway, where we would then drive to the Trade Mart...As we turned down this moderate curve here there was a loud shot. At first we thought it was a cherry bomb by some teenager. Then it was immediately followed by two or three more. Everybody said "duck" then there were people falling to the ground. We did not know who was shot. Ladies and men both were screaming..." (Hoefen's report as summarized by NBC in its 1966 book 70 hours and 30 Minutes) "Hoefen reports that he was in the motorcade with the Presidential party...A loud shot rang out; people ducked; men and women were screaming." **Analysis:** Even if one assumes Hoefen was wrong when he indicated there could have been four shots, his account is still at odds with the LPM scenario, as he reported that the first shot rang out as the car in which he was riding began its turn onto Elm. The subsequent concealment by NBC of Hoefen's suggestion there were more than three shots is also intriguing. This book, we should remember, misrepresented the words of Dallas DA Henry Wade and over-stated the case against Oswald. **First shot 190-224. Heard four shots?**

Dave Wiegman, an NBC cameraman, sat on the right side of the front seat, next to Hoefen. (Pictures of the Pain, p.371-372, Trask interview 3-18-89) "We were in a straight away heading down to what I now know as the Book Depository, and I heard the first report and I thought like everybody else that it was a good sized fire cracker—a cherry bomb. Then when I heard the second one, the adrenaline really started pumping because there was a reaction in the motorcade. I was sitting on the edge of the (car door) frame, which I sometimes did. I keenly remember right after the incident that my feet were on the ground during one of the reports. I don't think I was fast enough to react to the second, but I think on the third one I was running. The car had slowed down enough for me to jump out...I jumped and I remember running and I heard the third shot ... I'd done this before in other motorcades because a lot of times the President will stop and do something ...The motorcade has stopped, plus you heard a report. I don't think I thought on the first or second, but when the third one went off, I really thought I felt the compression on my face." (Interview on the Discovery Channel program Unsolved History, 2004) "I felt the third shot, actually the compression on my face, knew then it was not any cherry bomb. I decided that I've gotta run forward. This car's not going fast enough, so I swung my other leg out and ran very quickly—fast—and I turned on the camera figuring that the camera could see at least what I'm seeing." **Analysis:** Wiegman's statements are inconsistent. Did he start running on the ground before or after the third shot? As he began filming after noticing a reaction in the motorcade, and as the unedited film, according to Dale Myers, begins around Zapruder frame 245, and as Wiegman implies he'd heard two shots by this point, then perhaps he heard a missed shot at frame 160, or more than one shot between frames 190 and 224. In either scenario, he heard a shot heard by very few others. As the earliest interviews with Wiegman didn't take place for many years after the shooting, perhaps we should instead suspect his story was influenced by those who believed the first shot missed. Perhaps he really began filming after hearing only one shot, but after witnessing a reaction in the motorcade. He then heard shots two and three while preparing to get out of the car. As his film reveals that he was on the car or getting off of the car until a point in time 8 seconds or more after its inception (and more than 3 seconds after the head shot), his 1989 statement that he was running when he heard the third shot is almost certainly inaccurate. If even close to being true, however, it would indicate he heard a shot after the head shot. **Possible LPM scenario. Heard two early shots. Possible shot after the head shot.**

Thomas Craven, a cameraman for CBS News, sat on the left side of the back seat. (Pictures of the Pain p.371, Trask interview 5-23-85) "It was just as we were making the turn. We thought it was a motorcycle backfiring"...Craven believes he heard three shots, but adds," To tell the truth, I wouldn't be really positive. I could have sworn they were backfires." **Analysis:** as Craven's statement that they

were just making the turn could not refer to a first shot at frame 160, as Camera car #1 was mid-block at that point, it seems likely he meant the car was on approach to Houston and Elm, where it was circa frame 190 was referring to a shot's being fired at their approach to Houston and Elm. Additionally, as his car-mate Wiegman began filming as they were about to hit the intersection, Craven's statement can be taken as an indication that Wiegman began filming after the *first* shot, or after a second shot between frames 190 and 224. **Probable first shot 190-224.**

Cleve Ryan, an electrician assigned to the press pool, sat in the middle of the back seat. No comments by Ryan on the shooting have been located.

Thomas Atkins, a cameraman working for the White House, sat on the right side of the rear seat. (As quoted in the tabloid *Midnight*, **3-1-77**) "The car I was in had just made the little right turn. I was facing the Texas School Book Depository and Kennedy's car had just made the left turn heading toward the freeway entrance. Although I did not look up at the building, I could hear everything quite clearly. The shots came from below and off to the right side from where I was. I never thought the shots came from above. They did not sound like shots coming from anything higher than street level. They all sounded similar to me and did not seem to be coming from different points around the plaza. At first I thought it was a firecracker going off and I thought that whoever threw that thing at the motorcade is going to be in a heck of a lot of trouble with the Secret Service. Then when I heard the second shot, I realized it was gunfire. The third shot came very quickly after that, in less than two seconds, I'm sure. In thinking about it later, I got the distinct impression that it was almost like a little kid playing cowboys and Indians, the sounds came so close together. That is, between the second and third shots. It was bang...bang, bang. Like kids playing. That's exactly how I remember it." (Pictures of the Pain p.371, Trask interview **3-19-86**) "we came to the end (of Main Street) and made the right hand turn, and were going directly at the Depository. Just as we turned, I remember looking at my watch...as I looked at my watch I heard an explosion. The thought that ran through my mind, "Oh brother—somebody lit a cherry bomb"... And then immediately following there were two more quick explosions, and my stomach just went into a knot. The explosions were very loud, like they were right in front of me... (On describing the three shots) You know when kids play cowboys and Indians and they go Bam—Bam Bam! The last two clustered together." **Analysis:** although Atkins' statement that they had just made the turn might be taken as evidence for a shot earlier than Z-190, his more concrete observation that the last two shots were closely bunched together is a by-now familiar indication of the by now-dominant scenario. **First shot hit 190-224. Last two shots bunched together.**

Mo Motorcade

Above: Warren Commission Exhibit CE 883, with the locations of Abraham Zapruder and Robert Hughes marked, and the direction of their cameras marked by blue arrows.

At left, in descending order: an early frame from the Hughes film demonstrating his position, a later frame corresponding to Zapruder frame 160, and Zapruder frame 160.

Mo Motorcade

While the film of the motorcade made by Robert Hughes was misrepresented by the HSCA to establish that Officer H.B. McLain was in position to record the sounds heard on a dictabelt recording, and has been used by single-assassin theorists and honest conspiracy theorists to debunk those findings ever since, few have used the film in conjunction with eyewitness testimony in an attempt to isolate the moment of the first shot. When one looks at the moment of the film widely interpreted to correspond to Zapruder frame 160, the moment of the first shot miss in the LPM scenario, one can see that the yellow Chevy containing Dave Wiegman has safely made the turn onto Houston Street and is approaching mid-block. Behind this car is Camera car #2. Once again, thanks to Richard Trask and his work in *Pictures of the Pain*, the memories of some of the passengers of this car have been recorded.

Clint Grant, a Dallas Morning News photographer, sat in the middle of the front seat. (*Pictures of the Pain* p.398, letter Grant to Trask **12-1-85**) "we had just turned onto Houston Street when we heard one shot—pause—two shots in rapid succession. I thought it was someone playing a prank—maybe a kid's cherry bomb." (**11-21-93** Reporters Remember journalism conference, as quoted in *Reporting the Kennedy Assassination*) "as we turned the corner at Main and Houston, I heard three shots ring out."

Analysis: by saying the first shot rang out when they had just turned onto Houston, Grant's words could be LPM compatible. But by saying that the last two shots were in rapid succession, he's telling us all we need to know. **First shot hit 190-224. Last two shots bunched together.**

Frank Cancellare, a UPI photographer, sat on the right side of the front seat. (*Pictures of the Pain* p.398, Letter Cancellare to Trask, (3) **1985**) "I did not know what happened. I knew something had been attempted and the police and secret service were doing all they could. Police ran their bikes up the bank towards the railroad overpass. I thought they were chasing the culprit." **Analysis: too vague.**

Cecil Stoughton, a photographer working for the White House, sat on the left side of the back seat. (**3-1-71** interview with the Johnson Library) "We hadn't gotten to the corner yet. When we did get to the

corner from Main turning onto Elm, the President's car must have just rounded the corner, and by the time we were halfway up that one block street, we heard these shots, which were obvious shots to my compatriots and I, sitting on the back of the convertible, wide open. We all looked around, and I made a remark to the extent: "These Texans really know how to give you a salute. They're probably firing off their .45's or firecrackers or something like that." It's just some kind of a noisy thing. But they were so definitely shots that it just worried me for a little bit." (Pictures of the Pain, p.38, based upon Trask interview **7-10-85**) "Just after Stoughton's car had made its turn at the Old Court House, he heard three very distinct, loud reports, which sounded like shots." (**5-31-98** article in the Victoria Advocate) "Just a few cars behind Kennedy in the motorcade, the Air Force captain wasn't quite certain what had caused Kennedy's car to race away. 'We had to ask someone on the side of the street what had happened,' Stoughton said." **Analysis:** Stoughton's statement that he was halfway up that one block street--Houston--when he heard the first shot suggests he was further up the street than he was at Z-160. At Z-160, the blue Impala in which he was riding had just straightened out from the turn. **Probable first hit Z-190-224.**

Arthur Rickerby, a Life Magazine photographer, sat in the middle of the back seat. (Danbury News Times, **11-23-63**, as quoted in Pictures of the Pain p. 398) "We heard what sounded like a giant firecracker go off. With that we saw people diving to the ground, covering up their children, or scurrying up the banks." (Letter, Mrs. Wanda Rickerby to Trask, **3-20-85**) "He often stated his disagreement with the number of shots that were reported in the press." **Analysis:** if he saw people dive to the ground after the first shot, then he didn't hear all the shots. Perhaps, then, his disagreement with the press was that he only heard two shots, one *after* the head shot, when people dived to the ground. Or maybe he thought he heard four shots. **Too vague.**

Henry Burroughs, an AP photographer, sat on the right side of the back seat. (Pictures of the Pain p.398, based on Trask interview **8-21-85**) "Burroughs remembers hearing four shots...'We came up to the scene of the shooting and people were running all over the place.'" (**10-14-98** letter to Vince Palamara quoted in JFK: The Medical Evidence Reference) "After the President's limousine turned the corner at the book depository we could not see him, but we heard the shots, and the motorcade stopped." **Analysis:** with his recollection of four shots, Burroughs' account is definitely LPM incompatible. Still it's hard to determine when he heard the first shot. **Heard four shots.**

Mo Mo Motorcade

Above: Zapruder frame 160.

Below: the final frame of the Houston sequence of the Hughes film, at approximately Z-190-195.

Above: frame in the Hughes film corresponding to Zapruder frame 160.

Below: Zapruder frame 193

Mo Mo Motorcade

When one looks at the frame in the Hughes film used by single-assassin theorists the world over to discredit the dictabelt evidence, one should notice that they are at the same time discrediting their beloved LPM scenario. In the LPM scenario, let's remember, there is a first shot miss around Zapruder frame 160. Since the Hughes frame they love corresponds to frame 160, the people in the film should be where the LPM scenario needs them to be when the first shot rang out. But they are not, not by a long shot. (Pardon the pun).

James Underwood, a cameraman for KRLD, sat in the front seat of camera car #3, which has just rounded the corner onto Houston Street at frame 160 of the Zapruder film. (11-22-63 CBS news report, broadcast about 30 minutes after the assassination) "As we made the turn here at the intersection of Elm and Houston I heard first a loud report. It sounded to me like a giant firecracker. Then in quick succession two more. Immediately in front of me, I saw people begin to fall on the grass and run for bushes in a park area here." (11-25-63 FBI report, CD5 p. 17) "Mr. Underwood states the car in which he was riding was approaching the corner of Houston and Elm Streets...when he heard a loud noise sounding similar to a gunshot. He states that upon hearing the second noise he realized it was a gunshot and that at the sound of the next shot the car in which he was riding was almost directly in front of the Texas School Book Depository Building. (4-1-64 testimony before the Warren Commission, 6H 167-171) "After we turned onto Houston Street, the car I was in was about, as far as I can remember, about in the middle of the block or a little bit north of the center of the block, which is a short block, when I heard the first shot...I thought it was an explosion. I have heard many rifles fired but it did not sound like a rifle to me. Evidently it must have been the reverberations of the buildings or something. I believe I said to one of the other fellows it sounded like a giant firecracker and the car I was in was about the intersection of Elm and Houston when I heard a second shot fired and moments later a third shot fired and I realized they were by that time, the last two shots, I realized they were coming from

overhead ...By the time the third shot was fired, the car I was in stopped almost through the intersection in front of the Texas School Book Depository Building and I leaped out of the car before the car stopped...our car was in the intersection, in the intersection of Elm and Houston Street...It had partially made the turn or had just begun to make the turn.” **Analysis:** as he testified the car was significantly past the turn onto Houston at the time of the first shot, and the last shots were bunched, Underwood’s words are at odds with the LPM theory. They also suggest the last shot was after the head shot. As the car containing Dave Wiegman was at least 45 feet in front of the car containing Underwood, and Wiegman’s car was not quite in front of the building at Z-270, camera car #3 would have had to have averaged well over 13 miles an hour to get anywhere near the intersection by frame 313. And we know this didn’t happen because the motorcade was traveling at only 12 miles per hour, and had slowed down greatly for the turn onto Elm. For verification of this, there’s the Dorman film, which has multiple stops and starts and yet shows camera car #3 approaching Elm roughly 10 seconds after a frame closely corresponding to Z-133. **First shot hit 190-224. Last two shots bunched together (with the last shot after the head shot).**

Tom Dillard, a Dallas Morning News photographer, sat in the right front seat of camera car #3. He took photographs of the school book depository after the shots. (11-25-63 FBI report, CD5, p.16) “Mr. Dillard stated the car in which he was riding had not approached the corner of Houston and Elm Streets when he heard a noise sounding like a “torpedo” (a large firecracker). He states upon hearing another sound similar to the first he realized it was gunfire. He states that upon hearing the third shot the car in which he was riding was stopped almost in front of the Texas School Book Depository Building.” (4-1-64 testimony before the Warren Commission, 6H162-167) (When asked if he heard an explosion as they were driving north on Houston) “Yes, sir, I heard an explosion...I believe I said “My God, they’ve thrown a torpedo”...about 3 or 4 seconds, another explosion and my comment was “No, it’s heavy rifle fire”...I heard three, the three approximately equally spaced.” (When asked exactly where they were on Houston when they heard the first shots) “just a few feet around the corner and it seems we had slowed a great deal. It seems that our car had slowed down so that we were moving rather slowly and perhaps just passed the turn when I heard the first explosion.” (Report of an HSCA investigator's 2-8-78 interview of Dillard, found online) "The President's car turned left on Elm off of Houston and Dillard's car was about at the County Jail House. When Dillard heard the first shot, he said, "my God, they're throwing torpedos (fire crackers) at him!" When the second shot went off, Dillard knew it was a high velocity rifle. Dillard stated that they were just about to the corner of Houston and Elm when the third shot went off. Bob Jackson said, "there he is in the sixth floor window!" Dillard pointed his camera up and took a picture. Dillard jumped out of his car ran down Elm to take photos but could only get the rear of the vehicles as they sped off. Dillard then jumped back on his car and he did not know for sure that anyone had been hit...Mr. Dillard stated that there was no doubt that he heard three shots and all three shots came from the TSBD. He stated that as they got to the corner of Houston and Elm, he could smell gun powder very clearly." (7-19-93 oral history for the Sixth Floor Museum) “We were on Houston...sitting, chatting...and this gun went off. It was loud, and I said, "They're throwing torpedoes at him." In my mind, it was those things we threw as kids that hit the sidewalk and exploded. Then, in a matter of a second and a half, another shot. I said, "No, that's rifle fire." [After] the third shot, I said, "My God, they've killed him." (11-20-2000 eyewitness account in the Dallas Morning News) "The parade continued through downtown. My car had just turned north on Houston Street and was at the County Jail entrance when the first shot was fired. I said, 'They've thrown a torpedo.' At the second shot, 'No, it's heavy rifle fire.' and at the third shot I said, 'They've killed him.' The President's car had turned west on Elm before the shooting started, so we were unable to see what had happened around the corner. Bob Jackson, a photographer in my car, said, There's the rifle in that open window. In the three or four seconds it took me to locate the particular open window and make a picture, the rifle had been withdrawn. I made two shots of the building before we turned the corner to Elm. When we turned

the corner, there were people lying and crouched on the ground and others running up the grass slope. I jumped out of my car and made two pix of the area which by then was clear of people." **Analysis:** by saying they had perhaps just made the turn onto Houston when the first shot rang out, and that the shots were approximately equally spaced, Dillard's testimony is vague but consistent with the LPM scenario. His statement that the car was stopped almost in front of the school book depository building when the last shot was fired, however, is suggestive there was a shot fired after the head shot. His assertion that the car had slowed down for its entire journey up Houston only adds to this possibility. **Possible LPM scenario. Last shot possibly after the head shot.**

Jimmy Darnell, a cameraman for WBAP, sat on the back seat behind the driver. (12-2-63 FBI report, CD7 p.29) "stated he heard the first shot and thought it was a backfire from an automobile. The second shot he thought was a firecracker. He stated, however, after the second shot he realized from the confusion that something had happened and he jumped out of the car and ran towards the President's car...He said he noticed parents were throwing children to the ground and covering them with their bodies." **Analysis:** since he only mentions two shots, it's difficult to pigeon-hole Darnell's statements with absolute confidence. Still, as everyone else in the car made note of Robert Jackson pointing to the sniper's nest after the third shot, it's clear Darnell missed the third shot, probably while he was jumping from the automobile. As most of the witnesses in the Wiegman film seem oblivious when Wiegman begins filming at 270, the confusion mentioned by Darnell is most certainly the panic after the head shot. **Only mentioned two shots. Probable first shot hit 190-224. Second shot probably the head shot.**

Malcolm Couch, a cameraman for WFAA, was sitting in the middle of the back seat of camera car #3. He filmed the aftermath of the shots as the car crossed the Plaza. (11-22-63 eyewitness report on WFAA at approximately 1:45 PM) "Just as the President's car turned the corner, I heard a loud shot that sounded like at first a backfire. And then I heard another one. And then finally a third shot. We naturally took this third shot as a rifle shot because we figured by the third shot that this was not a backfire, that it was not a motorcycle backfiring, but it was actually someone taking a crack at the President. Just as our car rounded the corner we saw the President's car speed off. I had my camera in my hand and raised it to see an officer fall and pull his pistol. I took a shot of that, and then to my right, two ladies fell to the ground and one of them had fainted. People were running here and there, hither and yarn. Up in a window, I saw--I could not tell what the person looked like, but I saw the rifle being pulled back into the window. This was the fifth or sixth floor. There were people underneath the rifle who looked up to see where the shots had come from. One man started running down the street with his little boy, his little child. And police started running after him thinking he was the man that had fired the shots. There was much confusion around there. I noticed on the sidewalk, Walt, some blood. At this time, I do not know whose blood it was. But there was some blood on the sidewalk. Away from the street. It must not have been the President's blood." (11-22-63 eyewitness report on WFAA, at approximately 3:00 PM) "I was in the 8th car in the motorcade. There were 5 other newsmen, myself, in the car. We'd just rounded a corner and the President's car was heading out of downtown proper. We were at right angles to the President's car, about approximately 50-75 feet away. I heard this shot, or what had sounded like at the moment to be a motorcycle backfiring, and I heard another one, and by the third shot, it sounded by then, the men in the car realized it was not a motorcycle, but it was someone firing. Our car rounded the corner just as the President's car sped off down underneath an underpass and out onto what is known as Stemmon's Expressway. I looked to the left of me as a policeman fell, pulled a pistol. To the right of me two citizens dropped to the ground, and I had chance to take a quick shot of the window from which the assassin had fired his weapon." (11-27-63 FBI report, CD5 p.18) "He said they...were traveling the presidential route on Houston Street when he heard two loud noises about ten seconds apart which sounded like a motorcycle backfire. He said as they turned the corner onto Elm from Houston, he heard another noise, and Robert Jackson yelled to

look up at the window." (4-1-64 testimony before the Warren Commission, 6H153-162) "we turned north onto Houston, and it was there that we heard the first gunshot...It sounded like a motorcycle backfire at first—the first time we heard it—the first shot." (When asked where on Houston they heard this) "I would say, uh, 15 or 20 feet from the turn—from off of Main onto Houston... We had already completed the turn...I was looking back to a fellow on my—that would be on my right—I don't know who it was—we were joking. We had just made the turn. And I heard the first shot...there was no particular reaction...And—uh—then—in a few seconds, I guess from 4-5 seconds later or even less, we heard the second shot...we began to look in front of us...By the third shot, I felt that it was a rifle...as I said the shots or the noises were fairly close together, they were fairly even in sound. (When asked where they were when they heard the third shot) I'd say we were about 50 feet from making—or maybe 60 feet—from making the left hand turn onto Elm." (11-22-64 WFAA program A Year Ago Today) "As we turned the fateful corner, our senses were numb and our hearts seemed to stop beating as we heard the shots ring out. The photographer from Dallas, who slammed his elbow into my right side, yelled 'Look up in the window, there's the rifle.' And straight in front of us we could see the Texas School Book Depository Building and almost to the top floor there was the gleaming gun barrel sticking out of a window. The next few seconds were frantic. People were running. People were screaming. People falling to the ground." (Article found in the Clifton Record entitled JFK Shooting Recalled: Local Resident, Former TV Reporter Remembers Kennedy Assassination. Couch's Memories Remain Clear 37 Years Later, 11-22-00) "We had reached the end of the narrow corridor where most of the crowd had gathered, and had just made a turn to the right to go down Houston Street. As cameramen, we could relax for a few minutes. Just 100 yards ahead, the president's car took a westerly turn down Elm Street to go beneath an underpass. Beyond the underpass was clear highway to the Trade Mart, where the presidential party would have lunch. Putting down my camera, I remarked, 'Boy, what a beautiful day for a parade!. Everything is going perfect, too.' Hardly had I finished when we heard a sharp CRACK. It sounded like a motorcycle backfiring, or a firecracker. Then a second or so later, another CRACK. People began to run and scream. The reporter next to me jabbed me in the ribs. 'Look,' he yelled, 'Up in the window...a rifle!' He was pointing straight in front of us to the Texas School Book Depository Building. There on the fifth or sixth story, I saw about a foot of a rifle being drawn back into a window. Then our car turned sharply down Elm Street. I began taking pictures of people running, falling to the ground, and screaming." (11-22-03 article in the Dallas Morning News) "Jackson had taken his last picture and handed his film to Jim Featherston, a reporter waiting to receive it at the corner of Main and Houston. When the heavyset reporter fumbled it and began to chase after it, the men in the car found themselves laughing. And then came the first shot. Couch remembers someone shouting: 'Look at the window—there's the rifle!' By the time the third shot rang out, Couch had spotted about eight inches of the rifle protruding from the sixth-floor window." (Oral History interview performed for the Sixth Floor Museum, 4-2-07) "As we were starting the turn, facing the building, we heard a ka-pow. At first, well it could be motorcycle backfire, because all these cops were around us on motorcycles. And then another second or so, ka-pow. And whoever was sitting by me--and I really want to get this straight--hollered "Look up at the window; there's a rifle!" And we were facing the building at that point. And I looked up for about a split second and saw about a foot of the rifle going back in the window. It wasn't sticking out of the window, but it was visible in the window. It was just almost like that. And then another ka-pow. Pardon me, another couple of ka-pows. By then, by the time of the second ka-pow, going to the third and fourth, we really started to realize something was wrong. And that's when I looked up and saw the rifle go in the window." **Analysis:** as the car in which Couch was riding had just turned onto Houston at frame 160, and as Couch said they were 15-20 feet up Houston when he heard the first shot, his words could be interpreted as supportive of the LPM scenario. His WFAA report that his car was only 50-75 feet from the limo at the time of the shots, suggests his car was further up the street, however. The FBI's report is also problematic, in that it suggests Couch initially believed he was turning onto Elm when the last shot rang out. Which would suggest he'd heard

a shot after frame 313. His supposedly clear recollections to his local paper in 2000 are, of course, also problematic, as they suggest the last two shots were fired within a "second or so" of each other.

Possible LPM scenario. Possible first shot 190. Last shot possibly after the head shot.

Robert Jackson, a Dallas Times Herald photographer, was sitting on the right rear seat of the car. (11-23-63 AP article) "When we heard the first shot, the president had already turned the corner. We had not made the corner yet. Then we heard two more shots." (11-23-63 AP article found in the L.A. Times) "Bob Jackson, a photographer for the Dallas Times Herald, heard one shot, then two rapid bursts as he rode in an open convertible in the presidential motorcade." (11-23-63 FBI report, CD5 p.15) "he advised the car in which he was riding was proceeding north on Houston Street...and the presidential car had already turned left on Elm Street...when he heard three loud reports which sounded like shots from a gun. He stated that there was a "pause" after the first shot, followed by the second and third shots in rapid succession. Jackson advised that upon hearing the three shots, he looked upward and straight ahead at a window in the Texas School Book Depository...in time to see the barrel of a rifle being pulled inside the window." (3-10-64 testimony before the Warren Commission, 2H155-165) "I was in the process of unloading a camera and I was to toss it out of the car as we turned right onto Houston Street to one of our reporters...And that I did as we turned the corner...as I threw it out the wind blew it, caught it and blew it out into the street and our reporter chased it out into the street, and the photographers in our car, one of the photographers, was a TV cameraman whom I do not recall as his name, and he was joking about the film being thrown out and he was shooting my picture of throwing the film out... Well as our reporter chased that film out in the street, we all looked back at him and were laughing, and it was approximately that time that we heard the first shot, and we had already rounded the corner, of course, when we heard the first shot. We were approximately half a block on Houston Street...as we heard the first shot, I believe it was Tom Dillard from Dallas News who made some remark as to that sounding like a firecracker, and it could have been somebody else who said that. But someone else did speak up and make that comment and before he actually finished the sentence we heard the other two shots. ...We were still moving slowly, and after the third shot the second two shots seemed much closer together than the first shot, than they were to the first shot." (11-22-93 oral history for the Sixth Floor Museum) "And we had already made the turn as this was taking place and we heard the first shot...which put our car directly facing the Book Depository... We heard the first shot. Tom Dillard and I looked at each other. I think both of us, you know, the first thing we thought was it could be a gun. Then, we heard two more shots closer together, over a total span of about eight seconds maximum. I think we both realized that it was a rifle or a gun, not a backfire, especially after we heard the next two shots." (4-1-03 interview conducted for President Kennedy Has Been Shot, 2003) "I had unloaded the camera, put the film in an envelope, and as we turned the corner onto Houston I tossed the envelope out to a reporter. And that's when we heard the first shot, and then two more shots, closer together." **Analysis:** Jackson places the car well up Houston at the time of the first shot, when the car at frame 160 was barely past the turn. More importantly, he is consistent in stating the last two shots were bunched together. **First shot hit 190-224. Last two shots bunched together.**

H.B. McLain is the motorcycle officer riding at the left side of camera car #3 in the Hughes frame corresponding to Zapruder frame 160. (12-29-78 testimony before the HSCA, Vol. 5 p. 617-641) (When asked if he remembered hearing shots) "I only remember hearing one...I was approximately halfway between Main and Elm Streets on Houston...I just looked up the street and the only thing I saw was a bunch of pigeons flew out behind the school book depository. (The Kennedy Assassination Tapes, 1979) "Just after I had turned north onto Houston Street, I was moving very slow along the west side of the street...The motorcade seemed to stop at Elm and Houston as the crowd pressed in on the President. As the President got around onto Elm Street, I was approaching the middle of the block between Main and Elm. It was along there that I heard a shot. I suppose it was the first shot because I

looked up and saw the pigeons flushed from their roost on top of the building on the northwest corner of Elm and Houston. I was either stopped or stopping at the time. I looked around in an effort to determine what had happened. I don't recall ever hearing the other shots—just one which I guess was the first.” (No More Silence p.162-168, published 1998) “When I made the turn onto Houston on the left side, we had caught up with the cars in front of us, and I had stopped right by the side of the entrance to the old jail, which is about midway between Main and Houston Streets on Houston. I heard one very clear shot, threw my head out and it appeared that about 5,000 pigeons flew out from behind that building straight ahead....But I could see the limousine off to my left on Elm, and saw Mrs. Kennedy crawling on the back of the car.” (7-16-2003 oral history for the Sixth Floor Museum) (When asked if he heard but one shot) "That's all I recall hearing." (When asked if he then looked up at the depository) "Yeah, I looked over there after I looked up. I looked straight up when I heard the shot." (2006 interview with Seamus Coogan on youtube) "My thought was--when I heard the shot, all them pigeons flew out from behind that building, and I just said to myself 'somebody's shooting at the pigeons today.' It didn't even dawn on me they was shooting at him." **Analysis:** the shot heard by McLain was the last shot from the school book depository. He was too far up the street for the shot to have been at frame 160, and his claiming to have stopped before the shot makes it unlikely to have come before Z-224. That McLain heard but one shot at the end could be an indication the last two were very close together, and he perceived the second one as an echo. Or maybe he was just distracted by the pigeons. **Only heard one shot. No shot at frame 160.**

Marrion Baker rode on the east side of camera car #3. He can be seen in the last frame of the Hughes film 60 feet or so north of the north curb of Main Street. (11-22-63 statement to the Dallas County Sheriff's Department, 24 H199) "I was on Houston Street and the President's car had made a left turn from Houston onto Elm Street. Just as I approached Elm and Houston I heard three shots. I realized these shots were rifle shots and I began to try and figure out where they came from. I decided these shots had come from the building on the northwest corner of Elm and Houston.” (3-25-64 testimony before the Warren Commission, 3H 242-270) "As we approached the corner there of Main and Houston, we were making a right turn, and as I came out behind that building there, which is the country courthouse, the sheriff building, well there was a strong wind hit me and I almost lost my balance...As I got myself straightened up there, I guess it took me some 20, 30 feet, something like that, and it was about that time that I heard these shots come out. (When asked how far up Houston he was when he heard the shots, as per his measuring the distance with counsel David Belin) "we approximated it was 60 to 80 feet there, north of the north curblin of Main and Houston...It hit me all at once that it was a rifle shot...I heard—before I revved up this motorcycle, I heard the, you know, the two extra shots, the three shots...It seemed to me like they just went bang bang bang; they were pretty well even to me.” (Interview with CBS, aired 9-27-64) "I heard those shots come off, and they seemed like they was high, and they were directly ahead of me. And as I tried to figure out which—where they came from—and the building that I had in mind was directly ahead of me. And that was the Texas School Book Depository.” (Summary of HSCA interview conducted, 10-25-77) "Baker said that when he turned from Main to Houston street a gust of wind almost upset his cycle. By the time he righted himself he heard three shots. 'They went bam, bam, bam. They were high. I figured they came from the Texas School Book Depository Building or the Dallas Texas Building. Pigeons flew off the Hertz sign on the roof of the Book Depository so I figured it had to be there.'" (HSCA Outside contact report, 8-17-78) "On Houston street when first of three rifle shots was fired, believes he was at the driveway to the old county jail. Felt reports came from straight ahead and high. Seemed to be from one of two buildings, 411 Elm--TSBD--or 501, just east of 411. Observed pigeons fluttering in area of TSBD roof, chose that building to check first..." (The Kennedy Assassination Tapes, 1979) Officer E. "A little past half way down (between Main and Elm) I heard the first shot. As I looked up I noticed all the pigeons flushed off the top of the building on the corner ahead of me. And in the same period I heard the

second shot, and then the third one.” (7-23-86 testimony in a televised mock trial, On Trial: Lee Harvey Oswald) (When asked what happened after the motorcade turned left on Elm) "At this time I heard three shots." (When asked to point out on a map where he was when the first shot rang out) "Okay, about this area right here." (He points to a location roughly 70 feet north of the northern curb on Main Street). (When asked if he had a sense where these shots came from) "This building here" (He points to the book depository). (When asked if this was the book depository) "Yes, sir." (Note the next and final question and answer from this program is reported in Vincent Bugliosi's Reclaiming History, but was not shown in the U.S. version of the program.) (When asked if he thought the timing of the shots was such that one person could have fired all the shots with a bolt rifle) "Yes." (Interview in The Men Who Killed Kennedy, broadcast 1988) "I had gotten about halfway between Main and Houston (Note: he clearly means Main and Elm) when I heard these three shots. Immediately I knew they were in front of me and high." (No More Silence, p.123-126, published 1998) "I was approximately 150 feet south of Elm Street traveling north on Houston... Suddenly I heard these three shots. It was my impression that they came directly in front of me and high... The first two were pretty evenly spaced, and the last was a little bit closer.” **Analysis:** Baker’s not very good with numbers. His most recent approximation of being 150 feet south of Elm is particularly confusing, as that’s almost the entire block. Still, when he was forced to march it off with Belin he came up with his being 60 to 80 feet north of Main at the time of the first shot. Single-assassin theorist Dale Myers, in an extensive study of the assassination films released in 2007, created an illustration of Baker's position at Z-150. In this illustration, he placed Baker approximately 36 feet north of the Main Street curblin. As Myers also asserted that Baker had traveled 19.5 feet over the previous 35 frames of the Hughes film, which was filmed at the same speed as the Zapruder film, it follows that, even in Myers' opinion, Baker was approximately 42 feet north of Main Street at Z-160, and would not have reached 60 feet north of Main Street until approximately frame 192 of the Zapruder film (assuming, of course, that he maintained his speed). **First shot 190-224.**

The placement of the witnesses in the next few cars is based upon the research of Todd Wayne Vaughn.

Congressman George Mahon was riding in the second VIP car. This is the car seen completing its turn onto Houston in the last frames of the Hughes film. Although he said Presidential Aide Larry O'Brien sat in the front seat, there is reason to believe he was mistaken. (11-23-63 article in the Chicago Sun-Times) "Rep. George H. Mahon (D-Texas) also said that the shots sounded as though they were fired from a deer rifle or some other heavy weapon." (8-16-72 interview with the Johnson Library.) "I was riding in the back seat of a car, top down of course, with Homer Thornberry, it seems to me, and Walter Rogers. Sitting in the front seat with the driver was Larry O'Brien, and we commented that we thought the people looked a little antagonistic and unfriendly... And then we went down a certain street and turned to the right, and shortly after we turned to the right and we were facing the building from which the shot was fired we later learned, we heard these shots fired... We just didn't know what happened. But we saw the cars at the corner and then we saw them race off." **Analysis:** as the car in which he was riding was just making the turn at 160, his description is more in line with a first shot at 190. **First shot 190-224.**

Congressman Walter Rogers is believed to have been in this car as well. No comments by him on the shooting have been located.

Congressman Homer Thornberry, a close friend of Vice-President Johnson's, rode in the same car as Mahon and Rogers. (12-21-70 interview with the Johnson Library) "We were riding along, and then we heard what were the shots. We didn't know for sure what it was at first, but you could sense that something was wrong. You could just sense that something ahead had gone wrong." **Analysis: too vague.**

Lawrence F. O'Brien, one of Kennedy's top aides, sat on the right rear seat of this car. (5-26-64

testimony before the Warren Commission, 7H457-472) (When asked where he was in the motorcade) "I was in one of those open cars--specifically, I don't remember the order of the car, but I remember the passengers I joined. And as I pointed out, this was rather a quick hop into the car that I made at that point. Congressman Mahon was in the front seat with the driver. Congressman Rogers of Texas, now Judge Homer Thornberry of Texas, and me in the back seat." (On the shooting) "As I recall our car was about to make that turn (onto Houston) and it would seem to me therefore that the President's car was in the process of making the left turn... We heard the shots very clearly... The first shot was fired... And I must have almost immediately said to the driver... 'What was that?' The driver replied 'I do not know. They must be giving him a 21 gun salute.' By the time the driver had concluded that sentence, we did not hear explosion number 4." (When asked if he thought the shots were evenly spaced) "That is my impression... I recall that just prior to this, which indicates to me that perhaps we had turned that corner before the shots, Judge Thornberry pointed to a building and said that that was where his offices had been... We were turning the corner, and that took place before the shots." (No Final Victories, published 1974) "We were rounding a corner—Homer Thornberry was pointing out a building where he'd once had an office—when we heard a shot. 'What was that?' I immediately asked our driver. 'I don't know,' he said. 'They must be giving him a 21 gun salute.' As he spoke we heard two additional shots. We had no idea what had happened." (Interview in JFK: A Time Remembered, broadcast 1988) "Suddenly, shots were fired, and my initial reaction was to say to the driver 'What was that?' And he said 'I don't know, perhaps it's a 21 gun salute.'" **Analysis:** with his impression that the shots were evenly spaced and his initial impression that he was on Main when the first shot rang out, O'Brien almost fell into the first shot 160 category. His last second recollection that he'd already made the turn, however, puts him back into the domain of first shot 190. **First shot 190.**

Congressman Albert Thomas sat in the middle of the front seat of the next car. (4-16-64 and 8-19-64 interviews with William Manchester, as represented in The Death of a President, 1967) (On the first shot) "Most of the hunters in the motorcade--Sorrels, Connally, Yarborough, Gonzalez, Albert Thomas--instinctively identified it as rifle fire." **Analysis: too vague.**

Congressman Jack Brooks sat in front seat, on the right side of Thomas. (Comments dictated to President Johnson's secretary Marie Fehmer aboard Air Force One, available on the LBJ Library website, 11-22-63) "Shooting was approximately 12:30... heard three shots... turned around and hurried to hospital... knew immediately they were shots... saw two people on grass near freeway... man and child lying flat on ground... dodging shots." (2-1-71 interview with the Johnson Library) "We were riding along and we heard this shot, I thought it was a shot--two or three of them. Somebody said it was firecrackers and I said, 'It sounded like shots to me.' It sure did, too! I looked ahead and saw those cars speeding up, so we speeded up and went on up to the hospital." (Article by Dan Wallach in the Beaumont Enterprise, as found in 11-20-93 Moscow-Pullman Daily News) "'I heard the shots' Brooks said. 'I knew they were shots. I couldn't see the President. He was making a turn, but I could see people standing there, in shock. I knew then the President, or somebody, had been shot.'" **Analysis: too vague.**

Congressmen Lindley Beckworth was on the left side of the back seat of this car. (7-22-71 interview with the Johnson Library) "I was in the motorcade when the shots were fired. We thought at first it was a salute. I know Representative Albert Thomas and Representative [George] Mahon and Representative Jack Brooks--we were all together in about the third car back. The thing that really signaled that there was something wrong was this: We had been going at a parade speed, then we had an acceleration that threw us forward in a rough manner. It was at that time that I personally felt that something very bad had happened. We'd been having a very wonderful time in that parade." **Analysis:** apparently, Beckworth thought Mahon was in the car instead of Wright. **Too vague.**

Congressman Olin Teague is believed to have been sitting in the middle of the back seat of this car.

No comments by him on the shooting have been located.

Congressman Jim Wright, a future Speaker of the House of Representatives, was on the right side of the back seat of this car. (12-31-78 article in the Fort Worth Star-Telegram) "I distinctly recall hearing three shots" (Undated letter published in Reflections on JFK's Assassination, 1988) "I was in the motorcade, several cars behind President Kennedy, when those terrible shots rang out. There were a few seconds of anxious confusion before I learned the magnitude of the tragedy that had befallen the nation." (Interview in 1988 TV documentary JFK: The Day The Nation Cried) "My first instinctive thought was somebody is trying to fire a 21 gun salute with a rifle. I thought that that is inappropriate and that they could have done better than that." (Balance of Power, 1996) "Jack Brooks, Dallas Congressman Earl Cabell, and I rode in the fifth or sixth car, separated from the presidential and vice-presidential vehicles by several cars of media representatives... The vehicle in which I rode had rounded the corner past the old courthouse and was heading north toward the Texas School Book Depository warehouse when the first shot rang out. We were startled, suddenly alert. Then a second crack from the same rifle, its echo reverberating... Then the third shot, the cadence slightly off." (11-22-03 article in the Dallas Morning News) "And then came the carnage. Not until the third shot did Wright believe it was someone trying to kill the president." (7-03-07 article in the Ft. Worth Weekly) "Wright was riding several cars behind Kennedy when gunshots rang out, and he wondered if a car had backfired or maybe somebody had fired celebratory shots into the air. But as the motorcade continued and Kennedy's car sped off down Elm Street, it quickly became clear what had happened. 'As we passed the crowd, I saw these looks of horror on people's faces, and I knew they had seen something terrible,' he said. Wright isn't big on conspiracy theories of multiple shooters. 'I could tell all three shots came from the same rifle,' he said." **Analysis:** as the car in which Wright was traveling, apparently the car behind the last car seen in the Hughes film, was still on Main Street at frame 160, the first shot described by Wright must have come afterward. Still, as Wright claimed Earle Cabell was a congressman in 1963, and was in the car with him, when Cabell was still Dallas' mayor, and had his own car, Wright's memory was definitely not 100%. His comment that the last shot was off cadence is nevertheless intriguing. **First shot 190-224.**

Congressman John Andrew Young sat on the right front seat of the next car. (6-25-64 interview of Henry Gonzalez by William Manchester, as represented in The Death of a President, 1967) (On the first shot) "'Is that a Motorcycle backfire?" asked Congressman Young. Henry Gonzalez, who had been hunting only last Sunday, cried, 'No, it's gunfire!' **Analysis:** another second-hand story.

Congressman Henry Gonzalez, sat on the left side of the back seat of this car. (11-23-63 UPI article found in the San Antonio Light) "'I have misgivings about coming into this city... coming in Dallas.' Gonzalez added: The terrain was such that it must have been carefully selected by the assassin. The motorcade moved down an incline and went under an overpass. It had slowed to a halt at this point. Part of the entourage was excluded from view of the other cars. The terrain was well selected for the act. It must have been carefully thought out. The whole party drove rapidly then to the hospital. 'Oh, this is a sad, sad day. I did not want this to happen.'" (3-16-64 UPI article found in the Brownsville Texas Herald) "Gonzalez said he was in the sixth car in the motorcade and was sitting on the left hand side of the car in the rear. The congressman said when the first shot was fired the car stopped just in the intersection of Houston and Elm streets." (6-25-64 interview with William Manchester, as represented in The Death of a President, 1967) (On the first shot) "'Is that a Motorcycle backfire?" asked Congressman Young. Henry Gonzalez, who had been hunting only last Sunday, cried, 'No, it's gunfire!' The policeman driving their car immediately said 'You're right' and Gonzalez, who had been in Congress when Puerto Rican nationalists opened fire from the gallery, thought 'Can this be another Puerto Rico?'" (1-13-67 article by Seth Kantor found in the Pittsburgh Press) "Mr. Gonzalez was in the fourth car in the presidential motorcade--the car behind Vice President Lyndon B. Johnson and Sen

Ralph W. Yarborough, Texas Democrat--when he heard three shots, 'and then the whole earth spun and churned.'" (Introduction to Coup D'etat in America, 1975) "I suppose I really had questions from the start as to why he died, who killed him, and what directions had the bullets come? I was in car number four of the motorcade, and distinctly heard three shots." (8-25-75 UPI article found in the Fort Pierce Florida News Tribune) "Gonzalez said he was in the motorcade in Dallas when President Kennedy was slain. 'I have never mentioned this to anyone before. But when the first shot sounded, the cars were already at a complete halt or just crawling. Odd that we should have come to a virtual stop even before the first shot, at the exact spot.'" (1-26-92 AP article by Michelle Mittlestadt, found in the Victoria Advocate) "Gonzalez was in the third car behind the president's as they rounded the bend next to the Texas School Book Depository on the west end of downtown Dallas. He distinctly recalls hearing only three bullets, but doesn't reject the possibility another bullet--or several bullets--were fired from a gun equipped with a silencer. 'I had rolled the window down and I heard 'Bam,' then a pause, and then 'Bam' and then a short pause, 'Bam,' he remembered. I said 'My God, that's rifle fire.' Gonzalez said he could not see Kennedy's car when the shots were fired, but a police officer quickly motioned them toward nearby Parkland Hospital." **Analysis:** the car in which Gonzalez was riding was nowhere near the intersection of Houston and Elm at frame 160 of the Zapruder film. He must have meant the intersection of Houston and Main. No matter. As demonstrated in the Hughes film the car in which he was riding did not reach the intersection of Houston and Main until after frame 160. It's safe to say then, that, in Gonzalez' approximation, the first shot rang out shortly thereafter. **First shot 190-224. Last two shots bunched together.**

Texas State Senator Bill Patman is purported to have sat in the middle of the back seat. No comments from him on the shooting have been located.

Congressman Graham Purcell sat on the right side of the back seat of this car. (11-21-07 Ohmynews article by former Wichita Falls Times reporter Peter Hinchliffe) "In late afternoon on Nov. 22, I phoned our local Congressman, Graham Purcell. He was in that fateful motorcade through Dallas. Graham was a friend. In June of that year I married a Wichita Falls girl, Joyce Huggins (we're still together). Graham was a guest at our wedding. Graham was a great personal friend of Lyndon Johnson, staying at his fellow Texan's home for a month when he first went to Washington. He was a devoted supporter of President Kennedy. In a quiet choking voice he said, 'I cannot find the right words. This is the saddest day of my life.' There were four cars between the presidential car and the car in which Congressman Purcell was riding when the shooting occurred. 'I heard three shots: one shot, then a pause, then two more. I thought somebody was letting off firecrackers. Police around us started running. There were not many people about at the time. The presidential car suddenly shot away at high speed.'" **Analysis:** while Hinchliffe's story came a little too late to be credible, it is nevertheless intriguing that, in his recollection, Purcell noted that there had been a pause between the first and second shots. This is in line with the bulk of the other witnesses. While Hinchliffe puts Purcell's recollections in quotes, moreover, he fails to say he'd taken notes on their conversation. As a result, his account of Purcell's recollections can not be fully accepted.

Clyde Haygood rode a motorcycle beside the next car in the motorcade. (4-9-64 testimony before the Warren Commission, 6H296-302) (When asked where he was when he first heard the shots) "I was on Main Street just approaching Houston Street....(When asked how the shots sounded) "The last two were closer than the first. In other words, it was the first, then a pause, and then the other two were real close." (Interview with Fox News Channel program JFK: Case Not Closed, broadcast 11-2003.) "There was one shot and there was seconds of pause and then there was two additional shots that was closer together." **Analysis:** Haygood had good ears. His words are presented here to help put the next witness' words in context. **First shot hit 190-224. Last two shots bunched together.**

J.W. Courson rode in the motorcade opposite Haygood. (HSCA Report, p. 75) "Sergeant Jimmy

Wayne Courson was also interviewed on **September 26, 1977**. He stated that his assignment in the motorcade was in front of the press bus, approximately six or seven cars to the rear of the presidential limousine, and that as he turned onto Houston Street, he heard three shots about a second apart.” (The Kennedy Assassination Tapes, **1979**) Officer F “I had just turned off Main onto Houston and stopped... While waiting there for the press bus to complete its turn, I heard the shots. They definitely came from ahead of me, all three of them. The motorcade was backed up almost to a standstill. Then, people started running and falling. I looked toward where I would expect to see the President’s limousine but I couldn’t see it...I took off for the front of the motorcade to see what had happened. I passed people while I was doing this. I remember passing some of the motorcade vehicles...As I went down Elm Street, I noticed a motorcycle down at the curb, and an officer crawling on his hands and knees...I told the (HSCA) investigator that there were only three shots and that they had all come from Book Depository, but it seemed to me he didn’t believe me, or didn’t like what he heard.” (No More Silence, p.127-131, published **1998**) “All was going well until we had just made a right turn from Main onto Houston Street due to the limousine having to make the sharp left turn up ahead which slowed the motorcade. We had to stop, thus I was sitting on my motorcycle in the left lane on Houston looking more or less at the Book Depository. That’s when I heard the shots! I couldn’t tell exactly from where the shots came because of the echo pattern, but there were three very distinct shots. The first two were fairly close together then there was more space between the second and third. I could tell that they came from one location, but really I was concentrating more on the President and seeing if they needed help up ahead. I looked to my left...The limousine came to a stop and Mrs. Kennedy was on the back. I noticed that as I came around the corner on Elm. Then the Secret Service agent helped push her back in the car, and the motorcade took off at a high rate of speed. “

Analysis: Courson’s words can not be accepted at face value. First of all, the closest press bus to the President was the thirteenth car behind the limousine, and could not have been turning onto Houston by Z-230, the last possible moment for Courson to have heard the first shot. I suspect therefore that Courson heard the last two shots close together just after he turned onto Houston, and then convinced himself he heard a third shot, first stating it came right after the second shot, and then later telling Sneed it came after a pause. It’s also possible, of course, that he did hear a third shot, but just couldn’t remember where he was when he heard it. Should one consider it unlikely Courson’s memory could fade so badly, one should consider that Bobby Joe Dale, who rode six or more car lengths behind Courson and Haygood, told the Dallas Morning News in 1978 that he’d been riding "five vehicles behind the presidential limousine," and then later told author Larry Sneed that *he* was 40 feet north of Main on Houston Street when the *first* shot rang out. Courson’s inability to remember the shots in a consistent manner becomes more troubling, however, when one realizes that Courson was purported by Bowles to have sworn there were only three shots and that they all came from the book depository, and then later told Sneed he couldn’t even tell where the shots came from. It’s truly shocking how the unnamed witnesses in Bowles’ book said things that the witnesses they were obviously based upon completely contradicted when speaking for attribution. Still, if Courson’s 1979 statements are even close to being accurate they achieve Bowles’ desired effect, as they help debunk the dictabelt evidence so admired by the HSCA. As Courson said he passed a downed motorcycle and saw an officer crawling up the grass, and as this officer could only be Officer Haygood, Courson clearly turned onto Elm after Officer Haygood. As Malcolm Couch was in camera car #3, and as he began filming from the intersection of Houston and Elm, and as he then panned back to the street as Officer Haygood cut around the car, and as this revealed another officer just ahead of Haygood by camera car #1, we can conclude then that the officer ahead of Haygood was not Officer Courson but Officer McLain, the only officer in the area not behind Haygood. McLain’s presence in this image creates a huge problem for supporters of the dictabelt evidence. If the microphone purported to be McLain’s was by the Cabell car, two cars ahead of camera car # 1, when the shots rang out, *and then traveled at a constant speed*

through the plaza, as purported by those defending the dictabelt evidence, why was McLain riding by camera car #1, which had slowed down to a near-stop when the shots rang out, 20 or 30 seconds later?
Possible first shot hit 190-224. Last two shots bunched together.

Well, we've almost reached the end of our motorcade witnesses. But before we can end, we need to go back to the beginning.

The Leading Men

Above: the lead car makes a left in the Powers film.

Above: the lead car makes a left in the Hughes film.

Above: the lead car under the bridge in the Bell film.

Above: the lead car getting passed in the Daniel film.

The Leading Men

Dallas Police Chief Jesse Curry drove the small white lead car in the motorcade. (11-24-63 article by Donald Jansen in the New York Times) "The chief was riding in a car 40 feet ahead of the limousine carrying Mr. and Mrs. Kennedy and Gov. and Mrs. John B. Connally Jr. of Texas. The Motorcade was on its way to the Trade Mart where the President was to have spoken at a lunch. Chief Curry said he could tell from the sound of the three shots that they had come from the book company building, near downtown Dallas." (4-22-64 testimony before the Warren Commission, 4H150-202) "I was riding in a Presidential parade and approximately a hundred feet, I guess, ahead of the President's car, and when we heard this first report, I couldn't tell where it was coming from...We were just approaching an underpass...from the report I couldn't tell whether it was coming from the railroad yard or whether it was coming from behind...we heard this report...we were perhaps a couple of hundred feet or so (down Elm)...(when asked how far ahead of the Presidential vehicle he was) "to the best of my knowledge it would have been 100, 125 feet" (when asked where the President's car was at the time of the first shot) "I would say it was approximately halfway between Houston Street and the underpass, which would be, I would say probably 125- 150 feet west of Houston Street...(when asked how far it had gone by the time of the second shot) "perhaps 25 or 30 feet further along" (and the third shot) "A few feet further, perhaps 15-20 feet further" (when asked the duration of the shots) "perhaps 5 or 6 seconds...I heard three shots. I will never forget it." (9-25-64 interview with William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) "Curry was under the impression that someone

had fired a railroad torpedo." (8-18-69 interview with Johnson Library) "The Secret Service man had a radio but it didn't seem to be working too well at the time. He had been talking to some of the agents in the cars behind him, but it was a little portable machine. When I heard the shots and looked back in the rear view mirror I could see commotion in the President's car. About that time a motorcycle also pulled over, and I asked him what had happened, if someone had been hurt, and he said yes. I told him, "Take us to Parkland Hospital." (Curry's description of the shots in his book, JFK Assassination File, published 1969) "About half-way between Houston and the triple-underpass I heard a sharp crack. Someone in the car said, 'Is that a firecracker?' Two other sharp reports came almost directly after the first. All of the reports were fairly close together, but perhaps there was a longer pause between the first and second than between the second and third. The President's car was only about 100 feet behind our car at that moment. I glanced into my rear view mirror and could see the commotion in the President's car. Everyone was confused." (9-5-75 FBI report) "Lt. Jack Revill of Dallas Police Department told SA Brown that he had recently been contacted by former Dallas Police Chief Jesse Curry who told him he still has the impression that two men were involved in the shooting of President Kennedy." (2-6-77 UPI article found in the Valley News) "Reflecting on the fateful day which changed his life, Curry says, "The first shot sounded like a firecracker or a railroad torpedo. When the second and third shots came, I was sure it was rifle fire." **Analysis:** Curry's statements fit the general pattern. By testifying that the limousine was approximately halfway to the underpass when the first shot rang out, he undercuts the possibility the car was as far back as it was at 160. Similarly, by testifying that the limousine traveled a much shorter distance between the second and third shots than between the first two, he suggests the last two shots were bunched together. His latter statements confirm this impression. **First shot hit 190-224. Last two shots bunched together.**

Winston Lawson (11-23-63 report, 17H628-629) "It was about the time our car was arriving at this bridge that I heard the first shot. I believe I heard two more sharp reports and looking back saw people scurrying away from the route, as though they were taking cover. Almost immediately the President's car leaped ahead." (12-1-63 report, 17H630-634) "As the lead car was passing under this bridge I heard the first loud, sharp report and in rapid succession two more sounds like gunfire. I could see persons to the left of the motorcade vehicles running away." (4-23-64 testimony before the Warren Commission, 4H317-358) (when asked how far ahead they were of the limousine) "I think it was a little further ahead than it had been in the motorcade...I heard this very loud report...my first impression was firecracker or bomb or something like that...I can recall spinning around and looking back, and seeing people over on the grassy median kind of area running around and dropping down....I am positive that it came from the rear, and then I spun that way to see what had occurred back there...Then I heard two more sharp reports, the second two were closer together than the first. There was one report, and a pause, then two more reports closer together, two and three were closer together than one and two." (1-31-78 interview with HSCA investigator, file #180-10074-10396) "As they neared the Triple Overpass, Lawson heard the first shot, which to Lawson sounded like a "firecracker" or "cherry bomb." This was followed by a total of two more shots." (9-5-2003 interview with the Sixth Floor Museum) "I believe I was just about to go under the--pretty close to it anyway--the underpass to go out on the Stemmons Freeway sometime a little bit later, and I heard a shot, (makes sound) like that, and then I heard another one (makes sound). And the third one was a little closer to the second one than the first one was to the second one...I thought 'shots'...I thought immediately that it had come from over my right hand shoulder." (11-22-2003 article in the Dallas Morning News) "And then came the first shot. Like most witnesses, Win Lawson recalls two more, though puzzled by the quicker pace between the second and third." (Interview in the Discovery Channel program The Kennedy Detail, first broadcast 12-2-10) (While purportedly discussing the last two shots) "I heard a bang (he then waits about two seconds) bang." (Later in the program, when discussing the number of shots fired) "There were three. They were exactly like that. The third one came closer to the second one than the second one was to the first one.

Bang (he waits about three seconds) Bang..Bang (This last bang now comes about a second after the second bang.) They were from back of me over my right shoulder. Nothing went bang in front of me. Nothing went bang from the side of me--the front side of me. That shot came from the school book depository, back over my right hand shoulder." **Analysis:** by stating that the last two shots were bunched together, Lawson is indirectly stating that the first shot hit. Since no one dived down until after the head shot, Lawson's statement that people dropped down after the first shot is instead suggestive that they dropped down after the second. **First shot hit 190-224. Last two shots bunched together.**

Dallas County Sheriff Bill Decker rode in the back seat of the lead car. (11-22-63 article in the Dallas Times-Herald) "Sheriff Decker said he and Dallas Police Chief Jesse Curry were riding in the lead car in the parade about one and a half lengths in front of the President's car. The Sheriff said he heard two shots and 'may have seen one of the bullets hit the concrete and bounce.' He said he did not see the other bullet. 'It all happened so fast, I'm just not sure what happened,' Sheriff Decker said." (Undated 1963-1964 statement included with Decker Exhibit 5323, 19H458) "I distinctly remember hearing 2 shots. As I heard the first retort, I looked back over my shoulder and saw what appeared to be a spray of water come out of the rear seat of the President's car. At this same moment, Mr. Lawson said, "Let's get out of here and get to the nearest hospital." When I heard the shots I noted motorcycle officers coming off their cycles and running up the embankment on Dealey Plaza." **Analysis:** the only spray of anything Decker could have seen was the spray of blood from Kennedy's head. It seems likely the spray was from the shot he heard, and that another shot followed.. Since he recalls Lawson mentioning the hospital as this first shot rang out, and Kellerman didn't call Lawson until just before the head shot, the "shots" Decker heard were undoubtedly the last two shots bunched together. **Only heard two shots. Last two shots bunched together (with the last shot probably after the head shot).**

Forrest Sorrels (11-28-63 deposition, 21H548) "When we were at a point approximately three fourths of the distance between the Houston and Elm Street intersections and the first underpass, I heard what sounded like a rifle shot and said "What's that?", as I turned to my right to look back in the direction of the terrace and the Texas School Book Depository. When I heard two more shots, I said "let's get out of here". I looked towards the top of the terrace to my right as the sound of the shots seemed to come from that direction. I noted that the President's car had accelerated its speed and was fast closing the gap between us." (5-7-64 testimony before the Warren Commission, 7H332-360) "I looked back to see how close the President's car was in making the turn...we were probably, oh, I would say, several car lengths ahead of it...so they called on the radio to the Trade Mart that we were about five minutes away. And it seemed like almost instantly after that the first shot was heard...I just said "What's that?" And turned around to look up on this terrace part there, because the sound sounded like it came from the back and up in that direction...Within about 3 seconds, there were two more similar reports. And I said "Let's get out of here" and looked back all the way back to where the President's car was, and I noticed some confusion, movement there, and the car just seemed to lurch forward." (8-26-64 and 9-24-64 interviews with William Manchester, as represented in *The Death of a President*, 1967) (On the first shot) "Most of the hunters in the motorcade--Sorrels, Connally, Yarborough, Gonzalez, Albert Thomas--instinctively identified it as rifle fire." **Analysis:** Sorrels' approximation of the distance between the cars and his grouping the second two shots together is indicative he heard them the same as by now should be expected. **First shot hit 190-224. Last two shots probably bunched together.**

Stavis Ellis was one of the motorcycle officers out in front of the lead car. (HSCA Vol. XII, p.23 "On August 5, 1978, the committee received information from former Dallas policeman Stavis Ellis that Ellis had also seen a missile hit the ground in the area of the motorcade... Ellis said he rode on a motorcycle alongside the first car...approximately 100 to 125 feet in front of the car carrying President Kennedy. Ellis said that just as he started down the hill of Elm Street, he looked back toward President Kennedy's car and saw debris come up from the ground at a nearby curb. Ellis thought it was a

fragment grenade. Ellis also said that President Kennedy turned around and looked over his shoulder. The second shot then hit him, and the third shot “blew his head up.” (The Kennedy Assassination Tapes, **1979**) Officer A “when the first shot was fired, I was looking directly at the President, and I saw the concrete burst into a cloud of dust when the bullet hit the curb. I noticed, too, that with the shot, some people started running in every direction, while several people hit the ground... Then while looking back at the President, I heard the second shot. The President became rigid and grabbed his neck. It also seemed like the limousine stopped or almost stopped, and agents from the following car started running toward the President’s limousine. The third shot hit the President in the head.” (No More Silence p.142-153, published **1998**) “Just as I turned around, then the first shot went off. It hit back there... I could see where the shot came into the south side of the curb. It looked like it hit concrete or grass there in just a flash, and a bunch of junk flew up like a white or gray color dust or smoke coming out of the concrete... I thought there had been some people hit back there as people started falling. I thought either some crank had thrown a big “Baby John” firecracker and scared them causing them to jump down or else a fragmentation grenade had hit all those people. In any case they went down! Actually I think they threw themselves down in anticipation of another shot. As soon as I saw that, I turned around and rode up beside the chief’s car and BANG!...BANG!, two more shots went off, three shots in all!” **Analysis:** Ellis is a poster child for Selective Attribution Syndrome. Both conspiracy theorists and lone nut theorists alike love to use his comments about seeing something hit the curb as evidence for a first shot miss. But they should read on. He says that as this happened people began running everywhere. That they began falling... He is therefore describing the head shot. What he saw hit the curb then was quite possibly the skull fragment observed flying through the air by Charles Brehm and later found in the street by Harry Holmes and A.D. McCurley. If this is so, and he was describing the head shot, then Ellis’s description of Kennedy reaching for his neck and the third shot striking the President in the head would appear to be more an assertion of what he believes happened, then what he saw happen. Sure enough, in Ellis’s statements to Larry Sneed in No More Silence, he admits he turned around after the first shot and therefore could not have seen what he is purported to have seen in Bowles’ book. His throwing in the “Bang Bang” at the end was probably poetic license but possibly a reflection that he did indeed hear one or two shots after the head shot. Not surprisingly, the Bell and Daniel films prove that Ellis was nowhere near the lead car at the time of the shots. **Heard no early shots. One or more shots possibly after the head shot.**

William Lumpkin rode beside Officer Ellis in front of the lead car. (The Kennedy Assassination Tapes, **1979**) Officer B. “At first I thought it was a motorcycle backfiring, as they were heating up. The first shot apparently missed the limousine as it hit the curb, not too far from where they (Mary Moorman and Jean Hill) were standing. The second and third shots hit the President from the rear. At the time, I was facing east on Elm with the grassy knoll to my immediate left, and the corner of the stockade fence was less than 100 feet away. I saw nothing on that hill that looked in any way suspicious. I’m absolutely positive that there were only three shots, that they all came from back up Elm Street from the right rear of the President’s limousine, and that no one was shot from the grassy knoll.” (No More Silence, p.154-161, published **1998**) “we had turned off of Main Street onto Houston for one block, then over to Elm Street, then turned back left, and we were stopped at the time before we heard the shots. When the shots occurred I thought it was a motorcycle backfiring. I heard three distinct bangs with none of them being together or anything like that. There’s been conflicting reports where all the noise came from. From where I was it was behind me... I thought it was a motorcycle backfiring at first, till I turned back and saw the commotion in the President’s convertible. I wasn’t sure at the time what it was, but it later turned out it was his wife on the back. Then Chaney rode up to Curry and probably told him that the President had been shot. We were still stopped at the time, and then Chief Curry comes on and says “Let’s go, boys!” We went under the triple underpass and took the entrance ramp to Stemmons Freeway.” **Analysis:** very, very disturbing. Lumpkin’s statements suggest

once again that the Kennedy Assassination Tapes was a dishonest book presenting deliberately distorted recollections of the assassination. (Was this why Bowles failed to identify his witnesses by name?) While in Bowles' book Lumpkin says that he was facing east by the grassy knoll when the shots were fired, and that the first shot "apparently" missed—which would seem to be his admission that this is what he heard from Ellis--and that the second and third shots hit the President from the rear, Lumpkin told Sneed that he only turned around after the last shot in time to see Jackie climbing out onto the trunk! As stated, the Bell and Daniel films prove that Lumpkin and Ellis were nowhere near the lead car when the shots rang out. That Bowles, who was the Communications Supervisor for the DPD, published such lies is disturbing. That soon after the publication of his book Bowles became Dallas County Sheriff is even more disturbing. **Too vague.**

So now we've looked at the statements of 55 witnesses on the south and east sides of the Plaza, and 69 more in the motorcade. Of these **124** witnesses, **25** made statements that were too vague to tell us how the shots were fired. Of the remaining 99, **63** made statements suggesting the first shot was heard at a time corresponding to the period between frames 190 and 224 of the Zapruder film, and that two closely bunched shots followed. Another **21** made statements indicating the first shot was heard at frame 190 or afterward. Another **4** witnesses heard four or more shots, **3** others heard a shot after the head shot, **2** heard a shot within three seconds of the head shot, and **1** more could only swear to hearing two shots. This leaves just **5** witnesses who made statements which can reasonably be interpreted as supporting the LPM scenario of a first shot miss, a three and a half second gap, a second shot, a five second gap, and a head shot. And the statements of all of these witnesses, after their statements have been compared to the photographic evidence, can be used to support other scenarios as well. (3 of them made statements suggesting the last shot was fired after the head shot.) Eugene Boone, the first witness whose statements we examined, therefore, is the only witness so far whose actions and statements remotely suggest the LPM scenario, and he reversed himself later. This means there are NO eyewitnesses as yet whose statements offer unclouded support for the LPM scenario of a first shot miss. The evidence for this shot is... appropriately enough...missing. On the other hand, there were 21 witnesses who made statements suggesting that the *last shot* missed. Those who base their acceptance of the LPM scenario on a single-assassin-minded interpretation of the actions of John Connally and Rosemary Willis in the Zapruder film, and fail to note that their acceptance of this theory puts them at odds with the statements and testimony of President Lyndon Johnson, First Lady Lady Bird Johnson, Senator Ralph Yarborough, Congressman George Mahon, Congressman Jim Wright, Congressman Henry Gonzalez, Dallas Mayor Earle Cabell, Dallas Chief of Police Jesse Curry, Dallas County Sheriff Bill Decker, numerous Secret Service agents, dozens of Dallas Police Officers, Dallas County Sheriff's Deputies, and Texas State Highway Patrolmen, *and* Governor John Connally himself, should be forced to go back to school...and read the Warren Report and its twenty-six volumes of supporting evidence... the very books many of them claim to be defending

Chapter 7: Pieces in the Plaza

A continuation of our look at the ear and eye witnesses, with a focus on those standing along Elm Street

Over the Underpass

Clock-wise, from the left corner, a photo by James Altgens, Zapruder frame 464, a frame from the Bell film, and a controversial frame from the Wiegman film.

For reasons beyond my grasp, the first image in each chapter sometimes fails to appear. If there's nothing up above, don't despair; you can still see the image [here](#)

Over the Underpass

Earle V. Brown was a Dallas police officer stationed on the south end of the railroad bridge over the Stemmons Freeway. He was not in Dealey Plaza itself but on an elevated platform 150 yards or so to the west of it, with an unobstructed view of the parking lot behind the stockade fence at the top of the grassy knoll. (12-23-63 FBI report on a **12-9-63** interview, CD205 p39) "He stated he heard the shots that killed President Kennedy, but did not see the shots take effect and stated he could not furnish any information which would assist in identifying the assassin. He advised that he believed he could smell gunpowder in the air on the overpass but believed it was probably brought there by the wind." (4-7-64 testimony before the Warren Commission, 6H231-236) "the first I noticed the car was when it stopped...After it made the turn and when the shots were fired, it stopped." (When asked if it made a complete stop) "That I couldn't swear to." (When asked how many shots he heard) "Three." (When asked from where the shots came) "Well, they seemed high to me...I heard these shots and then I smelled this gunpowder...It come on it would be maybe a couple minutes later so--at least it smelled like it to me...It came it seemed the direction of that building, that Texas...School Book Depository." (7-15-64 signed statement to Dallas Police Department, 22H600) "I heard the shots and they seemed like they were coming high from the direction of the book depository building. There was a terrific echo." (11-09-83 AP article found in the Indiana Gazette) "I was down there early at about 10 a.m. and I had

this vision of a rifle sticking out of a window. It was very strange. Then I heard these shots," said Brown. "It was a premonition and it has always really shook me up when I think of it. It was like someone was trying to tell me something." About two hours later, Brown said, he heard shots and saw two or three puffs of white smoke wafting toward the bridge. The president, he said, was lying in his wife's lap as the car passed beneath him. "I still see that," he said." **Analysis:** as Brown associated the shots with the limo's stopping, and as the limo didn't slow to just before the head shot, it's hard to see how his testimony is consistent with a first shot miss, 8 seconds earlier. It's also intriguing that he chose to associate the shots with the depository building, when the grassy knoll was, from his presumed position, in line with the building. It just goes to show the power of suggestion. Still, **too vague. Saw Smoke. (On the knoll?)**

Atop the railroad bridge over Elm Street at the west of end of Dealey Plaza were a number of railroad men and police officers whose statements remain intriguing to this day.

S.M. Holland (11-22-63 statement to Dallas County Sheriff's Department, 19H480, 24H212) "the President's car was coming down Elm Street and when they got just about to the Arcade I heard what I thought for the moment was a fire cracker and he slumped over and I looked over toward the arcade and trees and saw a puff of smoke come over from the trees and I heard three more shots after the first one but that was the only puff of smoke I saw...After the first shot the President slumped over and Mrs. Kennedy jumped up and tried to get over in the back seat to him and then the second shot rang out. After the first shot the secret service man raised up in the seat with a machine gun and then dropped back down in the seat. And they immediately sped off." (11-24-63 FBI report, CD5 p. 49-50) "The motorcycle escort and the lead car had passed underneath the underpass and the Presidential car was approximately forty to fifty yards away. He stated that he heard what he first believed to be a firecracker and then saw President Kennedy, who had just waved to the crowd on the President's left, crumple forward. Jacqueline Kennedy appeared to rise up in the rear seat and caught the President in her lap and then sat back down with the President's head face down in her lap. Simultaneously with the first shot, he stated he heard either three or four more shots fired together and saw Governor Connally, sitting directly in front of the President, fall forward...When the first shot was fired, Holland stated that a motorcycle officer behind the car stopped his motor ...One of the officers in the front seat of the Presidential car stood up with a machine gun...The only unusual thing that Holland could recall was an approximate one and one-half to two foot diameter of what he believed was gray smoke which appeared to him to be coming from the trees which would have been on the right of the presidential car but observed no one there or in the vicinity." (4-8-64 testimony before the Warren Commission, 6H239-248) "the motorcade was coming down in this fashion, and the President was waving to the people on this side...And she (Jackie) was looking...in the southern direction...And about that time he went over like that(indicating) and put his hand up, and she was still looking off...(he) pulled forward and his hand just stood like that momentarily...His right hand; and that was the first report that I heard...it was a pretty loud report, and the car traveled a few yards, and Governor Connally turned in this fashion, like that (indicating) with his hand out, and another report...And another report rang out and he slumped down in his seat, and about that time Mrs. Kennedy was looking at these girls over here (indicating). The girls standing—now one of them was taking a picture...by the time she could get turned around, he was hit again along in—I'd say along in here (indicating)...It knocked him completely down on the floor. Over, just slumped completely over. I heard a third report and I counted four shots and about the same time all this was happening and in this group of trees...There was a shot, a report, I don't know whether it was a shot...And a puff of smoke came out about 6 or 8 feet above the ground right out from under those trees...you could see that puff of smoke, like someone had thrown a firecracker, or something out...It wasn't as loud as the previous reports or shots." (Interview in Rush to Judgment, filmed 3-21-66) "The first bullet, the President slumped over, and Governor Connally made his turn to the right and then back to the left. And that's when the second shot was fired and knocked

him down to the floorboards...I saw that next bullet that struck the President because it flipped him over almost on his stomach, and the side of his head, and his head was laying on the edge of the seat. He was laying more on his stomach, and his foot was hanging out over the edge of the car upside down...I looked over to where I thought the shot came from and I saw a puff of smoke still lingering underneath the trees in front of the wooden fence. The report sounded like it came from behind the wooden fence...I know where that third shot came from...from behind the picket fence, close to the little plaza...there's no doubt in my mind, there's no doubt whatsoever in my mind and the statements that I made in the Sheriff's Office immediately after the shooting, and the statement that I made to the Warren Commission, I made it very plainly there was no doubt in my mind what there was definitely a shot fired from behind that picket fence. I made it plain to the Warren Commission and I think I made the same statement in the Sheriff's Office. There was a fourth shot." (When standing behind the picket fence on the grassy knoll, at a point about 15 feet from the corner, and asked if he saw the President's reaction to the third shot Holland suspected had been fired from behind the fence) "It knocked him over to his left, down into the car...away from here." (6-28-66 UPI article, found in the Los Angeles Herald-Examiner) "Holland is certain that a separate shot came from beneath trees on a grassy knoll north and west of the depository building. At the time, he was standing on a railroad viaduct under which Elm Street passes. Looking straight ahead and down, he had one of the best views of any eyewitness. Holland says there were four separate shots. (The Warren report concludes there were three.) He says the first came from the book building and hit the President. The second came from the same place and hit Gov. John Connally riding in the same car.'The third shot came from behind the picket fence to the north of Elm Street. There was a puff of smoke under the trees there like someone had thrown out a Chinese firecracker and a report of a gun entirely different from the one which fired from the book building. I don't know whether it hit anything.' Holland said the fourth shot from the depository struck the President in the head, blowing away a large portion of his skull."

(11-22-66 UPI article, found in the Albuquerque Tribune) "There definitely was a shot fired from behind that fence," maintains S. M. Holland in regard to the assassination of President John Kennedy three years ago...He said in an interview yesterday that one and possibly two shots were fired at the motorcade from behind a wooden fence adjacent to the underpass and some 150 feet from where he was standing..."Four or five of us saw it, the smoke," Holland said. "One of my employees even saw the muzzle flash..."I was close enough to see it and hear it," Holland said. "And if you don't think you can see rifle smoke against a clump of trees, you're mistaken." He added that he is certain there were at least four shots fired, and perhaps five. "Now, the ones that came from up the street (the depository area) were quite a bit louder than the one from the fence. That's how I could tell they were from different rifles." (11-30-66 taped interview with Josiah Thompson, as recounted in Six Seconds in Dallas, 1967) (Thompson summarizes) "He told us of the shooting, of the motorcade swooping toward him as he stood on the railroad overpass, of the sound of the shots. Holland had heard four shots, not three, and the third and fourth were fired so close together that they sounded almost like a double shot." (On the first two shots) "The first shot, as I said, the first report that I heard, the President slumped over, similar to that, and his hands went up to his neck...And the Governor turned this...to his right, similar to this, then he turned like that, and that's when the Governor was shot...And I made the statement immediately after the assassination to the Warren Commission that he did turn to his right and his left and he was shot and hit by the second bullet. He definitely was not hit by the first shot...I know the Governor was hit by the second shot...I'm positive of that." (When asked the spacing of the first two shots) "about a second apart." (On the sound of the third shot, in comparison to others) "Well, it would be about like I was telling you awhile ago. It would be like you're firing a .38 pistol right beside a shotgun, or a .45 right beside a shotgun...One is not near as loud as the other...the third shot was not so loud; it was like it came from a .38 pistol, compared with a high-powered rifle...That's what drew my attention...The report of the third shot wasn't nearly as loud as the first and second shot or

the fourth shot." (When asked if the direction of the shot seemed different) "There was definitely a sound of direction where it was coming." (When asked about the spacing of shots three and four) "Well, like boom-boom...Pretty fast together. They weren't simultaneous, as we say, They were boom-boom. (When asked if the sound pattern could mean the shots were fired at the same time from different locations) "That's right. The sounds...The bullets travel faster than sound, but the report that I heard of the third one--I heard that before the fourth one, the fourth shot..The fourth resembled the first two. (When asked where the fourth one seemed to come from) "The upper end of the street...the north end of Houston Street...I could tell what direction they were being fired from, but I didn't know whether they were from a building, or whether it was from a street corner or the middle of the street. From where I was I couldn't tell because I was...the trees hid that part of...hid from me." (When asked which bullets hit the President) "Well, the third and fourth bullets hit the President." (When asked if he felt he'd been hit by both) "Well, I say this, the President fell over when the third and fourth shots were fired. Now whether he was caught in a crossfire or whether both of them hit him, I can't say." (When asked if he noticed any dust fly up from the pavement) "I didn't, and I was observing very close because that's what I was up here for." (When asked his opinion on shots three and four) "My opinion is that the third and fourth did, did hit the President...In the head." (When shown a photo and asked the location of the smoke he saw on the knoll, he marks the bottom of the trees just west of the steps) "Right under these trees, right at that exact spot, about ten or fifteen feet from this corner, the corner of the fence here, right under this tree, particular tree. It's that exact spot, right there...That's where it was...just like somebody had thrown a firecracker and left a little puff of smoke there; it was just laying there. It was a white smoke; it wasn't a black smoke or like a black powder. It was like a puff of a cigarette, but it was about nine feet off the ground. It would be just about in line with, or maybe just a little bit higher than that fence, but by the time it got out underneath the tree, well, it would be about eight or nine feet." (When asked about Clemon Johnson's suggestion the smoke seen by the railroad men came from a Dallas police motorcycle abandoned on the street after the shooting) "I saw the smoke before the motorcyclist left the street to go up there."

(Late 1966 Interview with Lawrence Schiller recounted in The Scavengers and the Critics of the Warren Report, published 1967) (When asked where the sound of the first shot came from) "Well, it came from the other end of Elm Street, up about the corner of Houston and Elm Street. I couldn't tell whether it was on the ground or whether it was up in the building." (When asked about the third shot) "Third and fourth were so close together. The third shot came from the fence." (When asked where he was looking at the time of the third shot) "My attention on the third and fourth shots was to my left, behind the picket fence, or over to the picket fence, and where I saw that puff of smoke coming from and heard the report. I couldn't swear that it was a rifle. It could have been a firecracker, but I don't think it was." (Interview with CBS broadcast **6-26-67**) "Just about the time the parade turned on Elm Street, about where that truck is - that bus is now, there was a shot came from up-the upper end of the street. I couldn't say then, at that time, that it came from the Book Depository book store. But I knew that it came from the other end of the street, and the President slumped over forward like that and tried to raise his hand up. And Governor Connally, sitting in front of him on the right side of the car, tried to turn to his right and he was sitting so close to the door that he couldn't make it that-a-way, and he turned back like that with his arm out to the left. And about that time, the second shot was fired and it knocked him over forward and he slumped to the right, and I guess his wife pulled him over in her lap because he fell over in her lap. And about that time, there was a third report that wasn't nearly as loud as the two previous reports. It came from that picket fence, and then there was a fourth report. The third and the fourth reports was almost simultaneously. But, the third report wasn't nearly as loud as the two previous reports or the fourth report. And I glanced over underneath that green tree and you see a - a little puff of smoke. It looked like a puff of steam or cigarette smoke. And the smoke was about - oh, eight or ten feet off the ground, and about fifteen feet this side of that tree."

(3-25-68 interview with Barry Ernest recounted in *The Girl on the Stairs*, published 2011) "As the motorcade approached in the middle lane of Elm, I heard four shots, the first two sounded like they were behind the president with that shot from the knoll being different from the rest.' When I asked what he meant by 'different,' he said it sounded 'I don't know, just different than the others, like it was a pistol, or a different type of rifle or something. The third and fourth shots were very close together, almost at exactly the same second.' Holland said his eyes were focused on Kennedy when 'the second, or possibly the third shot' caused the president's head to 'suddenly lurch backward.' At that moment, he said, his attention was immediately drawn to the left, straight at the far corner of the wooden fence on top of the knoll, where he felt that shot, the 'different' shot, had originated. 'And I saw a puff of smoke come out from that corner and it just didn't hang there but it slowly drifted out under the trees and over the grassy area toward the street below.' The smoke, he added, traveled out about 20 feet from the fence and was located slightly behind a large tree on the knoll." (8-2-68 re-enactment of Holland's actions on 11-22 with Barry Ernest in Dealey Plaza, as recounted in *The Girl on the Stairs*, 2011) "Holland said he watched as the wounded president passed directly beneath him into the Triple Underpass. He had seen a puff of smoke when Kennedy was shot in the head... In just under a minute, we had reached the corner of the fence where Holland said he'd seen smoke. I noticed during our entire reenactment that Holland had kept his eyes glued to his final destination. I asked if he had done the same thing on November 22. 'I did,' he replied. 'As soon as I could get a full view of that corner, my eyes were on it.' 'What did you see?' 'Nothing,' he said." **Analysis:** it's easy to see why Holland is so popular with conspiracy theorists. He said there were four shots and that at least one of them came from the stockade fence. The problem is he doesn't have a lot of credibility. Over the years his story kept getting better and better, incorporating bits of Connally's testimony, adding in juicy details like Kennedy's foot hanging over the side of the car—something he could only have seen in a newspaper. Still, if one goes by Holland's earliest statements, where he says he saw Jackie get up from her seat after the *first* shot, and notes that he mentioned the smoke in the trees from the get-go, it's hard to completely dismiss what he was saying. The man saw smoke in the trees and heard at least one shot after the head shot. **Heard four shots? Last two shots probably bunched together (with the last shot after the head shot). Saw smoke on the knoll.**

Austin Miller (11-22-63 statement to the Dallas County Sheriff's Department, 19H485, 24H217) "I saw a convertible automobile turn west on Elm off Houston Street. It had proceeded about halfway from Houston Street to the underpass when I heard what sounded like a shot a short second two more sharp reports. A man in the back seat slumped over and a woman in a bright colored dress (Orange or Yellow) grabbed the man and yelled. One shot apparently hit the street past the car. I saw something which I thought was smoke or steam coming from a group of trees north of Elm off the railroad tracks." (12-18-63 FBI report, CD205 p.27-28) "He saw an open top limousine containing people turn left off of Houston, driving west directly in front of the Texas School Book Depository. He heard three shots and also noticed a powder dust spray in the street directly to the driver's side and rear of the car...It was his first impression that the noise of the shots was a motorcycle backfire or firecrackers....he saw someone fall forward but could not tell who was in the car." (4-8-64 testimony before the Warren Commission, 6H223-227) "it came down Main Street and turned North on Houston Street and went over two blocks and turned left on Elm. Got about halfway down the hill toward the underpass and that is when as far as I can recall the first shot was fired...I thought at first the motorcycle backfiring or somebody threw some firecrackers out...just a few seconds later, there was two more shots fired or, or sounded like a sound at the time...it was after that I saw some man in a car fall forward, and a woman next to him grab him and hollered, and just what, I don't know exactly what she said...About that time I turned to look toward the - there is a little plaza sitting on the hill. I looked over there to see if anything was there, who threw the firecracker or whatever it was, or see if anything was up there, and there wasn't nobody standing there, so I stepped back and looked at the tracks to see if anybody run

across the railroad tracks, and there was nobody running across the railroad tracks. So I turned right straight back just in time to see the convertible take off fast..." (When asked from where he thought the shots came) "the way it sounded like, it came from the, I would say right there in the car." (8-1-68 interview with Barry Ernest as recounted in *The Girl On The Stairs*, 2011) (When asked about the smoke) "He said it definitely was smoke he saw 'around the trees in the corner of the picket fence on the grassy knoll.' (When asked if it could have been exhaust) 'No,' he firmly replied. Miller said he felt there had been three shots, that he saw the smoke just as he heard the third shot." (11-09-83 AP article found in the *Indiana Gazette*) "Miller, a railyard worker in 1963, had walked over to Elm Street on his lunch-break and was looking right at Kennedy "when shots began to crackle." - - - At first he didn't realize what was happening, he said. But when he saw a Secret Service agent jump onto the back of Kennedy's limousine, he knew. "I've tried to forget all I could of it, but I still remember most of it," said Miller, 25 at the time. "I guess you never forget it." Miller said he has told very few of his friends and co-workers that he was there when Kennedy was killed." **Analysis:** Miller heard the first shot after Z-190, and the last two shots bunched together. He also saw smoke in the trees. His contention that a shot was fired past the limo, when coupled with the FBI report's mentioning that this shot hit behind the car, might be taken to mean that he thought the shots were coming from the knoll. But when one considers Miller's view of the limousine, and that the limousine was on a descent throughout the Plaza, it seems more likely this "dust spray" was the cloud created by the explosion of Kennedy's skull. This cloud exploded upwards and to the left of Kennedy. That Miller notes Kennedy's falling over but doesn't note the explosion of his skull makes this all the more likely. **First shot hit 190-224. Last two shots bunched together. Saw smoke on the knoll.**

Royce Skelton (11-22-63 statement to the Dallas County Sheriff's Department, 16H496) "We saw the motorcade come around the corner and I heard something which I thought was fireworks. I saw something hit the pavement at the left rear of the car, then the car got in the right hand lane and I heard two more shots. I heard a woman say "Oh, no" or something and grab a man inside the car. I then heard another shot and saw the bullet hit the pavement. The concrete was knocked to the south away from the car. It hit the pavement in the left or middle lane." (12-18-63 FBI report, CD205 p.26) "Mr. Skelton noticed that as an open top limousine turned on Elm Street, it had moved approximately one hundred feet at which time he noticed dust spray up from the street in front of the car on the driver's side. This dust spray came from the direction of the Texas School Book Depository building. A few seconds later, he heard what he believed to be three shots." (4-8-64 testimony before the Warren Commission, 6H236-238) "Just about the same time the car straightened out—got around the corner—I heard two shots, but I didn't know at the time they were shots... It sounded like they were right there more or less like motorcycle backfire, but I thought they were these dumbballs that they throw at the cement because I could see the smoke coming up off the cement (when asked how many shots) "I thought I heard four—I mean—I couldn't be sure...after those two shots, and the car came on down closer to the triple underpass, well, there was another shot—two more shots I heard, but one of them—I saw a bullet, or I guess it was a bullet...hit in the left front of the President's car on the cement, and when it did, the smoke carried with it—away from the building." **Analysis:** while Skelton's story morphed over only a few months, with the supposed missed shot impacting first behind the limo then in front, we can take a few of the things he said and run with them. In his initial statement he said he heard something that sounded like fireworks. He then mentions seeing something hit the street. As a bullet travels much faster than the speed of sound, whatever he saw hit the street was not related to this first sound. (When studying the words of the railroad men it's important to remember they were 500 feet or so away from the sniper's nest, and would hear any shot from that location a half second or so after it was fired, in which time the limousine would have traveled 8-10 feet.) As we saw with Austin Miller, he makes no specific references to the head shot, leaving us to suspect the explosion he saw was somehow related to the head shot. **Heard four shots? Last two (or more) shots bunched together**

(with one or more shots after the head shot). Saw smoke. (But thought it was coming off the street.)

Frank Reilly (12-19-63 FBI report, CD205 p.29) “He saw two cars turn on Elm toward the underpass and at this time heard three shots which he thought came from the trees west of the Texas School Book Depository.” **(4-8-64** testimony before the Warren Commission, 6H227-231) (When asked if he saw the motorcade) “not until it turned and started to come under the underpass.” (When asked how many shots he heard) “three shots...It seemed to me like they come out of the trees...on the North side of Elm Street at the corner up there...it’s at that park where all the shrubs is up there—it’s to the north of Elm Street—up the slope.” **Analysis:** Reilly’s Warren Commission testimony is difficult to understand. Did he mean the trees in front of the depository building? If so, why didn’t he make reference to the building? Fortunately, the FBI report exists to tell us which trees he was talking about. Perhaps the “corner” Reilly was referring to was the corner of the stockade fence. While many interpret his statement that the shots came out of the trees to mean he saw smoke, that’s probably going too far. **Too vague. Saw smoke. (On the knoll?)**

George Davis (3-18-64 FBI report, 22H837) “Shortly after the motorcycle escort and Presidential car came into view and was at a point just east of the viaduct, Mr. Davis heard a sound which he described as similar to firecrackers exploding. All shots were very close together and he stated it was impossible for him to determine the number of shots. He stated his first impression was that someone had played a prank, but then he saw guns in the hands of the Secret Service Agents with President Kennedy, saw President Kennedy slumped forward, and the police motorcycle escort maneuver swiftly about the area, and he realized it was not a prank.” **Analysis:** as he says all the shots were very close together, it sounds like he’s describing the bunching of the last two shots, and perhaps their echoes. **Did not hear a shot as early as frame 160. Last two shots probably bunched together.**

Clemon Johnson (3-18-64 FBI report, 22H836) “He stated he first realized something was wrong when the motorcycles began moving from their regular course and at or just before this he heard sounds that could have been shots. Mr. Johnson stated at that time he did not know that it was shots and he could not state how many shots he heard. His attention remained on the vehicle carrying President Kennedy and he observed this car until it sped away. Mr. Johnson stated that white smoke was observed near the pavillion, but he felt that this smoke came from a motorcycle abandoned near this spot by a Dallas policeman.” **(11-09-83** AP article found in the Indiana Gazette) “Like dozens of other witnesses to the assassination, Johnson was called to testify before the Warren Commission. He told what he saw, which was little. He said he was ‘within throwing distance’ of Kennedy when the shots were fired and the Warren Commission grilled us as if we had done it. ‘I never like to talk about it,’ he said of having seen the incident. ‘I always just try to ignore talking about it, because to me it was a sad event, not what we thought it would be — just see the president come along and that’d be it.” (No More Silence, p.79-83, published **1998**) “The President was headed toward the underpass at the time the shots went off. First, you think of firecrackers going off, then, when you see all the motorcycles buzzing around, falling down, turning around, and running into one another, then you could plainly see that the President’s head was shot off...you could tell that the whole top of his head was probably missing...I heard maybe three shots. I know two plainly... You could tell it was a rifle...The car they were in...you could see it speed up and then stop, then speed up, and you could see it stop while they threw Mrs. Kennedy back up in the car...I didn’t have any idea where the shots came from, not even a guess...I did see smoke, lots of puffs of smoke, but I was of the opinion that the smoke was coming out of those motorcycles. The smoke was coming up off the ground out where the motorcycles were, not on the grassy knoll.” **Analysis:** his reference to the motorcycles moving from their regular course is a reference to Chaney and Jackson’s braking after the head shot. Here, once again, we have a witness from the bridge whose statements indicate he heard at least two shots beginning around the time of the

head shot. If there had been 5 second gaps between these shots he would have had not said “just before or after” and would have had an idea how many shots he heard. His offered explanation for the smoke seen on the knoll doesn’t fly because Officer Haygood, who parked his bike on the street by the knoll, never reached the knoll until Kennedy’s limousine was long gone. **Probably heard only two shots. Did not hear a shot as early as frame 160. Last two shots probably bunched together. Saw smoke. (But thought it was coming off the street.)**

Walter Winborn (3-18-64 FBI report, 22H833) “As the motorcycle escort and the vehicle carrying the president approached the viaduct, Mr. Winborn heard three distinct shots ring out...his attention remained on President Kennedy. He stated, however, that the shots sounded as if they all came from the same area.” (3-17-65 interview by Barbara Bridges, as noted in Best Evidence, published 1980) “there was a lot of smoke...from out of the trees, to the left.” (5-5-66 interview with Stewart Galanor, transcript on history-matters.com) “I just saw some smoke coming out in a—a motorcycle patrolman leaped off his machine and go up towards that smoke that come out from under the trees on the right hand side of the motorcade...There was a wooden fence there.” (When asked if he told the FBI about the smoke) “Oh yes. Oh yes.” **Analysis:** as he says the vehicle was *approaching* the viaduct, his words seem more in line with the first shot coming after frame 160. **Probable first shot 190-224. Saw smoke on the knoll.**

Richard Dodd (3-18-64 FBI report, 22H835) “when the motorcycle escort and the automobile carrying President Kennedy approached the area where he was standing his attention was directed on President Kennedy...he saw president Kennedy slump forward and simultaneously heard shots ring out. He stated he did not know how many shots were fired, but that the sounds were very close together.” (Interview in Rush to Judgment, filmed 3-24-66) “We all, three or four of us, seen about the same thing, the shot, the smoke came from behind the hedge on the north side of the Plaza. And a motorcycle policeman dropped his motorcycle in the street with a gun in his hand and run up the embankment to the hedge.” **Analysis:** heard *shots* ring out as Kennedy slumped forward, which almost certainly means the head shot. If he was describing an earlier shot, why would he fail to mention witnessing the head shot? **Did not hear an early shot. Last two shots bunched together. Saw smoke on the knoll.**

Nolan Potter (3-19-64 FBI report, 2H834) “when the President’s car...had driven past the Texas School Book Depository Building, he heard three loud reports which sounded like firecrackers. He then saw President Kennedy slump over in his car...Potter said he recalls seeing smoke in front of the Texas School Book Depository rising above the trees.” **Analysis:** from the railroad bridge looking up Elm, the knoll was just to the left of the school book depository. A puff of smoke coming out from the knoll would rise up above the trees in front of the depository. Or was saying the trees were *in front* of the school book depository simply an FBI mistake? As he said the car had driven past the school book depository, a shot as early as frame 160 seems unlikely. **First shot 190-224. Saw smoke. (On the knoll?)**

James Simmons (3-19-64 FBI report, 22H833) “stated when the President’s car started down Elm Street he heard three shots ring out. President Kennedy slumped forward in his seat and appeared to have been hit by a bullet...he recalled that a motorcycle policeman drove up the grassy slope toward the Texas School Book Depository Building, jumped off his motorcycle and then ran up the hill toward the Memorial Arches. Simmons said he thought he saw exhaust fumes of smoke near the embankment in front of the Texas School Book Depository Building.” (Interview in Rush to Judgment, filmed 3-28-66) “As the presidential limousine was rounding the curve on Elm Street, there was a loud explosion... it sounded like a loud firecracker or a gunshot, and it sounded like it came from the left and in front of us toward the wooden fence. And there was a puff of smoke that came underneath the trees on the embankment. It was right directly in front of the wooden fence.” (2-15-69 testimony in the trial of Clay Shaw) (When asked what he heard as the limo approached) “I heard three loud reports I presumed to be

shots." (When asked where the limousine was at the time of the first shot) "It had, it was about one-third of the way or maybe half-way between the Depository and the Overpass." (When asked Kennedy's response) "Well, I don't remember exactly -- it was between the first or second or thereabouts and he turned to his left and threw his hands up." (When asked Kennedy's response to the third) "Well, he fell and there was matter and a halo of blood." (When asked which way he fell) "To his left". (When asked what the limousine did then) "It paused and then accelerated real fast after the motorcycle got out the way." (When asked where the red halo appeared to be) "To the left side of his head." (When asked where the matter went) "It went over the side of the car...The left side." (When asked if he noticed anything unusual in the area of the grassy knoll when the second and third shots were fired) "Well, after I heard the shots I looked to see if I could see where they were coming from and underneath the trees up on the grassy knoll by the fence I detected what appeared to be a puff of smoke or wisp of smoke." (When asked again about the red halo) "Well, it looked just like the top of his head blew off and went up in the air." (When asked the direction in which the halo moved) "Like I said, it seemed to go out the left side of the car...Well, the matter." (When asked if the halo was in front of the President) "Well, it seemed to be over his head." (When asked if he saw anything hit the curb) "After the first shot I was screening the area to see if I could see where they were coming from and there was, it looked like dust particles fly in the air from something that had hit the curb or street." (When asked from where he heard the shots) "from in front...the sound was to the left of me." (When asked if this is the direction of the school book depository as well as the grassy knoll) "It is." **Analysis:** it appears the FBI made a similar "mistake" in their report on Simmons as they did in their report on Potter. Once again, it is purported that something that probably took place on the knoll took place in front of the school book depository. Haygood parked his bike near the grassy slope by the knoll; it seems very doubtful Simmons would say he drove it toward the school book depository. His Shaw trial testimony clears up matters some. His description of Kennedy turning to his left is a description of what one sees in the Zapruder film after Z-224. **First shot hit 190-224. Saw smoke on the knoll.**

Ewell Cowsert (3-19-64 FBI report, 22H836) "just as President Kennedy's car passed the Texas School Book Depository he heard two or three shots ring out and saw President Kennedy slump forward in his seat....he has no idea where the shots came from." **Analysis:** as the shots are mentioned together and as occurring after the car had passed the school book depository, Cowsert probably heard the last two shots bunched together. **Last two shots probably bunched together.**

Curtis Bishop (3-19-64 FBI report, 22H834): (He said that) "when President Kennedy's car came into view he started down Elm Street past the Texas School Book Depository Building. He heard three shots ring out. He then saw President Kennedy slump over as if he had been hit." **Analysis:** while his statement that 'he then saw' President Kennedy slump might be taken as an indication that there were no shots after the head shot, it's unclear how closely he was watching the President at this time. **Too vague.**

Thomas Murphy (3-20-64 FBI report, 22H835) "Murphy said they watched President Kennedy's limousine turn down Elm Street past the Texas School Book Depository and start towards them. He stated he then heard what sounded like two shots and he saw President Kennedy and Governor Connally slump in their seats. Murphy said in his opinion that these shots came from just west of the Texas School Book Depository." (5-6-66 interview with Stewart Galanor, transcription on history-matters.com) (When asked how many shots he heard) "More than three." (When asked where the shots came from) "they come from a tree to the left, of my left, which is to the immediate right of the site of the assassination...on the hill up there. There are two or three hackberry and elm trees. And I say it come from there." (When asked if he saw smoke) "Yeah, smoke...in that tree." **Analysis:** as he failed to mention a missed shot or a head shot, the shot where he saw Kennedy slump would most probably be the head shot. Since he failed to mention a gap between these shots, he probably heard the last two

shots closely bunched together. His adding in additional shots for Galanor could reflect his adjusting his story to match Holland's. On the other hand, maybe the FBI misunderstood him two years earlier. **Heard four shots? Last two shots possibly bunched together. Saw smoke on the knoll.**

J.W. Foster was the Dallas police officer on top of the railroad bridge. (12-4-63 signed statement to the Dallas Police Department, CD1259 p18) "After the motorcade turned from Houston Street to Elm Street, I was watching the railroad employees very closely so that I would be in a position to prevent any incident. When I heard the shots I was standing directly behind these railroad employees and I then moved to the railroad overpass banister to see what was happening. I then saw the President slumping over in the car and other persons falling down in the grass in the vicinity of the President's car. The President's car and a couple of other cars left the scene immediately at a high rate of speed with a motorcycle escort. I then observed some officers running toward the building on the northeast corner of Elm and Houston. I immediately ran towards the same building and assisted in blocking off the building." (3-26-64 FBI report, CD897 p.20-21) "Just as the vehicle in which President Kennedy was riding reached a point on Elm Street just east of the underpass, Patrolman Foster heard a noise that sounded like a large firecracker...he realized something was wrong because of the movement of the President. Another report was heard by Patrolman Foster and about the same time the report was heard, he observed the President's head appear to explode, and immediately thereafter, he heard a third report which he knew was a shot." (4-9-64 testimony before the Warren Commission, 6H248-253) "After he came onto Elm...I heard a loud noise, sounded like a large firecracker. Kind of dumbfounded at first, and then heard the second one. I moved to the banister of the overpass to see what was happening. Then the third explosion." (When asked what he saw happening) "Saw the President slump over in the car, and his head looked just like it blew up." (No More Silence p.211-214, published 1998) "When they got about halfway between Houston and the Triple Underpass, I heard three distinct, evenly spaced shots. I could see into the car but couldn't really determine anything...all I could tell about the shots was that they all sounded about the same, and they came from back toward Elm and Houston Streets. None of them came from the grassy knoll." **Analysis:** over the years, Foster "corrected" his recollections of what he saw in order to avoid controversy. He initially acknowledged running towards the Dal-Tex Building. He initially believed he heard a shot after the head shot. He then side-stepped these statements in his Warren Commission testimony. By the time he talked to Snead for No More Silence, he was playing stupid. Even so, his placement of the limousine at the time of the first shot is in conflict with the LPM scenario. **First shot hit 190-224. Last two shots bunched together (with the last shot after the head shot).**

The statements of these men were known to the Warren Commission. Eleven of them saw or smelled smoke in the moments after the shooting. That they not only saw smoke, but reported it to Sheriff's deputies charging into the railroad yards after the shooting, is confirmed, furthermore, by the reports on the shooting of Deputy Sheriffs A.D. McCurley (19H514) and J.L. Oxford (19H530). Although a few of those seeing smoke thought this smoke came from the motorcycles and/or the impact of a bullet on the street, such smoke was not noted by others closer to the action. As a result it seems possible that, in looking down on the action, they'd confused smoke in front of the limo with smoke behind it. In any event, the bulk of these witnesses thought they'd seen smoke, and thought it had come from the direction of the stockade fence or grassy knoll. Were they hallucinating? The debate continues. The railroad men themselves, mostly conservative types, were convinced they saw smoke, and were among the first conspiracy theorists. They risked ostracism in their hometown by refusing to go along with the official story that Oswald acted alone. Undoubtedly, they behaved admirably. But were they right?
